

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

INTERSTATE COMMERCE REPORTS 122274

VOL. I.

DECISIONS AND PROCEEDINGS

OF THE

11 INTERSTATE COMMERCE COMMISSION

UNDER THE

INTERSTATE COMMERCE ACT

OF FEBRUARY 4, 1887,

TOGETHER WITH ALL

DECISIONS OF THE COURTS

RELATING TO

INTERSTATE COMMERCE,

WITH NOTES.

MAY, 1887, TO JUNE, 1888.

PREPARED AND PUBLISHED

BY

THE LAWYERS' CO-OPERATIVE PUBLISHING COMPANY,

ROCHESTER, N. Y.

1887.

Entered according to Act of Congress, in the year eighteen hundred and eighty-seven, by

THE LAWYERS CO-OPERATIVE PUBLISHING CO.

In the Office of the Librarian of Congress, Washington, D. C.

E. R. ANDREWS, Printer, Rochester, N. Y.

PREFACE.

ON completing the first volume of the INTERSTATE COMMERCE REPORTS we feel justified in saying that the intention expressed in our preliminary announcement has been fulfilled, namely: that these Reports should "include not only the formal decisions of the Commission, but also such of its proceedings as may be of general interest and convey information as to the method of procedure before it;" and that "full reports will also be given of all cases in the courts of the country at large, relating to the subject of interstate commerce and arising under the Interstate Commerce Act, or involving questions connected with its application and operation, and which are deemed of value as precedents to lighten the burden of the Commission, or to inform shippers, carriers or counsel."

This plan of the Reports seems to have met with general approval, and the value and convenience of having everything connected with the subject of interstate commerce collected in a single publication have been recognized.

Of course the most prominent feature of the volume is its full presentation of the important work accomplished by the Interstate Commerce Commission during the first year of its existence. It will be seen that the labor which has been imposed upon the Commission has been very great, and that the questions which it has been called upon to decide have been intricate and difficult and of vital importance, not only to the parties immediately interested but to the commercial interests of the whole country.

The necessity for such legislation as is embodied in the Interstate Commerce Act seems to be fully shown by this record of the first year of its enactment; and the difficulties which it was feared by many would attend the application and enforcement of its provisions have been reduced to a minimum, under the clear and practical construction placed thereon by the Commission.

This central portion of the work has been supplemented by full reports of the decisions of the Federal and State Courts upon the subject of interstate commerce, rendered during the year covered by this volume; and the effort has been made (by including the full text of the Interstate Commerce Act and the material portions of the English Statutes upon which our Act is largely based, together with a note on the American and English decisions upon the questions connected with this legislation) to furnish a comprehensive and convenient hand-book upon the subjects of domestic commerce and transportation, in their relations to the Nation and the State, to the carrier and the shipper, to the producer and the consumer.

For the completeness and accuracy of this history of the first year of the Interstate Commerce Act, much is due to the courtesy and co-operation of the members of the Commission, of their Secretary and his assistants, and of the counsel who have appeared before the Commission.

May, 1888.

THE L. C. P. Co.

INTERSTATE COMMERCE REPORTS.

THE INTERSTATE COMMERCE ACT.

Approved February 4, 1887.

AN ACT TO REGULATE COMMERCE.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

That the provisions of this Act shall apply to any common carrier or carriers engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water when both are used, under a common control, management, or arrangement, for a continuous carriage or shipment, from one State or Territory of the United States, or the District of Columbia, to any other State or Territory of the United States, or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States, and also to the transportation in like manner of property shipped from any place in the United States to a foreign country and carried from such place to a port of transshipment, or shipped from a foreign country to any place in the United States and carried to such place from a port of entry either in the United States or an adjacent foreign country: *Provided, however,* That the provisions of this Act shall not apply to the transportation of passengers or property, or to the receiving, delivering, storage, or handling of property, wholly within one State, and not shipped to or from a foreign country from or to any State or Territory as aforesaid.

To whom provisions of the Act apply.

The term "railroad" as used in this Act shall include all bridges and ferries used or operated in connection with any railroad, and also all the road in use by any corporation operating a railroad, whether owned or operated under a contract, agreement, or lease; and the term "transportation" shall include all instrumentalities of shipment or carriage.

Terms "railroad," and "transportation" defined.

All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, or for the receiving, delivering, storage, or handling of such property, shall be reasonable and just; and every unjust and unreasonable charge for such service is prohibited and declared to be unlawful.

Reasonable and just charges.

Sec. 2. That if any common carrier subject to the provisions of this Act shall, directly or indirectly, by any special rate, rebate, drawback, or other device, charge, demand, collect, or receive from any person or persons a greater or less compensation for any service

Special rates, rebates, drawbacks, unjust discrimination.

rendered, or to be rendered, in the transportation of passengers or property, subject to the provisions of this Act, than it charges, demands, collects, or receives from any other person or persons for doing for him or them a like and contemporaneous service in the transportation of a like kind of traffic under substantially similar circumstances and conditions, such common carrier shall be deemed guilty of unjust discrimination, which is hereby prohibited and declared to be unlawful.

Undue or unreasonable preference.

Sec. 3. That it shall be unlawful for any common carrier subject to the provisions of this Act to make or give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic, in any respect whatsoever, or to subject any particular person, company, firm, corporation, or locality, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever.

Interchange of traffic.

Every common carrier subject to the provisions of this Act shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines, and for the receiving, forwarding, and delivering of passengers and property to and from their several lines and those connecting therewith, and shall not discriminate in their rates and charges between such connecting lines; but this shall not be construed as requiring any such common carrier to give the use of its tracks or terminal facilities to another carrier engaged in like business.

Discrimination prohibited.

Long and short haul. Greater compensation for a shorter than a longer distance forbidden.

Sec. 4. That it shall be unlawful for any common carrier subject to the provisions of this Act to charge or receive any greater compensation in the aggregate for the transportation of passengers or of like kind of property, under substantially similar circumstances and conditions, for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance; but this shall not be construed as authorizing any common carrier within the terms of this Act to charge and receive as great compensation for a shorter as for a longer distance: *Provided, however,* That upon application to the Commission appointed under the provisions of this Act, such common carrier may, in special cases, after investigation by the Commission, be authorized to charge less for longer than for shorter distances for transportation of passengers or property; and the Commission may from time to time prescribe the extent to which said designated common carrier may be relieved from the operation of this section of this Act.

Relief may be granted by commission.

Pooling of freights.

Sec. 5. That it shall be unlawful for any common carrier subject to the provisions of this Act to enter into any contract, agreement, or combination with any other common carrier or carriers for the pooling of freights of different and competing railroads, or to divide between them the aggregate or net proceeds of the earnings of such railroads, or any portion thereof; and in any case of an agreement for the pooling of freights as aforesaid, each day of its continuance shall be deemed a separate offense.

Sec. 6. That every common carrier subject to the provisions of this Act shall print and keep for public inspection schedules showing the rates and fares and charges for the transportation of passengers and property which any such common carrier has established and which are in force at the time upon its railroad, as defined by the first section of this Act. The schedules printed as aforesaid by any such common carrier shall plainly state the places upon its railroad between which property and passengers will be carried, and shall contain the classification of freight in force upon such railroad, and shall also state separately the terminal charges and any rules or regulations which in any wise change, affect, or determine any part of the aggregate of such aforesaid rates and fares and charges. Such schedules shall be plainly printed in large type, of at least the size of ordinary pica, and copies for the use of the public shall be kept in every depot or station upon any such railroad, in such places and in such form that they can be conveniently inspected.

Schedules of rates to be printed and made public.

Any common carrier subject to the provisions of this Act receiving freight in the United States to be carried through a foreign country to any place in the United States shall also in like manner print and keep for public inspection, at every depot where such freight is received for shipment, schedules showing the through rates established and charged by such common carrier to all points in the United States beyond the foreign country to which it accepts freight for shipment; and any freight shipped from the United States through a foreign country into the United States, the through rate on which shall not have been made public as required by this Act, shall, before it is admitted into the United States from said foreign country, be subject to customs duties as if said freight were of foreign production; and any law in conflict with this section is hereby repealed.

Rates to foreign countries.

No advance shall be made in the rates, fares, and charges which have been established and published as aforesaid by any common carrier in compliance with the requirements of this section, except after ten days' public notice, which shall plainly state the changes proposed to be made in the schedule then in force, and the time when the increased rates, fares, or charges will go into effect; and the proposed changes shall be shown by printing new schedules, or shall be plainly indicated upon the schedules in force at the time and kept for public inspection. Reductions in such published rates, fares, or charges may be made without previous public notice; but whenever any such reduction is made, notice of the same shall immediately be publicly posted and the changes made shall immediately be made public by printing new schedules, or shall immediately be plainly indicated upon the schedules at the time in force and kept for public inspection.

Advances in rates—ten days' notice.

Reductions in rates.

And when any such common carrier shall have established and published its rates, fares, and charges, in compliance with the provisions of this section, it shall be unlawful for such common carrier to charge, demand, collect, or receive from any person or persons a greater

No variation from published rates.

or less compensation for the transportation of passengers or property, or for any services in connection therewith, than is specified in such published schedule of rates, fares, and charges as may at the time be in force.

Copies of schedules filed with Commission.

Every common carrier subject to the provisions of this Act shall file with the Commission hereinafter provided for copies of its schedules of rates, fares, and charges which have been established and published in compliance with the requirements of this section, and shall promptly notify said Commission of all changes made in the same. Every such common carrier shall also file with said

Contracts and agreements with other companies to be filed.

Commission copies of all contracts, agreements, or arrangements with other common carriers in relation to any traffic affected by the provisions of this Act to which it may be a party. And in cases where passengers and freight pass over continuous lines or routes operated by more than one common carrier, and the several common carriers operating such lines or routes establish joint tariffs of rates or fares or charges for such continuous lines or routes, copies of

Joint rates.

such joint tariffs shall also, in like manner, be filed with said Commission. Such joint rates, fares, and charges on such continuous lines so filed as aforesaid shall be made public by such common carriers when directed by said Commission, in so far as may, in the judgment of the Commission, be deemed practicable; and said Commission shall from time to time prescribe the measure of publicity which shall be given to such rates, fares, and charges, or to such

Failure to adhere to rates.

part of them as it may deem it practicable for such common carriers to publish, and the places in which they shall be published; but no common carrier party to any such joint tariff shall be liable for the failure of any other common carrier party thereto to observe and adhere to the rates, fares, or charges thus made and published.

Failure to file or publish rates — penalties for.

If any such common carrier shall neglect or refuse to file or publish its schedules or tariffs of rates, fares, and charges as provided in this section, or any part of the same such common carrier shall, in addition to other penalties herein prescribed, be subject to a writ of *mandamus*, to be issued by any Circuit Court of the United States in the judicial district wherein the principal office of said common carrier is situated or wherein such offense may be committed, and if such common carrier be a foreign corporation, in the judicial circuit wherein such common carrier accepts traffic and has an agent to perform such service, to compel compliance with the aforesaid provisions of this section; and such writ shall issue in the name of the People of the United States, at the relation of the Commissioners appointed under the provisions of this Act; and failure to comply with its requirements shall be punishable as and for a contempt; and the said Commissioners, as complainants, may also apply,

Injunction.

in any such Circuit Court of the United States, for a writ of injunction against such common carrier, to restrain such common carrier from receiving or transporting property among the several States and Territories of the United States, or between the United States and adjacent foreign countries, or between ports of transshipment

and of entry and the several States and Territories of the United States, as mentioned in the first section of this Act, until such common carrier shall have complied with the aforesaid provisions of this section of this Act.

Sec. 7. That it shall be unlawful for any common carrier subject to the provisions of this Act to enter into any combination, contract, or agreement, expressed or implied, to prevent, by change of time schedule, carriage in different cars, or by other means or devices, the carriage of freights from being continuous from the place of shipment to the place of destination; and no break of bulk, stoppage, or interruption made by such common carrier shall prevent the carriage of freights from being and being treated as one continuous carriage from the place of shipment to the place of destination, unless such break, stoppage, or interruption was made in good faith for some necessary purpose, and without any intent to avoid or unnecessarily interrupt such continuous carriage or to evade any of the provisions of this Act.

Combinations to prevent continuous carriage prohibited.

Sec. 8. That in case any common carrier subject to the provisions of this Act shall do, cause to be done, or permit to be done any act, matter, or thing in this Act prohibited or declared to be unlawful, or shall omit to do any act, matter, or thing in this Act required to be done, such common carrier shall be liable to the person or persons injured thereby for the full amount of damages sustained in consequence of any such violation of the provisions of this Act, together with a reasonable counsel or attorney's fee, to be fixed by the court in every case of recovery, which attorney's fee shall be taxed and collected as part of the costs in the case.

Liability for damages.

Sec. 9. That any person or persons claiming to be damaged by any common carrier subject to the provisions of this Act may either make complaint to the Commission as hereinafter provided for, or may bring suit in his or their own behalf for the recovery of the damages for which such common carrier may be liable under the provisions of this Act in any District or Circuit Court of the United States of competent jurisdiction; but such person or persons shall not have the right to pursue both of said remedies, and must in each case elect which one of the two methods of procedure herein provided for he or they will adopt. In any such action brought for the recovery of damages the court before which the same shall be pending may compel any director, officer, receiver, trustee, or agent of the corporation or company defendant in such suit to attend, appear, and testify in such case, and may compel the production of the books and papers of such corporation or company party to any such suit; the claim that any such testimony or evidence may tend to criminate the person giving such evidence shall not excuse such witness from testifying, but such evidence or testimony shall not be used against such person on the trial of any criminal proceeding.

Complaint to Commission or action in court.

Testimony compulsory.

Sec. 10. That any common carrier subject to the provisions of this Act, or, whenever such common carrier is a corporation, any director or officer thereof, or any receiver, trustee, lessee, agent, or

Penalty for violation of the Act.

person acting for or employed by such corporation, who, alone or with any other corporation, company, person, or party, shall willfully do or cause to be done, or shall willingly suffer or permit to be done, any act, matter, or thing in this Act prohibited or declared to be unlawful, or who shall aid or abet therein, or shall willfully omit or fail to do any act, matter, or thing in this Act required to be done, or shall cause or willingly suffer or permit any act, matter, or thing so directed or required by this Act to be done not to be so done, or shall aid or abet any such omission or failure, or shall be guilty of any infraction of this Act, or shall aid or abet therein, shall be deemed guilty of a misdemeanor, and shall, upon conviction thereof in any District Court of the United States within the jurisdiction of which such offense was committed, be subject to a fine of not to exceed \$5,000 for each offense.

Interstate Commerce Commission—how constituted.

Sec. 11. That a commission is hereby created and established to be known as the Interstate Commerce Commission, which shall be composed of five Commissioners, who shall be appointed by the President, by and with the advice and consent of the Senate. The Commissioners first appointed under this Act shall continue in office for the term of two, three, four, five, and six years, respectively, from the first day of January, Anno Domini eighteen hundred and eighty-seven, the term of each to be designated by the President; but their successors shall be appointed for terms of six years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired time of the Commissioner whom he shall succeed. Any Commissioner may be removed by the President, for inefficiency, neglect of duty, or malfeasance in office. Not more than three of the Commissioners shall be appointed from the same political party. No person in the employ of or holding any official relation to any common carrier subject to the provisions of this Act, or owning stock or bonds thereof, or who is in any manner pecuniarily interested therein, shall enter upon the duties of or hold such office. Said Commissioners shall not engage in any other business, vocation, or employment. No vacancy in the Commission shall impair the right of the remaining Commissioners to exercise all the powers of the Commission.

Powers of the Commission.

Sec. 12. That the Commission hereby created shall have authority to inquire into the management of the business of all common carriers subject to the provisions of this Act, and shall keep itself informed as to the manner and method in which the same is conducted, and shall have the right to obtain from such common carriers full and complete information necessary to enable the Commission to perform the duties and carry out the objects for which it was created; and for the purposes of this Act the Commission shall have power to require the attendance and testimony of witnesses and the production of all books, papers, tariffs, contracts, agreements, and documents relating to any matter under investigation, and to that end may invoke the aid of any court of the United States in requiring the attendance and testimony of witnesses and the production

of books, papers, and documents under the provisions of this section.

And any of the Circuit Courts of the United States within the jurisdiction of which such inquiry is carried on may, in case of contumacy or refusal to obey a subpoena issued to any common carrier subject to the provisions of this Act, or other person, issue an order requiring such common carrier or other person to appear before said Commission (and produce books and papers if so ordered) and give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof. The claim that any such testimony or evidence may tend to criminate the person giving such evidence shall not excuse such witness from testifying; but such evidence or testimony shall not be used against such person on the trial of any criminal proceeding.

Refusal to testify before Commission.

Sec. 13. That any person, firm, corporation, or association, or any mercantile, agricultural or manufacturing society, or any body politic or municipal organization complaining of anything done or omitted to be done by any common carrier subject to the provisions of this Act in contravention of the provisions thereof, may apply to said Commission by petition, which shall briefly state the facts; whereupon a statement of the charges thus made shall be forwarded by the Commission to such common carrier, who shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time, to be specified by the Commission. If such common carrier, within the time specified, shall make reparation for the injury alleged to have been done, said carrier shall be relieved of liability to the complainant only for the particular violation of law thus complained of. If such carrier shall not satisfy the complaint within the time specified, or there shall appear to be any reasonable ground for investigating said complaint, it shall be the duty of the Commission to investigate the matters complained of in such manner and by such means as it shall deem proper.

Complaints to Commission.

Reparation by common carrier.

Investigation by Commission.

Said Commission shall in like manner investigate any complaint forwarded by the railroad commissioner or railroad commission of any State or Territory, at the request of such commissioner or commission, and may institute any inquiry on its own motion in the same manner and to the same effect as though complaint had been made.

Complaints by State R. R. Commissioners.

No complaint shall at any time be dismissed because of the absence of direct damage to the complainant.

Sec. 14. That whenever an investigation shall be made by said Commission, it shall be its duty to make a report in writing in respect thereto, which shall include the findings of fact upon which the conclusions of the Commission are based, together with its recommendation as to what reparation, if any, should be made by the common carrier to any party or parties who may be found to have been injured; and such findings so made shall thereafter, in all judicial proceedings, be deemed *prima facie* evidence as to each and every fact found.

Findings of Commission *prima facie* evidence.

All reports of investigations made by the Commission shall be

Reports of investigations.

entered of record, and a copy thereof shall be furnished to the party who may have complained, and to any common carrier that may have been complained of.

Notification to
common carrier
of violation of
Act.

Sec. 15. That if any case in which an investigation shall be made by said Commission it shall be made to appear to the satisfaction of the Commission, either by the testimony of witnesses or other evidence, that anything has been done or omitted to be done in violation of the provisions of this Act, or of any law cognizable by said Commission, by any common carrier, or that any injury or damage has been sustained by the party or parties complaining, or by other parties aggrieved in consequence of any such violation, it shall be the duty of the Commission to forthwith cause a copy of its report in respect thereto to be delivered to such common carrier, together with a notice to said common carrier to cease and desist from such violation, or to make reparation for the injury so found to have been done, or both, within a reasonable time, to be specified by the Commission; and if, within the time specified, it shall be made to appear to the Commission that such common carrier has ceased from such violation of law, and has made reparation for the injury found to have been done, in compliance with the report and notice of the Commission, or to the satisfaction of the party complaining, a statement to that effect shall be entered of record by the Commission, and the said common carrier shall thereupon be relieved from further liability or penalty for such particular violation of law.

Petition to United
States courts.

Sec. 16. That whenever any common carrier, as defined in and subject to the provisions of this Act, shall violate or refuse or neglect to obey any lawful order or requirement of the Commission in this Act named, it shall be the duty of the Commission, and lawful for any company or person interested in such order or requirement, to apply, in a summary way, by petition, to the Circuit Court of the United States sitting in equity in the judicial district in which the common carrier complained of has its principal office, or in which the violation or disobedience of such order or requirement shall happen, alleging such violation or disobedience, as the case may be; and the said court shall have power to hear and determine the matter, on such short notice to the common carrier complained of as the court shall deem reasonable; and such notice may be served on such common carrier, his or its officers, agents, or servants, in such manner as the court shall direct; and said court shall proceed to hear and determine the matter speedily as a court of equity, and without the formal pleadings and proceedings applicable to ordinary suits in equity, but in such manner as to do justice in the premises; and to this end such court shall have power, if it think fit, to direct and prosecute, in such mode and by such persons as it may appoint, all such inquiries as the court may think needful to enable it to form a just judgment in the matter of such petition; and on such hearing the report of said Commission shall be *prima facie* evidence of the matters therein stated; and if it be made to appear to such court, on such hearing or on report of any such person or persons, that

the lawful order or requirement of said Commission drawn in question has been violated or disobeyed, it shall be lawful for such court to issue a writ of injunction or other proper process, mandatory or otherwise, to restrain such common carrier from further continuing such violation or disobedience of such order or requirement of said Commission, and enjoining obedience to the same; and in case of any disobedience of any such writ of injunction or other proper process, mandatory or otherwise, it shall be lawful for such court to issue writs of attachment, or any other process of said court incident or applicable to writs of injunction or other proper process, mandatory or otherwise, against such common carrier, and if a corporation, against one or more of the directors, officers, or agents of the same, or against any owner, lessee, trustee, receiver, or other person failing to obey such writ of injunction or other proper process, mandatory or otherwise; and said court may, if it shall think fit, make an order directing such common carrier or other person so disobeying such writ of injunction or other proper process, mandatory or otherwise, to pay such sum of money not exceeding for each carrier or person in default the sum of \$500 for every day after a day to be named in the order that such carrier or other person shall fail to obey such injunction or other proper process, mandatory or otherwise; and such moneys shall be payable as the court shall direct, either to the party complaining, or into court to abide the ultimate decision of the court, or into the Treasury; and payment thereof may, without prejudice to any other mode of recovering the same, be enforced by attachment or order in the nature of a writ of execution, in like manner as if the same had been recovered by a final decree in personam in such court. When the subject in dispute shall be of the value of \$2,000 or more, either party to such proceeding before said court may appeal to the Supreme Court of the United States, under the same regulations now provided by law in respect of security for such appeal; but such appeal shall not operate to stay or supersede the order of the court or the execution of any writ or process thereon; and such court may, in every such matter, order the payment of such costs and counsel fees as shall be deemed reasonable. Whenever any such petition shall be filed or presented by the Commission it shall be the duty of the district attorney, under the direction of the Attorney-General of the United States, to prosecute the same; and the costs and expenses of such prosecution shall be paid out of the appropriation for the expenses of the courts of the United States. For the purposes of this Act, excepting its penal provisions, the Circuit Courts of the United States shall be deemed to be always in session.

Injunction.

Attachment.

Punishment for violation of Act or injunction.

Appeal to Supreme Court.

Sec. 17. That the Commission may conduct its proceedings in such manner as will best conduce to the proper dispatch of business and to the ends of justice. A majority of the Commission shall constitute a quorum for the transaction of business, but no Commissioner shall participate in any hearing or proceeding in which he has any pecuniary interest. Said Commission may, from time to

Commission — manner of conducting business.

rates. The petitioner set forth that his business is at a standstill, and that his daily expenses are about \$200. He asked the issuing of an order for the furnishing of cars and the acceptance of the old rates, according to the contract under which the elevator was built.

Re SUSPENSION OF THE FOURTH SECTION.

MR. Charles H. Tweed, of New York, addressed the Commission in behalf of the prayer of the Southern Pacific Railroad for a suspension of the fourth section. He presented a formal petition which sets forth that the Southern Pacific is in competition for the transportation of through passengers and freight with the Canadian Pacific, the Pacific Mail Steamship Company, clippers and tramp steamers, and that the business is done under substantially dissimilar conditions from those under which local transportation is conducted.

Mr. Hawley, of New York, general eastern agent of the Southern Pacific Company, was sworn and questioned by counsel upon the matters set forth in the petition. He was cross examined by F. N. Taft, of New York, representing Sutton & Co., of the clipper lines.

A. T. Britton, attorney of the Atchison, Topeka and Santa Fe Railroad, produced a map of the road and its connections. He read a petition setting forth that the road and its connections were engaged in transcontinental traffic. In an honest endeavor to comply with the law it had put in operation new schedules which, while they increased the through rates, largely reduced the rates to intermediate points. While this had not resulted in increasing the way traffic, it had entirely destroyed the through traffic. The prayer of the petition was similar to that of the Southern Pacific.

General William W. Belknap, representing the St. Louis & San Francisco Road, presented a petition setting forth the circumstances influencing that company's through traffic, and asked that the fourth section of the Act be suspended.

Colonel George Gray gave notice that he would file the petition of the Northern Pacific to a like purport later in the day.

James F. Goddard, assistant general manager of the Atchison, Topeka & Santa Fe Road, was sworn, and in reply to inquiries by counsel substantiated under oath the matters set forth in the petition mentioned above. The witness said the company asked to be placed in a position where it could meet the competition of the clippers without further reference to the Commission.

Mr. Taft presented a communication from Sutton & Co's Dispatch Line setting forth that the action of the transcontinental roads toward the shipping interest via Cape Horn has been of the most violent nature; that they had exerted every effort to annihilate the shipping interests of the country. They had taken the long haul traffic at a loss which they must make up from charges on the short haul traffic. The writers protested against the suspension of the long and short haul section, unless a fair competing tariff shall be made that will enable

shippers of coarse goods to forward them by sail.

J. E. Searles, Jr., of New York, representing the sugar refiners of the East, including the St. Louis Refinery, entered a protest against the granting of the San Francisco refiners' petition. He told the history of the rise of the Hawaiian sugar trade, to the point where the importations from the islands exceeded the entire consumption of the Pacific Coast. Then, to make a market for this surplus the importers entered into a combination with the railroads, by means of which they were enabled to lay down this foreign commodity, admitted duty free, at prices with which the eastern refiners who were held to full rates of freight could not compete. One result had been the closing up of the St. Louis refinery, which had cost \$1,500,000.

A telegram was received by the Commission from C. M. Wicker of Chicago, on behalf of the Board of Trade and merchants of Chicago announcing a wish to be heard upon the transcontinental question, and asking that the decision of the Commission be withheld until arguments can be submitted.

"We are," the telegram says, "in favor of conditional suspension of long and short haul clause on Pacific Coast traffic, provided rates from the Great Lakes and Mississippi Valley be made proportionately less than from the Atlantic seaboard as has been the case in the past."

Justice, Bateman & Co., wool commission merchants, of Philadelphia, in a letter to the Commission, express the hope that section 4 will not be suspended as regards transcontinental lines. The protests against the long and short haul, they say, came from persons who have heretofore enjoyed the greatest benefits from cut rates and who have had an unfair advantage.

"For instance," they continue, "last year the merchants of San Francisco had a rate of fifty cents per 100 pounds on wool, while dealers and growers located several hundred miles further east had to pay \$8 to \$4.50 per 100 pounds if that wool was shipped direct to the East."

There is wool, they say, now in Philadelphia, grown in Montana, which the railroads forced to be sent thence via San Francisco, making a haul of 4,000 miles, while if shipped direct it would have traveled only 2,000 miles. The object of the discrimination was to give the San Francisco merchants an opportunity to exact toll before it reached its natural destination.

(April 23, 1887.)

Re EXPORT TRADE OF BOSTON.*

Upon petitions by railroad companies praying the Commission to "authorize the trunk lines to bill export freight to Boston at New York rates" etc., held, that as any legal ground for affirmative action on the part of the Commission was precluded by the fact that the parties bringing the practice to the attention of the Commission did so with explanations of its propriety and insisting upon its lawfulness,—no order

*See ante, 13, 22.

should be made on the petitions, but leaves should be given to withdraw them.

PETITIONS by the Fitchburg Railroad Company and other Railroad Companies. The question presented is stated in the opinion.

Cooley, Chairman, delivered the opinion of the Commission:

Several petitions regarding this trade are before us: One from the Fitchburg Railroad Company, and others from the Boston & Lowell, the New York & New England, the Central Vermont line, and the Boston & Albany railroad companies. All seek the same relief, and upon a state of facts, which may be summarized as follows:

For many years it has been the practice of the railroad companies connecting Boston with western points, to make the rates from such points to Boston, upon grain and provisions for export, as low as the rates to New York, although the rates upon property for local consumption have during the same time been higher to Boston than to New York, the distance being somewhat greater. The rates to the seaboard and abroad, it was shown, are in effect determined by the shortest line from the interior, which for this purpose is the Pennsylvania line; the other lines conforming substantially to those rates as a security to participation in the traffic.

The equalization of rates upon the export business has sometimes been made by way-billing to Boston at New York rates, but as this is not always practicable it has more commonly been made by paying a rebate equal to the difference between Boston and New York rates.

Making the allowance in some form has been essential to the existence of the trade, since the ocean rates from Boston to New York are not materially different, and higher interior rates would exclude Boston altogether from participation in the foreign trade.

The practice which allows the rebate has, therefore, been adopted in a spirit of fairness to Boston and as a convenient method for equalizing the rates from western points to the foreign market, whether the route chosen by the shipper for his traffic be by way of Boston or of New York.

The petition of the Fitchburg Railroad Company states that "the New England railroads have been advised by the unanimous opinion of the counsel consulted by them that this practice was not illegal under the Interstate Commerce Bill inasmuch as the terms are available for all engaged in the like and contemporaneous transportation of such traffic under similar circumstances and conditions, and being equal to those by New York are neither unjust nor unreasonable. This commercial usage has in fact been looked upon as a vested right of this port (Boston) and upon the faith of its continuance vast sums have been expended to accommodate and permanently continue the export business. Unfortunately, however, adverse legal opinions have apparently been rendered by the advisers of the trunk lines, whose action, guided thereby, has practically stopped the practice, and has seriously

embarrassed the Boston export business, and threatens to put a stop to it, to the great detriment of this road and the business interests of Boston."

The prayer of the petition is that the Commission "authorize the trunk lines to bill export freight to Boston at New York rates, or take such other action as may seem best in order that this business may be continued upon as fair and favorable a basis as it has been done hitherto."

The other petitions are not essentially different. A hearing was had upon all together and evidence was taken in support of their allegations of fact. A party interested in the local grain and provision trade of Boston was also heard in favor of the contention that any concessions made in favor of the export trade of Boston ought in fairness to be extended to all other persons to whom grain and provisions may be consigned at that city from interior markets.

It was shown on the hearing that the Boston export trade was for the time being under considerable embarrassment arising from a doubt whether the railroad companies might lawfully continue the rebate which has been heretofore allowed. It was not so evident, however, that the Commission had the power to give relief. Indeed the petitioners when called upon to point out the provision of the Interstate Commerce Law under which the Commission had authority to grant the relief prayed, frankly confessed that there was difficulty in doing so. It was stated, however, that there were times when the rebate exceeded the ocean rates, and that then a suspension of the operation of the fourth section of the Act would be necessary, since otherwise the railroad companies would be liable to penalties for charging and receiving a greater sum for the transportation of grain and provisions from western points to Boston than from the same western points through Boston to the foreign market. But a case of this sort, it was conceded, would be quite exceptional, so that a suspension of the long and short haul clause of section 4 would not alone give the relief required.

What the companies desire is authority to continue payment of the rebate as well when it falls short of the ocean rates as when it exceeds it.

If what is paid under the name of a rebate were a rebate in fact, as understood in the second section of the Interstate Commerce Law, and if the effect of allowing it were to impose upon some classes of persons a greater charge for service rendered than was imposed upon others for a like contemporaneous service, under the same circumstances and conditions, and so effect what is described in the law as an unjust discrimination, it would neither be legal in itself nor could it be made legal by any order, assent, or permission made or given by the Commission. But as explained by the petitions and the evidence adduced in their support, the rebate has for its purpose to correct an inequality that would otherwise exist, and which, by making the cost of foreign shipments by way of Boston greater than by way of New York, would practically exclude shippers from the choice of the Boston route, though the distance from interior points to the foreign market would be practically no

greater by that route than by the other. This alleged necessity for the equalization of rates on export traffic is relied upon as the justification for the higher rate which is imposed on the traffic whose final destination is Boston, which higher rate, however, is averred to be in itself just and reasonable. If such is the real nature of the so-called rebate—if its purpose is only to do indirectly what might directly be done by bill of lading issued at the interior point of shipment for the delivery of the goods at the foreign destination, and if no discrimination is made between persons engaged in the foreign traffic, but the rebate is paid impartially, and only as a means of protecting the Boston route for the export trade against an excess in charge that would be ruinous to it, then it is obvious there is no occasion for calling upon the Commission to give sanction to a practice which would be legal without it. Indeed any legal ground for affirmative action on the part of the Commission is precluded when those who bring the practice to its attention do so with explanations of its propriety and insisting upon its lawfulness.

Whether all freights from interior points to Boston ought to be carried at rates as low as those prevailing from the same points to New York, is a question not legitimately before the Commission now.

The railroad companies, who are the only parties asking action at our hands, justify the differences now made on the ground of longer haul, while submitting to the rebate on the export trade, under a species of compulsion. If the exactions from the Boston traffic proper are excessive, the fact can only be adjudicated when somebody questions them in a proceeding instituted for the purpose of regular investigation.

It follows from what has been said that no order should be made on the petitions, and the petitioners have leave to withdraw them.

Morrison, Commissioner, concurs in the determination to make no order in the premises, and that leave be given to withdraw the petitions.

RE SUSPENSION OF THE FOURTH SECTION.*

The fourth section of the Act suspended for seventy-five days in the case of the transcontinental roads.

THE Commission made an order suspending the fourth section of the law for seventy-five days, as applied to the transcontinental roads, but subject to revocation and with a proviso that intermediate rates shall not be raised above those in force on April 30. This applies to the Northern Pacific, Southern Pacific, Atchison, Topeka and Santa Fé and St. Louis and San Francisco lines.

The Commission says:

"The Commission has made orders upon the application of the Southern Pacific, Northern Pacific, Atchison Topeka & Santa Fé and St. Louis & San Francisco railroad companies for relief from the operation of section 4 of the 'Act

*See ante, 25.

to regulate commerce,' permitting the carriers to establish rates to and from the Pacific coast at less amounts than to and from intermediate points, for a period not exceeding seventy-five days. This result has been reached upon considerations which are not necessary to be now stated in detail, but which appear to leave no present alternative.

"It is in evidence before us that rates to and from local points on some of the transcontinental lines have been somewhat reduced since April 5, and also that the through rates which prevailed prior to April 5 were the result of a war of rates among the lines, and produced a discrepancy between local rates and through rates, which the carriers agree was unreasonable and do not desire to return to.

"The Commission is earnestly engaged in considering the course which it will finally adopt in reference to section 4. Many conflicting interests have indicated a desire to be heard, and should have an opportunity, before our final decision is reached. All such persons are invited to present facts and arguments. For the purpose of this matter only, and without authorizing any general practice of that nature, in order to obtain the fullest information and afford the most extended facilities to distant points of the country, the Commission will receive affidavits as to matters of fact and printed or written arguments on matters of fact or of law, which should be presented without delay. This invitation extends to the general subject of questions arising under section 4, and is not limited to the petitions of the transcontinental lines.

"Meanwhile, the attention of the carriers is directed to the propriety of devoting the intermediate time to the preservation and adoption of tariffs which shall attempt to meet in good faith the requirements of the 'Act to regulate commerce,' giving the same a fair and reasonable interpretation in respect to all its various features. In making these orders the Commission does not finally determine upon their propriety or justice; but only that, pending the investigations now in progress, it is proper, right and just that the permission provided for be given, in order that the general business of the country shall receive no unnecessary shock or damage. The orders are intended to prevent, as far as may be possible, the occurrence of mischief in a period which, in a certain sense, is transitional and which must of necessity involve changes, the full extent of which cannot at present be foreseen."

The order in the case of each road recites in its preamble the circumstances peculiar to the road to which it applies. The following wording is common to all the orders:

"And it appearing to the Commission, after an investigation of said petition, and the facts presented in support thereof, to be a proper case for a temporary order until the Commission can make a complete examination of the matters alleged as reasons for relieving said common carrier from the operation of said section of the Act, it is ordered that the said application be, and the same is hereby granted temporarily, subject to modification or revocation by the Commission at any time upon hearing or otherwise, and that said railroad is hereby temporarily relieved from the operation of section 4 of

said Act, to the extent specified in the recitals of this order, and for a period not greater than seventy-five days from this date—subject, however, to the restriction that while this order remains in force said common carrier shall not charge or receive compensation for the transportation of property between sections on its line where more is charged for a short than for a longer haul which shall be greater than the rates hitherto in force prior to the 20th day of April, instant. It is a further condition of this order that a printed copy hereof shall be forthwith publicly posted and kept with the schedule of rates and charges at every station named herein upon the line of said company for the use of the public."

The following letter was sent by the Commission to Charles P. Clark, President of the New York & New Haven Railroad, in reference to the petitions presented by him on behalf of the various railroads of Southern New England for the suspension of the long and short haul clause:

"Your petitions were presented to us so late, while the transcontinental matters were pressing and on the eve of our departure for the South, that their immediate consideration is almost impossible. Moreover, you do not show in your petitions or prove by evidence any pressing exigency or imperative urgency for a temporary order such as has been shown in the not very numerous cases in which such orders have been made. They have been withheld in other instances upon that ground. It will not be very long before our views will be formulated; but at present it is a matter in process of hearing and consideration. Your statement that you 'are advised and believe' that no relief from us is necessary has also been observed, and a very vigorous protest against granting you this relief has been received, in which a hearing is demanded and

of which a copy is inclosed. Under all these circumstances the consideration of the petitions presented by you must be deferred until our return from our Southern trip."

The protest referred to is from C. C. Goodrich, general agent of the Hartford & New York Transportation Company. In it he says:

"We respectfully request notice, that we may be present and show the grievous wrongs done and force used at inland points reached by water in case parties competing by water do not combine in price and share the business with the railroads. If allowed by suspension of this law to give specials when touching a water point, they proceed at once to notify the water lines customers that if they do not ship by them (the railroad) at all times, they will be compelled to pay to the highest point when once navigation is closed. The law stops this wrong; and if the railroads are relieved from it, there is but one method of existence for the water lines, which is to join hands with the railroads and all charge so high that we may live, even though by dividing up the business the steamer lines go half loaded."

In the matter of a petition received from the Rome, Watertown & Ogdensburg Railroad, the Commission ordered the temporary suspension of the long and short haul as regards passenger traffic between stations where there is competition with the Grand Trunk. These are stations between Norwood on the East and Cape Vincent on the West.

(April 26, 1887.)

THE Commissioners left Washington for the South to investigate the facts set forth in the petition of the Southern Railway & Steamship Association* and expect to be absent for about two weeks.

See ante, 15.

UNITED STATES CIRCUIT COURT FOR THE DISTRICT OF OREGON.

Ex parte Richard KOEHLER, RECEIVER
OF the OREGON & CALIFORNIA RAIL-
WAY CO.

- *1. **Interstate Commerce.** The transportation of property from one State to another is interstate commerce, whether the carriers engaged in moving it or the vehicles on which it is borne cross the line of the State or not.
2. **Interstate Commerce Act.** This Act does not include or apply to all carriers engaged in interstate commerce, but only such as use a railway, or a railway and water craft "under common control, management or arrangement for a continuous carriage or shipment" of property from one State to another; nor does it apply to the carriage of property by rail wholly within the State, although shipped from or destined to a place without the State, so that such place is not in a foreign country.
3. **Case in judgment.** The O. R. & N.

*Head notes by DEADY, J.

Company carries certain kinds of goods on its steamers forth and back between Portland and San Francisco at special and reduced rates; the O. & C. Railway, under the management of the petitioner, carries the same kinds of goods forth and back between Portland and Ashland and way stations, in Oregon, at special and reduced rates; the O. P. Railway Company carries the same kind of goods forth and back between certain points on the line of the O. & C. Road and San Francisco via its railway from Albany to Yaquina Bay and thence by steamer, at reduced rates and thereby competes with the O. & C. and the O. R. & N. for business between said points and San Francisco. The O. R. & N. and the receiver of the O. & C. act independently, although concurrently, in making these reduced rates; but no through bill of lading or freight receipt is given, nor is either interested in or liable for the carriage of the goods beyond its own line of transportation. *Held*, that the O. & C. Road and the steamers of the O. R. &

N. Company in the carriage of the goods in question are not "used under any common control, management or arrangement for a continuous carriage or shipment" thereof, to and from San Francisco, within the intent and meaning of the Act, and that the carriage and handling of said goods so far as the receiver is concerned is performed wholly within the State, and therefore specially exempted by the terms of the Act from its operation; *provided*, the same are not directly shipped to or from a foreign country.

(April 4, 1887.)

PETITION by the Receiver of the Oregon & California Railway Company for instruction under the Interstate Commerce Act.

The facts and questions presented are stated in the opinion.

Mr. John W. Whalley, for petitioner.

Deady, J., delivered the following opinion:

The road of the Oregon & California Railway Company is 400 miles in length, and lies wholly within this State, between Portland and Ashland, near the southern boundary thereof. It is operated at present by a Receiver of this court, heretofore appointed on the application of the plaintiff in the pending suit of *Harrison v. Oregon & California R. Co.*, to enforce the lien of a mortgage thereon.

On March 30, 1887, the Receiver, *Mr. Richard Koehler*, filed a petition in this court asking for instruction whether the Oregon & California Road is within the purview of the Interstate Commerce Act lately passed by Congress, when engaged in carrying freight destined to or coming from a point or place without the State, under the circumstances herein stated.

It appears from the petition that the Receiver, acting under the instruction of this court heretofore given (*Ex parte Koehler*, 25 Fed. Rep. 73), has been and now is carrying wheat and other agricultural products of the State destined to San Francisco from certain points along the line of the Oregon & California Road, where there is competition with the Oregon Pacific Railway Company, at special and lower rates than if destined for Portland only; that such products are taken from Portland to San Francisco at a special rate on the steamers of the Oregon Railway & Navigation Company.

That said steamers also carry goods at special rates on their return trips from San Francisco to Portland, destined to the points aforesaid along the line of the Oregon & California Road, consisting of the products of California, China, the Hawaiian Islands and the Central and South American States, which goods are carried from Portland on the Oregon & California Road to the places of their destination at special and lower rates than those charged for goods shipped from Portland for other and noncompeting points on said road.

That the Oregon Pacific Railway Company is operating a line of railway from Albany to Yaquina Bay, Oregon, in conjunction with a line of steamers between the latter place and San Francisco, and is avowedly carrying and offering to carry freight to and from San Francisco

and portions of the country traversed by the road of the Oregon & California Company at cost; and that unless the Receiver is allowed to make a special rate for freight between the points on the Oregon & California Road subject to this competition and San Francisco, said road will not be able to retain its share of this business.

That although the Oregon Railway & Navigation Company and the Receiver of the Oregon & California Road, in making special rates as aforesaid, purpose to obtain each for itself the carriage of goods which otherwise it might lose, yet there is no agreement or guaranty between them on the subject; nor is such freight ever shipped on a through bill of lading, or the one party in any way liable for the default or miscarriage of the other in respect thereto, but each for itself carries the same over its own route,—it being represented to and understood by the shippers that if they send such goods by these lines of transportation they will be carried over each at a certain reduced rate, and that the Oregon & California road and the Oregon Railway & Navigation steamers "are not under any 'common control, management or arrangement for a continuous carriage or shipment' in any manner," unless the facts herein stated make them so; and on this point the Receiver prays the advice and direction of the court.

The first section of the Act reads as follows:

"That the provisions of this Act shall apply to any common carrier or carriers engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water when both are used, under a common control, management or arrangement, for a continuous carriage or shipment from one State or Territory of the United States or the District of Columbia to any other State or Territory of the United States or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States, and also to the transportation in like manner of property shipped from any place in the United States to a foreign country and carried from such place to a port of transshipment, or shipped from a foreign country to any place in the United States and carried to such place from a port of entry either in the United States or an adjacent foreign country; *Provided, however, That the provisions of this Act shall not apply to the transportation of passengers or property, or to the receiving, delivering, storage or handling of property wholly within one State, and not shipped to or from a foreign country from or to any State or Territory as aforesaid.*

"The term 'railroad,' as used in this Act, shall include all bridges and ferries used or operated in connection with any railroad, and also all the road in use by any corporation operating a railroad, whether owned or operated under a contract, agreement or lease; and the term 'transportation' shall include all instrumentalities of shipment or carriage.

"All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, or for the receiving, delivering, storage or handling of such property, shall be

reasonable and just; and every unjust and unreasonable charge for such service is prohibited and declared to be unlawful."

There is no doubt that this railway and these steamers are engaged in interstate commerce in the carriage of these goods under the circumstances stated. Any carriage of goods which crosses a state line is interstate commerce, and the fact that transportation from one State to another is accomplished in whole or in part through the agency of independent and unrelated carriers up to and from the state line, does not affect the character of the transaction in this respect; for whenever an article destined to a place without the State is shipped or started therefor, it becomes the subject of interstate commerce, and the carriers employed in the transportation thereof, although neither of them may pass from one State to the other, are subject, as instruments of such commerce, to national legislation and control. *The Daniel Ball*, 10 Wall. 564 [77 U. S. bk. 19, L. ed. 1001]; *Hall v. DeCuir*, 95 U. S. 485 [Bk. 24, L. ed. 547]; *Wabash etc. R. Co. v. Ill.* 118 U. S. 572 [Bk. 80, L. ed. 249]; *Ex parte Koehler*, 25 Fed. Rep. 76.

But the Interstate Commerce Act does not include or apply to all the instrumentalities or agencies used or engaged in interstate commerce. It does not include any water craft, unless it is used in connection with a railway "under a common control, management or arrangement for a continuous carriage or shipment" from one State or Territory of the United States to another, or to or from such State or Territory from or to a foreign country.

Nor does it include the carriage or handling of property by rail or otherwise, when such carriage and handling is performed wholly within a State, unless the same is directly shipped to or from a foreign country from or to such a State. The mere fact that a railway wholly within a State, and a vessel running between said State and another, meet at a point within the railway State, and thus form a continuous line of transportation between the two States, by the one taking up the goods delivered by the other, at its terminus, and carrying them thence to their destination, does not bring the carriers who so use the railway and steamer within the Act. So long as the railway and steamer are each operated under a separate and distinct control, making its own rates and only liable for the carriage and safe delivery of the goods at the end of its own route, the Act does not apply to the transaction.

To make these carriers subject to the Act,

the railway and vessel must, as therein provided, be operated or used under a "common control"—a control to which each is alike subject, and by which rates are prescribed and bills of lading given for the carriage of goods over both routes as one.

On this apparently plain exposition of the Act the railway of the Oregon and California Company and the steamers of the Oregon Railway & Navigation Company are not "used under a common control, management or arrangement" in this respect, and therefore are not subject to the Act, although engaged in interstate commerce. Each carrier makes its own rate, and undertakes for the carriage and delivery of goods not otherwise than over its own route. The fact that both are interested in maintaining the traffic between Oregon and California over this route and by this means, so as to secure it against the competition of the Oregon Pacific, is not material. Each is at liberty, as far as the other is concerned, to raise or further reduce its rates to-morrow, if the exigencies of the traffic permit or require it.

The present rate is not the result of any "arrangement" between the two carriers for "continuous carriage or shipment" from Oregon to San Francisco, and *vice versa*, but only an independent, although concurrent, reduction of rates by each over its own route, for the purpose of retaining the traffic thereon against the competition of a rival route.

The questions involved in this inquiry arise on the first section of the Act. Taking its several clauses together, my impression is that no carrier is within its operation unless he is engaged in interstate commerce by means of a railway or railway and water craft under one "control, management or arrangement," and that by such means or instrumentalities he does actually and continuously carry goods from within to without the State or from without to within the same. He may form a link in a line of interstate commerce; but if his relation to such commerce or interest in or liability for the carriage thereof does not extend beyond the line of the State he is not within the Act.

The Receiver is, therefore, instructed that he is at liberty, so far as the Act is concerned, to make special rates for the carriage of goods from or to points on the line of his road for the purpose of obtaining or retaining business therefor, against other carriers competing for the same. But this direction does not apply to goods shipped directly to or from a foreign country over the line of the Oregon & California Road.

UNITED STATES CIRCUIT COURT FOR THE EASTERN DISTRICT OF LOUISIANA.

Re Petition of the Receivers of the TEXAS & PACIFIC R. CO.

The "circumstances and conditions" touching the transportation of passengers and freight to and from the Republic of Mexico through El Paso, Texas, by the Texas & Pacific R. Co. are (within the meaning of section 4 of the Interstate Commerce Act) so substantially different from those surrounding transportation to other points on said railway as to justify said Com-

pany in establishing lower rates at El Paso on freights transported for export into and received from Mexico and for delivery at El Paso than is charged at points between that city and the points where the freights originate and where the distance and haul are shorter.

(April 12, 1887.)

PETITION by the Receivers of the Texas & Pacific R. Co. for a ruling by the court as to their right to establish lower rates at El Paso on traffic to and from Mexico than at other

points to and from which the haul was shorter.

The petition stated that the enforcement of the "long and short haul" section (§ 4) of the Interstate Commerce Law would work irreparable injury to the road under the charge of said receivers, petitioners; that said section forbids charging less for longer than for shorter haul when "the circumstances and conditions are substantially similar;" that the petitioners believe that the circumstances and conditions touching traffic with the Republic of Mexico through El Paso and from the Republic of Mexico to points in the United States are substantially different from those that surround the transportation of freights to other points on the line of said Texas & Pacific Railway, and that they would be justified in establishing lower rates there on freights transported for ex-

port into and received from Mexico and for delivery at El Paso than is charged at points between that city and the points where the freights originate and where the distance and haul are shorter.

Pardee, C. J., delivered the following opinion:

It is considered that the petitioners are correct in their construction of the Act of Congress approved February 4, 1887, commonly known as the Interstate Commerce Law, as to the transportation of passengers to and from the City of El Paso, in the State of Texas, as in the foregoing petition set forth.

And said petitioners are hereby instructed to conduct the same according to their said construction, until further order of the court.

UNITED STATES SUPREME COURT.

WABASH, ST. LOUIS AND PACIFIC RAILWAY COMPANY, *Plff. in Err.*,

v.

PEOPLE OF THE STATE OF ILLINOIS.

(From Lawyers' ed. U. S. Reports, Bk. 30, p. 244.)

*A Statute of Illinois enacts that if any railroad company shall, within that State, charge or receive for transporting passengers or freight of the same class, the same or a greater sum for any distance than it does for a longer distance, it shall be liable to a penalty for unjust discrimination. The defendant in this case made such discrimination in regard to goods transported over the same road or roads from Peoria in Illinois and from Gilman in Illinois to New York; charging more for the same class of goods carried from Gilman than from Peoria, the former being eighty-six miles nearer to New York than the latter, this difference being in the length of the line within the State of Illinois.

1. This court follows the Supreme Court of Illinois in holding that the Statute of Illinois must be construed to include a transportation of goods under one contract and by one voyage from the interior of the State of Illinois to New York.
2. This court holds further that such a transportation is "commerce among the States," even as to that part of the voyage which lies within the State of Illinois, while it is not denied that there may be transportation of goods which is begun and ended within its limits and disconnected with any carriage outside of the State, which is not commerce among the States.
3. The latter is subject to regulation by the State, and the Statute of Illinois is valid as applied to it. But the former is national in its character, and its

*Head notes by Mr. Justice Miller.

NOTE.—Constitutional law; regulation of interstate commerce; how far the power of Congress is exclusive. For full discussion, see Gloucester Ferry Co. v. Pa. 114 U. S. bk. 22. L. ed. p. 158, note.

regulation is confided to Congress exclusively, by that clause of the Constitution which empowers it to regulate commerce among the States.

4. The cases of *Munn v. Illinois*, *C. B. & Q. R. R. Co. v. Iowa*, and *Peik v. Chicago & Northwestern R. R. Co.*, all in 94 U. S. [Bk. 24, L. ed.], examined in regard to this question, and held, in view of other cases decided near the same time, not to establish a contrary doctrine.
5. Notwithstanding what is there said, this court holds now, and has never consciously held otherwise, that a statute of a State, intended to regulate or to tax, or to impose any other restriction upon the transmission of persons or property or telegraphic messages from one State to another, is not within that class of legislation which the States may enact in the absence of legislation by Congress; and that such statutes are void even as to that part of such transmission which may be within the State.
6. It follows that the Statute of Illinois, as construed by the Supreme Court of the State, and as applied to the transaction under consideration, is forbidden by the Constitution of the United States; and the judgment of that court is reversed.

(Argued Apr. 14, 15, 1886. Decided Oct. 25, 1886.)

IN ERROR to the Supreme Court of the State of Illinois. *Reversed.*

The case and agreed statement of facts appear in the opinion.

Messrs. H. S. Greene and W. C. Goudy, for plaintiff in error:

Under section 8 of article 1 of the Constitution, a regulation of commerce which is of a purely local character, and does not admit of general application, may be adopted and enforced by local authority. But where the subject of regulation is of national concern, or admits of one uniform plan or system of regulation, it is exclusively within the control of Congress.

Cooley v. Phila. 12 How. 299 (53 U. S. bk. 13, L. ed. 996); *Gilman v. Phila.* 8 Wall. 718 (70 U. S. bk. 18, L. ed. 96); *Passenger Cases*, 7 How. 283 (48 U. S. bk. 12, L. ed. 702); *Thames Bank v. Lovell*, 18 Conn. 500; *Lemmon v. People*, 20 N. Y. 562; *State Freight Tax Case*, 15 Wall. 232 (82 U. S. bk. 21, L. ed. 146); *Henderson v. Mayor, etc.* 92 U. S. 259 (Bk. 23, L. ed. 543); *Sherlock v. Alling*, 93 U. S. 99 (Bk. 23, L. ed. 819); *Welton v. Mo.* 91 U. S. 275 (Bk. 23, L. ed. 347); *Co. of Mobile v. Kimball*, 102 U. S. 691 (Bk. 26, L. ed. 238).

The non-exercise by Congress of its power over matters within its exclusive control is equivalent to a declaration that commerce as to such matters shall be free from any restriction.

Welton v. Mo and *Co. of Mobile v. Kimball*, *supra*; *Webber v. Va.* 103 U. S. 844 (Bk. 26, L. ed. 565); *Gloucester Ferry Co. v. Pa.* 114 U. S. 204 (Bk. 29, L. ed. 162); *Brown v. Houston*, 114 U. S. 630 (Bk. 29, L. ed. 260).

The statute in question cannot be sustained as an exercise of the police power.

R. R. Co. v. Husen, 95 U. S. 469 (Bk. 24, L. ed. 529); *New Orleans Gas Co. v. Louisiana Light etc. Co.* 115 U. S. 660 (Bk. 29, L. ed. 520); *Walling v. Mich.* 116 U. S. 460 (Bk. 29, L. ed. 695); *Carton v. Ill. Cent. R. R. Co.* 59 Iowa, 150.

Mr. George Hunt, Atty-Gen. of Illinois, for defendants in error:

The Act in question has for its object, neither directly nor indirectly, the promotion, restraint, or regulation of commerce among the States. It presents no hinderances, burdens, privileges or encouragements to commerce among the States, and it seeks no revenue, or advantage or disadvantage, to this or any other State.

Not everything which affects commerce is a regulation of it, within the meaning of the Constitution.

State Tax on R. Gross Receipts, 15 Wall. 284 (82 U. S. bk. 21, L. ed. 164); *Munn v. Ill.* 94 U. S. 113 (Bk. 24, L. ed. 77); *Gibbons v. Ogden*, 9 Wheat. 1 (22 U. S. bk. 6, L. ed. 23); *Passenger Cases*, 7 How. 283 (48 U. S. bk. 12, L. ed. 702); *Slaughter House Cases*, 16 Wall. 36 (83 U. S. bk. 21, L. ed. 394).

The subject matter of this Act is the discrimination in the rates charged for carriage. It neither requires the defendant to carry, nor prevents it from carrying, any freight between this State and other States. It may carry any goods it chooses, at any time and in any manner. The Act does not interfere with such commerce. But the defendant being a public servant, it requires it not to injure one citizen of the State by imposing upon him a greater charge than it imposes upon another for a similar service. The charge and collection of exorbitant and discriminating rates constitute a violation of the Act.

The Act in question is not in conflict with any Act of Congress and is within the power of the State to enforce. The grant of commercial power to Congress does not exclude the exercise by the State of authority over its subject matter.

Cooley v. Port Wardens, 12 How. 818 (53 U. S. bk. 13, L. ed. 1004).

If this Act amounts to a regulation of interstate commerce, it falls within that class of powers which the State may exercise in the absence of controlling action by Congress.

Houston v. Moore, 5 Wheat. 1 (18 U. S. bk. 5, L. ed. 19); *Sturges v. Crowninshield*, 4 Wheat. 198 (17 U. S. bk. 4, L. ed. 548); *Willson v. Blackbird Creek Co.* 2 Pet. 251 (27 U. S. bk. 7, L. ed. 414); *License Cases*, 5 How. 504 (48 U. S. bk. 12, L. ed. 256); *Cooley v. Port Wardens*, 12 How. 299 (53 U. S. bk. 13, L. ed. 996); *Gilman v. Phila.* 8 Wall. 718 (70 U. S. bk. 18, L. ed. 96).

This case is controlled by the decisions of this court in

Peik v. Chicago & N W R. Co. 94 U. S. 164 (Bk. 24, L. ed. 97); *O. B. & Q. R. R. Co. v. Iowa*, 94 U. S. 155 (Bk. 24, L. ed. 94); *Munn v. Ill. supra*, *R. R. Co. v. Fuller*, 17 Wall. 560 (84 U. S. bk. 21, L. ed. 710).

The law of Wisconsin, sustained in the *Peik Case*, fixed the maximum rate to be charged for the transportation of freight from points within to points outside of the State. In this case the Act authorizes the same thing, and undertakes to prevent discrimination in the rates charged. Only that portion of the Act is in issue which forbids unjust discrimination.

The Act in question is a police regulation. It forbids the making and enforcing, by railroad companies doing business in the State, of contracts which unjustly discriminate against one citizen, or locality, at the expense of another. It is not an attempt to regulate commerce among the States, or to interfere with the authority of Congress in regard thereto. It in no way attempts to tax, hinder, delay, control or regulate interstate commerce, but simply brands a discriminating contract as illegal, and provides a penalty for an illegal act. It merely protects persons within the State against unjust discrimination, the offense which it makes punishable.

Mr. Justice Miller delivered the opinion of the court

This is a writ of error to the Supreme Court of Illinois. It was argued here at the last term of this court.

The case was tried in the court of original jurisdiction on an agreed statement of facts. This agreement is short and is here inserted in full.

"For the purposes of the trial of said cause, and to save the making of proof therein, it is hereby agreed on the part of the defendant that the allegations in the first count of the declaration are true, except that part of said count which avers that the same proportionate discrimination was made in the transportation of said property—oil cake and corn—in the State of Illinois that was made between Peoria and the City of New York, and Gilman and New York City; which averment is not admitted, because defendant claims that it is an inference from the fact that the rates charged in each case of said transportation of oil cake and corn were through rates; but it is admitted that said averment is a proper one."

The first count in the declaration, which is referred to in this memorandum of agreement, charged that the Wabash, St. Louis and Pacific Railway Company had, in violation of a Statute of the State of Illinois, been guilty of an unjust discrimination in its rates or charges of toll and compensation for the transportation of freight. The specific allegation is that the Railroad Company charged Elder & McKinney

for transporting twenty-six thousand pounds of goods and chattels from Peoria, in the State of Illinois, to New York City, the sum of \$39, being at the rate of fifteen cents per hundred pounds for said carload; and that on the same day it agreed to carry and transport for Isaac Bailey and F. O. Swannell another carload of goods and chattels from Gilman, in the State of Illinois, to said City of New York, for which it charged the sum of \$65, being at the rate of twenty-five cents per hundred pounds. And it is alleged that the carload transported for Elder & McKinney was carried eighty-six miles further in the State of Illinois than the other carload of the same weight. This freight being of the same class in both instances, and carried over the same road, except as to the difference in the distance, it is obvious that a discrimination against Bailey & Swannell was made in the charges against them as compared with those against Elder & McKinney; and this is true whether we regard the charge for the whole distance from the terminal points in Illinois to New York City or the proportionate charge for the haul within the State of Illinois.

The language of the statute which is supposed to be violated by this transaction is to be found in chapter 114 of the Revised Statutes of Illinois, section 126. It is there enacted that if any railroad corporation shall charge, collect, or receive for the transportation of any passenger or freight of any description upon its railroad, for any distance within the State, the same or a greater amount of toll or compensation than is at the same time charged, collected, or received for the transportation in the same direction of any passenger or like quantity of freight of the same class over a greater distance of the same road, all such discriminating rates, charges, collections, or receipts, whether made directly or by means of rebate, drawback, or other shift or evasion, shall be deemed and taken against any such railroad corporation as *prima facie* evidence of unjust discrimination prohibited by the provisions of this Act. The statute further provides a penalty of not over \$5,000 for that offense, and also that the party aggrieved shall have a right to recover three times the amount of damages sustained, with costs and attorneys' fees.

To this declaration the Railroad Company demurred. The demurrer was sustained by the lower court in Illinois, and judgment rendered for the defendant. This, however, was reversed by the Supreme Court of that State, and on the case being remanded the demurrer was overruled; and the defendant pleaded, among other things, that the rates of toll charged in the declaration were charged and collected for services rendered under an agreement and undertaking to transport freight from Gilman, in the State of Illinois, to New York City, in the State of New York, and that in such undertaking and agreement the portion of the services rendered or to be rendered within the State of Illinois was not apportioned separate from such entire service; that the action is founded solely upon the supposed authority of an Act of the Legislature of the State of Illinois, approved April 7, 1871; and that said Act does not control or affect or relate to undertakings to transport freight from the State of

Illinois to the State of New York, which falls within the operation, and is wholly controlled by the terms of the third clause of section eight of article one of the Constitution of the United States, which the defendant sets up and relies upon as a complete defense and protection in said action. This question of whether the Statute of Illinois, as applied to the case in hand, is in violation of the Constitution of the United States, as set forth in the plea, was also raised on the trial by a request of the defendant, the Railroad Company, that the court should hold certain propositions of law on the same subject, which propositions are as follows:

"The court holds as law that, as the tolls or rates of compensation charged and collected by the defendant, in the instance in question, were for transportation service rendered in transporting freight from a point in the State of Illinois to a point in the State of New York, under an entire contract or undertaking to transport such freight the whole distance between such points, that the Act of the General Assembly of the State of Illinois, approved May 2, 1873, entitled 'An Act to Prevent Extortion and Unjust Discrimination in the Rates Charged for the Transportation of Passengers and Freight on Railroads in This State, and to Punish the Same, and Prescribe a Mode of Procedure and Rules of Evidence in Relation Thereto, and to Repeal an Act Entitled 'An Act to Prevent Unjust Discrimination and Extortion in the Rates to be Charged by the Different Railroads in the State for the Transportation of Freight on Said Roads,' approved April 7, 1871,' does not apply to or control such tolls and charges, nor can the defendant be held liable in this action for the penalties prescribed by said Act.

"The court further holds as law that said Act in relation to extortion and unjust discrimination cannot apply to transportation service, rendered partly without the State and consisting of the transportation of freight from within the State of Illinois to the State of New York, and that said Act cannot operate beyond the limits of the State of Illinois.

"The court further holds as matter of law that the transportation in question falls within the proper description of 'commerce among the States,' and as such can only be regulated by the Congress of the United States under the terms of the third clause of section 8 of article 1 of the Constitution of the United States."

All of these propositions were denied by the court, and judgment rendered against the defendant, which judgment was affirmed by the supreme court on appeal.

The matter thus presented, as to the controlling influence of the Constitution of the United States over this legislation of the State of Illinois, raises the question which confers jurisdiction on this court. Although the precise point presented by this case may not have been heretofore decided by this court, the general subject of the power of the State Legislatures to regulate taxes, fares and tolls for passengers, and transportation of freight over railroads within their limits has been very much considered recently; *State Freight Tax Case*, 15 Wall. 232 [82 U. S. bk. 21, L. ed. 146]; *Munn v. Illinois*, 94 U. S. 133 [Bk. 24, L. ed. 86]; *Chicago etc. R. R. Co. v. Cutts*, Id. 155 [Bk. 24, L. ed., 94];

Peik v. Chicago etc. R. Co. Id. 164 [Bk. 24, L. ed. 97]; *Stone v. Farmers Loan & Trust Co.* 116 U. S. 307 [Bk. 29, L. ed. 636]; *Gloucester Ferry Co. v. Pa.* 114 U. S. 204 [Bk. 29, L. ed. 162]; *Pickard v. Pullman Southern Car Co.* 117 U. S. 34 [Bk. 29, L. ed. 785]; and the question how far such regulations, made by the States and under state authority, are valid or void, as they may affect the transportation of goods through more than one State, in one voyage, is not entirely new here. The Supreme Court of Illinois, in the case now before us, conceding that each of these contracts was in itself a unit, and that the pay received by the Illinois Railroad Company was the compensation for the entire transportation from the point of departure in the State of Illinois to the City of New York, holds that while the Statute of Illinois is inoperative upon that part of the contract which has reference to the transportation outside of the State, it is binding and effectual as to so much of the transportation as was within the limits of the State of Illinois; *People v. Wabash, St. L. & P. R. R. Co.* 104 Ill. 476; and undertaking for itself to apportion the rates charged over the whole route, decides that the contract and the receipt of the money for so much of it as was performed within the State of Illinois violate the statute of the State on that subject.

If the Illinois Statute could be construed to apply exclusively to contracts for a carriage which begins and ends within the State, disconnected from a continuous transportation through or into other States, there does not seem to be any difficulty in holding it to be valid. For instance, a contract might be made to carry goods for a certain price from Cairo to Chicago, or from Chicago to Alton. The charges for these might be within the competency of the Illinois Legislature to regulate. The reason for this is that both the charge and the actual transportation in such cases are exclusively confined to the limits of territory of the State, and is not commerce among the States, or interstate commerce, but is exclusively commerce within the State. So far, therefore, as this class of transportation, as an element of commerce, is affected by the statute under consideration, it is not subject to the constitutional provision concerning commerce among the States. It has often been held in this court, and there can be no doubt about it, that there is a commerce wholly within the State which is not subject to the constitutional provision; and the distinction between commerce among the States and the other class of commerce, between the citizens of a single State and conducted within its limits exclusively, is one which has been fully recognized in this court, although it may not be always easy, where the lines of these classes approach each other, to distinguish between the one and the other. *The Daniel Ball v. United States*, 10 Wall. 557 [77 U. S. bk. 19, L. ed. 999]; *Hall v. DeCuir*, 95 U. S. 485 [Bk. 24, L. ed. 547]; *Western Union Telegraph Co. v. Texas*, 105 U. S. 460 [Bk. 26, L. ed. 1067].

It might admit of question whether the Statute of Illinois, now under consideration, was designed by its framers to affect any other class of transportation than that which begins and ends within the limits of the State. The Supreme Court of Illinois having in this case

given an interpretation which makes it apply to what we understand to be commerce among the States, although the contract was made within the State of Illinois, and a part of its performance was within the same State, we are bound, in this court, to accept that construction. It becomes, therefore, necessary to inquire whether the charge exacted from the shippers in this case was a charge for interstate transportation, or was susceptible of a division which would allow so much of it to attach to commerce strictly within the State, and so much more to commerce in other States. The transportation, which is the subject matter of the contract, being the point on which the decision of the case must rest, was it a transportation limited to the State of Illinois, or was it a transportation covering all the lines between Gilman in the one case and Peoria in the other in the State of Illinois, and the City of New York in the State of New York?

The Supreme Court of Illinois does not place its judgment in the present case on the ground that the transportation and the charge are exclusively state commerce; but, conceding that it may be a case of commerce among the States, or interstate commerce, which Congress would have the right to regulate if it had attempted to do so, argues that this Statute of Illinois belongs to that class of commercial regulations which may be established by the laws of a State until Congress shall have exercised its power on that subject; and to this proposition a large part of the argument of the Attorney-General of the State before us is devoted, although he earnestly insists that the Statute of Illinois, which is the foundation of this action, is not a regulation of commerce within the meaning of the Constitution of the United States. In support of its view of the subject the Supreme Court of Illinois cites the cases of *Munn v. Illinois*, *C. B. & Q. R. R. Co. v. Iowa* and *Peik v. Chicago & N. W. R. R. Co.*, above referred to. It cannot be denied that the general language of the court in these cases, upon the power of Congress to regulate commerce, may be susceptible of the meaning which the Illinois Court places upon it.

In *Munn v. Illinois* [*supra*] the language of this court upon that subject is as follows:

"We come now to consider the effect upon this statute of the power of Congress to regulate commerce. It was very properly said in the case of *State Tax on Railway Gross Receipts*, 15 Wall. 293 [82 U. S. bk. 21, L. ed. 167] that 'It is not everything that affects commerce that amounts to a regulation of it, within the meaning of the Constitution.' The warehouses of these plaintiffs in error are situated and their business carried on exclusively within the limits of the State of Illinois. They are used as instruments by those engaged in state as well as those engaged in interstate commerce; but they are no more necessarily a part of commerce itself than the dray or the cart by which, but for them, grain would be transferred from one railroad station to another. Incidentally they may become connected with interstate commerce, but not necessarily so. Their regulation is a thing of domestic concern, and, certainly, until Congress acts in reference to their interstate relations, the State may exercise all the powers of government over them, even though in so doing

it may indirectly operate upon commerce outside its immediate jurisdiction. We do not say that a case may not arise in which it will be found that a State, under the form of regulating its own affairs, has encroached upon the exclusive domain of Congress in respect to interstate commerce; but we do say that, upon the facts as they are represented to us in this record, that has not been done."

In the case of *C. B. & Q. R. R. Co. v. Iowa*, [*supra*] which directly related to railroad transportation, the language is as follows:

"The objection that the statute complained of is void because it amounts to a regulation of commerce among the States, has been sufficiently considered in the case of *Munn v. Illinois*. This road, like the warehouse in that case, is situated within the limits of a single State. Its business is carried on there, and its regulation is a matter of domestic concern. It is employed in state as well as in interstate commerce, and, until Congress acts, the State must be permitted to adopt such rules and regulations as may be necessary for the promotion of the general welfare of the people within its own jurisdiction, even though in doing so those without may be indirectly affected."

But the strongest language used by this court in these cases is to be found in *Peik v. Chicago & N. W. R. R. Co.* [*supra*], as follows:

"As to the effect of the statute as a regulation of interstate commerce, the law is confined to state commerce, or such interstate commerce as directly affects the people of Wisconsin. Until Congress acts in reference to the relations of this company to interstate commerce, it is certainly within the power of Wisconsin to regulate its fares, etc., so far as they are of domestic concern. With the people of Wisconsin this company has domestic relations. Incidentally, these may reach beyond the State. But certainly, until Congress undertakes to legislate for those who are without the State, Wisconsin may provide for those within, even though it may indirectly affect those without."

These extracts show that the question of the right of the State to regulate the rates of fares and tolls on railroads, and how far that right was affected by the commerce clause of the Constitution of the United States, was presented to the court in those cases. And it must be admitted that, in a general way, the court treated the cases then before it as belonging to that class of regulations of commerce which, like pilotage, bridging navigable rivers, and many others, could be acted upon by the States, in the absence of any legislation by Congress on the same subject.

By the slightest attention to the matter it will be readily seen that the circumstances under which a bridge may be authorized across a navigable stream within the limits of a State for the use of a public highway, and the local rules which shall govern the conduct of the pilots of each of the various harbors of the coasts of the United States, depend upon principles far more limited in their application and importance than those which should regulate the transportation of persons and property across the half or the whole of the continent, over the territory of half a dozen States, through which they are carried without change of car or breaking bulk.

Of the members of the court who concurred in those opinions, there being two dissentients, but three remain, and the writer of this opinion is one of the three. He is prepared to take his share of the responsibility for the language used in those opinions, including the extracts above presented. He does not feel called upon to say whether those extracts justify the decision of the Illinois Court in the present case. It will be seen from the opinions themselves, and from the arguments of counsel presented in the reports, that the question did not receive any very elaborate consideration, either in the opinions of the court or in the arguments of counsel. And the question how far a charge made for a continuous transportation over several States, which included a State whose laws were in question, may be divided into separate charges for each State, in enforcing the power of the State to regulate the fares of its railroads, was evidently not fully considered. These three cases, with others concerning the same subject, were argued at the same time by able counsel, and in relation to the different laws affecting the subject, of the States of Illinois, Iowa, Wisconsin, and Minnesota; the main question in all the cases being the right of the State to establish any limitation upon the power of the railroad companies to fix the price at which they would carry passengers and freight. It was strenuously denied, and very confidently, by all the railroad companies, that any legislative body whatever had a right to limit the tolls and charges to be made by the carrying companies for transportation. And the great question to be decided, and which was decided, and which was argued in all those cases, was the right of the State, within which a railroad company did business, to regulate or limit the amount of any of these traffic charges.

The importance of that question overshadowed all others, and the case of *Munn v. Illinois* was selected by the court as the most appropriate one in which to give its opinion on that subject, because that case presented the question of a private citizen, or unincorporated partnership, engaged in the warehousing business in Chicago, free from any claim of right or contract under an Act of incorporation of any State whatever, and free from the question of continuous transportation through several States. And in that case the court was presented with the question, which it decided, whether anyone engaged in a public business, in which all the public had a right to require his service, could be regulated by Acts of the Legislature in the exercise of this public function and public duty, so far as to limit the amount of charges that should be made for such services.

The railroad companies set up another defense, apart from denying the general right of the Legislature to regulate transportation charges, namely: that in their charters from the States they each had a contract, express or implied, that they might regulate and establish their own fares and rates of transportation. These two questions were of primary importance; and though it is true that, as incidental or auxiliary to these, the question of the exclusive right of Congress to make such regulations of charges as any legislative power had the right to make, to the exclusion of the States, was presented, it

received but little attention at the hands of the court and was passed over with the remarks in the opinions of the court which have been cited.

The case of *The State Freight Tax* [supra] which was decided only four years before these cases, held an Act of the Legislature of Pennsylvania void, as being in conflict with the commerce clause of the Constitution of the United States, which levied a tax upon all freight carried through the State by any railroad company, or into it from any other State, or out of it into any other State, and valid as to all freight the carriage of which was begun and ended within the limits of the State; because the former was a regulation of interstate commerce, and the latter was a commerce solely within the State which it had a right to regulate. And the question now under consideration, whether these statutes were of a class which the Legislatures of the States could enact in the absence of any Act of Congress on the subject, was considered and decided in the negative.

It is impossible to see any distinction in its effect upon commerce of either class, between a statute which regulates the charges for transportation, and a statute which levies a tax for the benefit of the State upon the same transportation; and in fact the judgment of the court in the *State Freight Tax Case* rested upon the ground that the tax was always added to the cost of transportation, and thus was a tax in effect upon the privilege of carrying the goods through the State. It is also very difficult to believe that the court consciously intended to overrule the first of these cases without any reference to it in the opinion.

At the very next term of the court, after the delivery of these opinions, the case of *Hall v. De Cuir* [supra] was decided, in which the same point was considered, in reference to a Statute of the State of Louisiana which attempted to regulate the carriage of passengers upon railroads, steamboats, and other public conveyances, and which provided that no regulations of any companies engaged in that business should make any discrimination on account of race or color. This statute by its terms was limited to persons engaged in that class of business within the State, as is the one now under consideration; and the case presented under the statute was that of a person of color who took passage from New Orleans for Hermitage, both places being within the limits of the State of Louisiana, and was refused accommodations in the general cabin on account of her color. In regard to this, the court declared that "For the purposes of this case, we must treat the Act of Louisiana of February 28, 1869, as requiring those engaged in interstate commerce to give all persons traveling in that State, upon the public conveyances employed in such business, equal rights and privileges in all parts of the conveyance, without distinction or discrimination on account of race or color * * * . We have nothing whatever to do with it as a regulation of internal commerce, or as affecting anything else than commerce among the States."

And, speaking in reference to the right of the States in certain classes of interstate commerce to pass laws regulating them, the opinion says:

"The line which separates the powers of the State from this exclusive power of Congress,

is not always distinctly marked; and oftentimes it is not easy to determine on which side a particular case belongs. Judges not unfrequently differ in their reasons for a decision in which they concur. Under such circumstances it would be a useless task to undertake to fix an arbitrary rule by which the line must, in all cases, be located. It is far better to leave a matter of such delicacy to be settled in each case upon a view of the particular rights involved. But we think it may safely be said that state legislation which seeks to impose a direct burden upon interstate commerce, or to interfere directly with its freedom, does encroach upon the exclusive power of Congress. The statute now under consideration, in our opinion, occupies that position. It does not act upon the business through the local instruments to be employed after coming within the State, but directly upon the business as it comes into the State from without, or goes out from within. While it purports only to control the carrier when engaged within the State, it must necessarily influence his conduct to some extent in the management of his business throughout his entire voyage. * * * It was to meet just such a case that the commercial clause in the Constitution was adopted. The River Mississippi passes through or along the borders of ten different States, and its tributaries reach many more. The commerce upon these waters is immense, and its regulation clearly a matter of national concern. If each State was at liberty to regulate the conduct of carriers while within its jurisdiction, the confusion likely to follow could not but be productive of great inconvenience and unnecessary hardship. Each State could provide for its own passengers and regulate the transportation of its own freight, regardless of the interests of others. Nay, more, it could prescribe rules by which the carrier must be governed within the State in respect to passengers and property brought from without. On one side of the river or its tributaries he might be required to observe one set of rules, and on the other another. Commerce cannot flourish in the midst of such embarrassments."

The applicability of this language to the case now under consideration, of a continuous transportation of goods from New York to central Illinois, or from the latter to New York, is obvious, and it is not easy to see how any distinction can be made. Whatever may be the instrumentalities by which this transportation from the one point to the other is effected, it is but one voyage, as much so as that of the steamboat on the Mississippi River. It is not the railroads themselves that are regulated by this Act of the Illinois Legislature, so much as the charge for transportation; and, in language just cited, if each one of the States through whose territories these goods are transported can fix its own rules for prices, for modes of transit, for times and modes of delivery, and all the other incidents of transportation to which the word "regulation" can be applied, it is readily seen that the embarrassments upon interstate transportation, as an element of interstate commerce, might be too oppressive to be submitted to. "It was," in the language of the court cited above, "to meet just such a case that the commerce clause of the Constitution was adopted."

It cannot be too strongly insisted upon, that

the right of continuous transportation from one end of the country to the other is essential in modern times to that freedom of commerce from the restraints which the States might choose to impose upon it, that the commerce clause was intended to secure. This clause, giving to Congress the power to regulate commerce among the States, and with foreign Nations, as this court has said before, was among the most important of the subjects which prompted the formation of the Constitution. *Cook v. Pennsylvania*, 97 U. S. 574 [Bk. 24, L. ed. 1018]; *Brown v. Maryland*, 12 Wheat. 446 [25 U. S. bk. 6, L. ed. 688]. And it would be a very feeble and almost useless provision, but poorly adapted to secure the entire freedom of commerce among the States which was deemed essential to a more perfect union by the framers of the Constitution, if, at every stage of the transportation of goods and chattels through the country, the State within whose limits a part of this transportation must be done could impose regulations concerning the price, compensation, or taxation, or any other restrictive regulation interfering with and seriously embarrassing this commerce.

The argument on this subject can never be better stated than it is by *Chief Justice Marshall* in *Gibbons v. Ogden*, 9 Wheat. 195-6 [22 U. S. bk. 6, L. ed. 70]. He there demonstrates that commerce among the States, like commerce with foreign nations, is necessarily a commerce which crosses state lines, and extends into the States; and the power of Congress to regulate it exists wherever that commerce is found. Speaking of navigation as an element of commerce, which it is, only as a means of transportation now largely superseded by railroads, he says: "The power of Congress, then, comprehends navigation within the limits of every State in the Union, so far as that navigation may be, in any manner, connected with 'commerce with foreign Nations, or among the several States, or with the Indian Tribes.'" It may, of consequence, pass the jurisdictional line of New York and act upon the very waters (the Hudson River) to which the prohibition now under consideration applies." P. 197 [70]. So the same power may pass the line of the State of Illinois and act upon its restriction upon the right of transportation extending over several States, including that one.

In the case of *Telegraph Co. v. Texas* [supra] the court held that "A telegraph company occupies the same relation to commerce as a carrier of messages that a railroad company does as a carrier of goods;" and that "both companies are instruments of commerce, and their business is commerce itself." And relying upon the case of the *State Freight Tax* [supra] already referred to, the court said that a tax by the State of Texas upon all messages carried within its borders was forbidden by the commerce clause of the Constitution, as being a tax upon commerce among the States; and observed that "The tax is the same on every message sent, and because it is sent, without regard to the distance carried or the price charged." * * * Clearly, if a fixed tax for every two thousand pounds of freight carried is a tax on the freight, or for every measured ton of a vessel a tax on tonnage, or for every passenger carried a tax on the passenger, or for the sale

of goods a tax on the goods, this must be a tax on the messages. As such, so far as it operates on private messages sent out of the State, it is a regulation of foreign and interstate commerce and beyond the power of the State. That is fully established by the cases already cited."

In the case of *Welton v. Missouri*, 91 U. S. 275 [Bk. 23, L. ed. 847], it was said: "It will not be denied that that portion of commerce with foreign countries and between the States which consists in the transportation and exchange of commodities is of national importance, and admits and requires uniformity of regulation. The very object of investing this power in the General Government was to insure this uniformity against discriminating state legislation."

And in *Mobile County v. Kimball*, 102 U. S. 691 [Bk. 26, L. ed. 238], the same idea is very clearly stated in the following language: "Commerce with foreign countries and among the States, strictly considered, consists in intercourse and traffic, including in these terms navigation and the transportation and transit of persons and property, as well as the purchase, sale and exchange of commodities. For the regulation of commerce as thus defined there can be only one system of rules, applicable alike to the whole country; and the authority which can act for the whole country can alone adopt such a system. Action upon it by separate States is not, therefore, permissible. Language affirming the exclusiveness of the grant of power over commerce as thus defined may not be inaccurate, when it would be so if applied to legislation upon subjects which are merely auxiliary to commerce."

In the case of *Gloucester Ferry Co. v. Pennsylvania* [supra], decided two years ago, the court declared without dissent that: "It needs no argument to show that the commerce with foreign Nations as between the States, which consists in the transportation of persons and property between them, is a subject of national character and requires uniformity of regulation." And still later, in the case of *Pickard v. Pullman Southern Car Co.* [supra], the whole subject is very fully re-examined; and a tax of the State of Tennessee upon sleeping cars of that company, which were used in carrying passengers through the State, and into it and out of it, was held void as a regulation of commerce among the States.

The case of *Stone v. Farmers Loan & T. Co.* [supra], argued at the same term as the present, while it does not decide the latter, evidently does not support the construction placed by the Supreme Court of Illinois upon the case of *Munn v. Illinois*, and the other cases on which the court relies.

We must, therefore, hold that it is not, and never has been, the deliberate opinion of a majority of this court that a statute of a State which attempts to regulate the fares and charges by railroad companies within its limits, for a transportation which constitutes a part of commerce among the States, is a valid law.

Let us see precisely what is the degree of interference with transportation of property or persons from one State to another which this statute proposes. A citizen of New York has goods which he desires to have transported by

the railroad companies from that city to the interior of the State of Illinois. A continuous line of rail over which a car loaded with these goods can be carried, and is carried habitually, connects the place of shipment with the place of delivery. He undertakes to make a contract with a person engaged in the carrying business at the end of this route from whence the goods are to start, and he is told by the carrier: "I am free to make a fair and reasonable contract for this carriage to the line of the State of Illinois, but when the car which carries these goods is to cross the line of that State, pursuing at the same time this continuous track, I am met by a law of Illinois which forbids me to make a free contract concerning this transportation within that State, and subjects me to certain rules by which I am to be governed as to the charges which the same railroad company in Illinois may make, or has made, with reference to other persons and other places of delivery." So that while that carrier might be willing to carry these goods from the City of New York to the City of Peoria at the rate of fifteen cents per hundred pounds, he is not permitted to do so because the Illinois Railroad Company has already charged at the rate of twenty-five cents per hundred pounds for carriage to Gilman, in Illinois, which is eighty-six miles shorter than the distance to Peoria.

So, also, in the present case; the owner of corn, the principal product of the country, desiring to transport it from Peoria, in Illinois, to New York, finds a Railroad Company willing to do this at the rate of fifteen cents per hundred pounds for a carload, but is compelled to pay at the rate of twenty-five cents per hundred pounds, because the Railroad Company has received from a person residing at Gilman twenty-five cents per hundred pounds for the transportation of a carload of the same class of freight over the same line of road from Gilman to New York. This is the result of the Statute of Illinois, in its endeavor to prevent unjust discrimination, as construed by the Supreme Court of that State. The effect of it is that whatever may be the rate of transportation per mile charged by the Railroad Company from Gilman to Sheldon, a distance of twenty-three miles, in which the loading and the unloading of the freight is the largest expense incurred by the Railroad Company, the same rate per mile must be charged from Peoria to the City of New York.

The obvious injustice of such a rule as this, which railroad companies are by heavy penalties compelled to conform to, in regard to commerce among the States, when applied to transportation which includes Illinois in a long line of carriage through several States, shows the value of the constitutional provision which confides the power of regulating interstate commerce to the Congress of the United States, whose enlarged view of the interests of all the States, and of the railroads concerned, better fits it to establish just and equitable rules.

Of the justice or propriety of the principle which lies at the foundation of the Illinois Statute it is not the province of this court to speak. As restricted to a transportation which begins and ends within the limits of the State, it may be very just and equitable, and it cer-

tainly is the province of the State Legislature to determine that question. But when it is attempted to apply the transportation through an entire series of States a principle of this kind, and each one of the States shall attempt to establish its own rates of transportation, its own methods to prevent discrimination in rates, or to permit it, the deleterious influence upon the freedom of commerce among the States and upon the transit of goods through those States cannot be overestimated. That this species of regulation is one which must be, if established at all, of a general and national character, and cannot be safely and wisely remitted to local rules and local regulations, we think is clear from what has already been said. And if it be a regulation of commerce, as we think we have demonstrated it is, and as the Illinois Court concedes it to be, it must be of that national character, and the regulation can only appropriately exist by general rules and principles, which demand that it should be done by the Congress of the United States under the commerce clause of the Constitution.

The judgment of the Supreme Court of Illinois is therefore reversed, and the case remanded to that court for further proceedings in conformity with this opinion.

Mr. Justice Bradley, dissenting:

The Chief Justice, Mr. Justice Gray, and myself dissent from the opinion and judgment of the court in this case, and I am authorized to state the reasons upon which our dissent is founded:

The Wabash, St. Louis & Pacific Railway Company, an Illinois corporation, plaintiff in error, was sued by the State of Illinois to recover a penalty for the breach of its laws, passed "to prevent extortion and unjust discrimination in the rates charged for the transportation of passengers and freight on railroads in the State." The law sued on was originally passed in 1871, and revised in 1878, and the material portions of its most important section are in the following words, to wit:

"If any such railroad corporation shall charge, collect or receive for the transportation of any passenger or freight of any description, upon its railroad, for any distance, within this State, the same or a greater amount of toll or compensation than is at the same time charged, collected or received for the transportation, in the same direction, of any passenger or like quantity of freight, of the same class, over a greater distance of the same railroad; * * * or if it shall charge, collect or receive from any person or persons, for the use and transportation of any railroad car or cars upon its railroad, for any distance, the same or a greater amount of toll or compensation than it at the same time charged, collected or received from any other person or persons, for the use and transportation of any railroad car of the same class or number, for a like purpose, being transported in the same direction, over a greater distance of the same railroad: * * * all such discriminating rates, charges, collections, or receipts, whether made directly or by means of rebate, drawback or other shift or evasion, shall be deemed and taken, against any such railroad corporation, as *prima facie* evidence of unjust discrimina-

tion, prohibited by the provisions of this Act; * * * *Provided, however*, That nothing herein contained shall be so construed as to prevent railroad corporations from issuing commutation, excursion or thousand mile tickets, as the same are now issued by such corporations."

A penalty of not less than \$1,000, and not more than \$5,000, for the first offense is imposed for the violation of the law; and it was for this penalty that the Company was sued in the Ford County Circuit Court.

The declaration alleged, in substance, that the Company charged certain parties fifteen cents per hundred pounds for carrying a load of freight from Peoria, in the State of Illinois, to New York, one hundred and nine miles of the distance being in Illinois, whilst at the same time it charged certain other parties twenty-five cents per hundred pounds for carrying a like load of the same class of freight from Gilman, also in the State of Illinois, to New York, twenty-three miles of the distance being in Illinois, both places being on the line of the road. This allegation was substantially admitted, and judgment was finally rendered in favor of the State, and was sustained by the Supreme Court of the State, to which the present writ of error was directed.

The main point insisted on by the Railway Company in its defense was that the law on which the action was founded is unconstitutional in its application to their case, as being a regulation of interstate commerce. They also contended that a gross charge from Peoria or Gilman to New York was no evidence of any particular charge within the State of Illinois.

The construction given to the law by the Supreme Court of Illinois is to be received by us, on a writ of error brought for the purpose of questioning its constitutionality. That construction is clearly exhibited in the following announcement of the opinion of that court when the case was brought before it a second time. The court says:

"We see no reason to depart from the conclusion reached in this case when it was here before. See *People v. W. St. L. & P. Railway Co.* 104 Ill. 476. But to avoid misapprehension, we deem it desirable to state explicitly that we disclaim any idea that Illinois has authority to regulate commerce in any other State. We understand and simply hold that, in the absence of anything showing to the contrary, a single and entire contract to carry for a gross sum from Gilman, in this State, to the City of New York, implies necessarily that that sum is charged proportionately for the carriage on every part of that distance; and that a single and entire contract to carry for a gross sum from Peoria, in this State, to the City of New York, implies the same thing; and that, therefore, when it is shown that there is charged for carriage upon the same line less from Peoria to New York (the greater distance), than from Gilman to New York (the less distance), and nothing is shown to the effect that such inequality in charge is all for carriage entirely beyond the limits of this State, a *prima facie* case is made out of unjust discrimination, under our statute, occurring within this State. We hold that the excess in the charge for the less distance presumably affects every part of the line of carriage between Gilman and the

state line, proportionately with the balance of the line. The judgment is affirmed." *Wabash St. L. & P. R. Co. v. Illinois*, 105 Ill. 236.

We have no doubt that this view of the presumed equal distribution of the charge to every part of the route is correct. If one tenth, or any other proportion, of the whole route of transportation was in Illinois, the clear presumption is, if nothing be shown to the contrary (as nothing was shown), that the like proportion of the whole charge was made for the transportation in that State.

The principal question in this case, therefore, is whether, in the absence of congressional legislation, a State Legislature has the power to regulate the charges made by the railroads of the State for transporting goods and passengers to and from places within the State, when such goods or passengers are brought from, or carried to, points without the State, and are, therefore, in course of transportation from another State, or to another State. It is contended that as such transportation is commerce between or among different States, the power does not exist. The majority of the court so hold. We feel obliged to dissent from that opinion. We think that the State does not lose its power to regulate the charges of its own railroads in its own territory, simply because the goods or persons transported have been brought from or are destined to a point beyond the State in another State.

The case before us is not embarrassed by any allegation of a contract between the State and the Company; it is a question of the power to regulate, pure and simple. The State has never contracted away or attempted to contract away this power.

It is also unembarrassed by any federal legislation on the subject. No one disputes that Congress might, if it saw fit, under its power to regulate commerce among the several States, regulate the matter under consideration; but it has not done so. The question rests solely and entirely upon the power of the State, when unrestrained by any contract, or by any action of the legislative department of the United States. Does it follow, then, that because Congress has the power to regulate this matter, though it has not exercised that power, therefore the State is divested of all power of regulation? That is the question before us.

We had supposed that this question was concluded by the previous decisions of this court; that all local arrangements and regulations respecting highways, turnpikes, railroads, bridges, canals, ferries, dams and wharves, within the State, their construction and repair, and the charges to be made for their use, though materially affecting commerce, both internal and external, and thereby incidentally operating to a certain extent as regulations of interstate commerce, were within the power and jurisdiction of the several States. That is still our opinion.

It is almost a work of supererogation to refer to the cases. They are legion. A few, only, will be selected and referred to:

The first great case on the subject was that of *Wilson v. Black Bird Creek etc. Co.* 2 Pet. 245 [27 U. S. bk. 7, L. ed. 412], where the State of Delaware had authorized a dam in a navigable tide water creek of that State, communicating

with Delaware Bay; and *Chief Justice* Marshall, delivering the unanimous opinion of the court, said: "The value of the property on its banks must be enhanced by excluding the water from the marsh, and the health of the inhabitants probably improved. Measures calculated to produce these objects, provided they do not come into collision with the powers of the General Government, are undoubtedly within those which are reserved to the States. But the measure authorized by this Act stops a navigable creek, and must be supposed to abridge the rights of those who have been accustomed to use it. But this abridgment, unless it comes in conflict with the Constitution or a law of the United States, is an affair between the Government of Delaware and its citizens, of which this court can take no cognizance. The counsel for the plaintiff in error insist that it comes in conflict with the power of the United States 'to regulate commerce with foreign Nations and among the several States.' If Congress had passed any Act which bore upon the case, any Act in execution of the power to regulate commerce, the object of which was to control state legislation over those small navigable creeks into which the tide flows, and which abound throughout the lower country of the Middle and Southern States, we should feel not much difficulty in saying that a state law coming in conflict with such Act would be void. But Congress has passed no such Act. The repugnancy of the law of Delaware to the Constitution is placed entirely on its repugnancy to the power to regulate commerce with foreign nations and among the several States; a power which has not been so exercised as to affect the question. We do not think the Act empowering the Blackbird Creek Marsh Company to place a dam across the creek can, under all the circumstances of the case, be considered as repugnant to the power to regulate commerce in its dormant state, or as being in conflict with any law passed on the subject."

This case was, in all things, affirmed by the later case of *Gilman v. Philadelphia*, 3 Wall. 713 [70 U. S. bk. 18, L. ed. 98]. The Legislature of Pennsylvania authorized the City of Philadelphia to erect a permanent bridge across the Schuylkill River, a navigable water, at the foot of Chestnut Street. It was sought to restrain the erection of this bridge on the same grounds which had been urged in the *Blackbird Creek Case*; but the Circuit Court of the United States refused to interfere, and dismissed a bill for an injunction. The decision was sustained by this court, which held that it was for Congress to determine when its full power to regulate commerce should be brought into activity, and as to the regulations and sanctions which should be provided; and that, until the dormant power of the Constitution is awakened and made effective by appropriate legislation, the reserved power of the States is plenary, and its exercise in good faith cannot be made the subject of review by this court.

These principles are reaffirmed in the still more recent case of *Escanaba etc. Co. v. Chicago*, 107 U. S. 678 [Bk. 27, L. ed. 442]. In that case the authorities of Chicago, under the powers conferred upon them by the Legislature of Illinois, regulated the times for opening and closing the draws in the bridges crossing the

Chicago River, so as to accommodate the local travel across them at certain times, and to allow the passage of vessels at others. This operated as a regulation of the commerce on the river, including interstate and foreign, as well as domestic commerce. But there being no legislation of Congress to the contrary, this court held that the power was constitutionally exercised. Commerce was affected; commerce was even incidentally regulated; but the jurisdiction of the State, and of the city acting under state authority, was unhesitatingly recognized by the court. *Mr. Justice* Field, delivering the opinion of the court, said: "The Chicago River and its branches must, therefore, be deemed navigable waters of the United States, over which Congress under its commercial power may exercise control to the extent necessary to protect, preserve and improve the free navigation. But the States have full power to regulate within their limits matters of internal police, including in that general designation whatever will promote the peace, comfort, convenience and prosperity of the people. This power embraces the construction of roads, canals and bridges, and the establishment of ferries, and it can generally be exercised more wisely by the States than by a distant authority. * * * Nowhere could the power to control the bridges in that city, their construction, form and strength, and the size of their draws, and the manner and times of using them, be better vested than with the State, or the authority of the city upon whom it has devolved that duty. When its power is exercised, so as to unnecessarily obstruct the navigation of the river or its branches, Congress may interfere and remove the obstruction. * * * But until Congress acts on the subject, the power of the State over bridges across its navigable streams is plenary."

The doctrines announced in these cases apply not only to dams in, and bridges over, navigable streams, but to all structures and appliances in a State which may incidentally interfere with commerce, or which may be erected or created for the furtherance of commerce, whether by water or by land. It is matter of common knowledge that, from the beginning of the government, the States have exercised almost exclusive control over roads, bridges, ferries, wharves and harbors. No one has doubted their right to do so. It is recognized in the great case of *Gibbons v. Ogden*, where *Chief Justice* Marshall, after enumerating some of the powers reserved to the States, says: "They form a portion of that immense mass of legislation which embraces everything within the territory of a State not surrendered to the General Government; all which can be most advantageously exercised by the States themselves. Inspection laws, quarantine laws, health laws of every description, as well as laws for regulating the internal commerce of the State, and those which respect turnpike roads, ferries, etc., are component parts of this mass." And he adds (what is very pertinent to this discussion): "No direct general power over these objects is granted to Congress; and, consequently, they remain subject to state legislation. If the legislative power of the Union can reach them, it must be for national purposes; it must be where the power is expressly given

for a special purpose; or is clearly incidental to some power which is expressly given."

The case of *Parkersburg etc. Trans. Co. v. Parkersburg*, 107 U. S. 681 [Bk. 27, L. ed. 584], related to wharves. The City of Parkersburg had built certain wharves for the accommodation of vessels, principally steamboats, navigating the Ohio River. The transportation company, being the owner of several steamboats plying on that river, complained of the wharfage charges as being extortionate and an unconstitutional interference with the commerce of the Ohio River. It was shown that the charges were imposed by authority derived from the state laws; and we held that until Congress interfered, the charges for wharfage was a matter of state law, and of state jurisdiction. We then said: "Wharves, levees and landing places are essential to commerce by water, no less than a navigable channel and a clear river. But they are attached to the land; they are private property, real estate; and they are primarily, at least, subject to the local state laws. * * * Until Congress has acted, the courts of the United States cannot assume control over the subject as a matter of federal cognizance. It is Congress, and not the judicial department, to which the Constitution has given the power to regulate commerce with foreign nations and among the several States. The courts can never take the initiative on the subject."

There is a class of subjects, it is true, pertaining to interstate and foreign commerce, which require general and uniform rules for the whole country, so as to obviate unjust discriminations against any part, and in respect of which local regulations made by the States would be repugnant to the power vested in Congress, and, therefore, unconstitutional; but there are other subjects of local character and interest which not only admit of, but are generally best regulated by state authority. This distinction is pointed out and enforced in the case of *Cooley v. Port Wardens of Phila.* 12 How. 299 [58 U. S. bk. 13, L. ed. 996]. In that case it was held that the pilotage regulations of the different courts of the country belong to the latter class, and are susceptible of state regulation. This case has been approved in several subsequent decisions. *Gilman v. Philadelphia, ubi supra*; *Crandall v. Nevada*, 6 Wall. 35, 42 [78 U. S. bk. 18, L. ed. 745]; *Ex parte McNeil*, 13 Wall. 236 [50 U. S. bk. 20, L. ed. 624]; *Osborne v. Mobile*, 16 Wall. 482 [83 U. S. bk. 21, L. ed. 473]; *Chicago etc. R. Co. v. Fuller*, 17 Wall. 569 [84 U. S. bk. 21, L. ed. 714]; *Roddi v. Heartt*, 21 Wall. 581, 582 [88 U. S. bk. 23, L. ed. 664]; *Packet Co. v. Keokuk*, 95 U. S. 88 [Bk. 24, L. ed. 381]; *Pound v. Turck*, 95 U. S. 462 [Bk. 24, L. ed. 526]; *Hall v. De Cuir*, 95 U. S. 488 [Bk. 24, L. ed. 548]; *Wilson v. McNamee*, 102 U. S. 575 [Bk. 26, L. ed. 235]; *Mobile Co. v. Kimball*, 102 U. S. 698 [Bk. 26, L. ed. 240]; *Packet Co. v. Trustees, Catlettsburg*, 105 U. S. 562 [Bk. 26, L. ed. 1170].

It is hardly necessary to argue that, in reference to this rule, railroads, canals, turnpikes, bridges, ferries and wharves belong to the category of local subjects, local means and local aids of commercial intercourse. Congress may establish national roads, canals and bridges, 'it is true; but we speak of those, hitherto the most part, which are constructed and estab-

lished under state authority; and in reference to these, it seems to us very clear that, in the absence of congressional legislation to the contrary, they are not only susceptible of state regulation, but properly amenable to it, irrespective of other considerations to which we shall refer.

The highways in a State are the highways of the State. Convenient ways and means of intercommunication are the first evidence of the civilization of a people. The highways of a country are not of private but of public institution and regulation. In modern times, it is true, government is in the habit, in some countries of letting out the construction of important highways, requiring a large expenditure of capital, to agents, generally corporate bodies created for the purpose, and giving to them the right of taxing those who travel or transport goods thereon, as a means of obtaining compensation for their outlay. But a superintending power over the highways, and the charges imposed upon the public for their use, always remains in the government. This is not only its indefeasible right, but is necessary for the protection of the people against extortion and abuse. These positions we deem to be incontrovertible. Indeed, they are adjudged law in the decisions of this court. Railroads and railroad corporations are in this category.

Now, since every railroad may be, and generally is, a medium of transportation for interstate commerce, and affects that commerce; and since the charges of fare and freight for such transportation affect and incidentally regulate that commerce; and since the railroad could not be built, and the charges upon it could not be exacted, without authority from the State, it follows as a necessary consequence that the State, in the exercise of its undoubted functions and sovereignty, does in the establishment and regulation of railroads, to a certain and a very material extent, not only do that which affects, but incidentally regulates commerce. It does so by the very Act of authorizing the construction of railroads and the collection of fares and freights thereon. No one doubts its powers to do this. The very being of the plaintiffs in error, the very existence of their railroad, the very power they exercise of charging fares and freights, are all derived from the State. And yet, according to the argument of the plaintiffs in error, pursued to its legitimate consequences, the Act of the State in doing all this ought to be regarded as null and void because it operates as a regulation of commerce among the States. Not only does the right to charge fares and freights at all, come to a railroad company from the grant of the State, but the amount of such charges is also regulated by the state law, either by the charter of the company, or by legislative regulations, or by the general law that the charges shall be reasonable; and that is state law and not United States law. Where else but from the laws of the State does the railroad company get its right to charge any fares or freight at all? And since its being, its franchises, its powers, its road, its right to charge, all come from the State, and are the creation of state law, how can it be contended that the State has no power of regulation over those charges, and over the conduct of the company in the trans-

directly affect those without." The law was sustained, and the bill of complaint was dismissed.

We do not see how this case can be distinguished from that now under consideration. The fact that in *Peik's Case* there was a classification of freights and a limitation of charges, and in the present case a prohibition of discrimination in the charges, is a distinction without a difference. The opinion is brief, it is true, but all the principles involved in it were so fully discussed in the cases immediately preceding, beginning with that of *Munn v. Illinois*, that no extended discussion of *Peik's Case* was deemed necessary. All the justices who concurred in the opinion were entirely satisfied with it. The cases were all argued at the same time, or in reference to each other, and were considered together. But there stands the judgment of the court, and, in our apprehension, the judgment in the present case is directly opposed to it.

We have omitted to cite a number of cases corroborating the views we have expressed. The case of *State Tax on R. Gross Receipts*, 15 Wall. 284 [82 U. S. bk. 21, L. ed. 164], is weighted with arguments and considerations in this direction. We would also refer to the cases of *Osborne v. Mobile*, 10 Wall. 479 [88 U. S. bk. 21, L. ed. 470]; *Chicago etc. R. Co. v. Fuller*, 17 Wall. 560 [84 U. S. bk. 21, L. ed. 710]; *R. R. Commission Cases*, 116 U. S. 307, 334, 335 [Bk. 29, L. ed. 636, 645].

It is supposed that the decision in *Hall v. De Cuir*, 95 U. S. 485 [Bk. 24, L. ed. 547], supports the contention of the plaintiffs in error. We think not. What was that case? A Statute of Louisiana, as construed by its courts, prohibited those engaged in the business of carrying passengers, in that State (including those engaged in interstate commerce), from making any discrimination on account of race or color in the use of the accommodations in their conveyances; a direct regulation of commerce, and within the reason of the tax cases before referred to. A steamer which regularly plied between New Orleans and Vicksburg had a cabin specially set apart for white persons, and De Cuir, a colored person, being refused admission to that cabin, sued for damages. We held that the law (as above suggested) was a direct regulation of commerce and a burden upon it. It compelled the steamboat proprietors to place colored persons traveling from one place to another in Louisiana, in the cabin set apart for white persons, many of whom were bound to another State; and, therefore, in its operation was a regulation of interstate commerce. It was against the rule that, in the absence of action by Congress, commerce must remain free and untrammelled. By that rule the proprietor of the vessel was at liberty to adopt such reasonable rules and regulations for the disposition and comfort of passengers upon his boat, while pursuing its voyage, as seemed to him most for the interest of all concerned. The statute took away from him this power so long as he was within Louisiana. We especially distinguished the case from those of *Munn v. Illinois*, *Peik v. R. R. Co.*, and the cognate cases, as belonging to a different category, and governed by different consideration; and the difference between them seems to us very apparent.

The *Chief Justice*, in delivering the opinion of the court said: "There can be no doubt but

that exclusive power has been conferred upon Congress in respect to the regulation of commerce among the several States. The difficulty has never been as to the existence of this power, but as to what is to be deemed an encroachment upon it; for, as has been often said, 'Legislation may in a great variety of ways affect commerce and persons engaged in it without constituting a regulation of it within the meaning of the Constitution.' *Sherlock v. Alling*, 93 U. S. 103 [Bk. 23, L. ed. 820]; *State Tax on R. Gross Receipts* [supra]. Thus, in *Munn v. Illinois*, 94 U. S. 113 [Bk. 24, L. ed. 77], it was decided that a State might regulate the charges of public warehouses, and, in *Chic. B. & Q. R. Co. v. Outts*, 94 U. S. 155 [Bk. 24, L. ed. 94], of railroads situate entirely within the State, even though those engaged in commerce among the States might sometimes use the warehouses or the railroads in the prosecution of their business." After referring to the cases of dams and bridges over navigable waters, and of turnpikes and ferries, the *Chief Justice* continued: "By such statutes the States regulate, as a matter of domestic concern, the instruments of commerce situated wholly within their own jurisdictions, and over which they have exclusive governmental control, except when employed in interstate commerce. As they can only be used in the State, their regulation for all purposes may properly be assumed by the State, until Congress acts in reference to their foreign or interstate relations. When Congress does act, the state laws are superseded, only to the extent that they affect commerce outside the State as it comes within the State." He then added: "But we think it may safely be said that state legislation which seeks to impose a direct burden upon interstate commerce, or to interfere directly with its freedom, does encroach upon the exclusive power of Congress. The statute now under consideration, in our opinion, occupies that position. It does not act upon the business through the local instruments to be employed after coming within the State, but directly upon the business as it comes into the State from without, or goes out from within." The distinction here taken seems to us sound and to distinguish the present case from that of *De Cuir*. In the *Peik Case*, and others of like character, the State regulated the charges made upon an instrument of commerce (a railroad) situated within the State and under its jurisdiction; such charges being made by virtue of the State's authority; in the *De Cuir Case* it attempted, as the law operated, to regulate the manner of carrying passengers on an instrument of commerce having no fixed location, by plying on navigable waters within and without the State; in other words, it attempted to regulate interstate commerce itself, directly, in a matter in which it had no special prerogative to legislate.

Other cases are referred to by the plaintiff in error in support of their contention; but we think that no case can be found which is not clearly distinguishable from the present on some or one of the grounds already referred to.

The inconvenience which it has been supposed in argument would follow from the execution of the laws of Illinois we think have been greatly exaggerated. But if it should be found to present any real difficulty in the modes of transacting business on through lines, it is

always in the power of Congress to make such reasonable regulations as the interests of interstate commerce may demand, without denuding the States of their just powers over their own roads and their own corporations.

Sabine ROBBINS, *Plff. in Err.*,

v.

TAXING DISTRICT OF SHELBY COUNTY, TENNESSEE.

(From Lawyers' ed. U. S. Reports, Bk. 30, p. 694.)

1. **The power of Congress to regulate interstate commerce is exclusive** when its subjects are national in character, or admit only of one uniform system or plan of regulation.
2. Where its power is exclusive, the **failure of Congress to make express regulations** indicates its will that the subject shall be left free from any restrictions or impositions.
3. **A State cannot levy a tax, or impose any other restriction upon the citizens or inhabitants of other States for selling or seeking to sell their goods in such State before they are introduced therein.**
4. **The negotiation of sales of goods which are in another State, for the purpose of introducing them into the State in which the negotiation is made, is interstate commerce.** Such commerce is not subject to state taxation, even though there be no discrimination between it and domestic commerce.

(Submitted Jan. 8, 1886. Submission set aside and argument ordered March 8, 1886. Argued Nov. 5, 1886. Decided March 7, 1877.)

IN ERROR to the Supreme Court of the State of Tennessee. Reported below, 18 Lea, 303. *Reversed.*

The history and facts of the case appear in the opinion of the court and in the dissenting opinion by the Chief Justice. See also the following case of *Corson v. Maryland*.

Messrs. Luke E. Wright and F. T. Edmonson, for plaintiff in error:

The Act in question is in violation of that part of article 1, section 8, of the Constitution of the United States, which declares that "The Congress shall have power to regulate commerce among the several States."

Congress is vested with the exclusive power to regulate commerce with foreign Nations and among the States.

County of Mobile v. Kimball, 102 U. S. 691 (26: 238); *Passenger Cases*, 48 U. S. 7 How. 283 (12: 702); *Gloucester Ferry Co. v. Pa.* 114 U. S. 196 (29: 158).

Congress has not only the right but it is the duty of Congress to take care that commerce is not obstructed by state legislation.

Pensacola Tel. Co. v. W. U. Tel. Co. 96 U. S. 1 (24: 706).

It is settled that a tax directly on commerce or aimed at commerce is unconstitutional.

State Freight Tax Case, 82 U. S. 15 Wall. 232 (21: 146); *State Tax on R. Gross Receipts*, 82 U. S. 15 Wall. 284 (21: 164).

The effect of the Act complained of is to draw a distinction between resident and non-resident merchants. Its object is not revenue, but exclusion. It allows the merchants of the Taxing District to do business on terms more favorable than nonresident merchants, and forbids the latter from coming into equal and fair competition with the former.

The right to tax carries with it the right to exclude, so that, if this stands, the Legislature can declare that no person shall, on any terms, offer to sell goods in said District, unless he first establish a commercial house therein.

Mr. S. P. Walker, for defendant in error:

The statute makes no reference whatever to the place of residence of the "drummer." He is equally subject to the tax whether he be a resident of the taxing district, or a resident of some other portion of the State, or of some other State. In any and all cases the privilege tax is alike imposed. Given the vocation of "drummer," and the statute applies, without any distinction or discrimination whatever. There is clearly, therefore, no violation of section 2, article 4, upon which the decision in *Ward v. Maryland*, 79 U. S. 13 Wall. 418 (20: 449), was rested. The statute is not directed against the "drummer's" principal, but against the "drummer" himself, as pursuing a particular vocation declared to be a taxable privilege. But if the statute be looked upon as an effort to tax the principal through the agent (for which view, we submit there is no foundation), it would still be free from objections urged against it, for that it equally applies to all "drummers," without reference to principal's place of residence. "The general power of the State to impose taxes, in the way of licenses, upon all pursuits and occupations within its limits," is unquestionable.

Welton v. Missouri, 91 U. S. 278 (23: 348).

The language of this court, in *Osborne v. Mobile*, 83 U. S. 16 Wall. 479, 481 (21: 470, 473), is equally pertinent here: "There was no discrimination in the taxation of Alabama between it (the plaintiff in error) and the corporations and citizens of that State. The tax for license was the same by whomsoever the business was transacted. There is nothing in the case, therefore, which brings it within the case of *Ward v. Maryland*. It seems rather to be governed by the principles settled in *Woodruff v. Parham*, 75 U. S. 8 Wall. 123 (19: 382)."

As is fully shown in the opinion of the state court, the classification of the statute is based on the character of the pursuit, and not on the fact of residence; and it is not subject to the objections that were sustained in *Ward v. Maryland*, *supra*.

Mr. Justice Bradley delivered the opinion of the court:

This case originated in the following manner: Sabine Robbins, the plaintiff in error, in February, 1884, was engaged at the City of Memphis, in the State of Tennessee, in soliciting the sale of goods for the firm of Rose, Robbins & Co., of Cincinnati, in the State of Ohio, dealers

in paper, and other articles of stationery, and exhibited samples for the purpose of effecting such sales,—an employment usually denominated as that of a “drummer.” There was in force at that time a Statute of Tennessee, relating to the subject of taxation in the taxing districts of the State, applicable, however, only to the Taxing District of Shelby County (formerly the City of Memphis), by which it was enacted, amongst other things, that “All drummers, and all persons not having a regular licensed house of business in the Taxing District, offering for sale or selling goods, wares, or merchandise therein, by sample, shall be required to pay to the county trustee the sum of ten dollars (\$10) per week, or twenty-five dollars per month, for such privilege; and no license shall be issued for a longer period than three months.” Act of 1881, chap. 96, § 16.

The business of selling by sample and nearly sixty other occupations had been by law declared to be privileges, and were taxed as such, and it was made a misdemeanor, punishable by a fine of not less than \$5 nor more than \$50, to exercise any of such occupations without having first paid the tax or obtained the license required therefor.

Under this law Robbins, who had not paid the tax nor taken a license, was prosecuted, convicted and sentenced to pay a fine of \$10, together with the state and county tax, and costs; and on appeal to the Supreme Court of the State, the judgment was affirmed. This writ of error is brought to review the judgment of the supreme court, on the ground that the law imposing the tax was repugnant to that clause of the Constitution of the United States which declares that Congress shall have power to regulate commerce among the several States.

On the trial of the cause in the inferior court, a jury being waived, the following agreed statement of facts was submitted to the court, to wit:

“Sabine Robbins is a citizen and resident of Cincinnati, Ohio, and on the — day of —, 1884, was engaged in the business of drumming in the Taxing District of Shelby County, Tenn.—*i. e.* soliciting trade by the use of samples for the house or firm for which he worked as a drummer, said firm being the firm of ‘Rose, Robbins & Co.’ doing business in Cincinnati, and all the members of said firm being citizens and residents of Cincinnati, Ohio. While engaged in the act of drumming for said firm, and for the claimed offense of not having taken out the required license for doing said business, the defendant, Sabine Robbins, was arrested by one of the Memphis or Taxing District police force and carried before the Hon. D. P. Hadden, president of the Taxing District, and fined for the offense of drumming without a license. It is admitted the firm of ‘Rose, Robbins & Co.’ are engaged in the selling of paper, writing materials, and such articles as are used in the book stores of the Taxing District of Shelby County, and that it was a line of such articles for the sale of which the said defendant herein was drumming at the time of his arrest.”

This was all the evidence, and thereupon the court rendered judgment against the defendant, to which he excepted, and a bill of exceptions was taken.

The principal question argued before the Supreme Court of Tennessee was as to the

constitutionality of the Act which imposed the tax on drummers; and the court decided that it was constitutional and valid. [13 Lea, 803.]

That is the question before us, and it is one of great importance to the people of the United States, both as it respects their business interests and their constitutional rights. It is presented in a nutshell, and does not, at this day, require for its solution any great elaboration of argument or review of authorities. Certain principles have been already established by the decisions of this court which will conduct us to a satisfactory decision. Among those principles are the following:

1. The Constitution of the United States having given to Congress the power to regulate commerce, not only with foreign Nations, but among the several States, that power is necessarily exclusive whenever the subjects of it are national in their character, or admit only of one uniform system, or plan of regulation. This was decided in the case of *Cooley v. Board of Wardens of Phila.* 53 U. S. 12 How. 299, 819 [18: 996, 1004], and was virtually involved in the case of *Gibbons v. Ogden*, 23 U. S. 9 Wheat. 1 [6: 28], and has been confirmed in many subsequent cases, amongst others, in *Brown v. Md.* 25 U. S. 12 Wheat. 419 [6: 678]; *Passenger Cases*, 48 U. S. 7 How. 283 [12: 702]; *Grondall v. Nevada*, 78 U. S. 6 Wall. 85, 42 [18: 745, 746]; *Ward v. Md.* 79 U. S. 12 Wall. 418, 480 [20: 449, 452]; *State Freight Tax Cases*, 83 U. S. 15 Wall. 232, 279 [21: 146, 162]; *Henderson v. Mayor of N. Y.* 92 U. S. 259, 272 [23: 548, 549]; *R. R. Co. v. Husen*, 95 U. S. 465, 469 [24: 527, 529]; *Mobile v. Kimball*, 102 U. S. 691, 697 [26: 288, 239]; *Gloucester Ferry Co. v. Pa.* 114 U. S. 196, 203 [29: 158, 161]; *Wabash, etc. R. Co. v. Ill.* 118 U. S. 557 [ante, 244].

2. Another established doctrine of this court is that, where the power of Congress to regulate is exclusive, the failure of Congress to make express regulations indicates its will that the subject shall be left free from any restrictions or impositions; and any regulation of the subject by the States, except in matters of local concern only, as hereafter mentioned, is repugnant to such freedom. This was held by Mr. Justice Johnson in *Gibbons v. Ogden*, 23 U. S. 9 Wheat. 1, 222 [6: 28, 76]; by Mr. Justice Grier, in the *Passenger Cases*, 48 U. S. 7 How. 283, 462 [12: 702, 777]; and has been affirmed in subsequent cases. *State Freight Tax Cases*, and *R. R. Co. v. Husen*, [supra]; *Welton v. Missouri*, 91 U. S. 275, 282 [23: 347, 850]; *County of Mobile v. Kimball* [supra]; *Brown v. Houston*, 114 U. S. 623, 631 [29: 257, 260]; *Walling v. Mich.* 116 U. S. 448, 455 [29: 691, 694]; *Pickard v. Pullman Southern Car Co.* 117 U. S. 84 [29: 785]; *Wabash, etc. R. Co. v. Ill.* [supra].

3. It is also an established principle, as already indicated, that the only way in which commerce between the States can be legitimately affected by state laws is when, by virtue of its police power, and its jurisdiction over persons and property within its limits, a State provides for the security of the lives, limbs, health and comfort of persons and the protection of property; or when it does those things which may otherwise incidentally affect commerce, such as the establishment and regulation of highways, canals, railroads, wharves, ferries and other commer-

cial facilities; the passage of inspection laws to secure the due quality and measure of products and commodities; the passage of laws to regulate or restrict the sale of articles deemed injurious to the health or morals of the community; the imposition of taxes upon persons residing within the State or belonging to its population, and upon avocations and employments pursued therein, not directly connected with foreign or interstate commerce or with some other employment or business exercised under authority of the Constitution and laws of the United States; and the imposition of taxes upon all property within the State, mingled with and forming part of the great mass of property therein. But in making such internal regulations a State cannot impose taxes upon persons passing through the State, or coming into it merely for a temporary purpose, especially if connected with interstate or foreign commerce; nor can it impose such taxes upon property imported into the State from abroad, or from another State, and not yet become part of the common mass of property therein; and no discrimination can be made, by any such regulations, adversely to the persons or property of other States; and no regulations can be made directly affecting interstate commerce. Any taxation or regulation of the latter character would be an unauthorized interference with the power given to Congress over the subject.

For authorities on this last head it is only necessary to refer to those already cited.

In a word, it may be said that in the matter of interstate commerce the United States are but one country, and are and must be subject to one system of regulations, and not to a multitude of systems. The doctrine of the freedom of that commerce, except as regulated by Congress, is so firmly established that it is unnecessary to enlarge further upon the subject.

In view of these fundamental principles, which are to govern our decision, we may approach the question submitted to us in the present case, and inquire whether it is competent for a State to levy a tax or impose any other restriction upon the citizens or inhabitants of other States, for selling or seeking to sell their goods in such State before they are introduced therein. Do not such restrictions affect the very foundation of interstate trade? How is a manufacturer, or a merchant, of one State, to sell his goods in another State, without, in some way, obtaining orders therefor? Must he be compelled to send them at a venture, without knowing whether there is any demand for them? This may, undoubtedly, be safely done with regard to some products for which there is always a market and a demand, or where the course of trade has established a general and unlimited demand. A raiser of farm produce in New Jersey or Connecticut, or a manufacturer of leather or wooden ware, may perhaps safely take his goods to the City of New York and be sure of finding a stable and reliable market for them. But there are hundreds, perhaps thousands, of articles which no person would think of exporting to another State without first procuring an order for them. It is true, a merchant or manufacturer in one State may erect or hire a warehouse or store in another State, in which to place his goods, and await the chances of being able to sell

them. But this would require a warehouse or a store in every State with which he might desire to trade.

Surely, he cannot be compelled to take this inconvenient and expensive course. In certain branches of business, it may be adopted with advantage. Many manufacturers do open houses or places of business in other States than those in which they reside, and send their goods there to be kept on sale. But this is a matter of convenience, and not of compulsion, and would neither suit the convenience nor be within the ability of many others engaged in the same kinds of business, and would be entirely unsuited to many branches of business. In these cases, then, what shall the merchant or manufacturer do, who wishes to sell his goods in other States? Must he sit still in his factory or warehouse, and wait for the people of those States to come to him? This would be a silly and ruinous proceeding.

The only other way, and the one, perhaps, which most extensively prevails, is to obtain orders from persons residing or doing business in those other States. But how is the merchant or manufacturer to secure such orders. If he may be taxed by such States for doing so, who shall limit the tax? It may amount to prohibition. To say that such a tax is not a burden upon interstate commerce is to speak at least unadvisedly and without due attention to the truth of things.

It may be suggested that the merchant or manufacturer has the postoffice at his command, and may solicit orders through the mails. We do not suppose, however, that anyone would seriously contend that this is the only way in which his business can be transacted without being amenable to exactions on the part of the State. Besides, why could not the State to which his letters might be sent, tax him for soliciting orders in this way, as well as in any other way?

The truth is that, in numberless instances, the most feasible, if not the only practicable, way for the merchant or manufacturer to obtain orders in other States is to obtain them by personal application, either by himself, or by some one employed by him for that purpose; and in many branches of business he must necessarily exhibit samples for the purpose of determining the kind and quality of the goods he proposes to sell, or which the other party desires to purchase. But the right of taxation, if it exists at all, is not confined to selling by sample. It embraces every act of sale, whether by word of mouth only, or by the exhibition of samples. If the right exists, any New York or Chicago merchant visiting New Orleans or Jacksonville, for pleasure or for his health, and casually taking an order for goods to be sent from his warehouse, could be made liable to pay a tax for so doing, or be convicted of a misdemeanor for not having taken out a license. The right to tax would apply equally as well to the principal as to his agent, and to a single act of sale as to a hundred acts.

But it will be said that a denial of this power of taxation will interfere with the right of the State to tax business pursuits and callings carried on within its limits, and its right to require licenses for carrying on those which are declared to be privileges. This may be true to a

certain extent; but only in those cases in which the States themselves, as well as individual citizens, are subject to the restraints of the higher law of the Constitution. And this interference will be very limited in its operation. It will only prevent the levy of a tax, or the requirement of a license, for making negotiations in the conduct of interstate commerce; and it may well be asked where the State gets authority for imposing burdens on that branch of business any more than for imposing a tax on the business of importing from foreign countries, or even on that of postmaster or United States Marshal. The mere calling the business of a drummer a privilege cannot make it so. Can the State Legislature make it a Tennessee privilege to carry on the business of importing goods from foreign countries? If not, has it any better right to make it a state privilege to carry on interstate commerce? It seems to be forgotten, in argument, that the people of this country are citizens of the United States, as well as of the individual States, and that they have some rights under the Constitution and laws of the former, independent of the latter, and free from any interference or restraint from them.

To deny to the State the power to lay the tax, or require the license in question, will not, in any perceptible degree, diminish its resources or its just power of taxation. It is very true that if the goods when sold were in the State, and part of its general mass of property, they would be liable to taxation; but when brought into the State in consequence of the sale they will be equally liable; so that, in the end, the State will derive just as much revenue from them as if they were there before the sale. As soon as the goods are in the State and become part of its general mass of property, they will become liable to be taxed in the same manner as other property of similar character, as was distinctly held by this court in the case of *Brown v. Houston*, 114 U. S. 823 [29: 257]. When goods are sent from one State to another for sale, or, in consequence of a sale, they become part of its general property, and amenable to its laws; provided that no discrimination be made against them as goods from another State, and that they be not taxed by reason of being brought from another State, but only taxed in the usual way as other goods are. *Brown v. Houston*, *qua supra*; *Machine Co. v. Gage*, 100 U. S. 676 [25: 754]. But to tax the sale of such goods, or the offer to sell them, before they are brought into the State, is a very different thing, and seems to us clearly a tax on interstate commerce itself.

It is strongly urged, as if it were a material point in the case, that no discrimination is made between domestic and foreign drummers—those of Tennessee and those of other States; that all are taxed alike. But that does not meet the difficulty. Interstate commerce cannot be taxed at all, even though the same amount of tax should be laid on domestic commerce, or that which is carried on solely within the State. This was decided in the case of *The State Freight Tax Cases* [*supra*]. The negotiation of sales of goods which are in another State, for the purpose of introducing them into the State in which the negotiation is made, is interstate commerce. A New Orleans merchant cannot be taxed there for ordering goods from

London or New York, because, in the one case, it is an act of foreign, and, in the other, of interstate commerce, both of which are subject to regulation by Congress alone.

It would not be difficult, however, to show that the tax authorized by the State of Tennessee in the present case is discriminative against the merchants and manufacturers of other States. They can only sell their goods in Memphis by the employment of drummers and by means of samples; whilst the merchants and manufacturers of Memphis, having regular licensed houses of business there, have no occasion for such agents; and if they had, they are not subject to any tax therefor. They are taxed for their licensed houses, it is true; but so, it is presumable, are the merchants and manufacturers of other States in the places where they reside; and the tax on drummers operates greatly to their disadvantage in comparison with the merchants and manufacturers of Memphis. And such was undoubtedly one of its objects. This kind of taxation is usually imposed at the instance and solicitation of domestic dealers, as a means of protecting them from foreign competition.

And in many cases there may be some reason in their desire for such protection. But this shows in a still stronger light the unconstitutionality of the tax. It shows that it not only operates as a restriction upon interstate commerce, but that it is intended to have that effect as one of its principal objects. And if a State can, in this way, impose restrictions upon interstate commerce for the benefit and protection of its own citizens, we are brought back to the condition of things which existed before the adoption of the Constitution, and which was one of the principal causes that led to it.

If the selling of goods by sample and the employment of drummers for that purpose, injuriously affect the local interest of the States, Congress, if applied to, will undoubtedly make such reasonable regulations as the case may demand. And Congress alone can do it; for it is obvious that such regulations should be based on a uniform system applicable to the whole country, and not left to the varied, discordant or retaliatory enactments of forty different States. The confusion into which the commerce of the country would be thrown by being subject to state legislation on this subject, would be but a repetition of the disorder which prevailed under the Articles of Confederation.

To say that the tax, if invalid as against drummers from other States, operates as a discrimination against the drummers of Tennessee, against whom it is conceded to be valid, is no argument; because the State is not bound to tax its own drummers; and if it does so whilst having no power to tax those of other States, it acts of its own free will, and is itself the author of such discrimination. As before said, the State may tax its own internal commerce; but that does not give it any right to tax interstate commerce.

The judgment of the Supreme Court of Tennessee is reversed, and the plaintiff in error must be discharged.

Mr. Chief Justice Waite, dissenting:
I am unable to agree to this judgment. The case, as I understand it, is this:

In January, 1879, the State of Tennessee abolished the charter of the City of Memphis and created the Taxing District of Shelby County as its successor. By a statute passed April 4, 1881, to provide means for the support of the Taxing District, it was, among other things, enacted "That all drummers and all persons not having a licensed house of business in the Taxing District, offering for sale or selling goods, wares, or merchandise therein by sample, shall be required to pay to the county trustees the sum of ten dollars per week, or twenty-five dollars per month, for such privilege; and no license shall be issued for a longer period than three months."

Sabine Robbins, a citizen of Ohio, employed by the firm of Rose, Robbins & Co., also citizens of Ohio, engaged in business as merchants at the City of Cincinnati, in that State, has been convicted of a violation of this statute because he solicited trade for his firm in the Taxing District, by the use of samples, without a license. This it is now decided was wrong, because the statute under which the conviction was had, in so far as it applies to the business in which Robbins was engaged, is a regulation of interstate commerce, and, therefore, repugnant to the commerce clause of the Constitution of the United States. To this I cannot give my assent.

The license fee is demanded for the privilege of selling goods by sample within the Taxing District. The fee is exacted from all alike who do that kind of business, unless they have "a licensed house of business" in the District. There is no discrimination between citizens of the State and citizens of other States. The tax is upon the business, and this I have always understood to be lawful, whether the business was carried on by a citizen of the State under whose authority the exaction was made, or a citizen of another State, unless there was discrimination against citizens of other States. In *Osborne v. Mobile*, 88 U. S. 16 Wall. 481 [21: 472], it is said "The whole court agreed that a tax on business carried on within the State, and without discrimination between its citizens and the citizens of other States, might be constitutionally imposed and collected." And I cannot believe that if Robbins had opened an office for his business within the Taxing District, at which he kept and exhibited his samples, it would be held that he would not be liable to the tax; and this whether he stayed there all the time or came only at intervals. But what can be the difference in principle, so far as this question is concerned, whether he takes a room permanently in a business block of the District where, when he comes, he sends his boxes and exhibits his wares, or engages a room temporarily at a hotel or private house and carries on his business there during his stay? Or even whether he takes his sample boxes around with him to his different customers and shows his wares from them? In either case he goes to the District to ply his trade and make his sales from the goods he exhibits. He does not sell those goods, but he sells others like them. It is true that his business was to solicit orders for his principals, but in doing so he bargained for them, carried on business for them in the District by means of the samples of their goods, which had been furnished him for that

purpose. To all intents and purposes he had his goods with him for sale, for what he sold was like what he exhibited as the subjects of sale. I am unable to see any difference in principle between a tax on a seller by sample and a tax on a peddler; and yet I can hardly believe it would be contended that the provision of the same statute now in question, which fixes a license fee for all peddlers in the District, would be held to be unconstitutional in its application to peddlers who came with their goods from another State and expected to go back again.

As the law is valid so far as the inhabitants of the State are concerned, no inhabitant can engage in this business unless he pays the tax. If citizens of other States cannot be taxed in the same way for the same business, there will be discrimination against the inhabitants of Tennessee and in favor of those of other States. This could never have been intended by the Legislature, and I cannot believe the Constitution of the United States makes such a thing necessary. The Constitution gives the citizens of each State all the privileges and immunities of citizens in the several States; but this certainly does not guarantee to those who are doing business in States other than their own immunities from taxation on that business to which citizens of the State where the business is carried on are subjected.

This case shows the need of such authority in the States. This Taxing District is situated on the western boundary of Tennessee. To get into another State it is only necessary to cross the Mississippi River to Arkansas. It may be said to be an historical fact that the charter of Memphis was abolished and the Taxing District established because of the oppressive debt of Memphis, and the records of this court furnish abundant evidence of the heavy taxation to which property and business within the limits of both the old corporation and the new have been for many years necessarily subjected. Merchants in Tennessee are by law required to pay taxes on the amount of their stocks on hand, and a privilege tax besides. Under these circumstances it is easy to see that if a merchant from another State could carry on a business in the District by sending his agents there with samples of his goods to secure orders for deliveries from his stock at home, he would enjoy a privilege of exemption from taxation which the local merchant would not have unless in some form he could be subjected to taxation for what he did in the locality. The same would be true in respect to all inhabitants of the State who were sellers by sample in this District, but who had no place of business there. And so they, like citizens of other States, were required to pay for the privilege. Thus all were treated alike, whether they were citizens of Tennessee or of some other State, and under these circumstances I can see no constitutional objection to such a taxation of citizens of the other States for their business in the District.

I have treated the case as a conviction of a "drummer" for selling goods by sample. That is what Robbins was found guilty of, and that is what this statute makes an offense. The license is only required of "drummers and all persons not having a licensed house of business in the Taxing District, offering for sale or sell-

certain extent; but only in those cases in which the States themselves, as well as individual citizens, are subject to the restraints of the higher law of the Constitution. And this interference will be very limited in its operation. It will only prevent the levy of a tax, or the requirement of a license, for making negotiations in the conduct of interstate commerce; and it may well be asked where the State gets authority for imposing burdens on that branch of business any more than for imposing a tax on the business of importing from foreign countries, or even on that of postmaster or United States Marshal. The mere calling the business of a drummer a privilege cannot make it so. Can the State Legislature make it a Tennessee privilege to carry on the business of importing goods from foreign countries? If not, has it any better right to make it a state privilege to carry on interstate commerce? It seems to be forgotten, in argument, that the people of this country are citizens of the United States, as well as of the individual States, and that they have some rights under the Constitution and laws of the former, independent of the latter, and free from any interference or restraint from them.

To deny to the State the power to lay the tax, or require the license in question, will not, in any perceptible degree, diminish its resources or its just power of taxation. It is very true that if the goods when sold were in the State, and part of its general mass of property, they would be liable to taxation; but when brought into the State in consequence of the sale they will be equally liable; so that, in the end, the State will derive just as much revenue from them as if they were there before the sale. As soon as the goods are in the State and become part of its general mass of property, they will become liable to be taxed in the same manner as other property of similar character, as was distinctly held by this court in the case of *Brown v. Houston*, 114 U. S. 622 [29: 257]. When goods are sent from one State to another for sale, or, in consequence of a sale, they become part of its general property, and amenable to its laws; provided that no discrimination be made against them as goods from another State, and that they be not taxed by reason of being brought from another State, but only taxed in the usual way as other goods are. *Brown v. Houston*, *qua supra*; *Machine Co. v. Gage*, 100 U. S. 676 [25: 754]. But to tax the sale of such goods, or the offer to sell them, before they are brought into the State, is a very different thing, and seems to us clearly a tax on interstate commerce itself.

It is strongly urged, as if it were a material point in the case, that no discrimination is made between domestic and foreign drummers—those of Tennessee and those of other States; that all are taxed alike. But that does not meet the difficulty. Interstate commerce cannot be taxed at all, even though the same amount of tax should be laid on domestic commerce, or that which is carried on solely within the State. This was decided in the case of *The State Freight Tax Cases* [*supra*]. Thus all were treated alike, whether they were citizens of Tennessee or of some other State, and under these circumstances I can see no constitutional objection to such a taxation of citizens of the other States for their business in the District.

I have treated the case as a conviction of a "drummer" for selling goods by sample. That is what Robbins was found guilty of, and that is what this statute makes an offense. The license is only required of "drummers and all persons not having a licensed house of business in the Taxing District, offering for sale or sell-

ing goods, wares or merchandise therein by sample." The Supreme Court of Tennessee decided that this means nothing more than that any person who sells by sample shall pay the tax, and to that I agree. It will be time enough to consider whether a nonresident can be taxed for merely soliciting orders without having samples when such a case arises. That is not this case.

Mr. Justice Field and *Mr. Justice Gray* concur in this dissent.

GEORGE W. CORSON, *Plff. in Err.*,

v.

STATE OF MARYLAND.

(From Lawyers' ed. U. S. Reports, Bk. 30, p. 799.)

A State cannot levy a license tax or impose any other restriction upon the citizens or inhabitants of other States for selling or seeking to sell their goods in such State before they are introduced therein.

(Argued and submitted April 5, 1886. Reargument ordered May 10, 1886. Reargued and submitted Nov. 5, 1886. Decided March 7, 1887.)

IN ERROR to the Court of Appeals of the State of Maryland. Reported below, 57 Md. 251. *Reversed.*

The case sufficiently appears in the opinion of the court.

Messrs. Henry D. Loney and *S. T. Wallis*, for plaintiff in error:

The power of Congress to regulate commerce between the States, whether legislatively exercised or not, in respect to any specific matter in controversy, is held to be exclusive without exception; save in matters of a local character and without any national bearing or application.

Brown v. Houston, 114 U. S. 622 (29: 257).

Of course, the case now under consideration belongs to the sphere of national commerce and control, if it is at all within the scope of the constitutional provision. The license here is imposed upon citizens and residents of other States than Maryland, contracting in respect to property situate beyond the limits of Maryland, and to be transported to that State, under the contract, by the usual channels of interstate commerce. If the legislation impeached interferes with the commerce, by which the goods sold and being in New York are to be transported to Baltimore, for the purpose of being mingled with the mass of property in Maryland, and before they are so mingled, it is plainly a state regulation of commerce and forbidden by the Constitution.

Welton v. Missouri, 91 U. S. 275, 281 (23: 347, 349).

"Commerce with foreign countries and among the States, strictly considered, consists in intercourse and traffic, including in these terms navigation, and the transportation and transit of persons and property, as well as the purchase, sale and exchange of commodities. For the regulation of commerce, as thus defined, there can be only one system of rules applicable alike to the whole country; and the authority which can act for the whole country can alone

adopt such a system. Action upon it by separate States is not, therefore, permissible."

County of Mobile v. Kimball, 102 U. S. 691 (26: 238).

Nor is the application of this principle to be varied or escaped by the substitution of a license for direct taxation of the merchandise sold and transported.

Cook v. Pa. 97 U. S. 570 (24: 1016); *Machine Co. v. Gage*, 100 U. S. 678 (25: 755).

The State of Maryland has no more right to tax the goods of a New Yorker, in New York, than those of an Englishman, in London. Nor can the temporary stay or residence of the foreign citizen in Maryland, without change of his residence or place of business, and without any removal of his goods to Maryland, render the taxation of those goods, by the latter State, any more allowable. This court has already held that illegal taxation is one of those deprivations of property which are within the scope of constitutional protection.

R. R. Co. v. Jackson, 74 U. S. 7 Wall. 263 (19: 88); *State Tax on Foreign Held Bonds*, 83 U. S. 15 Wall. 800 (21: 179); *Hagar v. Reclamation Dist.* 111 U. S. 701 (28: 569).

Messrs. Charles B. Roberts, Atty-Gen. of Maryland, and *Charles J. M. Gwinn*, for defendant in error:

The court of Appeals of Maryland decided, in this cause, that the provisions of the Maryland Code, amended by the Maryland Act of 1880, chapter 349, under which the particular indictment was found, required that all persons, whether residents or nonresidents of the State of Maryland, before offering to sell or selling, by sample in that State, packages of tea or other merchandise stored within the limits of any other State, should obtain the license so to do from the State of Maryland, which was required by article 56 of the Code of that State, as amended by the Act of 1880, chapter 349. The construction thus given by the Court of Appeals of Maryland to the scope of the license laws of Maryland, which are in controversy here, is authoritative in this court.

Christy v. Pridgen, 71 U. S. 4 Wall. 196, 203 (18: 322, 325); *Atcard v. State*, 86 U. S. 19 Wall. 635, 639 (22: 215, 216); *Burgess v. Seligman*, 107 U. S. 20, 33, 34 (27: 359, 365); *Flash v. Conn.*, 109 U. S. 371, 379 (27: 966, 970).

It is in general within the constitutional power of every State to tax occupations, within the control of a State, by requiring persons who wish to pursue them, to obtain, before doing so, a license from certain designated officers.

Nathan v. Louisiana, 49 U. S. 8 How. 80 (12: 995); *Welton v. Missouri*, 91 U. S. 278 (23: 348).

Such license is a tax. No employment thus under state control is absolutely exempt from the liability to be thus taxed. "The necessities of the government may require that the lowest employment, as well as the most lucrative, shall contribute to its support; and, if any are exempted, motives of policy will govern the discrimination."

Cooley, Tax, 1st ed. 385; *Burr. Tax*, § 77; *License Tax Cases*, 72 U. S. 5 Wall. 472, 473 (18: 501).

The selling of goods by sample within any particular State is conducting a business in

such State. As a business it is subject to taxation, unless there be some constitutional reason exempting it from the burden.

Cooley, Tax. 1st ed. 384; *McCulloch v. Md.* 17 U. S. 4 Wheat. 428, 429 (4: 607); *State Tax on Foreign Held Bonds*, 82 U. S. 15 Wall. 319 (21: 186); *Shepherd v. Sumter Co. Comrs.* 59 Ga. 535.

The provisions of the Maryland Code, which are in controversy in this case, as amended by the Maryland Act of 1880, chapter 349, were not in violation of article 4, section 2, subsection 1, of the Constitution of the United States, because their provisions apply equally to citizens of the State of Maryland and to citizens of the other several States.

Machine Co. v. Gage, 100 U. S. 679 (25: 755).

The vendor appropriated the specific quantities of teas sold for the benefit of the vendee, and engaged that such specific quantities should be shipped to him. The vendee assented to the appropriation made by the vendor and upon his terms. The property in the goods therefore passed to the vendee.

Chitty, Cont. 11 Eng. ed. 357; *Gillett v. Hill*, 2 Crompt. & M. 585; *Dixon v. Yates*, 5 B. & Ad. 818; 27 E. C. L. 90; *Thompson v. Balt. & O. R. R. Co.* 28 Md. 405.

There was not only a constructive but also an actual delivery of the property in Maryland.

Magruder v. Gage, 33 Md. 348; *Kribs v. Jones*, 44 Md. 406.

Under such circumstances the effect of the sale to Kenney of the particular tea, and of its shipment to him as a purchaser, was to bring the property, thus sold and shipped, within the jurisdiction of the State of Maryland; to incorporate and intermix it with the mass of property in the State; to deprive it of its distinctive character as an import, and to subject it to the taxing power of that State.

Hovell v. State, 3 Gill, 23; *Providence Bank v. Billings*, 29 U. S. 4 Pet. 564 (7: 956); *Brown v. Md.* 25 U. S. 12 Wheat. 441-2 (6: 686); *Pervear v. Commonwealth*, 72 U. S. 5 Wall. 479 (18: 609); *Waring v. Mayor*, 75 U. S. 8 Wall. 122-3 (19: 346); *Woodruff v. Parham*, Id. 139 (19: 387).

Mr. Justice Bradley delivered the opinion of the court:

This case does not differ materially from that of *Robbins v. Taxing District of Shelby County*, [ante, 45], just decided. The Code of Maryland, as amended in 1880, provides that "No person or corporation other than the grower, maker or manufacturer shall barter or sell, or otherwise dispose of, or shall offer for sale any goods, chattels, wares, or merchandise within this State, without first obtaining a license in the manner herein prescribed." A violation of this law was made an indictable offense; and the plaintiff in error, a citizen and resident of New York, was indicted for offering to sell and for selling by sample, in the City of Baltimore, without license, certain goods for a New York firm, to be shipped from New York directly to the purchaser. The plaintiff in error demurred to the indictment, but it was sustained both by the court of original jurisdiction and by the Court of Appeals of Maryland on writ of error. The constitutionality of the law was duly raised, and the law was sustained.

INTER 8.

The same principles apply to this case which were considered in that of *Robbins*, and the same result must be declared.

The judgment of the Court of Appeals of Maryland is reversed, and the plaintiff in error must be discharged.

Mr. Chief Justice Waite concurring:

Mr. Justice Field, Mr. Justice Gray, and myself agree to this judgment, but on different grounds from those stated in the opinion of the court. It is not denied that the Statute of Maryland requires a nonresident merchant desiring to sell by sample in that State to pay for a license to do that business a sum to be ascertained by the amount of his stock in trade in the State where he resides and in which he has his principal place of business. This differs materially from the Statute of Tennessee, which was considered in *Robbins v. Taxing District of Shelby County*, just decided, and is in its effect, as we think, a tax on commerce among the States. The charge for the privilege to the nonresident is measured by his capacity for doing business all over the United States, and without any reference to the amount done or to be done in Maryland.

JAMES C. FARGO, As President of the
MERCHANTS DISPATCH TRANSPORTATION
COMPANY, *Plff. in Err.*,

v.
WILLIAM C. STEVENS, As Auditor-General
of The STATE OF MICHIGAN.

(From Lawyers' ed. U. S. Reports, Bk. 80.)

- *1. A state statute which levies a tax upon the gross receipts of railroads for the carriage of freights and passengers into, out of, or through the State, is a tax upon commerce among the States, and therefore void.
2. While a State may tax the money actually within the State, after it has passed beyond the stage of compensation for carrying persons or property, as it may tax other money or property within its limits, a tax upon receipts for this class of carriage specifically is a tax upon the commerce out of which it arises; and, if that be interstate commerce, it is void under the Constitution.
3. The States can not be permitted, under the guise of a tax upon business transacted within their borders, to impose a burden upon commerce among the States, when the business so taxed is itself interstate commerce.

(Submitted December 9, 1886. Decided April 4, 1887.)

IN ERROR to the Supreme Court of the State of Michigan. *Reversed.*

The history and facts of the case appear in the opinion of the court.

Mr. Ashley Pond, for plaintiff in error:

Taxation by the State of Michigan, of an association organized and domiciled in the State of New York, based upon the estimated gross earnings of its cars within the State of Michigan, while engaged solely in traffic which cross-

*Head notes by Mr. Justice MILLER.

es the state line, such earnings being also received and possessed by such association in the State of New York, operates as a regulation of commerce, is extraterritorial and void.

It is respectfully submitted that the recent cases of *Gloucester Ferry Co. v. Pa.* 114 U. S. 196, and *Pickard v. Pullman Southern Car Co.* 117 U. S. 34 (Bk. 29, L. ed. 158, 785), and the principle of *Wabash etc. R. R. Co. v. Illinois*, decided October 25, 1886 (Bk. 30, L. ed. 244), are decisive of the case at bar.

Interstate communication cannot be restricted; and the terms upon which commerce may be engaged in cannot be prescribed by state authority.

Gibbons v. Ogden, 9 Wheat. 1 (22 U. S. bk. 6, L. ed. 23); *Brown v. Maryland*, 12 Wheat. 419 (25 U. S. bk. 6, L. ed. 678); *Passenger Cases*, 7 How. 283 (48 U. S. bk. 12, L. ed. 702); *Henderson v. Wickham*, 92 U. S. 269 (Bk. 23, L. ed. 543); *Head Money Cases*, 112 U. S. 580 (Bk. 28, L. ed. 798.)

The tax cannot be sustained as a tax upon the property of the company within the State. The company has no property taxable within the State. Its cars are within the State only in transit while engaged in interstate transportation or commerce. They cannot be there taxed as property, being owned in New York.

Hayes v. Pacific Mail Steamship Co. 17 How. 596 (58 U. S. bk. 15, L. ed. 254).

The tax cannot be sustained as a tax upon the business of the company, for that business is not local but is interstate, and is wholly beyond state regulation.

The cases of *Wiggins Ferry Co. v. East St. Louis*, 107 U. S. 365 (Bk. 27, L. ed. 419), and *Gloucester Ferry Co. v. Pa.* 114 U. S. 196 (Bk. 29, L. ed. 158), illustrate the difference between a valid tax upon the property of a domestic corporation engaged in interstate commerce, and an invalid tax upon the business of a foreign corporation engaged solely in interstate commerce.

See also *Moran v. New Orleans*, 112 U. S. 69 (Bk. 28, L. ed. 653).

The tax cannot be sustained as an exercise of the restrictive power of the State over foreign corporations; for under that power there can be no regulation of commerce by the State.

The Supreme Court of Michigan fails to distinguish this case from that of *State Tax on Railway Gross Receipts*, 15 Wall. 284 (82 U. S. bk. 21, L. ed. 164), in which a tax on the gross receipts of a Pennsylvania company, which had been actually garnered into its treasury in that State, was in question.

The court also specifically declares the tax to be one upon business done in the State, and deems it within the purview of *Osborne v. Mobile*, without distinguishing that the license in that case was of a business carried on in the City of Mobile, which was entirely local in its nature.

Mr. Edward Bacon with *Mr. Moses Taggart*, Atty-Gen. of Michigan, for defendant in error:

There are, in the different States of the Union, two well known systems of railroad taxation: one, such as that used in Tennessee, according to a valuation (See *State R. R. Tax Cases*, 92 U. S. 601, 603 (Bk. 23, L. ed. 669)); the other, such as that used in Michigan, according to gross receipts, a small percentage thereof being taken by the

State annually as specific taxes in lieu of all other taxation.

Howell's Statutes of Michigan, chap. 90, entitled *Commissioner of Railroads*, § 1, being § 3291 of said statutes; *State Treasurer v. Auditor-Gen.* 46 Mich. 231, 233; *Chicago etc. R. Co. v. Auditor-Gen.* 53 Mich. 79. See also *State R. R. Tax Cases*, 92 U. S. 611 (Bk. 23, L. ed. 666).

Is it true that the Merchants Dispatch Transportation Company did not carry on, in the State of Michigan, any business liable to state taxation?

Osborne v. Mobile, 16 Wall. 479 (83 U. S. bk. 21, L. ed. 470); *Telegraph Co. v. Texas*, 105 U. S. 464 (Bk. 26, L. ed. 1068).

The laws of New York, under which the bill states that the complainant was organized and was taxed, include statutes of the same force and effect as the Michigan Statute complained of in the bill; and a decision in the complainant's favor, against the Michigan Statute, would entitle it to a decision in its favor against the New York Statute, so far as interstate commerce is concerned.

The Court of Appeals of the State of New York has declared the validity of these statutes.

People v. Home Ins. Co. 92 N. Y. 846; *People v. Equitable Trust Co.* 96 N. Y. 894-896; *People v. Gold etc. Tel. Co.* 98 N. Y. 73.

The Act No. 152 of the Laws of Michigan for 1883 (also New York Statutes and similar statutes of other States), was enacted in reliance upon principles recognized by the decision of this court.

Osborne v. Mobile, 16 Wall. 479 (83 U. S. bk. 21, L. ed. 470).

The complainant has been claiming and exercising extensively, in Michigan, franchises granted by the laws of New York.

No good reason can be shown why the State which creates important corporate franchises for commercial corporations should have a right to tax the exercise thereof, while at the same time another State, wherein the same franchises are assumed and exercised (to a greater extent perhaps, and with more profit than elsewhere) should be forever powerless to tax such franchises or business carried on in the exercise thereof.

Baltimore etc. R. R. Co. v. Koontz, 104 U. S. 11 (Bk. 26, L. ed. 644); *Stone v. Ill. Cent. R. R. Co.* 116 U. S. 852 (Bk. 29, L. ed. 651); *Canada S. R. R. Co. v. Gebhard*, 109 U. S. 587 (Bk. 27, L. ed. 1023); *State Tax on R. Gross Receipts*, 15 Wall. 296 (82 U. S. bk. 21, L. ed. 168); *Minot v. Philadelphia etc. R. R. Co.* 18 Wall. 281 (85 U. S. bk. 21, L. ed. 896); *St. Clair v. Cox*, 106 U. S. 857 (Bk. 27, L. ed. 225); *Diamond Match Co. v. Powers*, 51 Mich. 148; *Talcott v. McCormick Harvesting Machine Co.* 51 Mich. 7; *Coe v. Errol*, 116 U. S. 524 (Bk. 29, L. ed. 717); *Telegraph Co. v. Texas*, 105 U. S. 464-5 and *Relife v. Rundle*, 103 U. S. 225-6 (Bk. 26, L. ed. 1068, 839); *Baltimore R. R. Co. v. Md.* 21 Wall. 456 (88 U. S. bk. 22, L. ed. 678).

Gloucester Ferry Co. v. Pa. 114 U. S. 196 (Bk. 29, L. ed. 158) is relied upon by the plaintiff in error; but the decision of no issue joined in that case can be relevant here. The Gloucester Ferry Company was doing no more business in Pennsylvania than any foreign corporation owning a line of steamships carrying on commerce between European ports and

Philadelphia. It merely obtained a lease of a sufficient landing place on the Pennsylvania shore; 114 U. S. 205 (Bk. 29: 162) and on page 203 this court uses the following language:

"The business of landing and receiving passengers and freight at the wharf in Philadelphia is a necessary incident to, indeed is a part of, their transportation across the Delaware River from New Jersey. Without it that transportation would be impossible. Transportation implies the taking up of persons or property at some point and putting them down at another. A tax, therefore, upon such receiving and landing of passengers and freight is a tax upon their transportation; that is, upon the commerce between the two States involved in such transportation."

The case of *Pickard v. Pullman Palace Car Co.* 117 U. S. 84 (Bk. 29, L. ed. 785), is distinguishable. In that case the company had no office in the State (Tenn.) through which its cars ran.

A corporation which seeks by its agents to establish a domicile of business in a State other than that of its own creation must take that domicile, subject to the responsibilities and burdens imposed by the laws which it finds in force there.

Atty-Gen. v. Bay State Min. Co. 99 Mass. 153; *Ricker v. American etc. Co.* 140 Mass. 350; *Carroll Iron Co. v. McLaren*, 5 H. L. Cas. 416, 449.

The Tennessee Statute imposing the tax in *Pickard v. Pullman Palace Car Co. supra*, was objectionable because it purported to make entirely illegal certain interstate commerce, except on payment of the license fee as a condition precedent, and was therefore no better than a statute to collect, at the state line, duties on interstate commerce.

The method of ascertaining taxes measured by gross receipts has been approved by this court and by the Supreme Court of Michigan.

State Tax on Railway Gross Receipts, 15 Wall. 284 (82 U. S. bk. 21, L. ed. 164); *Delaware R. R. Tax*, 18 Wall. 206 (85 U. S. bk. 21, L. ed. 889); *Erie R. Co. v. Pa.* 21 Wall. 492 (88 U. S. bk. 22, L. ed. 595); *State Treasurer v. Auditor-Gen.* 46 Mich. 281, 282; *Chicago etc. R. Co. v. Auditor-Gen.* 58 Mich. 79. In this connection see *Woodruff v. Parham*, 8 Wall. 123 (75 U. S. bk. 19, L. ed. 382); *Savings Society v. Coits*, 6 Wall. 594 (78 U. S. bk. 18, L. ed. 897); *Provident Sav. Institution v. Mass.* 6 Wall. 611 (73 U. S. bk. 18, L. ed. 907).

Summary. The tax in question is valid for the following reasons:

The tax is on business done in the exercise of corporate franchises, introduced by permission of the State of Michigan.

The tax is on such business done by means of the complainant's permanently established local agents and offices in Michigan, with every facility for carrying on business between places within the State, whenever profitable.

The tax is necessary to the safety of the State's revenue, from railroad companies and express companies.

The tax is upon railroad business so affecting and controlling public interests of the people of the State of Michigan that such business ought not to escape taxation in the State.

The complainant ought not to escape tax-

ation in Michigan, merely because the final receipts of its earnings in Michigan was at its chief office in the City of New York.

The business by which all right to such earnings accrued was completed within the State of Michigan; and according to the ordinary course of such business, any suit to collect such earnings must be brought in Michigan, where the contracts therefor were made and fulfilled.

Mr. Justice Miller delivered the opinion of the court:

This is a writ of error to the Supreme Court of the State of Michigan to bring here for review a decree sustaining a demurrer to the complainant's bill in chancery, and dismissing the bill. The complainant brought suit as President of the Merchants' Dispatch Transportation Company, averring that said company is a joint stock association, organized and existing under the laws of the State of New York, and by the laws of that State authorized to sue in the name of its president. The bill, so far as it presents the questions on which this court can have jurisdiction, charges as follows:

"Second. That during the year ending with the 31st day of December, A. D. 1888, the said Transportation Company was engaged in the business of soliciting and contracting for the transportation of freight required to be carried over connecting lines of railroad in order to reach its destination, and, for the prosecution of its said business, it had agencies located generally throughout the United States and the Dominion of Canada; the said Transportation Company issued through bills of lading for such freight, and caused the same to be carried by the appropriate railroad companies; and, as compensation for its service in the premises, the said Transportation Company was paid by the said railroad companies a definite proportion of the through rate charged and collected by said companies for the carriage of said freights.

"Third. That during the said year the said Transportation Company was possessed of certain freight cars which were used and run by the railroad companies in whose possession they changed from time to time to be for the transportation, upon their own and connecting lines of railroad, of through freight, principally between the City of New York, in the State of New York, and Boston, in the State of Massachusetts, and Chicago, in the State of Illinois, and other points and commercial centers in the West, Northwest and Southwest, without the said State of Michigan; that said cars were not used for the carriage of freight between points situate within the said State of Michigan, but wholly for the transportation of freight, either passing through the State or originating at points without said State and destined to points within, or originating at points within said State and destined to points without; that the said several railroad companies thus making use of said cars during the said year paid to the said Transportation Company as compensation therefor a definite sum per mile for the distance traveled by the said cars over their respective lines.

"Fourth. That the said Transportation Company during the said year was not running or

interested in any special fast, through, or other stock, coal or refrigerator car freight line, or doing business in or running cars over any of the railroads of said State of Michigan, otherwise than as in the preceding paragraphs stated.

"Fifth. That prior to the first day of April, A. D. 1884, the Commissioner of Railroads of the State of Michigan transmitted to the said Transportation Company certain blank forms of a report to be made to him pursuant to the provisions of an Act of the Legislature of the State of Michigan approved June 5, 1883, entitled 'An Act to Provide for the Taxation of Persons, Copartnerships, Associations, Car-loading Companies, and Fast Freight Lines Engaged in the Business of Running Cars Over Any of the Railroads of This State, and not Being Exclusively the Property of Any Railroad Company Paying Taxes on Their Gross Receipts,' with the requirement that the said Transportation Company should make up and return said report to the office of said commissioner on or before the first day of April, 1884, under the penalties of said Act; that on or about said first day of April, in compliance with said demand, but protesting that the same was without authority of law, and that said Act was invalid—or if valid, was not applicable to the said Transportation Company—the said Transportation Company made and filed with said commissioner a report, duly verified, setting forth that the gross amount of the receipts of the said Transportation Company for the mileage of said cars during said year 1883, while in use in the transportation of freight between points without said State and passing through said State in transit, estimated and prorated according to the mileage of said cars within said State of Michigan while so in use, was the sum of \$95,714.50; and while in the use of transportation of freight from points without to points within said State of Michigan, and from points within to points without said State, estimated and prorated according to the mileage of said cars within the State of Michigan while so in use, was the sum of \$28,890.01, making in the aggregate the sum of \$124,604.51; that during said year it received no moneys whatever on business done solely within the said State of Michigan, and no moneys which were or could be regarded as earned during said year within the limits of said State of Michigan other than as hereinbefore and in said report set forth.

"Sixth. That by the terms of said Act it is the duty of said Commissioner of Railroads to make and file with the Auditor-General of said State of Michigan, prior to the first day of June each year a computation based upon the report of each person, association, copartnership, or corporation taxable thereunder, of the amount of tax to become due from them respectively, and each such person, association, copartnership or corporation is required on or before the first day of July in such year to pay to the Treasurer of said State of Michigan, upon the statement of the Auditor-General thereof, 2½ per cent upon its gross receipts as computed by the said Commissioner of Railroads and derived from loading, renting or hiring of cars to any railroad or other corporation, association, copartnership or party. It was also provided in said Act that for the said taxes an interest thereon, and the penalty imposed for delay in the pay-

ment thereof, the said State should have a lien upon all the property of the person, association, copartnership, or corporation so taxed, and in default of the payment of said tax by and within the time so prescribed the Auditor-General of said State was authorized to issue his warrant to the sheriff of any county in said State, commanding him to levy the same, together with 10 per cent for his fees, by distress and sale of any of the property of the corporation or party neglecting or refusing to pay such tax wherever the same may be found within the county or State.

"Seventh. That the said Commissioner of Railroads has computed and determined that the amount of the gross receipts of the said Transportation Company under the said Act is the said sum of \$28,890.01, and that there is due from said Transportation Company to the State of Michigan, as a tax thereon, the sum of \$722.25, and has transmitted said computation to the said Auditor-General; and your orator shows that unless said tax is paid by the said Transportation Company on or before the first day of July, 1884, it will become the duty of the said Auditor-General under the said Act, and the said Auditor-General threatens that he will proceed to enforce payment of the said tax against said Transportation Company by the seizure and sale of the property of said Transportation Company under the provisions of said Act.

"Eighth. That your orator is advised and so charges, that the said Act as to the said gross receipts of the said Transportation Company, or of any of its receipts or earnings from the use of its cars, within the State of Michigan, and the transaction of its business in the manner aforesaid, is in violation of the Constitution of the United States, and void, and that said Act is inapplicable to the said Transportation Company, and inoperative for further reasons appearing upon its face; and that said Transportation Company is not amenable thereto.

"Ninth. That the chief officers of the said Transportation Company for the transaction of corporate business was, during said year, and is in the City of New York, in the State of New York, and that all the moneys earned by it, as set forth in the second and third paragraphs hereof, were paid to it at its said office; that said Company during said year had no funds or property whatsoever within the State of Michigan, except cars in transit and office furniture in the possession of agents; and that during said year the said Transportation Company was subject to taxation and was taxed on account of its property and earnings within and under the laws of the State of New York."

The bill then prays for a subpoena against William C. Stevens, Auditor-General of the State of Michigan, and for an injunction to prevent him from proceeding in the collection of said taxes. To this bill the defendant Stevens demurred, and the Circuit Court for the County of Washtenaw, in which this suit was brought, overruled that demurrer. From this decree the defendant appealed to the Supreme Court of the State, where the judgment of the lower court was reversed, the demurrer sustained, and the bill dismissed. To reverse that decree this writ of error was sued out.

The contention of the plaintiff in error is that the Statute of Michigan, the material parts of which are recited in the bill, is void as a regulation of commerce among the States, which, by the Constitution of the United States, is confided exclusively to Congress. Art. 1, § 8, clause 3. It will be observed that the bill shows that the tax finally assessed by the Auditor of State, against the Transportation Company, was for the \$28,890.01 of the gross receipts which the Company had returned to the commissioner as money received for the transportation of freight from points without to points within the State of Michigan, and from points within to points without that State; and that no tax was assessed on the \$95,714.50 received for transportation passing entirely through the State to and from other States.

There is nothing in the opinion of the Supreme Court of the State, which is found in the transcript of the record, to explain this discrimination. There is nothing in the Statute of the State on which this tax rests which makes such a distinction; nor is there anything in the commissioner's requirement for a report which suggests it. It must have been, therefore, upon some idea of the authorities of the State that the one was interstate commerce and the other was not, which we are at a loss to comprehend. Freight carried from a point without the State to some point within the State of Michigan as the end of its voyage; and freight carried from some point within that State to other States is as much commerce among the States as that which passes entirely through the State from its point of original shipment to its destination. This is clearly stated and decided in the case of *Phila. & Reading Railroad Co. v. Pa.* commonly called the case of *The State Freight Tax*, 15 Wall. 232 [82 U. S. bk. 21, L. ed. 146], in which it is held that a tax upon freight taken up within the State and carried out of it, or taken up without the State and brought within it, is a burden on interstate commerce, and therefore a violation of the constitutional provision that Congress shall have power to regulate commerce with foreign nations and among the several States. And in *Wabash R. Co. v. Ill.* 118 U. S. 557 [Bk. 30, L. ed. 244], it is held that a statute attempting to regulate the rates of compensation for transportation of freight from New York to Peoria, in the State of Illinois, or from Peoria, to New York, is a regulation of commerce among the States. The same principle is established in *Crandall v. Nevada*, 6 Wall. 35 [73 U. S. bk. 13, L. ed. 745].

The Statute of the State of Michigan of 1883, under which this tax is imposed, is entitled "An Act to Provide for the Taxations of Persons, Copartnerships, Associations, Carloading Companies, Corporations, and Fast Freight Lines Engaged in the Business of Running Cars over Any of the Railroads of This State, and Not Being Exclusively the Property of any Railroad Company Paying Taxes on Their Gross Receipts." Sections 1 and 2 require reports to be made to the commissioner of railroads of the gross amount of their receipts for freight earned within the limits of The State from all persons and corporations running railroad cars within the State. The commissioner is by section 4 required to make and file with

INTER S.

the Auditor-General, on the first day of June of each year, a computation of the amount of tax which would become due on the first day of July next succeeding from each person, association, or corporation liable to pay such taxes. Each one of these is by section 5 required to pay to the State Treasurer, upon the statement of the Auditor-General, an annual tax of 2½ per cent upon its gross receipts, as computed by the Commissioner of Railroads.

It will thus be seen that the Act imposed a tax upon all the gross receipts of the Merchants Dispatch Transportation Company, a corporation under the laws of the State of New York, and with its principal place of business in that State, on account of goods transported by it in the State of Michigan; and the bill states that the Company carried no freight, the transportation of which was between points exclusively within that State.

The subject of the attempts by the States to impose burdens upon what has come to be known as interstate commerce or traffic, and which is called in the Constitution of the United States "commerce among the States," by statutes which endeavor to regulate the exercise of that commerce, as to the mode by which it shall be conducted, or by the imposition of taxes upon the articles of commerce, or upon the transportation of those articles, has been very much agitated of late years. It has received the attentive consideration of this court in many cases, and especially within the last five years, and has occupied Congress for a time quite as long. The recent Act, approved February 4, 1887, entitled "An Act to Regulate Commerce," passed after many years of effort in that body, is evidence that Congress has at last undertaken a duty imposed upon it by the Constitution of the United States, in the declaration that it shall have power "to regulate commerce with foreign Nations, and among the several States, and with the Indian Tribes." Congress has freely exercised this power so far as relates to commerce with foreign Nations and with Indian Tribes, but in regard to commerce among the several States it has, until this Act, refrained from the passage of any very important regulation upon this subject, except perhaps the statutes regulating steamboats and their occupation upon the navigable waters of the country.

With reference to the utterances of this court until within a very short time past, as to what constitutes commerce among the several States, and also as to what enactments by the State Legislatures are in violation of the constitutional provision on that subject, it may be admitted that the court has not always employed the same language, and that all of the judges of the court who have written opinions for it may not have meant precisely the same thing. Still, we think the more recent opinions of the court have pretty clearly established principles upon that subject which can be readily applied to most cases requiring the construction of the constitutional provision, and that these recent decisions leave no room to doubt that the Statute of Michigan, as interpreted by its supreme court in the present case, is forbidden as a regulation of commerce among the States, the power to make which is withheld from the State.

The whole question has been so fully considered in these decisions, and the cases themselves so carefully reviewed that it would be doing little more than repeating the language of the arguments used in them to go over the ground again. The cases of *The State Freight Tax* and *State Tax on Railway Gross Receipts*, which were considered together and decided at the December Term, 1872, and reported in 15 Wallace, pp. 282 to 328 [82 U. S. bk. 21, 146-189], present the points in the case now before us perhaps as clearly as any which have been before this court. A Statute of the State of Pennsylvania imposed upon all the railroad corporations doing business within that State, as well as steamboat companies and others engaged in the carrying trade, a specific tax on each 2,000 pounds of freight carried, graduated according to the articles transported. These were arranged into three classes, on the first of which a tax of two cents per ton was laid, upon the second three cents, and upon the third five cents. The Reading Railroad Company, a party to the suit, in making its report under this statute, divided its freight on which the tax was to be levied into two classes, namely: freight transported between points within the State and freight which either passed from within the State out of it or from without the State into it. The Supreme Court of the State of Pennsylvania decided that all the freight carried, without regard to its destination, was liable to the tax imposed by the statute. This court, however, held that freight carried entirely through the State from without, and the other class of freight brought into the State from without or carried from within to points without, all came under the description of "commerce among the States," within the meaning of the Constitution of the United States; and it held also that freight transported from and to points exclusively within the limits of the State, was internal commerce and not commerce among the States. The taxing law of the State was, therefore, valid as to the latter class of transportation; but with regard to the others it was invalid, because it was interstate commerce, and the State could lay no tax upon it. In that case, which was very thoroughly argued and very fully considered, the case of *Grandall v. Nevada*, 6 Wall. 35 [73 U. S. bk. 18, L. ed. 745], was cited as showing, in regard to transportation, what was strictly internal commerce of a State and what was interstate commerce. The court said: "It is not at all material that the tax is levied upon all freight, as well that which is wholly internal as that embarked in interstate trade. We are not at this moment inquiring further than whether taxing goods carried because they are carried, is a regulation of carriage. The State may tax its internal commerce; but if an Act to tax interstate or foreign commerce is unconstitutional, it is not cured by including in its provisions subjects within the domain of the State. Nor is a rule prescribed for carriage of goods through, out of, or into a State any less a regulation of transportation because the same rule may be applied to carriage which is wholly internal. Doubtless a State may regulate its internal commerce as it pleases. If a State chooses to exact conditions for allowing the passage or carriage of persons or freight through it into another

State the nature of the exaction is not changed by adding to it similar conditions for allowing transportation wholly within the State."

In the case of *The Erie Railway Company* (a corporation of the State of New York) v. *Pennsylvania*, decided at the same time, it appeared that the road of that company was constructed for a short distance through a part of the State of Pennsylvania, and that a similar tax was levied upon it for freight carried over its road. This was held to be invalid for the reasons given in the case of the Reading Road.

In the other case of *State Tax on Railway Gross Receipts*, which was also a suit between the Reading Railway Company and the State of Pennsylvania, an Act of the Legislature of that State was relied on which declared that "In addition to the taxes now provided by law, every railroad, canal and transportation company incorporated under the laws of this Commonwealth, and not liable to the tax upon income under existing laws, shall pay to the Commonwealth a tax of three fourths of 1 per centum upon the gross receipts of said company; and the said tax shall be paid semi-annually upon the first days of July and January, commencing on the first day of July, 1866."

This tax was held to be valid. The grounds upon which it was distinguished from the one in the preceding case upon freight were, that the corporation, being a creation of the Legislature of Pennsylvania and holding and enjoying all its franchises under the authority of that State, this was a tax upon the franchises which it derived from the State, and was for that reason within the power of the State, and that, in determining the mode in which the State could tax the franchises which it had conferred, it was not limited to a fixed sum upon the value of them, but it could be graduated by and proportioned to either the value of the privileges granted or the extent or results of their exercise. "Very manifestly," said the court, "this is a tax upon the railroad company, measured in amount by the extent of its business, or the degree to which its franchise is exercised." Another reason given for the distinction is that "The tax is not levied, and, indeed such a tax cannot be, until the expiration of each half year, and until the money received for freights, and from other sources of income, has actually come into the company's hands. Then it has lost its distinctive character as freight earned, by having become incorporated into the general mass of the company's property. While it must be conceded that a tax upon interstate transportation is invalid, there seems to be no stronger reason for denying the power of a State to tax the fruits of such transportation after they have become intermingled with the general property of the carrier, than there is for denying her power to tax goods which have been imported, after their original packages have been broken, and after they have been mixed with the mass of personal property in the country. *Brown v. Md.* 12 Wheat. 420 [25 U. S. bk. 6, L. ed. 678].

The distinction between that case, which is mainly relied upon by the Supreme Court of Michigan in support of its decree, and the one which we now have before us, is very obvious, and is twofold: first, the corporation which was the subject of that taxation was a Pennsylvania

corporation, having the situs of its business within the State which created it and endowed it with its franchises. Upon these franchises thus conferred by the State, it was asserted, the State had a right to levy a tax; second, this tax was levied upon money in the treasury of the corporation, upon property within the limits of the State, which had passed beyond the stage of compensation for freight and had become like any other property or money liable to taxation by the State. The case before us has neither of these qualities. The Corporation upon which this tax is levied is not a Corporation of the State of Michigan, and has never been organized or acknowledged as a corporation of that State. The money which it received for freight carried within the State probably never was within the State, being paid to the Company either at the beginning or the end of its route; and certainly at the time the tax was levied it was neither money nor property of the Corporation within the State of Michigan.

The proposition that the States can, by way of a tax upon business transacted within their limits, or upon the franchises of corporations which they have chartered, regulate such business or the affairs of such corporations, has often been set up as a defense to the allegation that the taxation was such an interference with commerce as violated the constitutional provisions now under consideration. But where the business so taxed is commerce itself, and is commerce among the States or with foreign Nations, the constitutional provision cannot thereby be evaded; nor can the States, by granting franchises to corporations engaged in the business of the transportation of persons or merchandise among them, which is itself interstate commerce, acquire the right to regulate that commerce, either by taxation or in any other way.

This is illustrated in the case of *Cook v. Pa.* 97 U. S. 566 [Bk. 24, L. ed. 1015]. The State of Pennsylvania, by her laws, had laid a tax upon the amount of sales of goods made by auctioneers, and had so modified and amended this class of taxes that in the end it remained a discriminating tax upon goods so sold and imported from abroad. This court held that the tax which the auctioneer was required to pay into the treasury was a tax upon the goods sold, and, as this tax was three quarters of 1 per cent upon foreign drugs, glass, earthenware, hides, marble work and dye woods, that it was a tax upon the goods so described for the privilege of selling them at auction. The argument was made that this was a tax exclusively upon the business of the auctioneer, which the State had a right to levy. In that case, as in others, it was claimed that the privilege of being an auctioneer derived from the State by license, was subject to such taxation as the State chose to impose, but the proposition was overruled; and this court held that the tax was a regulation of commerce with foreign Nations, and that the fact that it was a tax upon the business of an auctioneer did not relieve it from the objection arising from the constitutional provision.

The same question arose in the case of *The Gloucester Ferry Co. v. Pa.* 114 U. S. 196 [Bk. 29, L. ed. 156]. That company was a corpora-

tion chartered by the State of New Jersey to run a ferry carrying passengers and freight between the Town of Gloucester, in that State, and the City of Philadelphia, in the State of Pennsylvania. It had no property within the State of Pennsylvania, but it leased a landing place or wharf in that city for its business. The Auditor-General and Treasurer of the State of Pennsylvania assessed a tax upon the capital stock of this corporation under the laws of that State, which the company refused to pay. Its validity was sustained by the State Supreme Court, and the question was brought to this court by a writ of error. It was insisted that the tax was justified as a tax upon the business of the corporation, which, it was claimed, was largely transacted in the City of Philadelphia. The Supreme Court of the State, in giving its decision, stated that the single question presented for consideration was whether the company did business within the State of Pennsylvania within the period for which the taxes were imposed; and it held that it did because it received and landed passengers and freight at its wharf in the City of Philadelphia. The argument was very much urged in this court that the licensing of ferries across navigable rivers, whether dividing two States or otherwise, had always been within the control of the States, and that this, being a mere tax upon the business of that corporation carried on largely within the State of Pennsylvania, was within the power of that State to regulate. But this court held, after an extensive review of the previous cases, that the business of ferrying across a navigable stream between two States was necessarily commerce among the States, and could not be taxed as was attempted in that case.

In the case of *Pickard v. Pullman Southern Car Co.* 117 U. S. 34 [Bk. 29, L. ed. 785], decided at the last term of the court, it was shown that the Legislature of Tennessee had imposed what it called a privilege tax under the constitution of that State of \$50 per annum upon every sleeping car or coach run or used upon a railroad in that State, not owned by the railroad company so running or using it. This, it will be perceived, is very much like the tax in the case before us, except that it is a specific tax of \$50 per annum upon the car instead of a tax upon the gross receipts arising from the use of the car by its owner. In that case, after an exhaustive review of the previous decisions in this class of cases by Mr. Justice Blatchford, who delivered the opinion of the court, it was held that, as these cars were not property located within the State, it was a tax for the privilege of carrying passengers in that class of cars through the State, which was interstate commerce, and for that reason the tax could not be sustained.

Two cases have been decided at the present term of the court in which these questions have been considered, one of them at least involving the subject now under consideration, namely, that of *Sabine Robbins v. Taxing District of Shelby Co. Tenn.* [ante, 45]. A Statute of that State declared that "All drummers, and all persons not having a regular licensed house of business in the taxing district, offering for sale or selling goods, wares, or merchandise therein by sample, shall be required to pay to the

county trustee the sum of \$10 per week, or \$25 per month, for such privilege." Robbins was prosecuted for a violation of this law, and on the trial it appeared that he was a resident and citizen of Cincinnati, Ohio, who transacted the business of drumming in the taxing district of Shelby County, that is, soliciting trade by the use of samples, for the firm by which he was employed, whose place of business was in Cincinnati, and all the members of which were residents and citizens of that city. It was argued in that case, as in the others we have just considered, that the State had a right to tax the business of selling by samples goods to be afterwards delivered, and to impose a tax upon the persons called "drummers" engaged in that business. It was further insisted that, since the license tax applied to persons residing within the State as well as those who might come from other States to engage in that business, that it was not a tax discriminating against other States, or the products of other States, and was valid as a tax upon that class of business done within the State. The whole subject is reconsidered again in this case by *Mr. Justice Bradley*, who delivered the opinion of the court, in which it is held that the business in which Robbins was engaged, namely: that of selling goods by sample, which were in the State of Ohio at the time and were to be delivered in the City of Memphis, Tennessee, constituted interstate commerce, and that, so far as this tax was to be imposed upon Robbins for doing that kind of business, it was a tax upon interstate commerce, and therefore not within the power of the State to enforce.

In the case of *Wabash R. Co. v. Ill.* [*supra*,]

the question presented related to a statutory regulation of that State as to compensation for carrying freight. It was held by the Supreme Court of Illinois to embrace all contracts for transportation by railroad which came into or went out of the State, as well as that which was wholly within its limits, and although the controversy did not arise in regard to a tax upon interstate commerce, yet the general question was fully considered as to what was interstate commerce and what was commerce exclusively within the State, and how far the former could be thus regulated by a statute of a State. This court held in that case that no statute of a State in regard to the transportation of goods over railroads within its borders which was a part of a continuous voyage to or from points outside of that State, and thus properly interstate commerce, could regulate the compensation to be paid for such transportation; that the carriage of passengers or freight between different points is commerce and except where that is wholly and exclusively within the limits of a State it is not subject in its material features to be regulated by the State Legislature.

In many other cases, indeed, in the three last cases mentioned, the whole subject has been fully examined and considered with all the authorities, and especially decisions of this court relating thereto. The result is so clearly against the Statute of Michigan as applied by its supreme court that we think the judgment of that court cannot stand.

The decree of the Supreme Court of Michigan is reversed, with directions for further proceedings in accordance with this opinion.

THE INTERSTATE COMMERCE COMMISSION.

Re ATCHISON, TOPEKA & SANTA FÉ R. R. CO.

Petitioning railroad company relieved temporarily from the operation of the **fourth section**, on certain conditions.

(April 23, 1887.)

THE petition presented to the Commission was as follows:

To the Honorable, the Interstate Commission:

Your petitioner, the Atchison, Topeka & Santa Fé Railroad Company, is a corporation organized under the laws of the State of Kansas. By ownership, lease or contract of and with the lines of railroad from Kansas City and Atchison on the Missouri River to and from Pueblo in the State of Colorado; Albuquerque in the Territory of New Mexico; El Paso and Galveston in the State of Texas; Mojave, San Diego, Los Angeles and Colton in the State of California; and by contract or agreement with the Southern Pacific Company in California; with the Mexican Central Railway in Mexico; with the Denver and Rio Grande Railway in Colorado; and with the various lines or systems of railroads running eastward from said Kansas City or Atchison; your petitioner is engaged in the transportation of passengers and property under a common control, management or arrangement, for a continuous carriage or shipment between points in California,

points in the Republic of Mexico, and El Paso and Galveston in Texas, on the one part, and New York, Boston, Philadelphia, Baltimore and all others points on the Atlantic seaboard and points intermediate between said initial and terminal points on the other part.

Wherefore, your petitioner and its connecting lines come within the operation of the Interstate Commerce Act of February 4, 1887.

But in such continuous carriage or shipment of through freight or passengers, your petitioner is in competition with sundry common carriers who are not subject to the operation or effect of said Interstate Commerce Law, viz.:

I. To and from all California points: 1. The Canadian Pacific Railway. 2. The Pacific Mail Steamship Company. 3. Ocean competition via Cape Horn, both steam and sail, and mainly in foreign bottoms.

II. To and from all Mexican and Texan points: 4. Water and rail competition at Vera Cruz in Mexico, and Galveston in Texas.

These several competitors being either without local traffic, or the local traffic being beyond and outside of the controlling effect of the law, they can fix through rates below the minimum possible to your petitioner, if your petitioner is obligated to be governed or limited by the rates which would be just and reasonable for local or intermediate traffic.

In an honest effort to comply with the requirements of the fourth section of the Law, and to avoid appealing to your Honorable

thence by water to New York, or by direct rail connection at El Paso with St. Louis and points west of the Atlantic seaboard.

While your petitioner has therefore reduced its local rates to the lowest possible minimum, to conform in good faith with the requirements of the Interstate Law and yet endeavor to meet the competition above recited on through Mexican business, said rates are above those fixed by its said competitors, and with the necessary result of diverting such business to the rival lines, in an increasing ratio, which must shortly deprive it of all participation therein.

With the Vera Cruz route beyond the jurisdiction of the Interstate Law, and the Texas & Pacific Company relieved from its operation on such Mexican traffic by the recent order of your Honorable Board*; it is manifest that your petitioner should receive like consideration to enable it to meet such rival rates and enjoy its fair proportion of such business; and the action of your Honorable Board in thus relieving the Texas & Pacific Road has been judicially indorsed by the order of *District Judge* Pardee of recent date.† The grounds on which this dual action is predicated and the circumstances which justify the same apply to your petitioner with equal force.

Wherefore, the premises considered, Your petitioner prays that an order be entered by your Honorable Board, authorizing your petitioner "to charge less for longer than for shorter distances for the transportation of passengers or property" over its line to or from the following points, which are competitive as above set forth, viz.:

1. To or from Kansas City and Atchison in the State of Kansas, or through Kansas City and Atchison to or from all competitive points east thereof, including New York, Boston, Philadelphia, Baltimore and other competitive points on the Atlantic seaboard, on the one part, or to and from San Francisco, Oakland, Sacramento, Marysville, Stockton, San José, Los Angeles, Colton, Ballona, San Diego and other competitive points in the State of California on the other part.

2. To or from Galveston in the State of Texas or through Galveston on the one part to or from the competitive points in California above specified on the other part.

3. To or from said Galveston or through the same on the one part to or from all points in the Republic of Mexico and including El Paso, Texas, on the other part.

4. To or from Kansas City and Atchison in Kansas, or through the same on the one part to and from all points in the Republic of Mexico, including El Paso, Texas, on the other part.

5. To or from Kansas City and Atchison, Kansas, or through the same on the one part to or from Galveston, Texas, or through the same on the other part.

Said relief between the points above named is prayed for, to such extent as will enable the Atchison, Topeka & Santa Fé Railroad Company and connecting lines to make such rates between the points of shipment and the points of destination on property that may be transported as competition may render necessary; and your petitioner prays for such other and

*See ante, 22. †See ante, 30.

further relief as it may be entitled to or as to your Honorable Commission may seem just and lawful.

Messrs. Britton & Gray, for petitioner.

By the Commission:

Application having been made to the Interstate Commerce Commission, under section 4 of the Act of Congress, entitled "An Act to Regulate Commerce," by the Atchison, Topeka & Santa Fé Railroad Company, a common carrier, subject to the provisions of said Act, for authority to charge less for a longer than for a shorter distance in certain cases, that is to say for the transportation of property: first, between San Francisco, Sacramento, Stockton, Marysville, San José, Oakland, Los Angeles and San Diego in California; Portland and Astoria in Oregon; Tacoma in Washington Territory; Victoria in British Columbia; and El Paso in Texas on the one hand; and New York, Boston, Philadelphia, Baltimore, Newport News, Richmond and all points commonly rated with them, or either of them, on the other hand: second, between the same western points and Chicago, St. Louis, Memphis, New Orleans and points east thereof; third, between the same western points, and Galveston and Houston in Texas, and points on the Mississippi River and east thereof, at lower rates than are charged between the same points respectively, and local points on the line of said petitioner, or between intermediate points on the same line;

And said common carrier having presented as a reason for granting its said application the existence of water competition and other competing agencies not subject to the "Act to Regulate Commerce," claiming that the rates to and from the said points which must be met in order to obtain through business are too low to enable said common carrier to carry on its business if applied to intermediate local points; and further claiming that great disturbance of business will occur if the provisions of the fourth section of said Act are immediately applied according to the construction thereof which shall treat the business above distinguished as substantially similar in its circumstances and conditions; and it appearing to the Commission, after an investigation of said petition and the facts presented in support thereof, to be a proper case for a temporary order until the Commission can make a complete examination of the matters alleged as reasons for relieving said common carrier from the operation of said section of said Act;

It is ordered that the said application be, and the same is hereby, granted temporarily, subject to modification or revocation by the Commission at any time, upon hearing or otherwise; and the said Atchison, Topeka & Santa Fé Railroad Company is hereby temporarily relieved from the operation of section 4 of said Act, to the extent specified in the recitals of this order, and for a period not greater than seventy-five days from this date; subject, however, to the restriction that while this order remains in force said common carrier shall not charge or receive compensation for the transportation of property between stations on its line where more is charged for a shorter than for a longer haul which shall be greater than the rates

hitherto in force prior to the 20th day of April, instant.

It is a further condition of this order that a printed copy hereof shall be forthwith publicly posted and kept with the schedule rates and charges at every station upon the line of said company for the use of the public.

(April 27, 1887.)

THE Commission examined at Atlanta a large number of persons interested in traffic on southern railroads.

(April 29, 1887.)

Re UNION PACIFIC R. CO.

THE following petition of the Union Pacific Railway Company to the Interstate Commerce Commission, asking to be relieved from the operation of the fourth section of the Interstate Law, was filed with the Secretary at Washington:

To the Honorable the Interstate Commerce Commission: The petition of the Union Pacific Railway Company respectfully represents that it is a railroad company engaged in the transportation of passengers and freight between the Atlantic and Pacific coasts, such transportation being conducted through various States and Territories of the United States, as will appear from the map of the lines operated by it hereunto annexed. The through transportation upon such lines is necessarily conducted under circumstances and conditions substantially dissimilar from those under which the intermediate local transportation is conducted.

In respect of the through transportation, your petitioner is subject to competition with the Canadian Pacific Railroad Company, the Pacific Mail Steamship Company and clipper ships, tramp steamers, and other vessels running between the Pacific and Atlantic ports, some or all of which are beyond the control of Your Honorable Commission in respect of their rates for transportation and their competition with the lines of your petitioner for traffic.

Your petitioner and other companies engaged in the transportation of passengers and freights between the Atlantic and Pacific coasts, have caused to be prepared two tariffs for transcontinental business: one upon the assumption that the fourth section of the Act creating the Commission does, and the other upon the assumption that such section does not, apply to cases in which competing agencies enter, which is not answerable to the operation of said law.

In case your petitioner shall adhere to the tariff for transcontinental business, prepared on the assumption that such section of said Act does apply to cases in which competing agencies enter which are not answerable to the operation of this law, the natural and necessary result therefrom would be that your petitioner would lose the whole or by far the greater part of its through transcontinental business, which would of necessity be diverted to the line of the Canadian Pacific Railroad Company, the Pacific Mail Steamship Company and the clipper ships, tramp steamers and other vessels between the Atlantic and Pacific ports, and such

diversion of such traffic would take place for the reason that the establishment of rates which could be reasonably or justly fixed for intermediate traffic would require and necessitate the charging by your petitioner of so high a rate for the through traffic as to be substantially prohibitory.

The effect of putting in operation the tariff for transcontinental business prepared on the assumption that the fourth section of said Act did apply to cases in which competing agencies enter which are not answerable to the operations of this law, has been that the through transcontinental business of your petitioner has, since the adoption of such tariff, been reduced by at least 90 per cent, and the amount of such through transcontinental business now being done, by your petitioner is very inconsiderable; on the other hand, if the rates for intermediate local traffic should be reduced to rates not greater than those which are requisite in order to enable your petitioner to do any substantial part of the through business the whole earnings of the roads operated by your petitioner would be wholly inadequate to the payment of their fixed charges.

While your petitioner verily believes that the circumstances and conditions of the transportation of passengers and freight for such through business are actually dissimilar from those under which the transportation of passengers and freight in the course of the intermediate traffic has to be conducted, still the penalties which are prescribed under the said Act are so stringent and severe that your petitioner has not heretofore felt authorized without the assent of the Commission to put in force such tariffs for through transportation as are requisite in order to enable your petitioner to perform any substantial or important part thereof, and it therefore respectfully invokes the action of this Honorable Commission on that behalf, and prays that, in the case above referred to, to wit: in respect of through transcontinental business, Your Honorable Commission will authorize your petitioner, and other lines associated with it in interest, to charge less for longer than for shorter distances for transportation of passengers and property, and will relieve your petitioner from the operation of the fourth section of the Act above referred to.

Your petitioner further shows that the circumstances and conditions above set forth are applicable not only to the through transcontinental business between points on the Atlantic coast and points on the Pacific coast, but also to business with points in the interior and on the Mississippi and Missouri Rivers, rates of freight to and from which are governed and controlled by water competition in the same manner in which water competition affects the rates for traffic between ports on the Atlantic seaboard and ports on the Pacific coast; that is to say, between Omaha, Council Bluffs, St. Joseph, Atchison, Kansas City, Leavenworth on the Missouri and intermediate points and points easterly, northwest and southeast thereof on the one hand, and points and places on Puget Sound and other places in Washington Territory, Victoria in British Columbia, Portland, Astoria and other points in Oregon, and San Francisco, Sacramento, Stockton, Marysville, San José, Oakland, Los Angeles, San

Diego and other California points on the other hand.

All the points herein before designated are subject to water competition via the Pacific and Atlantic Oceans, the Sacramento, San Joaquin, Columbia, Missouri and Mississippi Rivers and the Great Lakes, and are subject to competition by water and railway carriers not restrained by the Interstate Commerce Law. They are also subject to competition with the Canadian Pacific Line which, even if deemed to be affected in anywise by the law, has no considerable intermediate traffic to be affected by competitive rates to the Pacific coast, and hence is practically unrestrained. As a matter of fact the Canadian Pacific has taken canned goods from San Francisco destined to St. Louis and to points as far west as Dodge City, Kansas.

The like circumstances and conditions are also applicable in respect of foreign business, that is to say:

Between all points in Australia, New Zealand, British India, Japan and the islands of the Pacific and all points in the United States and Canada east of the ninety-seventh meridian of longitude, and between all points in Great Britain and Continental Europe on the one hand, and San Francisco, Sacramento, Stockton, San José, Oakland, Los Angeles and San Diego, California, and the Washington Territory, Oregon and British Columbia points herein before mentioned on the other.

A lower charge for longer than for shorter distances is necessary in respect to such foreign business, to enable the United States carriers to compete with foreign carriers not controlled by the law, and likewise necessary to enable United States producers, manufacturers and merchants to compete with foreign markets.

Wherefore, your petitioner prays that in respect of business between points above mentioned, Your Honorable Commission will authorize your petitioner and other lines associated with it in interest, as it has already authorized the Southern Pacific and its leased and associated roads, and the Northern Pacific and the Atchison, Topeka and Santa Fé and competitors of your petitioner to charge less for longer than for shorter distances for transportation of passengers and property, and will relieve your petitioner, as it has already relieved its said rival and competing lines, and as of the same date, from the operation of the fourth section of the Act above referred to, thereby placing this Company upon the same and equal footing with said other companies; or, if further investigation of the facts alleged in the foregoing petition may seem to be requisite or desirable, that such order may be made for a temporary suspension of said Act in respect of such traffic as may be equitable and proper; and your petitioner will ever pray, etc.

Charles F. Adams.

(April 30, 1887.)

THE Commission commenced its sessions at Mobile and heard the evidence of those interested in the iron business in Birmingham and vicinity, and received petitions from firms engaged in the lumber interest, all of them favor-

ing a suspension of the fourth section of the Interstate Act. But one witness appeared in favor of the enforcement of the law.

The Commission adjourned to meet in New Orleans on May 2.

Re OREGON RAILWAY & NAVIGATION CO.

THE Secretary of the Commission at Washington received by telegraph an application from the Oregon Railway & Navigation Company, asking to be relieved from the operation of section 4 of the Act.

The ground of the petition is that the Oregon Railway & Navigation Company's lines of railroad connect with the Northern Pacific and with the Union Pacific Railroads, and thus form links in through transcontinental lines to the Pacific coast. As the fourth section has been suspended as to these two roads, including transportation over the lines of the petitioner, the Oregon Company prays that it may be included in any order heretofore made suspending the operation of the section, so far as it applies to traffic passing over either the Union or Northern Pacific to or from the Pacific coast.

LEHIGH VALLEY R. R. CO., *Petitioner*, v. PHILADELPHIA & READING R. R. CO.

THE Lehigh Valley Railroad Company, by its general passenger agent, E. B. Byington, filed with the Secretary of the Commission a petition against the Philadelphia & Reading Railroad Company, asking for an investigation and decision of the question of free baggage allowance upon the registry and indemnity certificates of the Traders & Travelers Union of New York. The petition sets forth that,

"On March 30, 1887, the Philadelphia & Reading Railroad Company issued a circular in which its agents are instructed to allow 300 pounds of free baggage to passengers presenting certificates of registration and indemnity covering the same and issued by the Traders & Travelers Union of New York; while passengers who do not present such certificates are to be granted only the ordinary allowance of 150 pounds; that such exceptions in favor of the holders of these registry and indemnity certificates issued by the Traders & Travelers Union arise out of certain contracts which, it is claimed by the Philadelphia & Reading Railroad Company, are a sufficient warrant for the exception made in favor of the holders of these certificates, inasmuch as they secure to the Philadelphia & Reading Company a release from all ordinary liability for loss or injury to baggage covered by such certificates, and enables it to maintain in effect a system which prevents certain irregularities and abuses and increases the efficiency of their baggage service."

The petition alleges that the effect of such exemption in favor of the holders of these certificates is to force the Lehigh Valley Railroad Company to grant the same allowance upon the same terms, or in default thereof, to give an undue advantage to its competitor.

The petition asks a decision upon the question whether the allowance on the part of the Philadelphia & Reading Road is not in conflict with the Interstate Commerce Law. This is a formal presentation of the same question propounded some time ago by the Traders & Travelers Union [*ante*, 18], upon which the Commission declined to act until an actual case involving the question at issue had been presented.

(May 2, 1887.)

THE Commission commenced its sessions at New Orleans.

Chairman Cooley announced that to guard against misapprehensions the Commission deemed it wise to state that its authority is very limited in scope, and the Commissioners do not intend to go beyond it. The investigation they are making is not for any purpose of questioning the propriety, justice or expediency of the Interstate Commerce Law. The Commission had observed misapprehension in this matter in certain quarters during its inquiries.

A large number of witnesses were examined, including L. S. Sheldon, Receiver of the Texas & Pacific Railroad, J. C. Haskell of the Iberia Salt Works, R. L. Saunders of Jackson, Meridan & Vicksburg Railroad, J. W. Gibson of the Aberdeen Board of Trade, and others.

Most of them favored a suspension of the fourth section.

In opposition to the appeals of the railroads for a suspension of the fourth section, John J. Gragard, of the New Orleans Chamber of Commerce, presented a resolution of that body favoring the enforcement of the law. Mr. Gragard added that the testimony heretofore given was from railroads and persons whose interests lay in railroads. His observation and experience went to show that the sentiment of the people was in favor of an enforcement of the law. E. B. Stahlman, Vice President of the Louisville & Nashville Railroad, asked if it would be possible to get the people to testify. Mr. Gragard said the people were not organized, and were consequently not in a position to make a show against railroad attorneys.

N. D. Wallace, of the Produce Exchange, presented a memorial of the Produce Exchange, Sugar Exchange, Merchants & Manufacturers Association, and the Mechanics, Dealers & Lumermen's Exchange, acting jointly, calling for an enforcement of the law. He called to the stand in support of the allegations of the petition as witnesses: W. B. Campbell, E. L. Ranlett, Hugh McCloskey, President of the Produce Exchange, and E. Belknap, representing various mercantile interests, who presented facts and figures to show discriminations in rates.

The Commission adjourned to meet in Memphis.

(May 4, 1887.)

Re SUSPENSION OF FOURTH SECTION.

THE Commission heard parties interested in the enforcement of the fourth section of the Act, in Memphis.

(May 5, 1887.)

Re SUSPENSION OF FOURTH SECTION.

THE Commission concluded its labors in Memphis, after hearing evidence from merchants of Memphis, Louisville, Lexington, Little Rock and Newport, Ark., to the effect that the fourth section would be disastrous to the commerce and industries of the points named.

The Louisville & Nashville, the Nashville, Chattanooga & St. Louis, the Chesapeake & Ohio, and the Southwestern Railroads were granted two weeks' time to file arguments and statistical information in support of their petition for a temporary suspension of the section. Representatives of river interests were in attendance and asked leave to present their case in writing, which was granted.

(May 6, 1887.)

Re NEW YORK CENTRAL & HUDSON RIVER R. R. CO. *et al.*

A PETITION from the New York Central & Hudson River Railroad Company, by Chauncey M. Depew, the Lake Shore & Michigan Southern Railway Company, by John Newell, and the Pittsburg & Lake Erie Railway Company, by John Newell, was filed with the Commission, at Washington, asking that an order be made permitting the above named roads, and the New York, Pennsylvania & Ohio Railway Company and the New York, Lake Erie & Western Railway Company, to make such passenger and freight charges and rates from points upon the lines operated by the Pittsburg & Lake Erie Railway Company to the City of New York, the City of Boston, Eastern Pennsylvania, New York and New England points, as will be as low as those charged by the Pennsylvania Railway Company and its connections between said points, and lower than those charged from Youngstown and intermediate points to the Cities of Boston and New York and Eastern Pennsylvania, New York and New England points; and in the particulars named that they be relieved from the fourth section of the Act.

(May 7, 1887.)

Re GULLETT COTTON GIN CO.

THE Gullett Cotton Gin Company, of Amite City, Louisiana, filed with the Commission a petition asking for a permanent suspension of section 4 of the Act, so far as it may apply to the gins, feeders and condensers manufactured by that Company.

The petition represents that when the Company put down its plant, valued at \$100,000 at the isolated point above named on the Illinois Central Railroad, protection in freights was assured, as against competing companies in more central places, which assurance the Interstate Commerce Act renders impossible of fulfilment, to the great loss of the petitioners.

INTER 8.

Re Petition of CHICAGO ST. PAUL, MINNEAPOLIS & OMAHA R. R. Co.*

PETITION.

To the Honorable,

The Interstate Commerce Commission:

The petition of the Chicago, St. Paul, Minneapolis & Omaha Railway Company, a corporation organized under the laws of Wisconsin, would respectfully show unto your Honorable Commission:

The Chicago, St. Paul, Minneapolis & Omaha Railway Company operates, under lease, a line between Minneapolis and St. Paul, in the State of Minnesota; and it owns and operates a line from St. Paul, Minnesota, through Superior, Wisconsin, to Duluth, Minnesota.

The distance from St. Paul to Duluth by this line is 176.6 miles, and its business between Minneapolis, St. Paul and Duluth thus passes out of Minnesota into Wisconsin, and thence returns into Minnesota at Duluth.

The Company also owns and operates a line from Superior Junction to Washburn, both in the State of Wisconsin. This line is used in connection with a portion of the line first above mentioned; and the distance from St. Paul to Washburn is 187.6 miles.

Duluth, Superior and Washburn are all ports on Lake Superior. All of the through business, to and from eastern points, between aforesaid lake ports and St. Paul and Minneapolis, is competitive with the St. Paul & Duluth Railroad Company. That company owns and operates a line of railroad from St. Paul and Minneapolis to Duluth, wholly within the State of Minnesota, and consequently is not amenable to the Interstate Law. The distance from St. Paul to Duluth by this line is 154 miles.

Duluth rates maintain via the Lakes between Superior and Washburn and all eastern points.

It thus appears that while business from Minneapolis and St. Paul via the Lakes to all eastern points is competitive between said railroads to Duluth on the one part, and to Superior and to Washburn on the other part, yet that, as Duluth is the terminal point of shipment common to both railroads, Duluth rates necessarily control the rates at Superior and at Washburn; so that to enable your petitioner to handle through business in competition with that going to or beyond Duluth via the St. Paul & Duluth R. R. Co., your petitioner has within the past four years expended for terminal facilities at Washburn, Wisconsin, more than \$500,000; at Duluth within the year last past more than \$300,000; and it is proposed to expend a large sum at Superior for the same purpose during the present season.

The tariffs of your petitioner, both through and local (hereinafter to be submitted), will show that its competitive rates for through business to Superior and Washburn are less in many instances than its local rates for shorter distances over the same line, the shorter being included with the longer distance. That result is inevitable, if competition on through business with Duluth rates is to be maintained. Other-

*In response to requests for precedents of forms of petitions and method of presentation of applications to the Commission, the following petition and brief are given. The decision thereon will be reported as soon as rendered.

wise the St. Paul and Duluth Railroad, not being within the operation of the Interstate Law, could make rates to Duluth which would be beyond the competitive power of your petitioner on its longer lines. No greater rates could be obtained than the value of the transportation to the shipper, and that would be measured by the Duluth rate.

The local rates of this company are believed to be just and reasonable. It has from time to time made material reductions in such rates of transportation for both passengers and traffic, so that the rates now received per ton per mile, and per passenger per mile, are as low as will permit of carriage at a profit. To fix Duluth rates as the maximum for its local rates would compel your petitioner to abandon its local traffic, or to carry it at a ruinous loss. On the other hand, an increase of its through rates to Superior or Washburn beyond the Duluth rates fixed by the St. Paul & Duluth Company would necessarily force it to abandon its competitive traffic.

Wherefore, your petitioner prays to be relieved from the provisions of section 4 of the Interstate Commerce Act of February 4, 1887, and to be authorized to charge less for longer than for shorter distances for the transportation of property between Minneapolis and St. Paul, Minnesota, on the one part, and Superior and Washburn, Wisconsin, and Duluth, Minnesota, on the other part; or for such other relief as will enable your petitioner to transact business between aforesaid points upon a basis competitive with rates of the St. Paul & Duluth Railroad Company between the two first named companies and Duluth.

Britton & Gray,

Solicitors for Petitioner.

E. W. Winter,

General Manager Chicago, St. Paul, Minneapolis & Omaha Railway Company.

County of Ramsey,)
State of Minnesota, } ss:

Personally appeared before me, a notary public, duly commissioned and qualified in and for the county and State aforesaid, E. W. Win-

ter, with whom I am personally acquainted, and whom I know to be the general manager of the Chicago, St. Paul, Minneapolis & Omaha Railway Co., the above named petitioner, and who made oath in due form of law that the facts stated in the foregoing petition as of petitioner's own knowledge, are true, and that those stated upon information and belief he believes to be true.

Sworn to and subscribed before me this 16th day of April, A. D. 1887.

[Seal.]

Geo. A. Hamilton,

Notary Public.

BRIEF.

Herewith are filed the existing local tariffs of the St. Paul & Duluth R. R., between St. Paul and Duluth, taking effect April 15, 1887 (exhibit C), and the Chicago, St. Paul, Minneapolis & Omaha R. R. between St. Paul and Duluth, Superior and Washburn, taking effect April 5, 1887. (Exhibit A).

The coincidence of through rates between these roads, and for such competitive points, is shown by the following table (given below), compiled from these tariffs for convenient understanding:

Examination of the Omaha Company's existing tariff (ex. A) will disclose:

1. That the rates between St. Paul and non-competitive intermediate stations on the Company's line are made to conform to the rates prescribed for through transportation between St. Paul and the Company's lake terminals at Duluth, Superior, and Washburn, and in no case exceed the rates thus prescribed to such lake points.

Thus the rates from Minneapolis or St. Paul to Turtle Lake station—seventy-five miles distant from Minneapolis and intermediate points—are less than the rates to the lake, and from this point onward nowhere exceed such local lake rates.

The slight increase in rates to stations beyond Turtle Lake, and named as South Chippewa Falls, Chippewa Falls, Eagle Point, O'Neil Creek, Bloomer, Cartwright, Chetek, Cameron, Hart's Siding, Rice Lake, Bear Creek, and

	Merchandise.					Special Car Load Classes.					Car Load Classes.

<i>Chicago, St. Paul, Minn. & Omaha Railroad:</i> Rates between St. Paul, Minneapolis, or Minnesota Transfer, and Duluth, Washburn, and Superior City.	45	85	25	20	15	14	12½	10½	10	8	10	8½	*33 00 †34 00	*15 †15½	Tariff in effect April 5, 1887.

Tariff in effect April 15, 1887.

Tariff in effect April 5, 1887.

* Washburn. † Superior City and Duluth.

Bashaw, is explained by the fact that these are points not on the line between St. Paul and the lake, but off therefrom, on the road between Eau Claire and Chicago Junction, as appears by the diagram attached to the original petition.

Comparison of such existing tariff (exhibit A) with the former tariff of February 18, 1884 (exhibit D herewith), will show the large deductions made in local rates to such intermediate noncompetitive points.

While space will not permit a tabulated statement showing deductions to all such points, the following is submitted as fairly illustrative thereof:

The through rates in effect from St. Paul or Minneapolis to eastern points on wheat and its products during the season of 1886 were as follows:

May 26 to July 20.

	Per Cwt.
To New York.....	27½c.
" Philadelphia.....	25½c.
" Baltimore.....	24½c.
" Boston, export.....	27½c.
" Boston, local.....	32½c.
" Albany.....	27½c.

of which this line received as its proportion of

		Merchandise.					Special Car Load Rates.
							5
Distance from Minneapolis:							
110 m.....	Spooner.....	Tariff of 1884.....	50	49	41	38	25
		Tariff of 1887.....	45	35	25	20	15
153 m.....	Cable.....	Tariff of 1884.....	68	58	47	40	30
		Tariff of 1887.....	45	35	25	20	15
190 m.....	Ashland Junction.....	Tariff of 1884.....	70	60	50	40	30
		Tariff of 1887.....	45	35	25	20	15

3. While a comparison between the rates shown in existing tariff (exhibit A) between St. Paul and the lake ports with the rates shown in tariff of August 23, 1886 (exhibit E herewith), will show a slight advance in the rates to the lake ports, such advance was necessary to prevent a further reduction in local rates to intermediate stations which the Company could not grant and continue local business with profit.

This Company has therefore conformed to both the spirit and letter of the Interstate Commerce Law; and, as by that Act intended, local shippers are receiving the full benefit of the largely reduced rates now established by it.

But the present opening of lake transportation will start the shipment of grain and other products to the Atlantic seaboard thereover. Through shipment, partly by rail and partly by water, must meet competing rates via other lines; and the Chicago, St. Paul, Minneapolis & Omaha Company must conform to such competing rate or retire from the business. The Company cannot do this, inasmuch as fully 90 per cent of its carriage between St. Paul and the lake ports is of merchandise coming from or going to eastern points, and but 10 per cent of its business of a local character. While rates for such through shipments for the present season have not yet been fixed, an approximate estimate thereof may be made upon the business of 1886.

The rates that were in effect between St. Paul and Washburn on through business interchanged with lake lines during the season of 1886 were as follows:

	1st.	2d.	3d.	4th.	5th.	Classes.
April 7						
to May 1,	- -	15	12	8	7	6c. per cwt.
May 1						
to July 10,	- -	20	15	10	8	6 "
July 10						
to close of navigation,		12	10	8	6	5 "

INTER S. v. 1.

5

through rate above named 5c. per cwt. from St. Paul or Minneapolis to Washburn.

July 20 to Aug. 1.

The rates were changed and made as follows:

	Per Cwt.
To New York.....	25c.
" Philadelphia.....	23c.
" Baltimore.....	22c.
" Boston, export.....	25c.
" Boston, local.....	30c.
" Albany.....	25c.

of which through rates this Company received as its proportion from St. Paul or Minneapolis to Washburn 2½c. per cwt.

August 1, to Close of Navigation.

These rates were again changed and made as follows:

	Per cwt.
To New York.....	27½c.
" Philadelphia.....	25½c.
" Albany.....	27½c.
" Boston, export.....	27½c.
" Boston, local.....	32½c.
" Baltimore.....	24½c.

of which through rates this line received as its proportion from St. Paul or Minneapolis to Washburn 5c. per cwt.

The following amount of business was interchanged with lake lines at the Port of Washburn during the navigating season of 1886:

Flour, - - - 496,077 barrels,
Mill stuffs, - - - 3,567,890 pounds,
Merchandise, - - - 14,729,831 pounds,
besides a large volume of miscellaneous freight not specified.

The average rate on the merchandise business was one and twenty-six hundredths cents per ton per mile (\$.0126).

The average rate on wheat and its products was fifty-three hundredths cents per ton per mile (\$.0053).

It thus appears that this Company received

from one fourth to one half of the rate now established between St. Paul and the lake port on such through business; and it cannot expect that higher rates will prevail during the coming season.

If, then, it is denied the privilege asked, of competing with the St. Paul & Duluth Company, *because* its share of such through transportation is *less* than its local rates between the same points, it must either perform local business at a loss, or retire from such through business, leaving its competitor, who is not amenable to the Federal Law, in sole possession of the field.

But we confidently submit that the facts thus presented establish that its transportation of "like kind of property" to, or destined for, points beyond the lake ports, is not performed "under substantially similar circumstances and conditions" with the carriage between intermediate stations on its own line. The dissimilar circumstances which create this obvious difference are:

1. Competition with a rival line not made subject to the Interstate Law, and which rival line may alter or change its rates between St. Paul and the lake without reference thereto, and wholly within its own pleasure.

2. Extension of such competition to the Atlantic seaboard without the control of the Interstate Law in the mode set forth by the fol-

lowing clipping from the *New York World* of April 15, 1887:

"Dodging the Interstate Law.

[Special to The World.]

"St. Paul, Minn., April 14. General Freight Agent Dodge, of the St. Paul and Duluth, has gone East to make arrangements whereby freight can be taken from New York City by the New York Central, a road wholly within the State, to Buffalo, there to be reshipped to Duluth by steamboat lines, which are not under control of the new Interstate Commerce Law. At Duluth the freight can be reshipped by the St. Paul and Duluth over a route wholly within this State. In this manner it is thought a rate can be established which is much cheaper than all rail rates via Chicago."

Wherefore, your petitioner asks that such order be made as prayed, viz.: that this Company, in the language of the statute, "be authorized to charge less for longer than for shorter distances for the transportation of passengers or property" between Minneapolis and St. Paul, Minnesota, on the one part, and Superior and Washburn, Wisconsin, and Duluth, Minnesota, on the other part, until the further order of this Honorable Commission.

Respectfully submitted.

Britton & Gray,

Attys. for Chicago, St. Paul,
Minneapolis & Omaha R. R. Co.

SUPREME COURT OF THE DISTRICT OF COLUMBIA.

Re William J. HENNICK.

The Act of the late Legislative Assembly of the District of Columbia, imposing a license tax upon commercial agents, or drummers, whose business it is, as agents for nonresident manufacturers or wholesale dealers, to offer merchandise for sale is unconstitutional and void as a restriction upon interstate commerce.

(Decided May 9, 1887.)

HABEAS CORPUS. *Petitioner discharged.* The petitioner was arrested and convicted in the Police Court of this District for a violation of section 21 of the Act of the Legislative Assembly affirmed August 23, 1871, which is as follows:

Sec. 21. *And be it further enacted*, that a license tax shall be, and hereby is, imposed as follows, that is to say:

"First, Apothecaries shall pay, etc., etc.,

* * *

"Second, Auctioneers shall pay, etc., etc.,

* * *

"Third, Commercial Agents shall pay \$250. Every person residing in the District of Columbia, whose business it is, as agent for nonresident manufacturers or wholesale dealers, to offer for sale merchandise, shall be regarded as a commercial agent." Acts Sess. 1, p. 98.

After his conviction the petitioner sued out this writ of *habeas corpus*, the hearing upon which was certified by the justice holding "the criminal court to the general term, to be there heard in the first instance.

Messrs. Francis M. Darby, Francis Miller and Guion Miller, for petitioner:

The validity of this license was in question in *Humason's Case*, 2 MacArt. 158. It was contended that the law was illegal, as to commercial agents, because it was in effect an attempt to regulate commerce, and therefore, unconstitutional; but the court held the contrary. This decision, so far as it declares that the Act is not a regulation of commerce, has been overruled by the Supreme Court of the United States in the case of *Robbins v. Taxing District of Shelby Co.* 20 U. S. 489 (Bk. 30, L. ed. 694); *S. C. 1 Interstate Com. Rep. 45.*

This would seem to be conclusive of this case.

But it is claimed that this law was passed by the Legislative Assembly, by the authority of Congress, which has exclusive legislative power over this District.

Cohens v. Va. 6 Wheat. 441 (19 U. S. bk. 5, L. ed. 800).

But this court has decided that the Legislative Assembly had only municipal power of legislation; that it could not legislate on general subjects; and further that Congress could not give it power to do so.

Roach v. Van Rievick and Cooper v. Dist. Col. 4 MacArt. 171, 250; *Dist. Col. v. Wagaman*, 1 Cent. Rep. 823, 4 Mackey, 833; § 93 R. S. D. C.; *Dunphy v. Kleinschmidt*, 11 Wall. 610 (78 U. S. bk. 20, L. ed. 223).

It is certain, in view of the late decision of the United States Supreme Court that such a law is a regulation of interstate commerce, that Congress could not delegate to a mere municipal body its constitutional power over a great national interstate question.

As Congress could not clothe the Legislative Assembly with this power, its action in passing the License Law, was utterly void; and that law cannot gain any validity from the tacit acquiescence of Congress.

The rule of "ratification" is laid down in the case of *Mattingley v. Dist. Col.* 97 U. S. 687 (Bk. 24, L. ed. 1086).

It is contended that the fact that Congress has amended this law by repealing some of its provisions has given it the same effect as if it had been passed by Congress itself.

But the Legislative Assembly by the very terms of the organic Act, could not pass any law that the Legislature of the State could not. Can it be successfully contended that if, in disobedience of the restriction thus laid upon it, it attempted to exercise the highest constitutional function of Congress itself, the silence of Congress, or the repeal of some purely municipal regulations, is to be construed as a recognition and validation of this assumption of power.

Roach v. Van Rievwick, 4 MacArt. 171.

But the recent decision of the Supreme Court of the United States in the Tennessee case has conclusively settled that this law is, in effect, a regulation of commerce between the States; for in this connection, as in the case of the constitutional provision as to direct taxes, the District of Columbia and the territories must be included.

Loughborough v. Blake, 5 Wheat. 319 (18 U. S. bk. 5, L. ed. 98).

At least it is an attempt to regulate commerce between the District of Columbia, and (in the case at bar) the State of Maryland. It reaches out and affects the interests of that State, and is in effect an exercise of the national constitutional power of Congress to regulate commerce, and not of the exclusive power of local legislation over the District.

If it is an exercise of this national constitutional power, it must be subject to all the restrictions which the Constitution has imposed upon Congress. It must therefore be uniform. Either this regulation of commerce must be impartially applied to every man who engages in the business of a drummer, or it cannot be enforced against anyone.

The language of the supreme court on this subject, emphatic and oft repeated as it has been, is but an expansion of that of the Constitution itself.

Article 1, section 8, clause 1, says: "All duties, imposts and excises shall be uniform throughout the United States."

Chief Justice Marshall, 5 Wheat. 319 (18 U. S. bk. 5, L. ed. 98), says: "The power, then, to lay and collect duties, imposts and excises, may be exercised and must be exercised throughout the United States. Does this term designate the whole or any particular portion of the American Empire? Certainly this question can admit of but one answer. It is the name given to our great Republic, which is composed of States and Territories. The District of Columbia, or the territory west of the Missouri, is not less within the United States than Maryland or Pennsylvania; and it is not less necessary, on the principles of our Constitution, that uniformity in the imposition of imposts, duties and excises, should be observed in one than in the

other. Since, then, the power to lay and collect taxes, * * * is obviously coextensive with the power to lay and collect duties, imposts and excises, and since the latter extends throughout the United States, it follows that the power to impose direct taxes also extends throughout the United States."

Clause 6 of the same section provides that "No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another."

See *Passenger Cases*, 7 How. 405 (48 U. S. bk. 12, L. ed. 753); *Gibbons v. Ogden*, 9 Wheat. 191 (23 U. S. bk. 6, L. ed. 69).

Now if this License Law does give or may give the City of Baltimore any preference over the City of Washington, or the contrary, it is in violation of this clause of the Constitution.

We contend therefore that even if Congress had formally passed this law and it had been regularly approved by the President, with all the forms prescribed for the enactment of laws of the United States, it would still be void, because of its violation of the fundamental requirement of all such legislation, to wit: that of uniformity throughout the limits of the country; *Exchange Bank of Columbus v. Hines*, 3 Ohio St. 1; Cited in *Gilman v. Sheboygan*, 2 Black. 510 (67 U. S. bk. 17, L. ed. 305); for this license tax is a tax on the articles to be sold by the drummer.

Brown v. Md. 12 Wheat. 444, 448 (25 U. S. bk. 6, L. ed. 687, 688); *Cook v. Pa.* 97 U. S. 566 (Bk. 24, L. ed. 1015); *License Tax Cases*, 5 Wall. 462 (72 U. S. bk. 18, L. ed. 497); *Welton v. Mo.* 91 U. S. 275 (Bk. 23, L. ed. 347).

Judge Tucker thought that "duties" as used in the Constitution, "were probably intended to comprehend every species of tax or contribution not included in the ordinary terms 'taxes and excises'."

Cited in *Pacific Ins. Co. v. Soule*, 7 Wall. 493 (74 U. S. bk. 19, L. ed. 98).

Cooley, Const. Law, p. 494.

Direct taxes must be laid by the rule of apportionment; all others by the rule of uniformity.

Veazie Bank v. Fenno, 8 Wall. 533 (75 U. S. bk. 19, L. ed. 432); *Scholey v. Rew*, 23 Wall. 331 (90 U. S. bk. 23, L. ed. 99).

In *Ward v. Md.* 12 Wall. 418 (79 U. S. bk. 20, L. ed. 449), Mr. Justice Bradley foreshadows the recent decision in the Tennessee case.

"It will not be denied that that portion of commerce with foreign countries and between the States, which consists of the transportation and exchange of commodities is of national importance, and admits and requires uniformity of regulation."

Welton v. Mo. 91 U. S. 275 (Bk. 23, L. ed. 347), cited and approved in *Tyner v. Rinker*, 102 U. S. 128 (Bk. 26, L. ed. 103).

In respect of commerce between the States which consists in the transportation, purchase, sale and exchange of commodities there can of necessity be only one system or plan of regulations; and that Congress alone can prescribe.

Mobile Co. v. Kimball, 102 U. S. 691 (Bk. 26, L. ed. 238); *Cooley v. Board of Wardens*, 12 How. 299 (53 U. S. bk. 18, L. ed. 696); *Gloucester Ferry Co. v. Pennsylvania*, 114 U. S. 196 (Bk. 29, L. ed. 158); *Brown v. Houston*, 114 U. S. 622 (Bk. 29, L. ed. 257); *Wallace v. Mich.* 116

U. S. 446 (Bk. 29, L. ed. 691); *Pickard v. Pullman etc. Car Co.* 117 U. S. 84 (Bk. 29, L. ed. 785).

But suppose this tax is levied by Congress as the exclusive legislative power in the District of Columbia for the support of the government of the District of Columbia, it is still a tax on the commerce of the States with the District of Columbia, and subjects that commerce to burdens to support the local expenses of the District of Columbia—Can Congress compel the States to do this?

Cooley, Const. Law, p. 499.

We submit that the recent decision of the supreme court is universal in its operation and cuts up by the roots all local regulation of commerce; that it declares that requiring a license for drummers is a regulation of commerce; that therefore such license can only be required by Congress; and that Congress can only exercise its power to regulate commerce by the exercise of its constitutional powers so to do, under the constitutional restriction that the operation of its laws shall be uniform throughout the limits of the United States.

Mr. Henry E. Davis, for the District:

I. The law is, in effect, the law of Congress.

The power of the Legislative Assembly, which emanated from Congress, extended "to all rightful subjects of legislation within the District consistent with the Constitution of the United States * * * subject to all the restrictions and limitations imposed upon States by the tenth section of the first article of the Constitution of the United States;" and all Acts of the Assembly were "subject to repeal or modification by the Congress of the United States."

R. S. D. C. §§ 49, 50.

The extent of the power thus conferred upon the Legislative Assembly was considered by this court in *Roach v. Van Rensick* and *Cooper v. Dist. Col.* 4 MacArt. 171, 250; and in *Dist. Col. v. Waggaman*, 1 Cent. Rep. 823, 4 Mackey, 328.

In the last mentioned case the very License Act under consideration was held as within the power; and in *Dist. Col. v. Oyster*, 1 Cent. Rep. 84, 4 Mackey, 385, the Act was administered by this court without any question or expression of doubt as to its being properly within the power granted and properly grantable by Congress to the Assembly.

The Act having, then, been within the power of the Assembly to pass, it was in full force and virtue from its passage, unless repealed or modified by Congress.

As was said by this court in *Roach v. Van Rensick* (4 MacArt. 173, 178), the "reluctance on the part of Bench and Bar to recognize legislation of the late government as valid, * * * has sometimes sought its excuse in the want of positive confirmation by Congress of the legislation in question. This, however, is a very unsatisfactory foundation for it. The organic Act, * * * which established the District Government, nowhere contains an intimation that the Acts of the new government are to be inoperative until or unless confirmed by Congress; but, on the contrary, by the strongest imputation, excludes such idea. The fiftieth section [of the revision] declares that all Acts of the Legislative Assembly shall at all times be subject to repeal or modification by the Congress of the United States. Until repealed or modified, the clear implication is that they are

to operate, *proprio vigore*. * * * It is plain to us that as far as Congress could confer the power of original and independent legislation, needing no confirmation, but complete and operative in itself, it has done so by the Act in question."

The effect of this is that the legislation in question, being that of a duly authorized and qualified agent of Congress in the Government of the District of Columbia, is that of Congress itself. And if that be not so, we have a distinct adoption by Congress of this legislation in the several Acts of February 17, 1878 (17 Stat. at L. 464), July 12, 1876 (§ 19, 19 Stat. at L. 88), and January 28, 1887, in part amending and in part repealing the Act of the Assembly; whereby, by the clearest implication, the rest of the Act is adopted.

II. The constitutional question.

The question raised by the petitioner is supposed to find support in article I, § 8 of the Constitution of the United States, which provides that "The Congress shall have power to lay and collect taxes, duties, imposts, and excises * * * but all duties, imposts, and excises shall be uniform throughout the United States" (clause 1), and that "The Congress shall have power * * * to regulate commerce with foreign Nations, and among the several States, and with the Indian Tribes" (clause 8); and in section 9 of the same article, which declares that "No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another; nor shall vessels bound to or from one State be obliged to enter, clear or pay duties in another" (clause 6).

As to the first of these provisions, it is enough to say that the license tax in question is not a duty, an impost, or an excise, and is not, therefore, within that provision requiring uniformity throughout the United States. As to the last (§ 9, clause 6), the license law for the District of Columbia gives no preference to the ports of any State, or even of the District, over those of any other State; and it is not easily conceived how that clause can be thought to have any relevancy to the subject in hand.

A question seems, however, to be presented by the remaining of the three clauses above enumerated, viz.: whether, as a regulation of commerce, the license law for the District is invalid, as obnoxious to the Constitution of the United States?

1. It is not doubted that the law regulates commerce, in the sense of the Constitution. The opinion of the Supreme Court of the United States in the recent case of *Robbins v. Tazewell District of Shelby Co.* 120 U. S. 489 (Bk. 80, L. ed. 694); *S. C.* 1 Interstate Com. Rep. 45, closes the door to any possible contention on that head.

2. It is equally certain that, as above pointed out, the law is, in effect, an enactment by Congress.

3. The question, then, becomes, Has Congress power under the Constitution to pass such a law?

If not, it must be either because such power is not granted, or is denied, to Congress by the Constitution.

The power is undoubtedly granted in terms by article I, § 8, clause 17, whereby Congress is given power to exercise exclusive legislation

in all cases whatsoever over the District of Columbia. As was said by Marshall, *Ch. J.*, in *Loughborough v. Blake*, 5 Wheat. 324 (18 U. S. bk. 5, L. ed. 100); "On the extent of these terms, according to the common understanding of mankind, there can be no difference of opinion."

But it is contended that this broad grant is limited by the restrictions which the Constitution has imposed upon Congress. Granting this, what restriction of the Constitution upon the power of Congress affects the question under consideration? Petitioner's counsel cite but two such restrictions as of supposed applicability—that requiring uniformity of duties, imposts and excises, and that forbidding preference to the ports of one State over another; both of which have been noticed above.

Moreover, we have an explicit utterance of the Supreme Court of the United States, speaking by *Chief Justice Marshall*, on this subject. Touching the power to regulate commerce, that court says:

"This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations, other than are prescribed in the Constitution. These are expressed in plain terms. * * * If, as has always been understood, the sovereignty of Congress, though limited to specified objects, is plenary as to those objects, the power over commerce with foreign Nations, and among the several States, is vested in Congress as absolutely as it would be in a single government, having in its Constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States. The wisdom and the discretion of Congress, their identity with the people, and the influence which their constituents possess at elections, are in this, as in many other instances, as that, for example, of declaring war, the sole restraints on which they have relied, to secure them from its abuse. They are the restraints on which the people must often rely solely, in all representative governments."

Gibbons v. Ogden, 9 Wheat. 196 (22 U. S. bk. 6, L. ed. 70).

What limitations, then, exist on the power of Congress in regulating commerce? Seemingly none, except those distinctly prescribed by the Constitution, which "are expressed in plain terms," and none of which applies to the case in hand.

The questions thus recur: Does the regulation of commerce complained of emanate from Congress? That it does is shown above. "Although Congress cannot enable a State to legislate, Congress may adopt the provisions of a State on any given subject." *A fortiori* may it adopt the legislation of its own agency, in the exercise of one of its undoubted powers. The adoption by Congress of any given legislation "gives it the same validity as if its provisions had been specifically made by Congress."

Id. 207 (73).

4. The recent decision of the Supreme Court of the United States (*Robbins v. Taxing District, supra*), in reality does not affect the question under consideration.

In that case it was held only that a given law of the State of Tennessee was invalid, as dealing with the subject of commerce, which, by the Constitution, was committed to Congress.

The power of Congress, its extent and its limitations in the premises, was not under consideration.

5. The petitioner has no right to complain of the District License Law. He is not a member of a foreign Nation, nor of an Indian Tribe, and the law does not affect commerce "among the several States."

The District of Columbia is not a State, in the meaning of the Constitution.

Hopburn v. Ellzey, 2 Cranch, 445 (6 U. S. bk. 2, L. ed. 832); *New Orleans v. Winter*, 1 Wheat. 91 (14 U. S. bk. 4, L. ed. 44); *Scott v. Jones*, 5 How. 377 (46 U. S. bk. 12, L. ed. 197); *Barney v. Baltimore*, 6 Wall. 287 (78 U. S. bk. 18, L. ed. 827); *Baltimore etc. R. R. Co. v. Harris*, 12 Wall. 86 (79 U. S. bk. 20, L. ed. 860).

In respect to regulating commerce, there is in the Constitution no prohibition upon either Congress or any State to discriminate for or against the District, as between it and such or any State. "The sole restraints" against abuse in this respect are those mentioned by *Chief Justice Marshall* in *Gibbons v. Ogden*; and disregard of those restraints can only be reached by counter legislation; they cannot be affected by any action of the judiciary.

Mr. Justice Merriek delivered the opinion of the court:

I have been assigned to announce the opinion of the court in the case of *William J. Henning*, certified to this court, from the criminal court.

The petitioner, as it appears by his petition, was convicted before the police court upon an information against him as a commercial agent, or drummer, so-called. The information states:

"That on the 14th day of April, 1887, at the City of Washington he did engage in the business of a commercial agent, to wit: the business of offering for sale as agent of Lyons, Conklin & Co., a firm doing business in the City of Baltimore, State of Maryland, certain goods, wares, and merchandise, by sample, catalogue, and otherwise, without having first obtained a license to do so; contrary to the provisions of an Act of the Legislative Assembly."

Prior to the decision of the Supreme Court of the United States at its present term, in the case of *Robbins v. Taxing District of Shelby County*, 120 U. S. 489 [Bk. 30, L. ed. 694]; *S. C. 1 Interstate Com. Rep.* 45, there had been very great diversity of opinion throughout the United States as to the power of a State to tax commercial agents who were transacting business by selling goods by sample or by soliciting contracts for sale of goods owned by persons in other States than where the solicitation or sale was made. That diversity of opinion not only pervaded the legal profession, but, as it appears by this recent decision of the supreme court, it still existed in that tribunal; so that there is a complete justification for those who entertained that opinion, and who urged the liability under such laws.

By justification I mean justification up to the time that that decision was pronounced. That decision being pronounced, however, it is obligatory upon all other tribunals and upon citizens of the United States. It is not obligatory upon the supreme court itself, as a final adju-

dication, because it is liable to be reviewed by it and reversed by it if, in its better judgment hereafter, it should entertain a different opinion from that which has been expressed by itself, because it is a well defined rule, announced by that court, that in constitutional questions, the rule of *stare decisis* is not obligatory upon itself. Constitutional questions are always open for revision by the supreme court itself, notwithstanding there may have been one or more decisions upon the subject. But, while open for revision by that court such decisions, until reversed by it, are obligatory upon all other tribunals, and demand implicit obedience from all citizens throughout this land.

In the case of *Robbins v. Shelby County* it was decided that a state law imposing a tax upon commercial agents who solicited contracts for sale of property owned by citizens of another State was beyond the power of the State to enact or enforce; that it was in contravention of the constitutional provision that Congress should have the exclusive power of regulating commerce between the States, a tax upon commercial agents or drummers of one State soliciting business within another State being a tax upon interstate commerce.

It was said in argument that that decision did not cover the whole proposition, that it was limited only to discriminations which were made by the Statute of Tennessee as against the citizens of other States, and that if the law had been equally as applicable to all travelers the decision would not cover it. But an inspection of that decision shows this to be a mistaken view of the subject. The court grasped the whole matter, discussed the whole matter, fully, and decided the precise point as law, as will be seen from the following quotation from the decision:

"But to tax the sale of such goods, or the offer to sell them, before they are brought into the State, is a very different thing, and seems to us clearly a tax on interstate commerce itself. It is strongly urged, as if it were a material point in the case, that no discrimination is made between domestic and foreign drummers, those of Tennessee and those of other States, that all are taxed alike. But that does not meet the difficulty. Interstate commerce cannot be taxed at all, even though the same amount of tax should be laid on domestic commerce, or that which is carried on solely within the State. This was decided in the case of *State Freight Tax Cases*, 15 Wall. 232 [82 U. S. bk. 21, L. ed. 146]. The negotiation of sales of goods which are in another State, for the purpose of introducing them into the State in which the negotiation is made is interstate commerce. A New Orleans merchant cannot be taxed there for ordering goods from London or New York, because in the one case it is an act of foreign, and in the other of interstate commerce, both of which are subject to regulation by Congress alone."

Thus it will be seen that it does not put the decision at all upon the question of discrimination between drummers within the State and drummers outside the State; but it says that no law which imposes upon the person soliciting sales for merchants outside of the State is admissible, because that is a regulation of interstate commerce.

In connection with that decision it is well to

read an extract from the opinion of the Supreme Court of the United States in the case of *Walling v. Michigan*, in 116 U. S. 456 [Bk. 29, L. ed. 604], which is as follows:

"The subjects indeed upon which Congress can act under this power are of infinite variety, requiring for their successful management different plans or modes of treatment. Some of them are national in their character, and admit and require uniformity of regulation, affecting alike all the States; others are local, or are mere aids to commerce, and can only be properly regulated by provisions adapted to their special circumstances and localities. Of the former class may be mentioned all that portion of commerce with foreign countries or between the States which consists in the transportation, purchase, sale and exchange of commodities. Here there can of necessity be only one system or plan of regulation, and that Congress alone can prescribe. Its nonaction in such cases, with respect to any particular commodity or mode of transportation, is a declaration of its purpose that the commerce in that commodity or by that means of transportation shall be free. There would otherwise be no security against conflicting regulations of different States, each discriminating in favor of its own products and citizens, and against the products and citizens of other States. And it is a matter of public history that the object of vesting in Congress the power to regulate commerce with foreign Nations and among the States was to insure uniformity of regulation against conflicting and discriminating state legislation."

And further down on page 457 [695], it is said: "And after an examination of the causes which led to the adoption of the Federal Constitution, one of the principal of which was the necessity for the regulation of commerce and the laying of imposts and duties by a single government, the court says: 'But whatever may be the motive for the tax, whether revenue, restriction, retaliation, or protection of domestic manufactures, it is equally a regulation of commerce, and in effect an exercise of the power of laying duties on imports; and its exercise by the States is entirely at war with the spirit of the Constitution, and would render vain and nugatory the power granted to Congress in relation to those subjects. Can any power more destructive to the union and harmony of the States be exercised than that of imposing discriminating taxes or duties on imports from other States? Whatever may be the motive for such taxes, they cannot fail to beget irritation and lead to retaliation; and it is not difficult to foresee that an indulgence in such a course of legislation must inflame and produce a state of feeling that would seek its gratification in any measures regardless of the consequences.'"

Such is the declaration by the Supreme Court of the United States, of the spirit and scope of these constitutional provisions; that they are necessary to the harmony, and repose of the States; that they are necessary to the equal justice and equal privileges of the citizens of all the States of this Union; that they cannot be restricted at all; and that whatever rule is made with reference to them must be a uniform rule by the Congress of the United States acting as the National Legislature, regulating and controlling the commerce of the entire domain of

(May 5, 1897.)

SUSPENSION OF FOURTH SECTION.

The Commission concluded its labors in Memphis, after hearing evidence from merchants of Memphis, Louisville, Lexington, Rock and Newport, Ark., to the effect that the fourth section would be disastrous to commerce and industries of the points named.

Louisville & Nashville, the Nashville, Knoxville & St. Louis, the Chesapeake & Ohio and the Southwestern Railroads were given two weeks' time to file arguments and other information in support of their petition for a temporary suspension of the section. Representatives of river interests were in attendance and asked leave to present their case, which was granted.

GULLETT COTTON GIN CO.

Gullett Cotton Gin Company, of Amite, Louisiana, filed with the Commission asking for a permanent suspension on 4 of the Act, so far as it may apply to gins, feeders and condensers manufactured by that Company.

The petition represents that when the Company shut down its plant, valued at \$100,000 at the stated point above named on the Illinois Railroad, protection in freights was assured against competing companies in more places, which assurance the Interstate Commerce Act renders impossible of fulfillment, resulting in great loss of the petitioners.

B.

Re Petition of CHICAGO ST. PAUL, MINNEAPOLIS & OMAHA R. R. Co.*

PETITION.

To the Honorable,

The Interstate Commerce Commission:

The petition of the Chicago, St. Paul, Minneapolis & Omaha Railway Company, a corporation organized under the laws of Wisconsin, would respectfully show unto your Honorable Commission:

The Chicago, St. Paul, Minneapolis & Omaha Railway Company operates, under lease, a line between Minneapolis and St. Paul, in the State of Minnesota; and it owns and operates a line from St. Paul, Minnesota, through Superior, Wisconsin, to Duluth, Minnesota.

The distance from St. Paul to Duluth by this line is 176.6 miles, and its business between Minneapolis, St. Paul and Duluth thus passes out of Minnesota into Wisconsin, and thence returns into Minnesota at Duluth.

The Company also owns and operates a line from Superior Junction to Washburn, both in the State of Wisconsin. This line is used in connection with a portion of the line first above mentioned; and the distance from St. Paul to Washburn is 187.6 miles.

Duluth, Superior and Washburn are all ports on Lake Superior. All of the through business, to and from eastern points, between aforesaid lake ports and St. Paul and Minneapolis, is competitive with the St. Paul & Duluth Railroad Company. That company owns and operates a line of railroad from St. Paul and Minneapolis to Duluth, wholly within the State of Minnesota, and consequently is not amenable to the Interstate Law. The distance from St. Paul to Duluth by this line is 154 miles.

Duluth rates maintain via the Lakes between Superior and Washburn and all eastern points.

It thus appears that while business from Minneapolis and St. Paul via the Lakes to all eastern points is competitive between said railroads to Duluth on the one part, and to Superior and to Washburn on the other part, yet that, as Duluth is the terminal point of shipment common to both railroads, Duluth rates necessarily control the rates at Superior and at Washburn; so that to enable your petitioner to handle through business in competition with that going to or beyond Duluth via the St. Paul & Duluth R. R. Co., your petitioner has within the past four years expended for terminal facilities at Washburn, Wisconsin, more than \$500,000; at Duluth within the year last past more than \$800,000; and it is proposed to expend a large sum at Superior for the same purpose during the present season.

The tariffs of your petitioner, both through and local (hereinafter to be submitted), will show that its competitive rates for through business to Superior and Washburn are less in many instances than its local rates for shorter distances over the same line, the shorter being included with the longer distance. That result is inevitable, if competition on through business with Duluth rates is to be maintained. Other-

*In response to requests for precedents of forms of petitions and method of presentation of applications to the Commission, the following petition and brief are given. The decision thereon will be reported as soon as rendered.

parts of the Union; and therefore any discrimination in favor of this community would be in violation of the spirit, if not the letter, of the Constitution of the United States.

But we need not go that far for the purposes of this case. It was only necessary to speak of it for the purpose of repelling the argument, and making it be seen how we regard the relations of this community to the legislative power of Congress and to the several States of the Union. It is enough for the purposes of this cause to say that the delegated power to the Legislative Assembly of this District was the delegation only of municipal power, and that any attempt to legislate in this respect is *ultra vires* a municipality as it is *ultra vires* the power of a State of this Union.

For these reasons the court is of opinion that the prosecution was without authority; that so far as this law operates on this class of cases it is null and void, and that the prisoner must be discharged from custody.

But it is necessary to add that this decision on this branch of the Law is not at all inconsistent with the decision that was made in the *Case of Waggaman*, where it was held that the Legislative Assembly was empowered to impose a license tax upon people doing business within the District of Columbia. All occupations which are limited to the District of Columbia are subject to the taxing power. That is what was held in that case, and there is nothing in this case at all inconsistent with it. If this party had taken out a license for the District, for the purpose of soliciting business within the District, for sales by people within the District, he might have been subject, and would have been subject, to the license law. But upon the face of this information it appears affirmatively that his exclusive business was to act as the agent of citizens of other States, soliciting contracts of sale for goods within those States, thereafter

to be brought under the dominion, and within the control of the taxing power of the District. Therefore, there is no inconsistency between the two decisions. They are entirely harmonious, and there can be no difficulty in maintaining that in the aspect in which this case is presented, it is directly in the face of the decision in *Robbins v. Shelby County*, directly in opposition to the whole current of decisions upon the commercial power of the United States as expounded by the Supreme Court of the United States, and cannot be permitted to stand as law.

Mr. Riddle: If I apprehend this decision correctly, it leaves the law to be enforced against the citizens of the District.

Mr. Justice Merrick: Unquestionably.

Mr. Riddle: The license law can be enforced against the citizens of the District?

Mr. Justice Merrick: Against citizens of the District who are soliciting sales for people within the District. But a citizen of the District who is employed as an agent of a citizen of another State, for the purpose of selling the goods of that citizen of the other State cannot be restrained from so doing by the Legislative Assembly.

Mr. Riddle: I quite apprehended that.

Mr. Justice Merrick: And further than that, I will say that if his business had been to solicit business as a drummer within the District, and he had mingled with it the business of the people of a State, he would be obnoxious to the law, not for soliciting business for citizens of States, but as acting as a drummer generally. But here, the information says that he is charged with doing exclusively the business of a commercial agent, soliciting and selling his goods for citizens of other States. That is the exclusive business with which he is charged, and therefore it may well stand with the other matter about which the counsel has made the inquiry.

THE INTERSTATE COMMERCE COMMISSION.

THE taking of testimony by the Commission in relation to the suspension of the Fourth Section under the petition of the Southern Railway & Steamship Association, closed at Memphis on May 5, and public sessions of the Commission were resumed at Washington on May 18.

(May 10-16, 1897.)

Re SUSPENSION OF FOURTH SECTION.

A PETITION was received from citizens of Palatka, Florida, remonstrating against the suspension of the Fourth Section. It recites that Palatka is at the head of deep water navigation of the St. John's River and possesses peculiar advantages as the distributing point for South Florida, of the benefit of which it has been deprived by artificial laws of railroads.

The Commission received from the Committee on Railroads and Transportation of the Prescott, Arizona, Board of Trade a protest

against "the suspension of section 4, and against the railroads being allowed to charge more to any part of the interior between the Mississippi River, Missouri River and the Pacific Coast than they do to the coast." The protest says:

"We here in the interior have been unmercifully treated and discriminated against for the last six years by the railroads. For instance, we have been charged from St. Louis to Prescott from \$700 to \$1,800 per car, while the same kind of goods would go to San Francisco for from \$125 to \$250 per car. The distance from St. Louis to San Francisco over the Atchafalaya, Topeka & Santa Fé Road and the Atlantic & Pacific Road is about 2,600 miles; from St. Louis to Prescott about 1,700 miles.

The Commission also received a petition from a committee of citizens of Newman, Ga., protesting against the suspension of the fourth section. The petition says:

"We respectfully submit that the enforcement of the fourth section means the growth of the smaller towns, more large towns and fewer large cities."

(May 17, 1887.)

DAILY ORDER OF BUSINESS.

THE Commission adopted and promulgated the following Daily Order of Business:

At 10 o'clock A. M., private session for the reception and disposition of new business. At 11 o'clock A. M., public session for hearings assigned and for the consideration of other matters which may be presented. At 3 o'clock P. M., private session for the disposition of unfinished business and for conference.

(May 18, 1887.)

THE Commission heard arguments upon application of the Queen & Crescent Railway system for a permanent suspension of the fourth section of the Act. John C. Gault, General Manager of the system, addressed the Commission. He stated that his road was willing and anxious to give the law a fair trial, and only asked to be relieved from water competition; that meant the Ohio and Mississippi Rivers, chiefly.

General Black, Commissioner of Pensions, representing the Board of Managers of the National Volunteer Soldiers' Home, next appeared before the Commission, asking for a suspension, a modification or some legal arrangement by which the inmates of the homes might be permitted to continue the enjoyment of the half fare rates on railroads.

Representative Cabell, of Virginia, appeared for the Board of Trade of Danville, Va., and made complaint against the Richmond & Danville Railroad. Since that road had acquired control of the Virginia Midland Railroad, he said, rates had been greatly advanced and the interests of the town ruined. After Mr. Cabell had spoken the hearing was adjourned for the day.

JURISDICTION OF THE COMMISSION.

1. The Interstate Commerce Law contemplates that the cases in which the Commission is authorized to make orders for suspension of its operation are exceptional cases, and that where only general reasons operate, the general law shall be left to its general course, however serious the consequences in particular cases.
2. Any order for suspension must be based upon investigation.
3. Incidental injuries under the Act must be borne for the public good, until the Legislature provides a remedy.
4. The mere probability that injury will result from the operation of the Act will not authorize the Commission to direct a suspension.

PETITION of the Minneapolis & Northwestern Railway Company, for a suspension of the Fourth Section.

The Commission, per Cooley, Chairman, transmitted the following communication to the petitioner:

INTER S.

Washington, May 18, 1887.

J. H. Hanley, Traffic Manager Minneapolis & Northwestern Railway Company:

Dear Sir: The Commission is in receipt of a telegram from you by which you urge the prompt making of an order of relief on the application heretofore filed for the suspension of the long and short haul clause "in so far as it affects at certain points, the business of the road under your charge."

You state, and no doubt believe, that the interests of the road are being very seriously injured by the enforcement of that clause. If relief could be given you without a stretch of authority, and without at the same time causing mischief to other interests, the Commission would take great pleasure in granting it. But what evidently appears to you very easy and simple does not seem to its members to be so; and however anxious they are that your interests should not continue to suffer, they are constrained to hold the application under advisement still longer. Perhaps the delay entitles you to some further statement of reasons than has heretofore been given; and although these cannot now be gone into at length, it is hoped that a brief summary will be sufficient to satisfy you that the Commission does not act arbitrarily, and would not willingly suffer mischief to continue, if a remedy both lawful and safe was within its power:

The fourth section of the Act to regulate commerce, as we all very well understand, was intended to establish the general law that more should not be charged for transportation for the shorter than for the longer haul over the same line in the same direction, under circumstances and conditions substantially similar. Railroad companies, including your own, had, before its passage, been accustomed in many cases to charge more for the shorter haul, judging for themselves whether the circumstances and conditions authorized or required it. Congress, in passing the Act, decided that the rule should thereafter preclude this greater charge; and in so doing it must be understood to have determined that, in its judgment, any incidental injuries that might flow from the enforcement of the general rule would be more than counterbalanced by resulting benefits.

Whatever opinion any member of the Commission may have of the correctness of this determination is of no moment now, for the Commission is as much bound by it as are the carriers of persons and property; and any questioning of it by any member would be an impertinence. The Commission, of course, does not expect to question it, but enforce it, so far as it may fall within its duty to do so. The Act, nevertheless, contemplates that there may be cases in which public interest will be subserved by suspending the general rule, so far as to except such cases from its operation. The Commission will not, at this time, enter upon a critical examination of the provision which was made for such suspension, but it may be useful to call your attention to a few considerations which are obvious on the face of the law:

First. It is obvious that the cases the law contemplates in which the Commission is authorized to make orders for suspension are exceptional cases; that is to say, cases whose facts which made them stand apart from the ordi-

nary cases; the Act does not define them; it does not state the grounds that shall warrant relief, but it plainly intends that these grounds in every case shall be special and peculiar, and that where only general reasons operate, the general law shall be left to its general course, however serious may be the consequences in particular cases and to particular roads and interests.

Second: It is also made plain by the Act that any order for suspension was intended to be based upon investigation which would satisfy the Commission that the case was in fact exceptional and fairly within the intent of the provision made for the relief. The jurisdiction of the Commission to make orders was evidently meant to be somewhat closely restricted. The Commission, in its correspondence and otherwise, is every day made aware of the prevalence in some quarters of a vague notion that power has been conferred upon it to interfere anywhere, and for any reasons satisfactory to itself, in order to prevent what it may think is likely to be harmful; but you, of course, indulge no such baseless notion. The Commission, as you will agree, must find its authority in the law and not in its own ideas of right or policy.

Third: It must be assumed that Congress intended the general Law, in its main feature at least, to be a permanent law for the country. It must therefore have contemplated that considerable sacrifices would necessarily have to be submitted to by some interests, while the general Law was being established, for the very obvious reason that it would be quite impossible to introduce considerable changes in a branch of the law which concerns so intimately the commerce of the country, without serious consequence to some private interests. In all such cases the incidental injuries, however great they may be, are necessarily borne for the general good; and if the Legislature misjudges as to what the general good demands, it is to be expected that in due time it will provide the remedy.

The first questions to confront the Commission upon its organization were raised under the fourth section of the Act. Cases in which companies charged more for the shorter than for the longer haul over the same line in the same direction were to be met with in all parts of the country. The reasons for doing this were thought by the managers in many cases to be absolutely imperative, and to concern the interests of the public quite as much as that of the roads themselves. The interests which were involved in the continuance of the custom were very great, and the anticipation of serious injury from any sudden changes was, in some quarters, quite general. The Commission, therefore, had very earnest appeals made to it in support of the corporation, applications for relief from boards of trade and other public or semi-public bodies, and from representatives of large business interests, which feared or professed to fear destruction or bankruptcy. In many cases the appeals seemed to be made in the belief that the probability of injury was of itself a sufficient warrant for the Commission to interfere and grant a relieving order.

It is scarcely necessary to say to you that any such belief is without legal support. The probability, or even the certainty, that injury

to corporations or to individuals will result is not by itself, under the Act, any ground for a suspension anywhere of its ordinary operations. It could not, in fact, be made a ground for relief, without giving the Commission such a general dispensing power as would not be consistent with sound principles of government. Congress has not intimated a purpose to give such a power. If the law in its general operation were to prove generally and equally mischievous in all directions, the Commission instead of having the greater power, for that reason, would, on the other hand, have no power of suspension whatever; for the simple and plain reason that there would then be no exceptional cases for it to act upon, and therefore no cases referred by the Act to its judgment.

But uniform effects were, of course, as far from being possible as they were from being contemplated. There must and will be exceptional cases. In the absence of any specification of these in the Act itself the Commission was obliged to determine as best it might what cases were probably in the mind of Congress when the exceptional relief was provided for. It also found itself confronted with the question whether the railroads might determine for themselves, but at their peril, whether in any particular case the circumstances and conditions were so far different as to justify the greater charge for the shorter haul, or whether, on the other hand, it was only upon and in view of such different circumstances and conditions that the Commission was empowered to act.

Upon these subjects the debates in Congress might be expected to throw some light; but the Commission felt itself justified, if not compelled, to look beyond the record, and to seek such aid in construction as might be derived from a study of the condition of things pertaining to the transportation of persons and property which Congress by the Act had undertaken to deal with.

The suspension authorized by the Act was to be ordered after investigation. This was plainly determined by the Act itself. If the order was to have any finality, it would be proper that the investigation should afford opportunity for a hearing to parties who opposed as well as to those who favored the application. This would require considerable time in every case; and had the Commission made no order, except upon full and final hearing, the majority of applications now on its files would, up to this time, have necessarily remained not acted upon. If the applications were taken up in their order, yours would have been among those not yet reached. This fact is mentioned as showing that the giving of temporary relief in some other cases has not placed your road in any worse position than it would necessarily have occupied if the temporary orders had not been made.

The Commission, however, deemed it wise to grant some temporary orders on an investigation not as complete as it expected finally to make. This was done in the belief that no considerable mischief could follow from allowing an existing condition of things to remain for a brief period, whether it was then suffered to stand or not, and that harmful results from a sudden change in the law might thereby to some extent be averted.

This course also gave the Commission such an opportunity for careful study of the system which Congress undertook to reform as would otherwise have been wanting. If the new Law had been left to operate universally, the old state of things would have been swept away at once, and the Commission, seeing only what had been substituted for it, would have been deprived of the best and most satisfactory means of making just comparison. Such a comparison was important, not merely to enable it to pass finally with full knowledge upon the exceptional cases, but also the better to prepare it to make in its periodical reports such suggestions and recommendations as might naturally be looked for.

The Commission felt that in whatever it was doing on any single application, it was acting not less for permanence than for the particular and special relief; and, without making the vain effort to prevent all injury, it deemed itself fully justified in granting orders of temporary suspension in some of the most obvious cases, and where special grounds for urgency were shown, without first making the investigation complete for final action, leaving other cases not thought to be so strong on the affirmative showing to take the more deliberate course. This method of proceeding the Commission at the time believed had important advantages, and it still believes will conduce to the best results in the end.

You speak strongly and earnestly of the reasons for granting your application. But in order to warrant its being granted it is not enough that the application, if considered by itself, appears to have merits. The Commission must consider in each case what effect the giving of relief to one applicant will have upon other interests; and your knowledge of railroad matters must enable you to perceive that in some sections of the country the granting of one application may so affect the interests of other roads as to create a necessity for the like relief to several more, the satisfaction of one claim begetting others which are equally meritorious, until, if all are satisfied, the exception becomes the rule.

But when such a result is probable, the reasons for declining to make any temporary order are very conclusive. The Commission cannot consent deliberately to enter upon a highway where, to all appearances, there will be no halting place within the limits of its lawful jurisdiction. If a general suspension of the "long and short haul clause" of the statute is not to be made by a single comprehensive order, neither should the same result be reached or approached by the granting of successive orders in individual cases. In whatever the Commission may do, it must keep in view the preservation of the general rule.

It is not our purpose in this communication to express any opinion as to what ought to be the final conclusion upon your application. The Commission is not yet prepared to give its decision; and the purpose of this answer to your telegram is merely to place before you some of the reasons which, up to this time, have precluded definite action. That injury results to the parties interested in your road, or to any other person, it sincerely regrets; and your belief that such is the case will be kept in mind

as a reason for action as prompt as under the circumstances shall seem consistent with duty. In these views the whole Commission concur.

Very Respectfully Yours,
T. M. Cooley, Chairman.

(May 19, 1887.)

Re INMATES OF NATIONAL HOMES.

The Commission cannot make an order or give an opinion in advance of an actual complaint and hearing. *So held,* in the case of an application on behalf of the inmates of the national homes for disabled volunteer soldiers and sailors, for a ruling as to whether the granting to them of half rate fares by railroads would be "**unjust discrimination**" within the meaning of section 2 of the Act.

IN response to the request of General J. C. Black, Commissioner of Pensions, presented on May 18, on behalf of the inmates of the national homes for disabled volunteer soldiers for half fare rates, when traveling from one home to another, the Commission, per **Schoonmaker, Commissioner**, replied as follows:

The meritorious character of this application, and the patriotic and humane reasons urged in support of it, are fully appreciated and admitted; but the Commission is not referred to any provision of the Act that authorizes it to make an order or express an opinion upon an *ex parte* application of this nature.

In the absence of such authority, an order or an opinion would have no validity or weight whatever. If the fair meaning of the second section, that the giving of half rates to members of the national homes for disabled volunteer soldiers and sailors, is the allowance of special rate, etc., for a like and contemporaneous service, for certain persons, not common to all, and under substantially similar circumstances and conditions, then such allowance would be unjust discrimination, otherwise not.

The trunk lines according to the petition, have taken the responsibility of assuming that the allowance of the half rates desired does not constitute unjust discrimination. Every carrier has the same right to assume its own construction of this provision.

The Commission cannot prematurely impose any construction on a carrier, however much some particular construction may be desired. Construction is a judicial act, involved in the decision of some controverted question. The jurisdiction of the Commission in such cases is limited to the discussion of complaints for alleged violation of the law, upon a hearing of the parties interested, and its opinion of the intent of the statute can then be announced. Any order or opinion in advance of a complaint or hearing would be misleading and unfair to those who might be affected by it, and would be unauthorized.

The Commission regrets that it has no power to comply with the request of the petition.

(May 21, 1887.)

**Re FILING COPIES OF JOINT TARIFF
BY TRAFFIC COMBINATIONS.**

In reply to an inquiry as to whether more than one member of a traffic combination con-

sisting of several railroad or freight lines must file copies of their agreements, joint tariffs, etc., *Secretary Moseley* wrote, by authority of the Commission, that, provided due notice be filed with the Commission, any one member or agent may file returns for all the members of a combination.

ATLANTA, GEORGIA, April 27, 1887.

THE COMMISSION met at 10 A. M. in the rooms of the city council, all the members being present.

The Chairman: Gentlemen, the Commission organized under the Interstate Commerce Law has received quite a number of petitions from railroads whose field of operations is in this part of the country, asking for exceptional orders under the Fourth Section of that Act, orders that, as the Commission believes, could only properly be made upon evidence, after an investigation. We have come here to-day for the purpose of taking such evidence as may be offered in support of those petitions, and also for the purpose of giving an opportunity to parties who may think their interests or the interests of the public require a denial of the prayer of the petitioners, to present evidence in support of that view of the question. We propose now to enter upon the taking of evidence. We shall receive it as we should if it were evidence in support of a judicial investigation, upon oath; but shall receive at the same time, such documentary evidence and such memorials, if any shall be offered, from public bodies, as it shall be proper to receive in that form.

As the petitions are numerous, and as our own time is limited, it has seemed proper to us that we should mark out to some extent in advance, a course of proceeding in order to

forms and rules permitted by the Commission. The publication of testimony at length is not, however, at present contemplated in connection with all future cases, but we shall endeavor to always present the facts as fully as a complete and intelligible report may seem to require. These proceedings, together with the opinion by Commissioner Walker, *Re Order of Railway Conductors*, page 18, *ante*, the communication of Chairman Cooley in reference to the jurisdiction and powers of the Commission, published on page 73, *ante*, and the petitions given as precedents on pages 58, 60 and 63, *ante*, furnish very full information as to the questions which may properly be presented to the Commission, and the manner in which they should be presented. [Ed.]

expedite our business, and in the hope that by doing so parties whose interests seemed to be identical should, as far as possible, be enabled to concentrate their evidence and their arguments. We hope that method will be taken here, as a necessary course, in order that we may have fully laid before us all the evidence and all the views of those who may think they have facts important for our consideration. We have not expected to take up each of these petitions by itself. It has seemed probable that the facts that would support one, must, to a large extent, support another; and that what would tend to disprove the one would, to a large extent, tend to disprove the others; so that the evidence will largely be taken for its bearing upon all the petitions together.

As we proceed, any petitioner desiring to present that which is special to himself, will have the opportunity to do so when he is upon the stand.

With these few remarks, sufficiently indicating the course we desire to have pursued, we shall for the time being, leave the matter in the hands of the petitioners, expecting that they will endeavor, as far as possible, to conform to the views expressed and present their evidence as succinctly, clearly, and concisely as may be found practicable.

Mr. E. B. Bullock of Atlanta. I have been requested to ask the Commission to be kind enough to suspend for a moment the regular order as indicated by the circular, that you may hear from the chairman of a large meeting which was held last night, representing the different cities, chambers of commerce, manufacturing interests, etc., who are affected and interested in this matter.

Mr. J. F. Hanson, of Macon, Georgia, then came forward, and, as Chairman of the meeting above referred to, submitted a memorial prepared by that body, asking for the permanent suspension of the Fourth Section of the Act to regulate commerce.

Mr. Hanson. This action was taken in pursuance of a notice posted up in the Kimball House, requesting all parties who had come representing localities or commercial bodies, to meet us last night. Our action was practically unanimous; in fact, I may say it was entirely unanimous; and this action we desire to present as the action of the business interests here represented independent of the railroads. I was also requested to ask the Commission to allow these commercial bodies to present their memorials, if possible, today, in order that they may go home, as many of them live at a great distance.

Mr. Norcross of Atlanta. As you have allowed some general matter to be introduced here—

The Chairman. We will take up this matter in order.

Mr. Norcross. I thought this proceeding was out of order.

The Chairman. It is not out of order, because we have allowed it by special order made for the purpose.

Mr. Norcross. I wish to present an argument.

The Chairman. We will not take it now. We will take it at some proper time. In the program marked out yesterday, a request was
INTER S.

made that the names of witnesses who were to be examined should be handed in this morning. Is that list now ready?

Mr. W. S. Chisholm of Savannah. At the meeting of the railroad companies held last evening, a list of witnesses was prepared. The proposition which you announced this morning was also considered, to wit: that it would be for the interest of all concerned to take up the petitions together so far as they bore upon the same points and the same questions. All of the railroads belonging to the Southern Railway & Steamship Association, of course, have joint interests, and those joint interests are set forth in their various petitions.

In addition to those roads there is the Charleston & Savannah Railway Company, and the Savannah, Florida & Western Railway Company, running from Charleston to Savannah, and from Savannah to various Florida points. It is proposed now that all of the petitions of the roads forming the Southern Railway & Steamship Association, and those of the Charleston & Savannah road and of the Savannah, Florida & Western road be taken together.

Charles A. Sindall then appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. E. P. Alexander:**

Q. Please state to the Commission what position you occupy.

A. I am secretary of the Southern Railway & Steamship Association.

Q. Are you familiar with the rates which are being worked generally in this territory?

A. Yes sir.

Q. I wish to question you first as to the rates that prevail and the method in which they are made, from northern and eastern cities to Mobile?

A. The rates to Mobile are made in competition with the steamship lines, the steamship lines making their rates to Mobile or New Orleans from the north.

Q. What are the lines?

A. The Cromwell line, the Morgan line, and the Mobile & New York Steamship Company.

Q. Where do those lines run?

A. The Cromwell and Morgan lines run from New York to New Orleans. The Mobile & New York line runs between those ports.

Q. Do the rates charged or made by those steamers generally control the rates to those places which other lines have to accept?

A. Yes sir, they make the rates. We have to accept those rates or go out of that business entirely.

Q. Will you illustrate that by giving the average figures of the present prevailing rates?

A. The present figures to Mobile and New Orleans are from fifty to fifty-five cents on first class by steamer. The rail lines are charging seventy-five cents.

Q. Are the rail lines able to maintain any better rates than the steamers?

A. No sir, they cannot maintain any higher rates than the difference in insurance will compensate for, and occasionally the difference in time.

Q. But generally the rates are controlled entirely by the steamship lines?

dication, because it is liable to be reviewed by it and reversed by it if, in its better judgment hereafter, it should entertain a different opinion from that which has been expressed by itself, because it is a well defined rule, announced by that court, that in constitutional questions, the rule of *stare decisis* is not obligatory upon itself. Constitutional questions are always open for revision by the supreme court itself, notwithstanding there may have been one or more decisions upon the subject. But, while open for revision by that court such decisions, until reversed by it, are obligatory upon all other tribunals, and demand implicit obedience from all citizens throughout this land.

In the case of *Robbins v. Shelby County* it was decided that a state law imposing a tax upon commercial agents who solicited contracts for sale of property owned by citizens of another State was beyond the power of the State to enact or enforce; that it was in contravention of the constitutional provision that Congress should have the exclusive power of regulating commerce between the States, a tax upon commercial agents or drummers of one State soliciting business within another State being a tax upon interstate commerce.

It was said in argument that that decision did not cover the whole proposition, that it was limited only to discriminations which were made by the Statute of Tennessee as against the citizens of other States, and that if the law had been equally as applicable to all travelers the decision would not cover it. But an inspection of that decision shows this to be a mistaken view of the subject. The court grasped the whole matter, discussed the whole matter, fully, and decided the precise point as law, as will be seen from the following quotation from the decision:

"But to tax the sale of such goods, or the offer to sell them, before they are brought into the State, is a very different thing, and seems to us clearly a tax on interstate commerce itself. It is strongly urged, as if it were a material point in the case, that no discrimination is made between domestic and foreign drummers, those of Tennessee and those of other States, that all are taxed alike. But that does not meet the difficulty. Interstate commerce cannot be taxed at all, even though the same amount of tax should be laid on domestic commerce, or that which is carried on solely within the State. This was decided in the case of *State Freight Tax* (Case, 15 Wall. 232 [83 U. S. bk. 21, L. ed. 146]). The negotiation of sales of goods which are in another State, for the purpose of introducing them into the State in which the negotiation is made is interstate commerce. A New Orleans merchant cannot be taxed there for ordering goods from London or New York, because in the one case it is an act of foreign, and in the other of interstate commerce, both of which are subject to regulation by Congress alone."

Thus it will be seen that it does not put the decision at all upon the question of discrimination between drummers within the State and drummers outside the State; but it says that no law which imposes upon the person soliciting sales for merchants outside of the State is admissible, because that is a regulation of interstate commerce.

In connection with that decision it is well to

read an extract from the opinion of the Supreme Court of the United States in the case of *Walling v. Michigan*, in 116 U. S. 456 [Bk. 29, L. ed. 694], which is as follows:

"The subjects indeed upon which Congress can act under this power are of infinite variety, requiring for their successful management different plans or modes of treatment. Some of them are national in their character, and admit and require uniformity of regulation, affecting alike all the States; others are local, or are mere aids to commerce, and can only be properly regulated by provisions adapted to their special circumstances and localities. Of the former class may be mentioned all that portion of commerce with foreign countries or between the States which consists in the transportation, purchase, sale and exchange of commodities. Here there can of necessity be only one system or plan of regulation, and that Congress alone can prescribe. Its nonaction in such cases, with respect to any particular commodity or mode of transportation, is a declaration of its purpose that the commerce in that commodity or by that means of transportation shall be free. There would otherwise be no security against conflicting regulations of different States, each discriminating in favor of its own products and citizens, and against the products and citizens of other States. And it is a matter of public history that the object of vesting in Congress the power to regulate commerce with foreign Nations and among the States was to insure uniformity of regulation against conflicting and discriminating state legislation."

And further down on page 457 [695], it is said:

"And after an examination of the causes which led to the adoption of the Federal Constitution, one of the principal of which was the necessity for the regulation of commerce and the laying of imposts and duties by a single government, the court says: 'But whatever may be the motive for the tax, whether revenue, restriction, retaliation, or protection of domestic manufactures, it is equally a regulation of commerce, and in effect an exercise of the power of laying duties on imports; and its exercise by the States is entirely at war with the spirit of the Constitution, and would render vain and nugatory the power granted to Congress in relation to those subjects. Can any power more destructive to the union and harmony of the States be exercised than that of imposing discriminating taxes or duties on imports from other States? Whatever may be the motive for such taxes, they cannot fail to beget irritation and lead to retaliation; and it is not difficult to foresee that an indulgence in such a course of legislation must inflame and produce a state of feeling that would seek its gratification in any measures regardless of the consequences.'"

Such is the declaration by the Supreme Court of the United States, of the spirit and scope of these constitutional provisions; that they are necessary to the harmony, and repose of the States; that they are necessary to the equal justice and equal privileges of the citizens of all the States of this Union; that they cannot be restricted at all; and that whatever rule is made with reference to them must be a uniform rule by the Congress of the United States acting as the National Legislature, regulating and controlling the commerce of the entire domain of

United States, with a view to do equal justice between all the parts of the country and to away any possibility of prejudice or any action of injustice or discrimination by one part against another. That being so, it is manifest that any regulation upon this subject must be made by Congress, in its capacity as the National Legislature.

could Congress, if it had been so directed, have delegated to the Legislative Assembly of this District the power to pass any such law? That is not an open question in this case.

In the case of *The District v. Wagoner*, 100 U. S. 680, 4 Mackey, 333, this court said:

Rosch v. Van Hook, 7 Wash. Law. 20, this court held that the very broad powers which the organic Act of 1870 granted to the Legislative Assembly have the effect to clothe that body with only such powers as might be given to a municipal corporation, and that it was not competent for Congress to delegate the larger powers of general legislation which it had itself received from the Constitution.

These extracts have already shown by these extracts that the subject matter belongs to the larger class of general legislation,—belongs to Congress as the Legislature of the Nation. It could not, therefore, within this announcement, delegate any such part of its general legislative power to a municipal legislative body. It is manifestly outside the scope of a municipal body to legislate on this subject.

It would be marvelous indeed if, when the Constitution strips all the States of this Union of the power to legislate on this subject, it could be maintained that a municipal body could be clothed with any such faculty. If a State cannot, how can a body inferior to a State do so? Now can it be said to be within the power of a municipal corporation, when it is not the power of a sovereign State to legislate on this subject matter? It would seem manifest to stop at this point.

It has been said here in argument that, Congress of the United States having the exclusive legislative power of this District of Columbia, there is no restriction upon its capacity to act as such Legislature. If the question were before the court in that aspect, it might not be difficult to say that it is a proposition that cannot be entertained by any who recognize the comprehensive power of the Constitution, the object for which it was formed, or the purposes for which this District of Columbia is dedicated to national uses, to maintain a municipal body may be established here in legislation, in antagonism to the rights of the States of this Union.

A community is not even a State. It is an organized body to be legislated over by Congress. This District has surrendered its right of representation, and that representation is exercised in Congress; but still it is vested in Congress as the National Legislature, and it is exercised by Congress in subordination to the principles of the Constitution of the United States.

The argument, pushed to its extreme, simply is this: Congress is without constitutional restraint as to this District; the people are helpless, and not under the sanctions or protection of the Constitution of the United States.

at all; the United States has here a foreign territory in which it can legislate in antagonism to the interests of the States and in opposition to the policy which prevails in the Constitution, obligatory upon the States in their intercourse one with another to do equal and exact justice one as to the other and each as to all. Such an argument cannot have any sanction at the hands of this court. This District is set aside and dedicated to the uses of the Nation, and if there be anywhere on the face of the earth a locality where no discrimination should be made as against the rights of any of the States or any citizens of the United States, it should be upon this soil where all are equal, on which each citizen has an equal right and in which each State has an equal right, as regards all the other States and as regards the United States itself. This Territory is dedicated simply as a temple of justice, as a temple where the liberties of the Nation are to be sacredly preserved, and it is for that purpose that it should be exempt from hostile control or the possibility of antagonism with the purposes of the Union. Congress was vested with the power of exclusive legislation for this District, but not at all for the purpose of enabling it to legislate in any manner in hostility to the rights of any of the States of the Union.

Can it be supposed for an instant that any of the States would have ceded to the Government of the United States a district for the seat of its Government in which hostile legislation should be exercised towards the interests of the citizens of those States or the citizens of their sister States? We cannot suppose such a thing possible. We cannot suppose that when the Congress was vested with power to legislate over this District it was clothed with any power to act as such Legislature in hostility to the rights of the States or to do anything regarding the interests of the citizens of one State which any State of the Union could not do with regard to the citizens of any other State. We are subject to the Constitution of the United States. Here, if anywhere, the Constitution should be venerated, and the most sedulous regard should be had for each and all of its provisions, and we should rejoice that we are under its provisions; we should rejoice that we are under its protection; we should rejoice that we are set apart for the purpose of ministering to the temple of justice, the temple of "Equality of Laws" which has been established in our midst.

It seems impossible, therefore, to argue from the fact that Congress has exclusive legislation over this District that it has the power of the tyrant through this District over the States of the Union. The whole idea is inconsistent with the spirit of our institutions, utterly inconsistent with the object for which the Constitution was formed, and for which this district of country was set apart for the uses of the general government. Therefore, even if Congress had undertaken, with regard to this District, in its general capacity as the Legislature for the District, to pass such a law, it would have been outside the power of Congress so to do; because, as a National Legislature, it can only legislate under the commercial power upon the principle of uniformity, which is to pass laws equally operative upon any, every, and all

for as this law operates on this class of cases it is null and void, and that the prisoner must be discharged from custody.

But it is necessary to add that this decision on this branch of the Law is not at all inconsistent with the decision that was made in the *Case of Waggaman*, where it was held that the Legislative Assembly was empowered to impose a license tax upon people doing business within the District of Columbia. All occupations which are limited to the District of Columbia are subject to the taxing power. That is what was held in that case, and there is nothing in this case at all inconsistent with it. If this party had taken out a license for the District, for the purpose of soliciting business within the District, for sales by people within the District, he might have been subject, and would have been subject, to the license law. But upon the face of this information it appears affirmatively that his exclusive business was to act as the agent of citizens of other States, soliciting contracts of sale for goods within those States, thereafter

Mr. Justice Merrick: Against citizens of the District who are soliciting sales for people within the District. But a citizen of the District who is employed as an agent of a citizen of another State, for the purpose of selling the goods of that citizen of the other State cannot be restrained from so doing by the Legislative Assembly.

Mr. Riddle: I quite apprehended that.

Mr. Justice Merrick: And further than that, I will say that if his business had been to solicit business as a drummer within the District, and he had mingled with it the business of the people of a State, he would be obnoxious to the law, not for soliciting business for citizens of States, but as acting as a drummer generally. But here, the information says that he is charged with doing exclusively the business of a commercial agent, soliciting and selling his goods for citizens of other States. That is the exclusive business with which he is charged, and therefore it may well stand with the other matter about which the counsel has made the inquiry.

THE INTERSTATE COMMERCE COMMISSION.

THE taking of testimony by the Commission in relation to the suspension of the Fourth Section under the petition of the Southern Railway & Steamship Association, closed at Memphis on May 5, and public sessions of the Commission were resumed at Washington on May 18.

(May 10-18, 1887.)

Re SUSPENSION OF FOURTH SECTION.

A PETITION was received from citizens of Palatka, Florida, remonstrating against the suspension of the Fourth Section. It recites that Palatka is at the head of deep water navigation of the St. John's River and possesses peculiar advantages as the distributing point for South Florida, of the benefit of which it has been deprived by artificial laws of railroads.

The Commission received from the Committee on Railroads and Transportation of the Prescott, Arizona, Board of Trade a protest

against "the suspension of section 4, and against the railroads being allowed to charge more to any part of the interior between the Mississippi River, Missouri River and the Pacific Coast than they do to the coast." The protest says:

"We here in the interior have been unmercifully treated and discriminated against for the last six years by the railroads. For instance, we have been charged from St. Louis to Prescott from \$700 to \$1,800 per car, while the same kind of goods would go to San Francisco for from \$125 to \$250 per car. The distance from St. Louis to San Francisco over the Atchafalpa, Topeka & Santa Fé Road and the Atlantic & Pacific Road is about 2,600 miles; from St. Louis to Prescott about 1,700 miles.

The Commission also received a petition from a committee of citizens of Newman, Ga., protesting against the suspension of the fourth section. The petition says:

"We respectfully submit that the enforcement of the fourth section means the growth of the smaller towns, more large towns and fewer large cities."

(May 17, 1887.)

DAILY ORDER OF BUSINESS.

Commission adopted and promulgated following Daily Order of Business:

9 o'clock A. M., private session for the on and disposition of new business. At 10 o'clock A. M., public session for hearings and for the consideration of other matters which may be presented. At 3 o'clock P. M., private session for the disposition of unfinished business and for conference.

(May 18, 1887.)

Commission heard arguments upon application of the Queen & Crescent Railway for a permanent suspension of the fourth section of the Act. John C. Gault, General Manager of the system, addressed the session. He stated that his road was well equipped and anxious to give the law a fair trial, and asked to be relieved from water competition that meant the Ohio and Mississippi Rivers.

General Black, Commissioner of Pensions, visiting the Board of Managers of the National Volunteer Soldiers' Home, next appeared before the Commission, asking for a suspension of the law or some legal arrangement by which the inmates of the homes might be permitted to continue the enjoyment of the half rates on railroads.

Representative Cabell, of Virginia, appeared before the Board of Trade of Danville, Va., and complained against the Richmond & Danville Railroad. Since that road had acquired the Virginia Midland Railroad, he stated that the road had been greatly advanced and the interests of the town ruined. After Mr. Cabell spoke the hearing was adjourned for the

JURISDICTION OF THE COMMISSION.

Interstate Commerce Law contemplates that the cases in which the Commission is authorized to make orders for suspension of its operation are exceptional cases, and that where only general reasons operate, the general law should be left to its general course, however serious the consequences in particular cases.

Any order for suspension must be based upon a full investigation.

Incidental injuries under the Act must be shown for the public good, until the Legislature provides a remedy.

There is more probability that injury will result from the operation of the Act than from its suspension. The Commission is not authorized to make orders for suspension.

Application of the Minneapolis & Northwestern Railway Company, for a suspension of the fourth Section.

Commission, per Cooley, Chairman, received the following communication to the Commission:

8.

Washington, May 18, 1887.

J. H. Hanley, Traffic Manager Minneapolis & Northwestern Railway Company:

Dear Sir: The Commission is in receipt of a telegram from you by which you urge the prompt making of an order of relief on the application heretofore filed for the suspension of the long and short haul clause "in so far as it affects at certain points, the business of the road under your charge."

You state, and no doubt believe, that the interests of the road are being very seriously injured by the enforcement of that clause. If relief could be given you without a stretch of authority, and without at the same time causing mischief to other interests, the Commission would take great pleasure in granting it. But what evidently appears to you very easy and simple does not seem to its members to be so; and however anxious they are that your interests should not continue to suffer, they are constrained to hold the application under advisement still longer. Perhaps the delay entitles you to some further statement of reasons than has heretofore been given, and although these cannot now be gone into at length, it is hoped that a brief summary will be sufficient to satisfy you that the Commission does not act arbitrarily, and would not willingly suffer mischief to continue, if a remedy both lawful and safe was within its power.

The fourth section of the Act to regulate commerce, as we all very well understand, was intended to establish the general law that more should not be charged for transportation for the shorter than for the longer haul over the same line in the same direction, under circumstances and conditions substantially similar. Railroad companies, including your own, had, before its passage, been accustomed in many cases to charge more for the shorter haul, judging for themselves whether the circumstances and conditions authorized or required it. Congress, in passing the Act, decided that the rule should thereafter preclude this greater charge; and in so doing it must be understood to have determined that, in its judgment, any incidental injuries that might flow from the enforcement of the general rule would be more than counterbalanced by resulting benefits.

Whatever opinion any member of the Commission may have of the correctness of this determination is of no moment now, for the Commission is as much bound by it as are the carriers of persons and property; and any questioning of it by any member would be an impertinence. The Commission, of course, does not expect to question it, but enforce it, so far as it may fall within its duty to do so. The Act, nevertheless, contemplates that there may be cases in which public interest will be subserved by suspending the general rule, so far as to except such cases from its operation. The Commission will not, at this time, enter upon a critical examination of the provision which was made for such suspension, but it may be useful to call your attention to a few considerations which are obvious on the face of the law:

First. It is obvious that the cases the law contemplates in which the Commission is authorized to make orders for suspension are exceptional cases; that is to say, cases whose facts which made them stand apart from the ordi-

Commission such study of the system of reform as would be. If the new Law finally, the old state kept away at once, only what had been been deprived of means of making comparison was made it to pass finally exceptional cases, re it to make in its questions and recommendations be looked for. In whatever it was action, it was acting for the particular without making the injury, it deemed giving orders of ten of the most obvious grounds for urgency making the investigation, leaving other going on the affirmative deliberate course. The Commission at important advantages, due to the best re-

earnestly of the reaction. But in order granted it is not so, if considered by its. The Commission what effect the want will have upon knowledge of railroads to perceive that try the granting of act the interests of necessity for the like satisfaction of one h are equally merited, the exception

Very Respectfully Yours,

T. M. Cooley, Chairman.

(May 18, 1897.)

Re INMATES OF NATIONAL HOMES.

The Commission cannot make an order or give an opinion in advance of an actual complaint and hearing. So held, in the case of an application on behalf of the inmates of the national homes for disabled volunteer soldiers and sailors, for a ruling as to whether the granting to them of half rate fares by railroads would be "unjust discrimination" within the meaning of section 2 of the Act.

In response to the request of General J. C. Black, Commissioner of Pensions, presented on May 18, on behalf of the inmates of the national homes for disabled volunteer soldiers for half fare rates, when traveling from one home to another, the Commission, per Schoonmaker, Commissioner, replied as follows:

The meritorious character of this application, and the patriotic and humane reasons urged in support of it, are fully appreciated and admitted; but the Commission is not referred to any provision of the Act that authorizes it to make an order or express an opinion upon an *ex parte* application of this nature.

In the absence of such authority, an order or an opinion would have no validity or weight whatever. If the fair meaning of the second section, that the giving of half rates to members of the national homes for disabled volunteer soldiers and sailors, is the allowance of special rate, etc., for a like and contemporaneous service, for certain persons, not common to all, and under substantially similar circumstances and conditions, then such allowance would be unjust discrimination, otherwise not.

The trunk lines according to the petition, have taken the responsibility of assuming that the allowance of the half rates desired does not constitute unjust discrimination. Every carrier has the same right to assume its own construction of this provision.

The Commission cannot prematurely impose any construction on a carrier, however much some particular construction may be desired. Construction is a judicial act, involved in the decision of some controverted question. The jurisdiction of the Commission in such cases is limited to the discussion of complaints for alleged violation of the law, upon a hearing of the parties interested, and its opinion of the intent of the statute can then be announced. Any order or opinion in advance of a complaint or hearing would be misleading and unfair to those who might be affected by it, and would be unauthorized.

The Commission regrets that it has no power to comply with the request of the petition.

A. Generally they are entirely controlled by the steamship lines.

Q. Do the steamship lines maintain the rates?

A. No sir; I have never known them to maintain a tariff for any period of time.

Q. Does our position enable you to know when rates are maintained and when rates are being cut?

A. Yes sir.

Q. And generally the rates by those steamers are not thoroughly maintained?

A. No sir.

Q. Will you state now to the Commission on what basis the rates are made coming back from Mobile and New Orleans into the country, first to interior points, say on the line of the Mobile and Montgomery road, such as Greenville, Alabama, for instance?

A. They are made by adding the rate to the Mobile rate, except where competition by river would prevent.

Q. That is, you first take the through rate from New York to Mobile?

A. Yes sir.

Q. And as you go back from the water's edge you add what?

A. We add the railroad rate from there on to the purely railroad points.

Q. And then the rates become higher. For instance, if Mobile was sixty-five cents, fifty miles this side of Mobile would be something higher?

A. Yes sir.

Q. What are the first competitive points approached in coming back from Mobile?

A. The first points are Montgomery and Selma.

Q. How are the rates there made and maintained?

A. They are water rates made by adding the steamship rate to the rail rate. The rail line makes only a sufficiently higher rate to compensate for insurance and the difference in time.

Q. Can you illustrate by figures what are the ordinary prevailing rates?

A. The lowest rate we had to Montgomery and Selma last week, quoted by the steamship agents, was seventy cents on first class goods.

Q. That is from New York?

A. From New York, by way of Mobile.

Q. Are the railroads able to maintain any higher rates?

A. Only sufficiently higher to compensate for the cost of insurance and loss of time.

Q. About what rates would they make for first class, as an average?

A. The railroads cannot under that basis maintain a rate higher than from ninety cents to a dollar, if that.

Q. Coming on in this direction how are the rates made to competitive points in Georgia, such as Atlanta, Macon and Columbus?

A. The rates to Augusta, Macon, Atlanta and Columbus are made from exactly the same basis; that is, we take the steamship lines running from New York to Charleston, Savannah or Brunswick, and we assimilate by classification as nearly as possible to our classification, in order to name a through rate upon the article to be transported. That then is regarded as their local. An approximate classification

is made by measurement. That is the history of local classification. On through classification we have an amount which I say we arrive at by assimilating. To that we add the rates authorized by the Georgia Commission from Savannah to Augusta, and that is the total which we have had to enforce for some years. Then for Macon we add the rate the Georgia Commission authorize to be used for Macon and Brunswick, or Macon and Savannah, and that makes the Macon total as we have it now in force. To Atlanta the same principle is used.

Q. In short, the first thing in the rate is the through rate from New York to the coast; Charleston or Savannah?

A. Yes sir; that is the first element.

Q. That rate is a purely water rate?

A. It is a purely water rate.

Q. Made by the Ocean Transportation Companies?

A. Yes sir.

Q. To that, then, is added in the case of Georgia the rates of the Georgia Railroad Commission?

A. To that is added the rates of the Georgia Railroad Commission to those points.

Q. The rates being made, will you state for illustration what are the prevailing first class rates to the principal interior points in Georgia?

A. Take Atlanta. We are charging from New York to Atlanta \$1.14. The steamship proportion, under the tariff which they have been using, would produce 45 cents from New York to Savannah. The rate authorized by the Georgia Commission from Savannah or Brunswick to Atlanta is 69 cents—a total of \$1.14. To Macon it is 45 cents for the steamships. Assuming their local to be 64 cents, the total is \$1.09, the present rate. To Augusta the steamship rate is 45, and I think the local rate is 51; total, 96. Those are made on the exact combination.

Q. Are those rates higher or lower than they were before the Commission was appointed in Georgia?

A. Those rates, as well as I can remember, are about the same as we had in force. The steamship rates have been reduced in that time, and they are probably lower. I think the steamship service has been very much improved in the last ten or twelve years, and their rates have been very considerably reduced.

Q. Those rates were fixed before there was a Commission. They were fixed by competition at these points in the first instance?

A. Yes sir.

Q. And since then by the Commission?

A. Yes sir.

Q. Referring to the steamer lines that run to New Orleans and Mobile, as well as those to the other points: they are entirely water lines not run in connection with any railroad?

A. They are purely water lines. I do not know of any ownership of railroads or connection with railroads, except that they naturally—the New Orleans lines give bills of lading through to interior points in connection with railroads, and the Mobile line the same. There is no connection between them that I know of, except a mere traffic arrangement.

Q. You have explained the formation of rates to the competitive points in Georgia. Now explain how rates are formed to the non-competitive points. Take the local stations intermediate between the different cities.

A. They are formed upon the same principle, with the exception that there are lower rates authorized by the Commission of Georgia to points like Macon, Atlanta and Augusta, than there are to stations intermediate, and, therefore, the rates to intermediate stations are higher than the rates to Atlanta, Macon and Augusta.

Q. That is by direction, and not by the tariff fixed by the Georgia Railroad Commission?

A. Yes sir; occasionally there may be some point upon a railroad where there is competition between two points for a certain trade between; and they will group those points by authority of the Commission.

Q. How long have you been familiar with the method of making rates and with the freight business of this territory?

A. I began the freight business in this country, I believe, in June, 1873.

Q. Has the principle of competition and working lower rates to competing points been the prevailing rule during all that time?

A. It has ever since I have known the service, sir.

Q. When a point like Atlanta, for instance, is made a competing point, do the merchants and dealers at stations near Atlanta, who do not directly share in that competition, derive any of the benefit of the low competitive rates given to Atlanta?

A. Yes sir; they get actually the same benefit. If the rate was reduced today from \$1.14 to \$1, all points based upon Atlanta would be reduced 14 cents also; that is, all noncompetitive points, as we call them.

Q. Can you illustrate by figures, and make it a little clearer, how a low rate given to Atlanta at any time, if reduced, would affect intermediate points; or if Atlanta should be raised, how it would affect the local points near Atlanta?

A. They would get the same reduction exactly; all points based upon Atlanta.

Q. Please explain a little more fully.

A. Suppose we take the rate from New York to Jonesboro.

Q. Where is Jonesboro?

A. It is an intermediate station twenty miles east of Atlanta; between New York and Atlanta, over the Savannah line. That point today has a rate based upon the rates by adding the Georgia Commission's tariff to the steamship's local. A reduction to Atlanta would make, by adding to the Atlanta rate, the rate to Jonesboro; and so they would get the same reduction Atlanta would have.

Q. If the rates to Atlanta were raised, would it act upon that point?

A. Not necessarily against Jonesboro. If Atlanta were raised it would not reduce Jonesboro. It need not necessarily advance Jonesboro, because the present rate is based upon the rate to Savannah, plus the rate from there.

Q. Does your office receive statistics of the amount of business handled by the different lines?

A. Yes sir; at all competitive points; and

we are now receiving statistics of the business of all points where there are two or more lines together.

Q. Can you form any idea of the comparative volume of business that passes over the lines of this association? Take, for instance, the competitive points, like Mobile and New Orleans, that we were first speaking of. Can you give any idea of the comparative volume of that competitive business which is done at the low rates in competition with the steamers, as compared with the volume of business that is done to intermediate points?

A. We could only get that from the statistics we have. I think I would be safe in saying that the competitive business would not exceed twenty-five or thirty per cent of the total business.

Q. The whole competitive business?

A. Yes sir. I doubt if such points as are purely competitive, as, for instance, Mobile and New Orleans, would be more than five or ten per cent. It is almost impossible, of course, to estimate correctly.

Q. Generally, however, the business of the roads that serve this section of country affected by the competition on what are called the lower rates for the long haul, is about what percentage of the total business?

A. It would be almost impossible to state without having the figures. It would be almost guess-work.

Q. You have those figures in your office, or figures from which an estimate could be made?

A. Yes sir; figures from which it could be made.

Q. Can you state what you would expect from your knowledge of the figures, in making up the accounts and reports that you send out monthly to the different roads; a general idea of what it would be?

The Witness: From eastern points, or taking the whole section?

Mr. Alexander: Compare eastern points with other eastern business.

A. I do not think it would affect over twenty-five per cent of the whole business; not more than that, although that is, of course, merely estimating. We have not the full statistics sufficient to get at it thoroughly.

By Mr. Stahlman:

Q. You have the statistics of the competitive points, but not all the others?

A. Not all the others; only certain points.

By the Chairman:

Q. What do you mean by the use of the term "competitive points?"

A. The competitive points which we have are determined first by the rates made by water lines to points that have purely water competition, and those rates made by the water lines to points, added to a short rail haul, making water and rail competitive points. Then we have some points which, owing to their location and the competition with other points, have been made competitive points.

Q. So that it may be a point where there is water competition, or the competition may be exclusively by rail?

A. Yes sir; it might be a point where the competition is exclusively by rail.

Q. You speak of rates being based upon a point. W^h

A. I mean, for instance, take a station on any line of road. We give that station the lowest combination, taking the nearest competitive point and giving them an arbitrary from that competitive point or the local roads proportioned from that competitive point to the station. The lowest combination so produced becomes their rate.

Q. For example, you have spoken of Atlanta as a competitive point?

A. Yes sir.

Q. Take a point south of Atlanta in the direction of Mobile, an intermediate station not a competitive point. How would the rate from New York to that point be made?

A. It would be made by adding to the Atlanta rate, or adding to the Montgomery rate for instance in coming up; always seeing that the local points themselves were protected in their competition with one another.

Commissioner Walker. I do not think that is at all clear.

Q. Explain that further.

A. Take a rate to a station—say suppose there is a line entirely between two points, Atlanta and Montgomery, and nothing between, no competition whatever. Those rates would be made by adding in the rate from New York to Atlanta, or the rate from New York to Montgomery to the rate from Montgomery or from Atlanta to the local points. The lowest total so produced would become the rate, always taking into consideration the fact of the stations competing one with another. There may be stations twenty miles apart, and those stations have got to be kept so that they will do their fair share each of the business between them.

Q. You say their fair share of the business. How do you always determine that?

A. We endeavor to make the rates equal to them; and if a rate made upon mileage produces a higher total on combination by Atlanta to a point forty miles from it than the rate on mileage produced from Montgomery, we would have to discard the mileage rate entirely, or discard the—

Q. Suppose the station were the first station south of Atlanta. How would you make the rate to it?

A. Take the Atlanta rate and add the rate of the road from Atlanta to that station.

Q. That is, on New York business to that station you would charge the rate to Atlanta and then from Atlanta back to that station?

A. No sir; not back to it. Where do you mean?

Q. Suppose it was in the direction of Mobile?

A. Then it would come through Atlanta from New York.

Q. Suppose it was business coming by water by way of Mobile to the first station south of Atlanta?

A. If the rate via Mobile added to the rate from Mobile to that station made a less rate than the rate from Atlanta to that station, we would take the lowest rate.

Q. And you would do the same for the next station further south?

A. We would do the same for the next station further south.

Q. It might be greater or less to the next station further south?

A. Yes sir; but if we found it produced less to the next station than to stations where there was competition, we would have to take the total made to the two stations for the rate.

Q. It is only because of your thus basing the rates upon Atlanta, as you say, that a change in the rates to Atlanta would effect the change in rates to these other stations?

A. Yes sir; that would affect them naturally if they were based upon Atlanta.

Q. I do not quite get what you intend us to understand by your remark that as between intermediate stations you endeavor to fix rates that would be just. You do not compare the rates as between these intermediate stations with the rates to the competitive points?

A. Yes sir; we do. We compare them.

Q. The rates to the competitive points affect them; but you do not compare them for any purpose of determining what is just between the competitive points and the non-competitive points, do you?

A. We think we do that in making the rates on that basis.

Q. But in any event the rates to the non-competitive points would be above the rates to the competitive points?

A. Yes sir.

Q. So that you do not compare them for the purpose of equalizing them at all?

A. No sir; if they are differently located of course you cannot.

Q. How do you endeavor to reach the point of justice as between these intermediate points?

A. In making up our local tariffs we endeavor to give such rates as the business of that community will stand and as the business of the country and of the road will justify.

Q. Is that done regardless of competitive forces?

A. No sir; we have to regard competitive forces also.

Q. You regard the competitive forces as they operate at the competitive points?

A. Yes sir.

Q. But as between these competitive points do you arrange the rates—as between these noncompetitive points with respect to the competitive forces?

A. Yes sir; I don't think there is any general freight agent who would make his tariff to a point upon his line of road so as to make competitive points take the business properly belonging to the local points, or discriminate against anybody there. He would endeavor to arrive at it so as to give each one the business which the community claimed and which they had enjoyed for years.

Q. You spoke of the competition by water and of the carriers by water determining what the rates should be. Is the competition as sharp between the carriers by water as it is between the carriers by rail?

A. Sometimes it is. For instance take the New Orleans lines, the purely water lines. Unless they have lately come together they have very strong competition between themselves.

Q. As between water and rail the carriers by water fix the rates?

A. Yes sir.

Q. Is the cutting of rates all on one side, or may it be as sharp on one side as on the other?

A. The water line has the making of the rate and the rail lines have got to take the business at that rate or go out of the business. It may be errors have been made as to information, but they certainly do not cut unnecessarily.

Q. But suppose there is a normal condition of things under which, as I understand you, the rates by rail would ordinarily be higher than by water, a certain per centage?

A. Yes sir.

Q. To cover an allowance for speed, insurance, etc.?

A. Yes sir.

Q. Suppose that normal state of things is broken in upon. Is the breaking in upon it by the cutting of rates always from one side rather than the other?

A. Probably not always; but our experience has been that the competition has been forced upon us by the water lines at those points.

Q. In order to get the business competed for as between water and rail, do not the carriers by rail sometimes cut down pretty low?

A. We have had some very low rates.

Q. And does not the cutting begin with them sometimes?

A. That would be a matter—

Q. I ask these questions because I do not know, and I want to bring out the fact.

A. We do not think it does, sir. Our experience has been that the endeavor has been to keep fair and reasonable and just rates between all points.

Q. The railroads generally think it an object to get this competitive business even if they are obliged to take it at very low rates?

A. So long as it leaves them anything whatever over, or even the cost of its actual carriage, they naturally want to get it.

Q. And when that is the case would it not be very natural that they should push the rates to a very low figure sometimes?

A. I do not think any man wants to do business without some return for it.

By **Commissioner Walker**:

Q. I wish you would produce the rates which you say have been fixed by the Georgia Commission from Savannah to Atlanta?

A. I will do so. (Producing paper.)

Q. This is the joint freight tariff No. 11, containing rates of freight from Charleston, Port Royal, Beaufort, Savannah and Brunswick, in effect March 1, 1886. What is there to show that these rates have been established by the Georgia Commission?

A. The fact that the rates are worked today and have been worked for years; and if there was any violation of the law, the Georgia Commission would not allow them to so work.

Q. Have you anything in writing signed by the Georgia Commission showing their approval of this sheet?

A. I judge that the officers of the roads using those sheets have.

Q. What road is it that runs from Atlanta south on this line?

A. The East Tennessee, Virginia & Georgia road runs from Atlanta to Brunswick, and the Central Railroad of Georgia runs from Atlanta to Georgia within the State of Georgia.

INTER S.

Commissioner Walker. Have you the approval of the Georgia Commissioners to this sheet, Mr. Alexander?

Mr. Alexander. I don't think we have to that particular sheet; but we have to the rates that we work, and we have it at all our principal stations.

Commissioner Walker. I wish you would produce it.

By the **Chairman**:

Q. Do you take into account, as constituting Atlanta a competitive point, anything but the railroads?

A. We take into account the competition by the water routes to Montgomery and to Augusta, in addition to the fact of there being competition on rail lines, and make the rate, as I said, upon the lowest combination; the lowest rate that can be made—the rate authorized by the Commission.

Q. You claim the business of Atlanta to be affected by water competition?

A. Yes sir; Augusta and Atlanta are competitive markets, and Montgomery and Atlanta are competitive markets. Both of those points are reached by water communication entirely Atlanta has of course no river.

Q. In that view would there be any competitive point in this territory that would not be affected by water competition?

A. I don't think we have any that is not directly or indirectly affected by water competition.

By **Commissioner Walker**:

Q. The sheet which you just handed me contains simply what are called competitive points, as I understand it?

A. Yes sir.

Q. You named Jonesboro as a point twenty miles down on this line?

A. Yes sir.

Q. Have you anything from the Georgia Commission fixing the rate to Jonesboro?

A. Yes sir.

Q. Where is it?

A. I have it in my office down stairs. It is the standard tariff published by them.

Q. Will you send for it?

A. Yes sir.

Q. If I understand you, on freight coming from Savannah to Jonesboro you take the rate to Atlanta and add the local rate from Atlanta back to Jonesboro?

A. No sir; not from Savannah. From Savannah the rate to Jonesboro is made by the Georgia Commission, and their standard tariff is of course used. But I say if Jonesboro was affected by the Atlanta rate, if that combination on the New York Steamship rate made a higher rate than the rate to Atlanta plus the local back, we would adopt the lowest total so produced.

Q. Then the rate to Jonesboro is a rate that has been fixed for some time by the Georgia Commission?

A. Yes sir.

Q. So that that does not vary with the rates to competing points. It is a permanent rate?

A. If the rate to Atlanta would make a less rate, adding the local back, than the rate fixed by the Georgia Commission, that would have to be the rate at that point.

Q. Then you do do what I said in my first

question. You make the rate from Savannah to Atlanta the base, and you add the local back to Jonesboro?

A. Not to Jonesboro. That is not close enough probably to make it; but that is the principle. The Georgia Commission here make their rates on that basis—if the short local added to the competitive rate made less than the long local. I don't think Jonesboro is such a case, however.

Q. Take the point to which you have referred, six miles south of here, on the road to Mobile—the first station; what is that?

A. East Point.

Q. Is that a competitive point?

A. No sir.

Q. How do you make the rate from New York City to East Point?

A. That would probably be made—

Q. How do you make it; not how it would probably be made?

A. I do not make that.

Q. Who makes that rate?

A. The Central Railroad. That would be made with the rate to Atlanta added. The lowest total so produced would be the rate to East Point.

Q. You do not make that at all clear. I am inquiring about the rate from New York to East Point. Do you take the standard rate from New York to Atlanta and add the local rate to East Point?

A. We take the rate from New York to Savannah by steamship and add to that the rate from Savannah to East Point by the Georgia Commission tariff to see what the tariff is. Then we take the rate from New York to Atlanta and add the local of the Georgia Commission from Atlanta to East Point, and see what that total is. Whichever of those totals is the lowest would be the rate from New York to East Point.

Q. And that rate would be adopted by the Piedmont Line, for instance?

A. If the Piedmont Line worked to these points; yes sir.

Q. Do they not?

A. I don't know that they do. I do not think they do.

Q. Where do the Piedmont Lines make a tariff to the south?

A. There are no points south of Atlanta that they make a tariff to unless it is the East Tennessee road and the Georgia Pacific road.

Q. Where does the Georgia Pacific run?

A. From Atlanta to Columbus, Mississippi.

Q. Is that the Birmingham line?

A. Yes sir.

Q. What is the first station on that road?

A. Chattahoochee, I believe.

Q. How far is that?

A. About six miles.

Q. What is the rate from New York?

A. Take the Atlanta rate and add the local from Atlanta to Chattahoochee.

Q. How is that sum divided among the different roads?

A. The roads up to Atlanta would divide the Atlanta rate upon whatever basis they had agreed. In that case it would be a pro rate. The rate from Atlanta to Chattahoochee would be the regular local rate of the road.

Q. So that the railroads which reach the competing points divide on that basis?

A. Yes sir.

Q. And the other road gets the local rate?

A. Yes sir.

Q. Is that principle generally followed?

A. That principle is generally followed except where they have to vary a rate to a local point, and in those cases there are occasionally different arrangements made arbitrarily. Those cases are very rare.

By Commissioner Bragg:

Q. How do you make the rate from New York to Norcross?

A. I couldn't say positively; in fact I have never made any of those rates; but I judge the rate from New York to Norcross would be produced by the rate to Atlanta plus the local back.

Q. How would you make the rate from New York to Gainesville, Florida?

A. That is made on the rate to Augusta. Gainesville has been given the same rate as Atlanta.

Q. As a competitive point?

A. Yes sir.

Q. As I understand the way you make your rates, you charge the through rate to the nearest competitive point, and then charge the local from that point. That is the usual way?

A. Yes sir.

Q. Do you ever make any such charges as are called arbitraries?

A. I say that in some cases there are arbitraries; that those arbitraries are generally the result where the application of the actual local would produce different rates to different competing stations on that line. Arbitraries are made for the purpose of grouping stations as a general rule under one rate.

Q. Give us an instance of where you make an arbitrary.

A. For instance, on the Central Railroad of Georgia—I do not know the actual practice today, but for some years it was the practice to group the stations on the southwestern division, take the rate to Macon and add that fixed arbitrary on the through business to those points; but the business from Macon to each of those points might be a different rate from the rate to Macon proper.

Q. How does that arbitrary usually differ from the local rate? It is sometimes more and sometimes less, generally less, is it not?

A. It is generally less. Generally it is certainly as low as the average.

Q. Usually a little less?

A. Yes sir.

Q. Do you give special rates to any particular interests?

A. We give special rates to the manufacturers of the south; yes sir.

Q. You give special rates to the mining interests, too, do you not?

A. Yes sir; and we are now applying those special rates not only to the manufacturers but to the manufactured articles themselves, no matter by whom shipped.

Q. You are not a lawyer?

A. No sir.

Q. But I can ask you this question: I know that in Alabama the statute provides that spe-

cial rates may be given for the purpose of developing manufactures, special industries, mining, etc. Is there not a similar statute here?

A. The Georgia law provides the same thing exactly, sir. A road may make a special rate for manufacturers as against an ordinary merchant.

Q. That you do by classification?

A. No sir; you generally do it by giving the special rate. Formerly in our through business in regard to cotton factory products we did it by classification; but it is generally done by just giving those rates. Such rates in Georgia have to be filed with the Commission, of course.

Q. How do you find that the transportation of iron and coal in a State like Alabama compares with the transportation of the cotton crop in the business and revenue it affords to railroads?

A. I would not be able to answer as to the relative value.

Q. Can you not state approximately?

A. I have only lately had anything to do with the iron interests. We have to make our rates upon the iron products to meet the competition of other interests. We have what we consider very low rates upon iron, and according to the present outlook we will have to have still lower.

Q. I am not talking about the rates, whether high or low; but how the amount of revenue that you get from that business compares with the transportation of cotton or any other crop down there in the aggregate?

A. I would not be able to answer, from the fact that I have not got the statistics of the iron. We have them in the office, but I have not had anything to do with that branch.

Commissioner Bragg. I did not expect you to answer to an exact cent or dollar, but just approximately.

The Witness. I can ascertain.

The Chairman. I wish you would look into it and give us the statistics after dinner.

Mr. Stahlman. I think we will be able, if not here, certainly before the sessions of the Commission close in the South, to fully bring out the facts.

Commissioner Bragg. I have no doubt you will; but I thought perhaps this gentleman, being the Secretary of the Southern Railway & Steamship Association and accustomed to figures, could give it approximately. I have some idea myself on the subject.

The Witness. Only very lately so far as my duties are concerned, within the last month, I have taken in the iron interests, and therefore I have not looked over those statistics at all.

By the Chairman:

Q. You spoke of special rates to manufacturers. Are those under the law left to the discretion of the railroad companies?

A. Yes sir; I think they are left to their discretion. All such rates are filed with the Commission, of course.

Q. Are they made equally to all classes of manufacturers, or do they favor particular manufacturers?

A. We endeavor to make them equal between competing manufacturers. For instance, we endeavor to make the rates on cot-

ton factory products from Atlanta, Macon and Augusta, each, so that neither one will be at a disadvantage in reaching the various markets.

Commissioner Bragg. The Alabama Law provides that these special rates made by the railroad companies shall be filed with the Commission. Have they the same law here?

The Witness. The same law; yes sir.

By the Chairman. Does the law necessarily apply to all classes of manufacturers, for instance, manufacturers of wood as well as of cotton?

A. Yes sir; the law provides that the companies may give special rates—

Q. But is it customary to give the same rates to all kinds of manufacturers?

A. Yes sir; we give special rates here to a manufacturer of tubs the same as to a manufacturer of cotton goods.

Q. Do I understand you that you have a general rule that would apply and make the rates the same?

A. No sir; there is no general rule. The law allows it.

Q. The railroad companies determine what special rates they shall give?

A. Yes sir.

Q. And you say you intend to make them equal under similar circumstances; you mean to make them impartially?

A. Yes sir.

Q. But as between a manufacturer located at a competitive point and one located at a point not competitive, would not the effect of the special rate be to increase the disparity?

A. No sir. I have not got here any rates upon manufacturers at local points, but the rates are generally made so as to let those people come in in the same way. They are probably higher to some extent, but no higher than the relative rates charged on other goods.

Q. Still the rates on other goods would be preserved in respect to these special rates?

A. Yes sir; the local rates of the roads. I have had nothing whatever to do with the local rates, only the through business; and therefore there are some points I cannot answer except from general information.

By Mr. Stahlman:

Q. You stated on cross examination that the railroads did not cut rates to river competitive points, but that there was a great deal of cutting. Has it not been the rule and practice of the railroads to make every effort possible to agree with the water lines and the rail and water lines on a fair adjustment of rates?

A. Yes sir; I, myself, have been in charge frequently of the endeavor to get an agreement with water lines for that very purpose, and so far without any success—or I have done very little.

Q. You have spoken of special rates. I want to ask if the special rates to which you refer are anything more or less than the open rate of which everybody can avail themselves if engaged in like business?

A. Just exactly what I stated. They are filed with the Commission and are open rates given to all manufacturers in the same line.

Q. And no one is favored?

A. No one is favored as between persons or places.

question. You make the rate from Savannah to Atlanta the base, and you add the local back to Jonesboro?

A. Not to Jonesboro. That is not close enough probably to make it; but that is the principle. The Georgia Commission here make their rates on that basis—if the short local added to the competitive rate made less than the long local. I don't think Jonesboro is such a case, however.

Q. Take the point to which you have referred, six miles south of here, on the road to Mobile—the first station; what is that?

A. East Point.

Q. Is that a competitive point?

A. No sir.

Q. How do you make the rate from New York City to East Point?

A. That would probably be made—

Q. How do you make it; not how it would probably be made?

A. I do not make that.

Q. Who makes that rate?

A. The Central Railroad. That would be made with the rate to Atlanta added. The lowest total so produced would be the rate to East Point.

Q. You do not make that at all clear. I am inquiring about the rate from New York to East Point. Do you take the standard rate from New York to Atlanta and add the local rate to East Point?

A. We take the rate from New York to Savannah by steamship and add to that the rate from Savannah to East Point by the Georgia Commission tariff to see what the tariff is. Then we take the rate from New York to Atlanta and add the local of the Georgia Commission from Atlanta to East Point, and see what that total is. Whichever of those totals is the lowest would be the rate from New York to East Point.

Q. And that rate would be adopted by the Piedmont Line, for instance?

A. If the Piedmont Line worked to these points; yes sir.

Q. Do they not?

A. I don't know that they do. I do not think they do.

Q. Where do the Piedmont Lines make a tariff to the south?

A. There are no points south of Atlanta that they make a tariff to unless it is the East Tennessee road and the Georgia Pacific road.

Q. Where does the Georgia Pacific run?

A. From Atlanta to Columbus, Mississippi.

Q. Is that the Birmingham line?

A. Yes sir.

Q. What is the first station on that road?

A. Chattahoochee, I believe.

Q. How far is that?

A. About six miles.

Q. What is the rate from New York?

A. Take the Atlanta rate and add the local from Atlanta to Chattahoochee.

Q. How is that sum divided among the different roads?

A. The roads up to Atlanta would divide the Atlanta rate upon whatever basis they had agreed. In that case it would be a pro rate. The rate from Atlanta to Chattahoochee would be the regular local rate of the road.

Q. So that the railroads which reach the competing points divide on that basis?

A. Yes sir.

Q. And the other road gets the local rate?

A. Yes sir.

Q. Is that principle generally followed?

A. That principle is generally followed except where they have to vary a rate to a local point, and in those cases there are occasionally different arrangements made arbitrarily. Those cases are very rare.

By *Commissioner Bragg*:

Q. How do you make the rate from New York to Norcross?

A. I couldn't say positively; in fact I have never made any of those rates; but I judge the rate from New York to Norcross would be produced by the rate to Atlanta plus the local back.

Q. How would you make the rate from New York to Gainesville, Florida?

A. That is made on the rate to Augusta. Gainesville has been given the same rate as Atlanta.

Q. As a competitive point?

A. Yes sir.

Q. As I understand the way you make your rates, you charge the through rate to the nearest competitive point, and then charge the local from that point. That is the usual way?

A. Yes sir.

Q. Do you ever make any such charges as are called arbitraries?

A. I say that in some cases there are arbitraries; that those arbitraries are generally the result where the application of the actual local would produce different rates to different competing stations on that line. Arbitraries are made for the purpose of grouping stations as a general rule under one rate.

Q. Give us an instance of where you make an arbitrary.

A. For instance, on the Central Railroad of Georgia—I do not know the actual practice today, but for some years it was the practice to group the stations on the southwestern division, take the rate to Macon and add that fixed arbitrary on the through business to those points; but the business from Macon to each of those points might be a different rate from the rate to Macon proper.

Q. How does that arbitrary usually differ from the local rate? It is sometimes more and sometimes less, generally less, is it not?

A. It is generally less. Generally it is certainly as low as the average.

Q. Usually a little less?

A. Yes sir.

Q. Do you give special rates to any particular interests?

A. We give special rates to the manufacturers of the south; yes sir.

Q. You give special rates to the mining interests, too, do you not?

A. Yes sir; and we are now applying those special rates not only to the manufacturers but to the manufactured articles themselves, no matter by whom shipped.

Q. You are not a lawyer?

A. No sir.

Q. But I can ask you this question: I know that in Alabama the statute provides that spe-

cial rates may be given for the purpose of developing manufactures, special industries, mining, etc. Is there not a similar statute here?

A. The Georgia law provides the same thing exactly, sir. A road may make a special rate for manufacturers as against an ordinary merchant.

Q. That you do by classification?

A. No sir; you generally do it by giving the special rate. Formerly in our through business in regard to cotton factory products we did it by classification; but it is generally done by just giving those rates. Such rates in Georgia have to be filed with the Commission, of course.

Q. How do you find that the transportation of iron and coal in a State like Alabama compares with the transportation of the cotton crop in the business and revenue it affords to railroads?

A. I would not be able to answer as to the relative value.

Q. Can you not state approximately?

A. I have only lately had anything to do with the iron interests. We have to make our rates upon the iron products to meet the competition of other interests. We have what we consider very low rates upon iron, and according to the present outlook we will have to have still lower.

Q. I am not talking about the rates, whether high or low; but how the amount of revenue that you get from that business compares with the transportation of cotton or any other crop down there in the aggregate?

A. I would not be able to answer, from the fact that I have not got the statistics of the iron. We have them in the office, but I have not had anything to do with that branch.

Commissioner Bragg. I did not expect you to answer to an exact cent or dollar, but just approximately.

The **Witness.** I can ascertain.

The **Chairman.** I wish you would look into it and give us the statistics after dinner.

Mr. Stahlman. I think we will be able, if not here, certainly before the sessions of the Commission close in the South, to fully bring out the facts.

Commissioner Bragg. I have no doubt you will; but I thought perhaps this gentleman, being the Secretary of the Southern Railway & Steamship Association and accustomed to figures, could give it approximately. I have some idea myself on the subject.

The **Witness.** Only very lately so far as my duties are concerned, within the last month, I have taken in the iron interests, and therefore I have not looked over those statistics at all.

By the **Chairman:**

Q. You spoke of special rates to manufacturers. Are those under the law left to the discretion of the railroad companies?

A. Yes sir; I think they are left to their discretion. All such rates are filed with the Commission, of course.

Q. Are they made equally to all classes of manufacturers, or do they favor particular manufacturers?

A. We endeavor to make them equal between competing manufacturers. For instance, we endeavor to make the rates on cot-

ton factory products from Atlanta, Macon and Augusta, each, so that neither one will be at a disadvantage in reaching the various markets.

Commissioner Bragg. The Alabama Law provides that these special rates made by the railroad companies shall be filed with the Commission. Have they the same law here?

The **Witness.** The same law; yes sir.

By the **Chairman.** Does the law necessarily apply to all classes of manufacturers, for instance, manufacturers of wood as well as of cotton?

A. Yes sir; the law provides that the companies may give special rates—

Q. But is it customary to give the same rates to all kinds of manufacturers?

A. Yes sir; we give special rates here to a manufacturer of tubs the same as to a manufacturer of cotton goods.

Q. Do I understand you that you have a general rule that would apply and make the rates the same?

A. No sir; there is no general rule. The law allows it.

Q. The railroad companies determine what special rates they shall give?

A. Yes sir.

Q. And you say you intend to make them equal under similar circumstances; you mean to make them impartially?

A. Yes sir.

Q. But as between a manufacturer located at a competitive point and one located at a point not competitive, would not the effect of the special rate be to increase the disparity?

A. No sir. I have not got here any rates upon manufacturers at local points, but the rates are generally made so as to let those people come in in the same way. They are probably higher to some extent, but no higher than the relative rates charged on other goods.

Q. Still the rates on other goods would be preserved in respect to these special rates?

A. Yes sir; the local rates of the roads. I have had nothing whatever to do with the local rates, only the through business; and therefore there are some points I cannot answer except from general information.

By **Mr. Stahlman:**

Q. You stated on cross examination that the railroads did not cut rates to river competitive points, but that there was a great deal of cutting. Has it not been the rule and practice of the railroads to make every effort possible to agree with the water lines and the rail and water lines on a fair adjustment of rates?

A. Yes sir; I, myself, have been in charge frequently of the endeavor to get an agreement with water lines for that very purpose, and so far without any success—or I have done very little.

Q. You have spoken of special rates. I want to ask if the special rates to which you refer are anything more or less than the open rate of which everybody can avail themselves if engaged in like business?

A. Just exactly what I stated. They are filed with the Commission and are open rates given to all manufacturers in the same line.

Q. And no one is favored?

A. No one is favored as between persons or places.

Q. Is it not true that the rates on all the factory products moved on short haul are approved by the Commission of Georgia?

A. Yes sir; all rates made in the State are subject to the approval of the Commission of Georgia. There are no rates now in force not approved by them.

Q. Do you know of the existence of any rate to or from local points in this section that you would consider oppressive, unjust or unreasonable as compared with the rate to competing points?

A. No sir; I have heard of none. I have lived at a local point below Atlanta for years, and I never heard the people complain of any unjust discrimination or of being oppressed at all. I did business there for years.

By **Mr. Alexander:**

Q. You spoke of the difficulty of getting water lines to maintain the rates. I want to ask you if you are familiar with the character of the business done by the water lines generally, the steamers from the southern coast to the north. Are they loaded heavily going north, and are they empty coming south, or is the reverse the case?

A. At certain seasons they are loaded more heavily going north. During the cotton season, for instance, they would be loaded very much heavier. The business has been distributed more evenly through the year than formerly in commercial articles.

Q. Besides cotton, are naval stores shipped from the south?

A. Yes sir.

Q. Is there anything else in the way of heavy freight?

A. Yes sir; some iron is being shipped by steamer.

Q. Is there any lumber?

A. Yes sir; considerable lumber.

Q. Is there any rice?

A. Yes sir.

Q. So that generally all the heavy products go north?

A. Very largely.

Q. What is the general character? Are the goods that go south heavy or light goods generally?

A. They are more largely dry goods, boots, shoes, clothing and what we would call the higher class of freights, lighter goods.

Q. In which direction then do the steamers want freight most?

A. Mostly coming south.

Q. In which direction are they least apt to maintain rates?

A. On the business coming south, where they want the freights most.

Q. Do they not absolutely require some freight for ballast?

A. Yes sir; they have got to have it, if they carry it for nothing. They have got to have a certain amount.

Q. A tariff has just been laid on the table of rates made from Charleston and Savannah to some other points. By whom were those regulations made?

A. By the Georgia State Commission.

Q. Please read the sixth regulation concerning freight rates.

A. (Reading.) The freight rates prescribed by the Commission are maximum rates, which

shall not be transcended by the railroads. They may carry, however, at less than the prescribed rates, provided that if they carry for less for one person, they shall for the like service carry for the same lessened rate for all persons, except as mentioned hereafter; and if they adopt less freight rates from one station, they shall make a reduction of the same per cent at all stations along the line of road, so as to make no unjust discrimination as against any person or locality.

But when, from any point in this State there are competing lines, one or more not subject to the jurisdiction of the Commission, then any line or lines which are so subject, may, at such competing point, make rates below the standard tariff, to meet such competition, without making a corresponding reduction along the line of the road.

By the **Chairman:**

Q. What is the date of that order?

A. It is practically the order they have had in force since their organization. This is a reprint of their tariff dated March 1, 1887. It is practically the regulation, and I do not know that there is any change whatever—I am satisfied there is no change whatever in treating that, since they were first organized. The first tariff contained that same regulation.

Q. In reply to a question you spoke of not considering these local rates, at any time that you had known of them to be unjust as between a local point and a competitive point. What I want to bring out now from you is your reason for that statement. Suppose, for example, to the point next from Atlanta in the direction of the sea board the rate for a car load was higher than the rate to Atlanta for a car load of the same material. Why would you say there was no injustice in that?

A. There are a number of elements entering into that. The cost of the service at the station is much less, and the volume of business is different. The cost of the service would be a very large element in determining that.

Q. Is that all you care to say to say about it?

A. That would be the largest element. They get the benefit of their location as fairly as it is possible to arrange it.

Q. Suppose as a matter of fact that station, by reason of the volume of its business, was one where the expense was proportionately less than to the competitive points. Would it be given the advantage of the diminished rate?

A. I think in such a case it would be given the advantage.

Q. Does not that frequently happen to be the case?

A. Not in this country, sir.

Q. But when that is found to be the case the rates would not be fixed in the manner you have described?

A. That would be a matter for each road to settle; but I think they would give that point, if it came into competition with any other—

Q. I am not speaking of that as a competitive point. Suppose it is not a competitive point, but still the volume of business is such that the cost of transacting the business is less than it would be at the competitive point in proportion to its volume.

A. It would be given that rate; that is, provided it did not result to the injury of other

points around it; did not draw from other points, and detract from them.

W. F. Shellman appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Alexander**:

Q. Please state your present office and duties?

A. I am the traffic manager of the Central Railroad of Georgia. My duty is to supervise the rates of freight and passengers.

Q. You are familiar with its business?

A. Yes sir.

Q. Are statistics sent to your office of the amount of business over different lines and in different directions?

A. Yes sir.

Q. Are you familiar with the rates of connecting and competing roads?

A. To a certain extent; yes sir.

Q. How are your rates from New York to Mobile and New Orleans made?

A. They are made to meet the rates of the direct steamers to those points.

Q. Are you familiar with the general drift of business done by steamers between the north and the south?

A. To some extent.

Q. In which direction do those steamers have the most business, north bound or south bound?

A. I could not state that definitely. Of course in the winter during our cotton season the heaviest loads go north; but in the spring and early fall the steamers have better loads coming south.

Q. What is the character of the goods that they bring south?

A. Goods that are manufactured in the east; dry goods of every description.

Q. Can you load a steamer up to her draft with these goods possibly?

A. I hardly think so.

Q. What is the character of the goods that they take north besides cotton in the winter, and is the cotton compressed or plantation baled?

A. It is compressed in the busy season usually, but at other times the steamers carry some uncompressed to get rid of the expense of compressing it. The other principal articles carried north are lumber, pig iron, and naval stores, turpentine and rosin.

Q. Can you load vessels to their capacity with those goods?

A. You can, on account of the density of the goods. You cannot load a ship with what we call dead weight. You cannot load it fully up to its capacity. A steamer, as I understand, can only carry a certain amount of what they call dead weight. For instance, steamers that carry eighteen or nineteen hundred tons of freight would not take on more than three or four hundred tons of pig iron under any circumstances.

Q. But is there not always at the south enough of heavy material such as lumber, naval stores and pig iron to put in up to the capacity of the vessel or to give her ballast?

A. To give her ballast, but not to load her to her capacity always.

Q. Is there any heavy freight to give her ballast coming south from the north?

INTER S.

A. I can think of nothing except the company's railroad iron. Formerly before the naval stores trade grew to the extent it is now, and before we had any pig iron, we had very frequently to carry those rails on the return trip for ballast.

Q. Please state whether, in your opinion or from your knowledge, the steamers can take any sort of rate in competition better with north bound freight, or with south bound freight.

A. I do not know. If a steamer is not full they could of course take as low a rate in one direction as another. Any additional business could be taken at a lower rate. If she is not full she could take in either direction, south or north.

By **Commissioner Morrison**:

Q. Is it harder to get heavy freight south?

A. Yes sir; the heavier character of business.

Q. And so the inducement to take them at a low price is greater?

A. Yes sir.

By **Mr. Alexander**:

Q. Will you state how the local rates of the road that you represent are made?

A. We use the rates authorized by the State Commission.

Q. Do you in any case make them lower than those authorized by the Commission?

A. No sir; not local rates, strictly speaking, except in the case of such manufactured articles as the law permits us to make whatever rate we think is reasonable.

Q. Are you in the habit of making special rates for manufacturing enterprises?

A. Yes sir.

Q. Are they given to a particular company or to all that class of manufacturers generally?

A. We never make any rates but what we publish at our stations. We never make a rate in favor of any particular party. When we make a rate between any points for one party, it is of course open to every shipper of the same character of business.

By **Commissioner Walker**:

Q. As I understand you, the rates to points on your road are invariably fixed by the State Commission, and they are made up on a mileage basis, are they not?

A. Not strictly sir, I believe; that is, the Commission do not increase their rates pro rata according to distance.

Q. It is so much for a certain number of miles?

A. I do not know what their basis is. They have just prescribed rates. What basis they have I am unable to say.

Q. Do they prescribe rates for you at competing points?

A. No sir.

Q. All they do in reference to competing points is to let you alone?

A. Well, all rates we make that are below theirs, and all rates we make, whether below or not, are filed with the Commission; and it is presumed, having supervision of them, that they indorse them, of course.

Q. That is presumed from the fact that they do not say anything about it?

A. Yes sir.

Q. They do give you a maximum on the local business, and otherwise you fix your own rates?

A. We fix our own rates where there are any lines that are not under the jurisdiction of the Commission; any competitive lines or competitive markets.

By the **Chairman**:

Q. What road do you represent?

A. The Central Railroad of Georgia.

Q. What are your connections for New York business, and at what points do you receive it, either by water or by rail?

A. Our lines extend from New York, Philadelphia and Boston, by water to Augusta.

Q. You say your lines. What lines?

A. The Central Railroad lines; the lines they are interested in.

Q. Do you mean that they are interested in steamship lines?

A. We are interested in the Ocean Steamship Company; yes sir.

Q. Coming to what ports?

A. Between Boston, New York, Philadelphia and Savannah. The rail lines extend to Augusta, Spartanburg, South Carolina, Greenville, Anderson, Atlanta, Montgomery, Albany, Macon and all intermediate points.

Q. You have no all rail lines to New York or any northern ports?

A. No sir; there are no all rail lines over which we make rates into that territory. We have connections, of course.

By **Commissioner Bragg**:

Q. Is there any regular line of steamers running between New York and Savannah, except the steamers of the Southern Railway & Steamship Association?

A. It is the Ocean Steamship Company which is a member of that association. There is no other between New York and that point.

Q. That steamship line from Savannah to New York is part of the system of the Central Railroad, is it not?

A. It is a separate organization. It is the Ocean Steamship Company, chartered as such.

Q. But it is run in connection with the Central Railroad?

A. Yes sir.

Q. Is there any line of steamers running from New York to Port Royal?

A. Yes sir.

Q. A regular line?

A. A regular line.

Q. Is there a regular line of steamers running from Charleston to New York?

A. Yes sir.

Q. Is there a regular line of steamers running from Brunswick to New York?

A. Yes sir.

By the **Chairman**:

Q. Are those lines members of this association?

A. Yes sir. The Mallory Line, which runs to Port Royal, and thence to Brunswick and Fernandino, I understand, are not now members of the association. They have been.

By **Commissioner Bragg**:

Q. Are there other ships that bring freight from New York and Boston to Savannah, besides the steamships of the Southern Railway Steamship Association?

A. No sir; no others that do any regular business.

By **Mr. Stahlman**:

Q. Is it not true that on low grades of freight, such as grain, flour, provisions, etc., the steamships have strong competition between Baltimore, Charleston, Savannah and New York with the schooners; in other words, unless the rates are fixed very low by the steamers, that the schooners come in and take the business?

A. Yes sir; that is the fact. Furthermore, the schooners come in empty for the lumber business, unless they can get something. They come in for return freight and they can afford to carry very low.

Q. You say that the schooners frequently come in empty for the purpose of taking out cargoes of lumber?

A. Yes sir.

Q. And they are willing to bring the low grades of freight in at a nominal rate of transportation, in order to get something for ballast?

A. Yes sir; they have got to have a certain amount of ballast. I believe ships have been known to buy ballast. I have heard so.

Q. Is it not true that your steamers, during a certain season of the year, now, for example, are coming from the northern ports to the Southern ports very poorly laden; in other words, without a sufficient amount of traffic to answer even for ballast?

A. Yes sir; we have to calculate in the company's supply of rails that they buy and scatter them along through the season so as to give the ships a certain amount of ballast. They have to provide for the ballast in that way to some extent.

Q. I want to ask if you as traffic manager of the Central Railroad system, including the steamship lines, have not endeavored to secure a fair adjustment of rates to New Orleans and Mobile and Pensacola on business from the east, particularly in which you are most interested; and whether or not the steamship lines running into the ports of Mobile and New Orleans have endeavored to co-operate with you?

A. We have had agreements with the steamship lines at times running to New Orleans; but even at the same rate of freight we transported but a very small percentage of business, and we are confident it was on account of their nonconformity with the rates. We are satisfied of that.

Q. Were you apprised of the fact that at or about the 5th of April the steamship lines running between New York and New Orleans undertook to advance the rates materially, assuming that the railroads would withdraw from competition for that traffic?

A. I do not know that as a fact. I have had it proposed by the steamship lines to New Orleans to advance the rates recently. Whether it was about the 5th of April or not I do not know. They made a proposition to advance the rate to New Orleans. I think it was subsequently to the 5th of April.

Mr. Stahlman. We will undertake to show that hereafter.

The Witness. I have no proposition of about that date.

T. M. Emerson appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. H. Walters**:

Q. What position do you occupy?

A. I am general freight and passenger agent of the Atlantic Coast Line.

Q. Are you familiar with the rates that are made over that line?

A. Yes sir.

Q. How are the Richmond rates made to and from eastern cities?

A. The rates to and from the east for Richmond are made by direct steamer lines running to certain of the eastern cities, for instance New York and Philadelphia, by rail and water lines to Baltimore, and also by the short all rail lines running directly from Richmond to the eastern cities.

Q. How are the Richmond rates from western cities made?

A. They are made by the shorter rail lines, and the basis is usually the rate of the Baltimore Trunk Lines to and from the various western and northwestern cities.

Q. The rates to and from Petersburg are made relatively in the same way?

A. The rates to and from Petersburg are made practically the same as Richmond. Their situation is similar in every respect, both as regards the articles they consume and produce, and as regards the mode of transportation and the different facilities they have for reaching the different trade centers.

Q. What is the method adopted for making rates to Tarboro, North Carolina?

A. They are governed by the rates of the water lines running on the Tar River in connection with the water lines running through the sounds of North Carolina and connecting at Norfolk with the ocean steamship lines. The rates are fixed by these lines, and the rail lines by Wilmington adopt these rates. The territory between the two points, Tarboro and Wilmington being similar to the Tarboro situation, the rates are in no case higher for the shorter than the longer distance; but that is not the case on the lines working out towards Weldon. They are not a factor in making the rates that exist at Tarboro.

Q. The rates at Fayetteville, North Carolina, competitive rates, are made how?

A. They are controlled and made by the steamboat lines on the Cape Fear River at the head of navigation, in connection with the ocean transportation lines from Wilmington to New York, and via New York to the various points that are reached. The combination of these water line rates fixes the maximum total which can be observed at Fayetteville. Neither of the rail lines are direct factors in making the rates.

Q. What is the method adopted at Wilmington, North Carolina, and what governs the rates there?

A. The rates there are governed by the steamer lines from New York to Wilmington and the rail lines are made approximately the same, allowing a difference of insurance and slowness of transportation. Other eastern cities are governed by the rate that is made between New York and Wilmington.

Q. And the western rates?

INTER 8.

A. The western rates are governed in the same way, by the trunk linerate to New York plus the rate from New York to Wilmington by steamer; and that has been met by the rail line via Richmond into Wilmington.

Q. The line into Richmond is considered as a trunk line?

A. Yes sir; as I said before, they observe the trunk line Baltimore rates to Richmond as a general rule.

Q. What is the method adopted in making the competitive rates to and from Columbia?

A. They are made by a combination of steamer rates from the east to Charleston plus the rate authorized and approved by the South Carolina Commission between Charleston and Columbia, making a total of the New York and other eastern city rates to Columbia.

By the **Chairman**:

Q. You speak of the rates fixed by the State Commission of North Carolina.

A. No sir; I am speaking of the rates approved by the Commission of South Carolina. They do not now fix the rates. When they did fix them they observed the same rule. The rates are now fixed generally by the ocean carriers and by the railroad, and can only be changed by joint consent. They fix a rate from Charleston to Columbia which is less than the intermediate rate; and the combination of that rate with the rate the steamers work from New York and other eastern cities to Charleston fixes the Columbia rate.

Q. And that is less than the rate to the intermediate points?

A. It is less than the rate to the intermediate points on all lines which go into Columbia; certainly so by our lines.

By **Mr. Walters**:

Q. The rates at Charleston are competitive rates?

A. Yes sir; and they are likewise fixed by the steamer lines plying directly from Charleston to eastern cities. The rail lines are no factors there in making the rates; at least the rail lines I represent. It likewise applies to the western business to a considerable extent; but we do not do the western business in there, and so I can't answer that matter in detail.

By **Commissioner Bragg**:

Q. How many steamship lines run from New York to Richmond?

A. There is one steamship line, the Old Dominion Line. They have, I believe, two ships a week, or possibly three.

Q. Is that line run in connection with the Richmond & Danville Railroad?

A. They run in connection with the Richmond and Danville Railroad at West Point. It is a different line, I believe. They have numerous lines. Some of their ships run by way of West Point, but I am not certain whether they connect with the Richmond & Danville or not. I am inclined to think they do not.

Q. Has the Old Dominion Line no connection at all with the Richmond & Danville Railroad in its ownership and management?

A. As I said before, it has a connecting line at West Point. I don't think it connects at Richmond with them.

Q. You say it is the only steamship line to Richmond from New York?

A. I know of no other.

Q. Is there any steamship line from Richmond to Baltimore?

A. There is not now. There is a steamship line from West Point in connection with the York River Road.

Q. What steamship line is that?

A. The Richmond, York River and Chesapeake Bay Steamboat Company, I believe it is called.

Q. And that runs in connection with the Richmond & York River Railroad?

A. I so understand it.

Q. Is there any steamship line from Richmond to Boston?

A. There is not. There is a connection by the Newport News & Mississippi Valley Road at Newport News with the steamer line to Boston.

Q. Does the Mississippi Valley and Newport News Line run in connection with the steamship line from Newport News?

A. They run in connection with the steamship line for Boston and Providence business.

Q. At Norfolk is there not a steamship line that runs in connection with the Norfolk & Western Railroad?

A. Yes sir.

Q. What line is that?

A. To what point?

Q. From Norfolk to New York.

A. The Old Dominion I believe. I am not familiar enough with these lines to answer definitely. I have no connection with them. I simply know they are there.

Q. Do you know about the steamship line at Wilmington?

A. Yes sir.

Q. What line is that?

A. It is known as the New York & Wilmington Steamship Company.

Q. Does that run in connection with any railroad there?

A. Yes sir; it runs to a certain extent in connection with the Wilmington, Columbia & Augusta, and Wilmington & Weldon Railroads; that is, it brings business for their local stations.

Q. Do you know what steamship lines run from New York to Charleston?

A. There are several, what is known as the Clyde Line, I believe, and the Quintard Line. I think those are all.

Q. Do they run in connection with any railroad?

A. I believe they run in connection with the lines at Charleston, and in a similar manner with the steamship connections at Wilmington—to the lines that are carrying business from and to them.

Q. Do you know anything about the Port Royal Steamship Line?

A. I understand there is a line there, although I know nothing about it from personal knowledge.

Q. You say Fayetteville is the head of navigation on the Cape Fear River?

A. Yes sir.

Q. How long during the year do steamships run from Wilmington up to Fayetteville?

A. They run off and on all seasons of the year. They depend somewhat on the frequency of the rain, but I believe there is no special season of the year when it can be considered

as certain that they cannot get there. They have to depend on the weather.

Q. Are they small boats or large boats?

A. They are small boats, sir; that is, boats of very light draught, but boats that carry a great deal of freight.

Q. Is there any steamboat that goes up any river from Charleston to Columbia?

A. No sir.

Q. Is the Tar River navigable to Tarboro all the year?

A. Not all the year. It is something like the Cape Fear River in that respect. For the last three years it has been navigable nearly the entire year. At other seasons it is not.

Q. The steamers that run up the Tar River are small, are they not?

A. They are light draught boats, but large so far as carrying capacity is concerned.

James R. Ogden appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Stahlman**:

Q. What is your occupation, and where do you reside?

A. Vice Commissioner of the Southern Railway & Steamship Association; Atlanta, Georgia.

Q. You are familiar with the business of this section of the country?

A. I am somewhat familiar with it.

Q. How long have you been connected with the railroad systems of the south?

A. With the East Tennessee, Virginia & Georgia road since 1865, until last February. Since then, for one year as Commissioner of the Associated Roads, and since April 1 as I before stated.

Q. Are you familiar with the reasons which actuate the railroads in charging a less rate of transportation on western produce, or charging a less rate on the products of the south going west or north between the Cities of Louisville, Charleston, Savannah, Brunswick and Wilmington than between other points?

A. I think I am.

Q. Will you please state to the Commission what is the basis upon which rates are adjusted, from Louisville to Charleston, for instance?

A. I will state that what affects one point in the west affects all alike, as you can see. The rates from Louisville to Charleston are made as high as we think the water competition will permit. We base that on the relative movement of business between the rail and water lines via the coast and the interior rail lines. From the best estimate that we can obtain, the rail lines through Louisville, Cincinnati and other river points, have not done more than forty per cent of the business to the coast so far as we are able to get the statistics, and we have very full statistics. We have also special evidence and positive proof of rates on provisions being made from western points—I will take Hillsdale, Michigan, for instance, on which about a hundred thousand pounds of flour have been moved in the last week at a rate of twenty-three cents to New York, added to a rate of seven cents from New York to Savannah, a total of thirty cents per hundred pounds, as against the all rail rate from the same point through Louisville or Cincinnati of fourteen

cents per hundred pounds higher, which is the lowest rate we can make. In fact, during the month of April our information is that at least seventy per cent of the business going to the coast cities has gone via the eastern ports, particularly via Newport News and Baltimore.

Q. Will you please state to the Commission what is the basis of fixing rates to points in the interior near the Southern Atlantic Coast, say Macon, Augusta, Columbia and such points?

A. The western business is principally a provision business. You can enumerate in about five articles almost all the articles shipped from the west. On those articles to Augusta the rates are made—on bacon six cents higher than Charleston, on grain and flour four cents per hundred pounds higher than Charleston. Those are the principal articles that are shipped.

By the **Chairman**. Higher than would be made by rail to Charleston?

A. Yes sir.

By **Mr. Stahlman**. And the reasons for that are that the water lines competing with the rail lines at the coast would charge about that rate?

A. That is it exactly. The rate to Atlanta is thus made arbitrarily two cents less than Augusta for the purpose of enabling Atlanta people to distribute in competition with Augusta. The rate to Macon is made the same as Augusta for the same reason. I have the basis of a large number of points that I can file with you to show how they are all made.

Q. You say some of these rates are forced upon the rail lines by the competition of the New York and Baltimore steamers and schooners; and you say that the rates to Atlanta are arbitrarily made for the purpose of enabling Atlanta to compete with the other markets. Do you know of any rates from the west to this interior country, made for the purpose of giving one locality similarly situated, one commercial center, any advantage over another?

A. I do not. I believe the rates are as properly and fairly adjusted as it was possible to do under the circumstances. A great number of points are made the same as Atlanta for the reason that they are competing with Atlanta or competing with each other. I have promised Mr. Walker to file with him an explanation of the basis of all those points.

Q. If the rail lines should be obliged to reduce their rates of transportation to interior points corresponding with the rates to the coast, what in your opinion would be the effect upon the railroad transportation companies which undertook to participate in the competitive business to the coast?

A. It would have a serious effect on the revenue of the roads to abandon the coast business.

Q. If they should elect to continue in the coast business, and yet be compelled to reduce the rates to intermediate points for shorter distances to the basis of coast point rates, is it, or is it not your opinion that the railroads would become bankrupt under such an adjustment?

A. I think it is. I have made out and just had completed a full statement of the entire business with all the coast cities from all western points. It amounts in revenue to the in-

terior lines south of the Ohio River to very nearly a million dollars a year—the business going to the coast cities—and that would be a very serious loss.

Q. I do not think you get the point. The point I make is this: if the railroads for any reason should see fit to continue to compete for that million dollars worth of business at a comparatively low rate, and should be forced to reduce their rates to and from intermediate points to the total rates thus fixed, would not the effect be disastrous to all of the railroads that participated in such business?

A. It would be very disastrous indeed. There is no question about that. It would be an immense loss.

Q. As Vice-Commissioner, do you know of any particular complaints from parties located in this section of country at points that are not terminal nor competing points, and not given the benefit of rates to such points?

A. I cannot think now of a single instance of complaint. If there are any such complaints they have not been made to me; but, on the contrary, I have been told by parties paying more revenue to the roads at local stations than any other parties paid, that they were perfectly satisfied with the local rates paid as adjusted by the Railroad Commission of Georgia. I think there is a very general feeling of satisfaction with those rates on the part of the shippers; more so than by the roads.

Q. In other words, it is your conclusion that the people of this section are satisfied with the present adjustment of rates, whether located at terminal points or at local points; and, if at local points, such points receiving, as they do now under the present adjustment, the benefit of the competitive rates to competitive points?

A. I do think there is a more general satisfaction with the adjustment of rates at both competitive and non-competitive points in this territory, than in any other section of the country.

Q. Is it not true that a large proportion of the products of this country are moved on long haul rates; for instance, rosin, turpentine, cotton, iron, coal, etc.?

A. I think the majority of the business brought into the south as well as taken out of the southern territory is on long haul. I will say, as you allude to rosin and turpentine on the coast, that the steamship lines have made rates so low for naval stores that the rail lines don't attempt to touch that business. They let it go by water, except to a very small extent.

Q. You are familiar with the situation so far as it applies to the rates of transportation on traffic to and from the western cities of Louisville, Cincinnati and St. Louis with New Orleans, Mobile, Pensacola, Vicksburg and Memphis. What is the controlling factor in the adjustment of rates between those cities?

A. The controlling factor in the adjustment of rates between St. Louis and other river points and New Orleans is, of course, the Ohio and Mississippi Rivers. The basis to Mobile is the same as to New Orleans, or probably the same as the open rate to New Orleans. The rates have been more frequently cut to

New Orleans than to Mobile, perhaps, so that Mobile has probably been always a little higher than New Orleans. But to enable Mobile to compete with New Orleans in the interior, the rule is pretty general to make it about as near the New Orleans rate as can be ascertained.

Q. Will you explain to the Commission why the rates at times might be made a little higher to Mobile than to New Orleans?

A. Simply because it is not always possible to follow the changes on the Mississippi River. The rail lines are more regular in their charges than the Mississippi River.

Q. Is there not another element? There are regular steamers plying between the western cities on the Ohio and Mississippi Rivers and New Orleans?

A. That is what I mean by water competition.

Q. And Mobile, while it has indirect benefit, yet has no direct water competition?

A. Yes sir. In order to enable Mobile to compete in distributing to the interior, we have to give it the same rates as New Orleans, and give it the advantage of New Orleans competition.

Q. In other words, the benefit?

A. Yes sir; the benefit of New Orleans competition.

Q. What affect the rates from the west to Montgomery?

A. The rates from the west to Montgomery are made by taking the rate to Mobile and adding, as near as we can ascertain, the rates of the steamboats on the Alabama River from Mobile to Montgomery.

Q. In other words, you mean to say that Montgomery has water competition and that fixes the rate of transportation?

A. It has very active water competition.

Q. Is not that true of Selma?

A. The same line runs to Selma on the same river, and it is just as active at Selma as at Montgomery. There are two steamboat lines on that river fighting each other very much, which reduces that rate. The rate on grain and provisions is not over five cents a hundred today from Mobile to Montgomery, while the rail rates are higher than that.

Q. Is it not true that the river competition on the Ohio and Mississippi Rivers from the west has the same effect upon the business to and from Vicksburg, that it has on business to and from New Orleans?

A. It is, evidently.

Q. Is it not also true that it affects the rates to the interior of Mississippi via Vicksburg, that is to say, for instance, to Jackson and Meridian?

A. It does. The rates to Meridian and Jackson are made by adding the short rail rate to the long water rate. Their proximity to the Mississippi River absolutely controls those rates.

Q. And what applies to Vicksburg also applies to the business between the Mississippi and Ohio River points and Memphis?

A. The same, of course, applies to all river points.

By the **Chairman**:

Q. What determines the rate from the west to Atlanta?

A. As I explained before, the rates to At-

lanta are made two cents less than to Augusta, to enable Atlanta to compete. It is a little shorter distance.

Q. Then it is not competitive forces exclusively that determine the rate?

A. It is competition between the markets of Atlanta and Augusta.

Q. It is your judgment of what would be right as between the two places?

A. It is something that has been established after years of fighting and compromising. Neither parties were satisfied, but both parties are satisfied it is the best that could be done.

By **Commissioner Morrison**:

Q. Where are the markets?

A. In territory contiguous to both points. The Georgia railroad extends between Atlanta and Augusta. They both want to supply and distribute business to that territory; and a very great difference in rate between one place and the other would give the city having the low rate the best chance to get the whole business.

Q. When you come the other way, how is it?

A. When you come from the east?

Q. Yes; by way of Savannah.

A. As was explained by Mr. Sindall, there is a little—he didn't explain the difference, but he explained the basis. We take our steamship rates from the east.

Q. I am talking about results. Which is the higher?

A. It is higher from the east, and the reason it is higher from the east—

Q. Which has the higher rate from the east, Atlanta or Augusta?

A. Atlanta has the higher rate from the east. It can stand, probably, a little higher rate from the east more than it could from the west, for the reason that the eastern business is merchandise and dry goods on which the rate does not affect the articles distributed, while from the west, on grain and provisions, a very small difference will determine the point from which it will be distributed.

By **Commissioner Walker**:

Q. You have a rate established to Atlanta on business from Chicago and Michigan through Louisville. Through what places does that business pass twenty or thirty miles north of here?

A. Marietta is an important point twenty miles north of Atlanta.

Q. At that point the rate is higher than it is to Atlanta, is it?

A. The rate is slightly higher to Marietta than it is to Atlanta. I will give you the exact figures. The rate from Atlanta to Louisville (and the rates north of the river are all based on Louisville and Cincinnati) is \$1.07 for first class. To Marietta it is \$1.26. That is made by adding the Georgia Commission local to the Atlanta rate in that special case.

Q. What Georgia Commission local?

A. The full Georgia Commission local rate.

Q. From where to where?

A. From Atlanta to Marietta.

Q. Just as though they had brought the freight down and carried it back?

A. Yes, sir.

Q. Is that principle adopted at the various stations in that vicinity?

A. It is uniformly pursued at all the stations between Chattanooga and Atlanta. The rate is made by the lowest combination added either to Chattanooga or Atlanta.

By the **Chairman**:

Q. If I understand you, the highest rate in between those points would be somewhere near the center?

A. Not necessarily. The basis of the rate from the west to Chattanooga is the same rate per mile as Atlanta, to enable Chattanooga to distribute, so that nearly everything on the Western Atlantic Railroad between Atlanta and Chattanooga is based on Chattanooga. I can tell you exactly how far it comes down.

Q. Suppose you name the point?

A. It comes very close to Atlanta, almost to Atlanta.

Q. Is that the furthest point north?

A. It is this way: Bolton is made on Atlanta, and every other station is made on Chattanooga—that is on some classes. I find in looking through that some classes are made on one point and some on another. There is not any one point that has the highest intermediate rate.

By **Commissioner Walker**:

Q. What is the rate to Bolton on that same class that you gave us?

A. The rate to Bolton is \$1.21.

Q. So that Marietta is a little higher than Bolton?

A. Marietta is a little higher than Bolton.

Q. But it is further north?

A. It is further north.

Q. Is there any reason connected with the movement of the freight whereby, if you have a car load of flour coming from Michigan to Marietta, you should charge more for it than you should to Bolton?

A. I think that introduces a pretty large question. It introduces the question whether local rates should be lower than through rates. In my opinion there are excellent reasons why they should not.

Q. We want to know the reasons?

A. I think there are other gentlemen here who can give them a great deal better than myself.

Mr. Stahlman. I do not think you have understood the question.

The Chairman. I think he has understood the question very well. I do not think anyone could make it more intelligible.

The Witness. I do not know how to answer it in a few words. I think there are a good many people who can.

Q. I should like to know what reasons there are for making the rate from Detroit to Marietta higher than the rate from Detroit to Bolton.

A. Our southern territory is mostly an agricultural territory. When the roads were built they had a fixed business on which they had to depend for their fixed expenses. They were dependent, most of these roads, for a long time, on that purely local business. They had no through business at the start. By and by, when other roads were built and competitive points were established, they were compelled by the force of competition to accept low rates between those points which had competition. If they had adopted the plan of

reducing their local rates to the same figure, it would have produced absolute bankruptcy. Their pay rolls would not have been paid. It was purely necessity that made them. We will take the Alabama Central Road, a road with which Captain Bragg is very familiar, no doubt. That road has a purely local business; nothing, or almost nothing but cotton. It has a certain number of bales of cotton a year to carry, dependent on the seasons, and with more or less every year. It has to depend on the revenue it gets on that cotton for its expenses. It has to provide for its revenue in proportion to that. They do almost no through business. They are not located where they can do it. They do very little through business. It would be simple bankruptcy if they adopted this plan in making their rates.

There is another good reason that I think I have never heard given. As the roads are enabled to increase their through business, although they may do it at a very small profit, they have to increase the expenses of running the road, and the local territory on the line of the road gets the advantage of the money spent in operating this increase of through business which is brought to the road. I can give the Commission instances where roads in the south that are actively engaged in through business and have also a good local territory, spent more money upon the line of their road than every dollar collected—more than that road received—every dollar it received from the people of every local station on that road. I think that is a good reason why the local rates should bear a larger proportion of the—should be larger than through ones. There are a great many points, but I have not been in the transportation department at all, and do not feel competent to speak. There are a great many gentlemen here who are well posted.

Q. So far as the cost of transportation is concerned, do you know why a car load of flour should be charged more if left at Marietta than at Bolton?

A. I take it the business does not go to Bolton so much in carloads. You would stop a train to put a barrel off; and it would probably cost you more to stop your train at that point for the small amount of business you do than you would get on the entire freight shipped.

Q. That is a reason why the charge should be higher at Bolton than at Marietta; but on the contrary, it is just the other way.

A. That is controlled by the competition at Atlanta. A party could ship to Atlanta and ship back; but that would not be a good reason for reducing every other local station on the road which was not similarly situated.

Q. That is actually the fact, is it? It is the low rate at Atlanta that fixes it.

A. That is it. It is the low rate at Atlanta that controls Bolton. You will find that would be generally true if we were compelled by a strict construction of the fourth section to advance our rates to these competitive points—the result would simply be an advance to every local point.

Q. Why do you say a strict construction of the section would require you to advance your rates to Atlanta? Why could you not make

your Bolton and Marietta rates the Atlanta rates?

A. It would reduce the revenues of the roads more than they could stand.

Q. Why could you not take an intermediate course, raise the Atlanta rate a little, and lower the rates at intermediate points?

A. That is exactly how we have figured. I have some figures based on such a calculation to show pretty well how it would come out. There is another point there. By advancing Atlanta and reducing local points you destroy the cities. The railroads have not felt like taking the responsibility of destroying these cities in which a great deal of money has been invested. We prefer to leave that to the law, or to the Commission.

By the **Chairman**:

Q. Have not the cities been largely built up by the preference in rates they have received?

A. Yes sir; I have no doubt of that; but still we think the rates are both just and reasonable.

By **Commissioner Walker**:

Q. You have just made up a tariff whereby you have raised the rate to Atlanta slightly, and reduced the local rates above Atlanta to the same figure, as I understand you?

A. We made out two tariffs, one to put into effect provided we did not get the suspension, and another to put into effect provided we had to construe the law strictly.

Q. What is the difference between those two ideas, in your view, according to those tariffs?

A. I have not got the local points figured out and couldn't tell. I have only got the competitive points. For instance, we proposed to put into effect a rate from Louisville to Cincinnati of \$1.26.

Q. That is taking the highest intermediate rate, is it not?

A. Yes sir.

Q. Why do you not go to work and get out a tariff raising the competitive points a little and then reducing the local points to the same lines?

A. You would have to commence at the coast. You cannot commence at Atlanta. You would have to commence at a point where you have water competition. It would be simply impossible for the roads to do it. They have got to get revenue. It would be impossible to commence at the remote points where you come in competition with water transportation and grade it all the way. You would have to abandon that part of the territory entirely. We could not take a twenty-five cent rate from Cincinnati to Charleston and grade it back. It would be ruin to the roads. You might take an Atlanta rate and you would not lose much, because it is comparatively high.

By **Commissioner Morrison**:

Q. You proceed on the idea that you would lose in quantity?

A. You would. The profit on the coast business is so small comparatively that the roads would be compelled to give that up and take business on which they made a profit.

By **Commissioner Walker**:

Q. You would have to start with the high-

est rate at some point this side of the coast?

A. Yes sir.

Q. Some point like Augusta, or perhaps as far inland as Atlanta?

A. Yes sir.

Q. Have you attempted to see where that point would be?

A. I have not.

Q. You have not made any attempt to fix a rate on that basis?

A. I have not.

By **Mr. Alexander**:

Q. Suppose now you were going to make your tariff in that way. You cannot reduce everything down as low as the coast, but would go back and take Augusta and then proceed from that. Would not that make a great disparity between markets on the coast and the line from which you started to level?

A. It would. It would absolutely throw the business to the coast. It would build up the cities located on the water and destroy the cities not located on the water. It would have that effect.

Q. So if you adopt that principle in full it will carry you down to the water competition of the coast, which would be ruin to your road; and if you only adopt it in part, you distribute the equilibrium between the coast market and the interior markets.

Commissioner Morrison. You have that inequality everywhere now. Then you would have it in one territory.

Mr. Alexander. It is not inequality. It is grading. Then there would be a sharp drop.

By **Commissioner Walker**:

Q. Why cannot this be done—very likely it can, but I want to know the reason, if any exists. The rate to Atlanta will be established at a slight advance from the present rate, giving all points back as far as Chattanooga the same rate; the rate to Augusta established in the same way, giving all points between Atlanta and Augusta the same rate; and the rate to Charleston established in the same way. Of course you may at the far point on the sea coast possibly be obliged to take an ocean rate which is lower than the Atlanta or Augusta rate; but why cannot all the intermediate points be worked from those basing points without having this great disparity as against the local stations?

A. We do not think there is a very great disparity against the local stations. If you will examine the rates, I do not think you will find it. They pay a little higher rate, but we have either got—

Q. Leave out the "great" and then answer the question.

A. There is a disparity; yes sir.

By **Commissioner Morrison**:

Q. You have already stated that in fixing the rate at Atlanta and Augusta you take into consideration something else besides the competition and the cost of carrying; that is, equalization of business. What becomes of the people between the two cities? There would be no distributing between Atlanta and Augusta?

A. None has been recognized; no sir.

By **Commissioner Walker**:

Q. Is there any practical impossibility in making rates in the way I have stated?

A. I do not think it is possible to make those rates in the way you have suggested, without the roads losing a very large amount of revenue. I think it would be a very serious injury to them. It is possible that the roads might be able to do it; but if they could do it, it would be a serious injury to communities, and they have not felt like taking the responsibility of it.

Q. They have never tried to make any such averaging of charges as I have suggested, have they?

A. They may have tried to make it for themselves. It would be better to get that information from each line. They may have worked on that. As an association we have not done anything of that sort.

Q. When you gave out to the public what the effect of the Interstate Commerce Law was to be, you simply did it by raising the rates to the distributing points to the highest intermediate local?

A. In some cases it might have been the highest intermediate local. It was probably not in all. It would not be in all cases.

By **Mr. Stahlman**:

Q. Do I understand you to say that the tariff was made assuming that the law required an advance of rates to terminal points, and that such a tariff was issued before the relief was asked for?

A. I say that we figured on the two rates.

Commissioner Walker. It was made public. It was not issued for operation; but it was given to the press.

The Witness. I do not think it was given to the press. I do not think it was. I never saw it out of the records of our office.

Q. Is it not true that the rail rates from the west do not at all times control the rates to Atlanta? Is it not true that when the rates from Chicago to Baltimore are very low, which has been the case frequently—

A. I have known instances in which the combination on Richmond has disturbed it, but I don't know of any on Baltimore. My impression is that there has not been any on Baltimore, though others may know better. I know the combination on Richmond has sometimes affected it.

Q. Are not the rates as adjusted at present due largely to competition over which the rail lines have no control in the interior as between markets; that is, the grain from one section reaching this territory would have an effect upon the rates of transportation from another section?

A. Yes sir; they are controlled to a very large extent by water. For instance, the rail lines do not control to-day the rate on provisions from the west to Montgomery. Montgomery competes with Atlanta. Therefore if the lines interested in Atlanta business want to do any business they have got to make such rates as will compete with Montgomery, which is controlled by water; so that that extent Atlanta would be controlled by water.

Q. As between terminal and local points is it not true, and is it not an element in the adjustment of the rates as between those points, that the business of reaching the terminal

points pays the transportation companies two rates, one coming in and another going out, and that that is not the case at local points?

A. Yes sir; of course the business that is distributed is handled twice by the same line always, but it is often handled by the same line.

Q. Have you heard any complaints from Bolton or Marietta?

A. I have not.

Q. Or any other point on the Western Atlantic road?

A. I have not heard any complaints. I have neither heard privately nor officially. I have only been in this territory a month, but we have got nothing of the kind officially or privately.

Q. You have been connected with the business from the west to this section of the country for some time?

A. Oh yes, sir; for a great many years.

Q. You are a member of the Rate Committee?

A. Yes sir. During that time we have probably had complaints, but I have not heard of any complaints for the last two or three years. I believe the people at local points are generally satisfied. The rates are established by the Commissions of Georgia, Alabama and South Carolina, and are exceedingly low.

By **Commissioner Walker**:

Q. These Commissions do not establish the rate from Louisville?

A. Those Commissions establish the local rate on which that rate is based. They certainly affect it.

Q. They do not establish the interstate commerce rate on flour from the great west?

A. No; but the Georgia Commission rate is charged on interstate business.

Q. After you once get it into the State, you add the Georgia Commission rate to the local point?

A. Yes sir.

By **Commissioner Bragg**:

Q. You say the rate on western freights to Chattanooga is the same as it is to Atlanta?

A. The same rate per mile as to Atlanta.

Q. How does it differ then from the Atlanta rate?

A. It is 138 miles less distance.

Q. Therefore it is that much less?

A. Therefore it is that much less.

Q. How much does it amount to?

A. The difference on first class between Louisville and Cincinnati to Chattanooga and Atlanta is seventy-six cents to Chattanooga and \$1.07 to Atlanta.

Q. What determines the rate to Chattanooga?

A. It is simply made by agreement to enable Chattanooga to do distributing business; simply by agreement of the lines.

Q. The lines terminating at Chattanooga?

A. Yes sir; an old basis that has been established for years.

Q. Water competition has nothing to do with the rate at Chattanooga?

A. Water competition has nothing to do with the rate at Chattanooga, except so far as Atlanta might be affected by water competition.

Q. The Tennessee River does not cut any figure in it?

A. The Tennessee does not cut any figure in it at present. It probably will in a short time.

Q. What is the rate on western freight to Decatur, Alabama?

A. I have not the rate. You will have to ask Mr. Culp about that. It is a point to which we have never made any rates in our association. It is simply made by agreement between the Memphis & Charleston, and Louisville & Nashville roads.

Q. What is the rate to Birmingham, Alabama on western goods?

A. The basis is the same rate as Montgomery.

Q. What determines that?

A. Competition with Montgomery in distributing.

Q. Is that the only reason?

A. I do not know of any other reason.

Q. What is the rate at Rome, Georgia, on western freights?

A. The rate to Rome, Georgia, is the Georgia Commission rate added to the Chattanooga rate, provided it does not make a higher rate than Atlanta. In no case is Rome higher than Atlanta from the west.

Q. What is the rate to Meridian, Mississippi?

A. I have not the figures of the rate to Meridian. It is variable to that point and controlled by the rate to Vicksburg, which is out of our control, and the rate from Vicksburg. You can get that information better from the representative of the Cincinnati Southern, New Orleans & Northeastern, and Vicksburg & Meridian roads.

Q. How does the rate at Chattanooga and the rate at Memphis correspond on western freights?

A. Our lines practically make no rate to Memphis. The business comes to Memphis generally now, either down the Mississippi River, or from Kansas City in the other direction.

Q. What are your rates at Knoxville compared to Chattanooga?

A. From the west the same as Chattanooga. It is practically the same distance from the west.

Q. The competition then has nothing to do with the making of rates at Knoxville any more than Chattanooga?

A. The reason is precisely the same. It is a distributing point and the competition is for markets.

Solomon Haas appeared before the Commission, and having been duly affirmed, was examined as follows

By **Mr. Stahlman**:

Q. With what lines of railroad are you connected and in what capacity?

A. I am the traffic manager of the Associated Railways of Virginia and the Carolinas, the Piedmont Air Line, the Atlantic Coast Line and the Seaboard Air Line.

Q. Please state to the Commission the basis of fixing rates from the east and from the west to southern coast points; what controls the rates?

A. The trunk lines and the water lines from

the eastern coast control the rates to the southern Atlantic ports.

Q. Both from the east and west?

A. Certainly. The trunk lines do not have anything to do with the eastern rates to the ports.

Q. Is it not true that the rates from the west to Macon, Augusta and other interior points adjacent to the coast are controlled by the rates of the trunk lines and steamships to the coast?

A. Not always. When the trunk lines are at war the rates are very low to Baltimore and the Chesapeake & Ohio use the same rate to Richmond as to Baltimore. The rate to Richmond fixes the Macon rate sometimes. That is very rarely the case. Generally it is controlled by the rates to the ports.

Q. The rates to Augusta and Macon are so controlled?

A. Yes sir; generally.

Q. What is your idea as to the existing rates from the west to Macon, Augusta and Atlanta? What is your view as to the necessity of these rates?

A. I hardly know that I could answer that question intelligently.

Q. What are your reasons, if you favor a lower rate from the west to Augusta than to an intermediate point between Augusta and Atlanta?

A. That would depend on how you were going to treat Macon and Atlanta. You can't get the Macon rate any higher than you have it now, I imagine. To put Atlanta upon a fair basis with Macon and allow Atlanta to distribute business as against Macon, you would necessarily have to have intermediate points higher. You would either have to do that, in all probability, or go out of the Macon business, and let the intermediate rates stand where they are, or put them up.

Q. Are you a member of the Rate Committee of the Southern Railway & Steamship Association?

A. I am.

Q. And you have participated in the making of the rates of transportation for several years, have you not?

A. Yes sir; but we have not made any rates to the local stations; only to the terminal stations.

Q. As a member of that committee, do you know of any complaints coming up from local stations asking a different adjustment from western points?

A. No sir; I think not. The only questions of differences we have had have been between such places as Atlanta, Macon, Augusta, Athens, Dalton and other competitive points.

Q. The complaints have been from the competitive points and not from the local points.

A. Yes sir. There may have been local complaints. I do not know. They have not, I think, reached the rate committee.

Q. You participate in the traffic to Birmingham, do you not?

A. From the east; yes sir.

Q. What effect would it have on the business of your company if you were to level down all your rates on the basis of the present rates to Birmingham and Montgomery?

A. I don't think we would be able to operate very long if we did that.

Q. Do you think it is possible for you to secure an advance of rates from east of Birmingham, or would the rates via Mobile and the Gulf or through New Orleans keep the figures down?

A. It might be possible to squeeze the rates up a little and lose a little more business. We would not get any more money by putting the rates up. We would throw that much more on the water lines and the short rail lines. I doubt if we would accomplish anything by advancing the rates.

Q. Are you entirely familiar with the nature of competition existing at Mobile and Montgomery and the business to and from the east?

A. I think so, at Montgomery via Mobile.

Q. Do you think the rates to Montgomery could be advanced?

A. No sir; I think not.

Q. Or to Selma?

A. No sir.

Q. It is your judgment that the rates as between Montgomery and Atlanta should be made practically the same, so as to give each point an equal showing for the distribution of business. Is not that about the idea as between markets almost similarly situated?

A. I think that is all the people would be willing to submit to. That has been our experience in the rate committee. It would not do for me at this late day to say any other rule could be followed. That has been a subject we have been wrestling with for ten or fifteen years, and we have very rarely, if ever, tried to depart from it. We have talked about it several times, and it has always appeared to be more or less of a trouble as between these points themselves.

Q. I understand you to say that the troubles that come before the rate committee are in the nature of complaints from the competing markets, one as against the other?

A. Yes sir.

Q. And that there has been no complaint from intermediate points?

A. I do not remember any. It is possible that they might not have gone to the rate committee. They may have gone to their local roads. I do not remember that any have ever come to us.

By **Mr. George M. Rose:**

Q. How are your rates made to Fayetteville, North Carolina; upon what basis?

A. They are made as high as we think they can be made in competition with the water lines to Wilmington, plus the rates from Wilmington up the Cape Fear River.

Q. How are your rates made to Bennettsville, South Carolina?

A. They are made with a view to similar competition from Charleston; by the same process.

Q. Over what river; the Pee Dee River?

A. Yes sir.

Q. How are your rates made to Sanford?

A. The same as to Charlotte now.

Q. But the rates that you issue for the associated lines of railroad are good over the Cape Fear and Yadkin Valley Railroad by either line. For instance, a rate to Fayetteville is good over any line that goes into Fayetteville?

INTER 8.

A. Yes sir; we have three lines and the rate is good over any of the three lines.

By **Commissioner Bragg:**

Q. How long is the Pee Dee River navigable up to Bennettsville?

A. Sometimes it is navigable only a month or two during the winter; but for the last two winters it has been navigable all the season, according to my recollection.

Q. Is it navigable in the summer and fall too?

A. There is no business at that time. I think it is not navigable.

Q. What determines the rate to Charlotte, North Carolina?

A. The Charlotte rate is determined chiefly from eastern cities by the water rate to Wilmington plus the rate from Wilmington.

Q. How is the Greensboro rate determined?

A. By the Charlotte rate.

Q. Is it the same as the Charlotte rate?

A. It is a fraction lower than Charlotte. There is a graded rate.

Q. What competition is there that determines the Greensboro rate?

A. The Cape Fear & Yadkin Valley Road enters Greensboro. There is really no competition there. The lines are working rather harmoniously.

Q. What competition determines the rate at Spartanburg, South Carolina?

A. There has been competition there for two years, I think, by the opening of the Port Royal & Augusta Road into that country from Augusta.

Q. What determines the competition at Greenville?

A. The same thing; the Florence & Greenville Road.

J. M. Culp appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Stahlman:**

Q. What is your position and where do you reside?

A. I am the general freight agent of the Louisville & Nashville Railroad, and I reside at Louisville, Kentucky.

Q. You are familiar with the rates of transportation of the Louisville & Nashville Road and connecting lines?

A. Somewhat, sir.

Q. You are also quite familiar with the competition from the west to the south?

A. Yes sir.

Q. Will you please state to the Commission what controls the rates to the southern coast points from the western cities, Chicago, St. Louis, Louisville, Cincinnati, etc.?

A. Ocean competition in connection with the east and west rail lines; trunk lines.

Q. Have not repeated efforts been made to arrive at an adjustment and maintenance of rates between the west and southern coast points with the steamship companies and others who were interested in the traffic?

A. Yes sir; frequent attempts have been made and occasionally those attempts have resulted in apparent success; but the competition and the rates made by the water lines have been lower than the agreed rates, and the result has been failure.

Q. Are the rates to Macon, Augusta and other points adjacent to the coast in the interior of Georgia and South Carolina, affected by the rates to the coast?

A. Yes sir.

Q. Are the rates to Atlanta affected at times by the trunk line rates?

A. Yes sir.

Q. Either via Richmond or Charleston or Savannah?

A. Yes sir; they are via Richmond, and directly via the coast.

Q. Has it not been the custom as far as it was not only practicable but possible, for transportation companies working for the business between the west and the south, to endeavor to observe a mileage basis between points similarly situated?

A. Yes sir. I know of no points similarly situated—no competitive points where the rates are higher. I do not call to mind any now.

Q. There are no reasons, in your judgment, why the railroads should make a less rate to one point, or why they are making less rates to one point than another, except as forced to do so by competition?

A. Competition is the sole reason that forces them to do it; the sole cause.

Q. Either between transportation lines or between markets?

A. Either between transportation lines or between markets.

Q. As a practical railroad man would you not consider it a part of your duty to undertake to protect the business on the line of your road and the cities on the line of your road, whether terminal or local, against the competition of markets or cities located on other lines of roads or rivers? That is, would you not make the adjustment such, or endeavor to do so, as to give the cities and towns located on the line of your road a fair and just and equal chance with the competing markets located on other lines?

A. That has always been the rule.

Q. Is not a large percentage of the competition due to the fact, at a number of intermediate points in this section of the country, that the rule of competition—

A. Do you have reference now to points in this territory, or to points on the Louisville & Nashville Railroad?

Q. Take for example some of the points in the interior of Georgia, Athens, Gainesville, Columbus and other points undertaking to distribute and job their merchandise to the same territory. The rates have been so adjusted, have they not, as to give each point a fair chance to do business?

A. Yes, sir. Some of those points are directly affected by water competition, and it is not a question whether we will or will not. If we do not, we lose the business. Others have been given the rates which they have, because of competition of markets, to enable them to do business. As I said before, I do not know any rate that is less than the rates to local stations that has not been brought about by competition.

Q. If one point should be favored with water competition, and there was a line of railroad existing to another point, you would so

adjust its rates to that point as to enable it, if it could in reason, to undertake to compete with that point for business, being interested in building up its own, rather than a distant city?

A. Yes sir.

Q. You have been connected with the rate committee of the Southern Railway and Steamship Association for a number of years?

A. Yes sir; since 1880.

Q. Is it, or is it not true that the rates to the interior of Georgia, North Carolina, South Carolina, and Alabama, particularly Georgia, South Carolina and North Carolina and also Florida, have been very much disturbed by the great reduction and change in rates from the west to the eastern seaboard and thence by steamer around through the south Atlantic coast points?

A. Yes sir. So much so is that the case that the majority of the rates to North Carolina—I think I am safe in saying all of them—and the majority of the rates to South Carolina, are based on the rates to Richmond or other eastern points and the rates from those points.

Q. The rates to Atlanta, even, have been frequently disturbed.

A. The rates to Atlanta have been disturbed by the rates of the Chesapeake & Ohio Railroad to Richmond, plus the rate from that point.

Q. In your experience as a member of the Rate Committee, have you heard any complaints coming up from intermediate points, or has your experience on the line of road of which you are general freight agent been such as to give you any trouble on business to and from intermediate points?

A. Very little, sir. Occasionally, perhaps, there will be a complaint from some local point, but it is rare. There are not nearly so many from the local points as from the points of competition.

Q. So far as your observation goes, is there a good feeling between people living on the line of the Louisville & Nashville Road and the officers of the road?

A. Very good, sir, so far as I know.

Q. And they are reasonably well satisfied?

A. I am sure of it, sir.

Q. They do not expect the benefit of competition where competition does not exist?

A. No sir. I say no. I know that a great many do not. I know that all that I have talked with do not, and that has been a great many.

Q. Is it the custom of the Louisville & Nashville Railroad, or has it been within a series of years, to favor one shipper as against another, or one community as against another similarly situated?

A. No sir; it has not.

Q. Do you know whether it is the practice of the connections of the Louisville & Nashville Road to indulge in such discriminations?

A. So far as I know none of the connections of the road favor one shipper or one locality over another, the circumstances being similar and the conditions being similar.

Q. Is not true that a large portion of the products of the southern country go long distances to find consuming markets?

A. Yes sir; I might say nearly the entire

product goes long distances; pig iron, cotton, lumber, naval stores, rice, sugar, etc.

Q. Is it not found necessary at times in order to enable the producer to place his products of lumber, pig iron, rice or sugar in competition with such products from other sections to charge a less rate for the longer distance than for the shorter? Take for instance the rate on pig iron?

A. Yes sir; it is. Take pig iron from Birmingham, Alabama, to New York or Philadelphia or Baltimore. The rates have been made in competition with other iron. Rates of freight have been made from the Birmingham district to those points that were lower than the rates to intermediate points.

Q. Is not that also true of yellow pine lumber produced in Alabama or Georgia, which comes in competition with the pine or poplar lumber of the northwest or west?

A. Yes sir; the rates on pine lumber, from Alabama and Georgia to points on the lake are lower than they are to some intermediate points.

Q. Do you know whether the producers of the lumber and pig iron are satisfied with the basis of adjustment of rates from this section of country? I refer also to the producers of rosin, rice, and other products of the country.

A. So far as I know, they are satisfied, or were satisfied with the adjustment that was in effect on March 31. They are not satisfied, however, with the adjustment of rates between the iron district and points north of the Ohio River. The lines leading from the Ohio River north have adopted the long and short haul literally, and there has been a great deal of complaint on the part of the pig iron men at the rates which we are compelled to make, if we make at all, upon the rates furnished from the Ohio River under that clause.

Q. Do you mean to say that the lines north of the Ohio River have advanced their rates under the operations of the Act?

A. They have adjusted their rates under what they call the literal construction of the fourth clause—the long and short haul clause.

By *Commissioner Walker*:

Q. Explain how they have changed their rates from what they used to charge.

A. They have advanced their rates from the Ohio River to Chicago so that no rate between the Ohio River and a point south of Chicago shall be higher than the rate to Chicago. They have advanced the rate from Cincinnati to Pittsburgh so that the rate shall not be lower than the rate from Cincinnati to an intermediate point. They have advanced the rate from Cincinnati to Indianapolis, so that the rates shall not be lower than the rate from Cincinnati or Louisville to any intermediate point. They have advanced the rate from St. Louis and East St. Louis to Missouri River points, Kansas City for illustration, so that the rate from St. Louis and East St. Louis to Kansas City shall not be lower than the rate from St. Louis and East St. Louis to any intermediate point.

By *Mr. Stahlman*:

Q. Is not that true also of lumber?

A. It is true of lumber. I have not heard so much complaint from the lumber men, how-

ever, although I have had letters expressing the hope that the thing will be settled.

By *Commissioner Walker*:

Q. How much does that raise the rate on pig iron from Louisville to Chicago?

A. It raises it nominally twenty-five cents a ton, and I think actually fifty cents a ton.

Q. What is the difference?

A. Their tariff was \$1.75 before and iron has been billed at \$1.50, as I understand, from the Ohio River. That is the proportion of the rate coming from the south.

Q. Why can you not do that now?

A. They require these rates. I cannot say why it is not done.

Q. Do you know of any reason why that cannot be done now just the same as before?

A. The reason is I suppose that they feel that they can't do it. I don't know about that however. It is because the lines south would have to stand that twenty-five or fifty cents a ton out of its proportion, and there is no reason why it should do it. If before, a through rate was made to Chicago based on \$1.50 a ton from the river, and that proportion is now advanced to \$3 and the same through rate is continued, the fifty cents must be borne by the lines south of the river.

Q. What was the through rate before from Louisville to Chicago for pig iron?

A. It varied. For illustration, let us say it was \$3.50 a ton to the Ohio River, and let us say it was \$5 a ton from Birmingham to Chicago.

Q. You are getting away from what we were talking about. What was the rate from Louisville to Chicago shortly prior to this Law going into effect?

A. From the Ohio River \$1.75.

Q. You say they prorated with you on a through rate at \$1.50?

A. I do not say they prorated. I say their proportion was \$1.50. I do not say \$1.75 might not have been charged on some iron, but a great deal of iron was carried at \$1.50.

Q. They have raised the rate now to \$3?

A. Yes sir.

Q. Why can they not make a through rate for \$1.75?

A. Do you mean why can't they make a rate from Birmingham their proportion of which will be \$1.75?

Q. Yes.

A. I do not know, sir.

Q. Why can they not make a rate from Birmingham, their proportion of which will be \$1.50, just the same as it was before?

A. I do not know, sir; but if you will let me give you my opinion, it is not to make through rates divisible upon pro rata percentages with the lines which will not conform to the interpretation of the long and short haul clause of the eastern lines.

By the *Chairman*:

Q. Do you mean by that that they desire the law to be enforced strictly according to its terms?

A. It looks that way as to some of them.

By *Mr. Stahlman*:

Q. May not this be the the moving cause: The roads from the river to Chicago having endeavored to carry out this law under the leveling process which the law calls for with-

out any change, they find it necessary in order to hold their revenue to about what it was before, to advance their rates very much from terminal point to terminal point to correspond to the reductions whether on the same classes or some other classes, and the revenue that may be made between intermediate points?

A. That may be the reason.

Q. Is not the reference that you make to nominal rates this: That the published rate was \$1.75, and that the railroad, in order to get the business, before the enactment of this law, made a concession of twenty-five cents a ton to the shipper or to the receiver, which under the law that there must be an open rate is not admissible?

A. Yes sir.

By *Commissioner Walker*:

Q. Is that so, or was it simply a rate that every shipper had alike?

A. It was a rebate in some cases, I know.

Q. Was it special to certain shippers?

A. Perhaps any shipper who asked for it may have obtained it or it may have been given to all. It is an arrangement with which the lines south of the Ohio River had nothing to do. It was done by the lines north with the pig iron shippers, some of whom were located at Cincinnati and Louisville and other places north. Therefore I cannot say whether it was with all shippers or only a part.

Q. Then the change in the rate is simply taking away that rebate?

A. No sir; there is an advance of twenty-five cents a ton; from \$1.75 to \$2.

Q. A general advance?

A. Yes sir.

By *Mr. Stahlman*:

Q. Is not the lumber traffic, the pig iron traffic and the cotton traffic which moves for long distances about the entire product of this section of the country besides rice, sugar and the products of cotton?

A. Yes sir; lumber, pig iron and cotton comprise nearly the entire exports from this section.

Q. I want to ask you what effect you think the leveling process under this Bill, if it should be rigidly construed or enforced, would have on the consumption of all the business to be carried to and from local points? In other words, is it not true that this section of country consumes just so much western produce, and no matter what the rate may be, you cannot bring more than just so much down here, a sufficient quantity to feed the people and to feed the stock; and that there are no other means of disposing of any western produce.

A. I don't think there is any question about that. I think the leveling process would result perhaps in the property being shipped direct without any increase in the consumption of our exports at all.

Q. Do you catch the point?

A. I think so.

Q. Is there just so much business coming into this country that is not likely to be increased or diminished?

A. It would not be increased by a reduction in rates, or diminished.

Q. It might be diminished by raising the

rates so high that home production would be necessary, might it not?

A. That might be the case.

Q. But beyond that there cannot be any increase?

A. I think not. I don't think there can be any increase in the consumption.

Q. In that respect the business of the southern roads differs very materially from the business of the trunk lines of the west?

A. I think so. There is no time when almost anything a man has to sell or ship cannot be disposed of in the eastern seaboard towns, especially in New York, if he will take the right price for it. He can sell anything for export.

Q. There are times when you cannot sell anything here for any price, almost?

A. Except possibly it might be bought at a very low price, and held to take the place of what would otherwise be bought later on.

By *Commissioner Bragg*:

Q. You have been engaged in the railroad freight business a long time, have you not?

A. Between sixteen and seventeen years.

Q. You are a member of the Rate Committee of the Southern Railway & Steamship Association?

A. Yes sir.

Q. Do you know in a general way the business and traffic of the lines north of the Ohio River? You have a branch of your road running to Chicago, have you not?

A. No sir. We have a road running from Louisville to Cincinnati and one from Evansville to East St. Louis.

Q. Did you not formerly have a branch of your line running to Chicago, a leased line?

A. No sir.

Q. As a railroad man you know in a general way what their traffic and business is?

A. In a general way; yes sir.

Q. Will you give us from a railroad standpoint what you understand or know to be the reasons why they make their tariff as you have stated, and why the railroads south of the Ohio River cannot make it that way without a greater loss?

A. There are a number of reasons. One is that their traffic is much heavier per mile. Another is that the grades of many of the western roads north of the Ohio River are less than those of a good many of the southern roads. The main reason, however, is the larger volume of traffic.

Q. They have a much larger traffic from intermediate points. That is what you mean to say?

A. Yes sir. On some of those eastern roads it looks like you were riding through a city all the way along, almost.

By the *Chairman*:

Q. If I understand you, your company has not made an effort to conform your tariff of freight to the new law as yet?

A. Except that we prepared a line of rates based upon not more for the short haul than for the long haul, which was prepared for use provided we could get no suspension.

Q. You made no attempt to put that in force?

A. No sir.

Q. You alluded in your testimony to circumstances which might force you to charge less from the north to Atlanta for example, and also from the south, than to intermediate points. What do you understand to be the circumstances and conditions that would permit that? What do you take into account as constituting such circumstances?

A. The competition of the roads themselves at Atlanta and the competition of markets.

Q. These circumstances, in other words, which you have been in the habit of taking into account in fixing rates?

A. Yes sir.

C. D. Owens appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Chisholm**:

Q. Please state your position?

A. I am the traffic manager of the Charleston & Savannah Railroad, and the Savannah, Florida & Western Railroad.

Q. What are the connections of the Charleston & Savannah Railroad?

A. The Charleston & Savannah Railroad has first a rail connection with the Northeastern Railroad and its connections north. It has connections also via the Central Line of Steamships from that point. Its connection south is first at Yemassee with the Port Royal and Augusta Road, north to Augusta and south to Port Royal. At Savannah it connects with the Savannah, Florida & Western and the Georgia Central system.

Q. What are its competitors?

A. Its competitors are mainly lines of steamships running from eastern cities to Savannah and to Florida, the steamship line known as the Clyde Line running from New York to Charleston, making a stop there and from there on to Florida points direct, and the other lines formerly known as the Quintard, but now known as the New York and Charleston, from New York to Charleston, and from Charleston to Fernandina.

Q. Are there any points on the Charleston & Savannah Railroad where less is charged for a long than for a shorter distance?

A. Not on the line of its road proper.

Q. Are there any aggregate rates of that kind?

A. There are at points beyond Savannah in connection with the Savannah, Florida & Western system. There the amount in the aggregate would be less than we receive as between business originating at Charleston and terminating in Savannah.

Q. Why has that rate been so made?

A. Because the rate proper has been dominated by a water line over which it has no control.

Q. What are the connections of the Savannah, Florida & Western Railroad?

A. Going south the first is the East Tennessee, Virginia & Georgia Railroad at Jesup. Next it connects at Waycross with the Brunswick & Western, and one stem of the road runs from Waycross to Jacksonville. Going back to Waycross and following the line out it then runs to Live Oak and Gainesville, with a branch to Lake City. It also has a stem at

Dupont, running from there to Albany, Georgia. At Albany it connects with the Central and Southwestern systems, and also it has a further extension to the Chattahoochee River, where it connects with the Pensacola and Atlantic Road and with the Chattahoochee River, both of which they connect with and compete with for business at those points. They connect from the river with the boats of the Chattahoochee River, and they compete with those very boats. They also compete with the Pensacola and Atlantic system of the Louisville & Nashville Road for the business west of the Chattahoochee River.

Q. Have you seen the map that was attached to the petition of the Savannah, Florida & Western Railway?

A. I have.

Q. Does that map show that road?

A. That map shows the system correctly, as it exists.

Q. It shows all the terminal and junctional points?

A. Yes sir; it shows all the terminal and junctional points.

Q. Are there any points upon that road where less is charged for a greater than for a shorter distance?

A. That question requires this answer as near as I can give it: Our rates are made up for the State of Georgia by the Commissioners of the State of Georgia. We have applied that rate to our points in Florida; that is, from an intermediate point, not a junctional or competitive point, originating in Georgia to a point in Florida not competitive or junctional, we use the Commissioners' tariff for the State of Georgia. If the business originates in Savannah and then terminates at a point in Florida, that principle will not apply. We there charge less for the longer than for the shorter haul.

Q. Why?

A. Because that rate is dominated by a water route over which we have no control.

Q. What are those water routes?

A. The water routes are: first, the lines that run to Charleston and Fernandina, then a direct steamship line that runs from New York to Fernandina; next, a steamship line that runs from Savannah to Fernandina. They naturally make the rate. Jacksonville itself is the metropolis of Florida, and has water connections all the way. Not only does Jacksonville have this water connection, but Palatka, sixty odd miles above it, can take a schooner drawing from ten to twelve feet of water and even more, and take the cargo right up there and make a distributing center from Palatka into the interior of the State. These facts we have to recognize in the making of our rates.

By **Commissioner Walker**:

Q. Is Gainesville affected in that way?

A. To this extent: It is some fifty miles from Palatka to Gainesville, and that would dominate the rate at Palatka. We have hitherto made our rates based on the Palatka rate to Gainesville as a terminal point. Our rate to Gainesville should be the same as the Palatka rate. That is the principle with us in making the rate to that point.

By **Mr. Chisholm**:

Q. Have you any points where you have charged less for a greater distance than for a

out any change, they find it necessary in order to hold their revenue to about what it was before, to advance their rates very much from terminal point to terminal point to correspond to the reductions whether on the same classes or some other classes, and the revenue that may be made between intermediate points?

A. That may be the reason.

Q. Is not the reference that you make to nominal rates this: That the published rate was \$1.75, and that the railroad, in order to get the business, before the enactment of this law, made a concession of twenty-five cents a ton to the shipper or to the receiver, which under the law that there must be an open rate is not admissible?

A. Yes sir.

By *Commissioner Walker*:

Q. Is that so, or was it simply a rate that every shipper had alike?

A. It was a rebate in some cases, I know.

Q. Was it special to certain shippers?

A. Perhaps any shipper who asked for it may have obtained it or it may have been given to all. It is an arrangement with which the lines south of the Ohio River had nothing to do. It was done by the lines north with the pig iron shippers, some of whom were located at Cincinnati and Louisville and other places north. Therefore I cannot say whether it was with all shippers or only a part.

Q. Then the change in the rate is simply taking away that rebate?

A. No sir; there is an advance of twenty-five cents a ton; from \$1.75 to \$2.

Q. A general advance?

A. Yes sir.

By *Mr. Stahlman*:

Q. Is not the lumber traffic, the pig iron traffic and the cotton traffic which moves for long distances about the entire product of this section of the country besides rice, sugar and the products of cotton?

A. Yes sir; lumber, pig iron and cotton comprise nearly the entire exports from this section.

Q. I want to ask you what effect you think the leveling process under this Bill, if it should be rigidly construed or enforced, would have on the consumption of all the business to be carried to and from local points? In other words, is it not true that this section of country consumes just so much western produce, and no matter what the rate may be, you cannot bring more than just so much down here, a sufficient quantity to feed the people and to feed the stock; and that there are no other means of disposing of any western produce.

A. I don't think there is any question about that. I think the leveling process would result perhaps in the property being shipped direct without any increase in the consumption of our exports at all.

Q. Do you catch the point?

A. I think so.

Q. Is there just so much business coming into this country that is not likely to be increased or diminished?

A. It would not be increased by a reduction in rates, or diminished.

Q. It might be diminished by raising the

rates so high that home production would be necessary, might it not?

A. That might be the case.

Q. But beyond that there cannot be any increase?

A. I think not. I don't think there can be any increase in the consumption.

Q. In that respect the business of the southern roads differs very materially from the business of the trunk lines of the west?

A. I think so. There is no time when almost anything a man has to sell or ship cannot be disposed of in the eastern seaboard towns, especially in New York, if he will take the right price for it. He can sell anything for export.

Q. There are times when you cannot sell anything here for any price, almost?

A. Except possibly it might be bought at a very low price, and held to take the place of what would otherwise be bought later on.

By *Commissioner Bragg*:

Q. You have been engaged in the railroad freight business a long time, have you not?

A. Between sixteen and seventeen years.

Q. You are a member of the Rate Committee of the Southern Railway & Steamship Association?

A. Yes sir.

Q. Do you know in a general way the business and traffic of the lines north of the Ohio River? You have a branch of your road running to Chicago, have you not?

A. No sir. We have a road running from Louisville to Cincinnati and one from Evansville to East St. Louis.

Q. Did you not formerly have a branch of your line running to Chicago, a leased line?

A. No sir.

Q. As a railroad man you know in a general way what their traffic and business is?

A. In a general way; yes sir.

Q. Will you give us from a railroad standpoint what you understand or know to be the reasons why they make their tariff as you have stated, and why the railroads south of the Ohio River cannot make it that way without a greater loss?

A. There are a number of reasons. One is that their traffic is much heavier per mile. Another is that the grades of many of the western roads north of the Ohio River are less than those of a good many of the southern roads. The main reason, however, is the larger volume of traffic.

Q. They have a much larger traffic from intermediate points. That is what you mean to say?

A. Yes sir. On some of those eastern roads it looks like you were riding through a city all the way along, almost.

By the *Chairman*:

Q. If I understand you, your company has not made an effort to conform your tariff of freight to the new law as yet?

A. Except that we prepared a line of rates based upon not more for the short haul than for the long haul, which was prepared for use provided we could get no suspension.

Q. You made no attempt to put that in force?

A. No sir.

Q. You alluded in your testimony to circumstances which might force you to charge less from the north to Atlanta for example, and also from the south, than to intermediate points. What do you understand to be the circumstances and conditions that would permit that? What do you take into account as constituting such circumstances?

A. The competition of the roads themselves at Atlanta and the competition of markets.

Q. These circumstances, in other words, which you have been in the habit of taking into account in fixing rates?

A. Yes sir.

C. D. Owens appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Chisholm**:

Q. Please state your position?

A. I am the traffic manager of the Charleston & Savannah Railroad, and the Savannah, Florida & Western Railroad.

Q. What are the connections of the Charleston & Savannah Railroad?

A. The Charleston & Savannah Railroad has first a rail connection with the Northeastern Railroad and its connections north. It has connections also via the Central Line of Steamships from that point. Its connection south is first at Yemassee with the Port Royal and Augusta Road, north to Augusta and south to Port Royal. At Savannah it connects with the Savannah, Florida & Western and the Georgia Central system.

Q. What are its competitors?

A. Its competitors are mainly lines of steamships running from eastern cities to Savannah and to Florida, the steamship line known as the Clyde Line running from New York to Charleston, making a stop there and from there on to Florida points direct, and the other lines formerly known as the Quintard, but now known as the New York and Charleston, from New York to Charleston, and from Charleston to Fernandina.

Q. Are there any points on the Charleston & Savannah Railroad where less is charged for a long than for a shorter distance?

A. Not on the line of its road proper.

Q. Are there any aggregate rates of that kind?

A. There are at points beyond Savannah in connection with the Savannah, Florida & Western system. There the amount in the aggregate would be less than we receive as between business originating at Charleston and terminating in Savannah.

Q. Why has that rate been so made?

A. Because the rate proper has been dominated by a water line over which it has no control.

Q. What are the connections of the Savannah, Florida & Western Railroad?

A. Going south the first is the East Tennessee, Virginia & Georgia Railroad at Jesup. Next it connects at Waycross with the Brunswick & Western, and one stem of the road runs from Waycross to Jacksonville. Going back to Waycross and following the line out it then runs to Live Oak and Gainesville, with a branch to Lake City. It also has a stem at

Dupont, running from there to Albany, Georgia. At Albany it connects with the Central and Southwestern systems, and also it has a further extension to the Chattahoochee River, where it connects with the Pensacola and Atlantic Road and with the Chattahoochee River, both of which they connect with and compete with for business at those points. They connect from the river with the boats of the Chattahoochee River, and they compete with those very boats. They also compete with the Pensacola and Atlantic system of the Louisville & Nashville Road for the business west of the Chattahoochee River.

Q. Have you seen the map that was attached to the petition of the Savannah, Florida & Western Railway?

A. I have.

Q. Does that map show that road?

A. That map shows the system correctly, as it exists.

Q. It shows all the terminal and junctional points?

A. Yes sir; it shows all the terminal and junctional points.

Q. Are there any points upon that road where less is charged for a greater than for a shorter distance?

A. That question requires this answer as near as I can give it: Our rates are made up for the State of Georgia by the Commissioners of the State of Georgia. We have applied that rate to our points in Florida; that is, from an intermediate point, not a junctional or competitive point, originating in Georgia to a point in Florida not competitive or junctional, we use the Commissioners' tariff for the State of Georgia. If the business originates in Savannah and then terminates at a point in Florida, that principle will not apply. We there charge less for the longer than for the shorter haul.

Q. Why?

A. Because that rate is dominated by a water route over which we have no control.

Q. What are those water routes?

A. The water routes are: first, the lines that run to Charleston and Fernandina, then a direct steamship line that runs from New York to Fernandina; next, a steamship line that runs from Savannah to Fernandina. They naturally make the rate. Jacksonville itself is the metropolis of Florida, and has water connections all the way. Not only does Jacksonville have this water connection, but Palatka, sixty odd miles above it, can take a schooner drawing from ten to twelve feet of water and even more, and take the cargo right up there and make a distributing center from Palatka into the interior of the State. These facts we have to recognize in the making of our rates.

By **Commissioner Walker**:

Q. Is Gainesville affected in that way?

A. To this extent: It is some fifty miles from Palatka to Gainesville, and that would dominate the rate at Palatka. We have hitherto made our rates based on the Palatka rate to Gainesville as a terminal point. Our rate to Gainesville should be the same as the Palatka rate. That is the principle with us in making the rate to that point.

By **Mr. Chisholm**:

Q. Have you any points where you have charged less for a greater distance than for a

lesser, except those which have been forced upon you by water competition?

A. No sir; not that I am aware of.

Q. Do either of these systems belong to the Southern Railway and Steamship Association?

A. They are connections of the Association, but not members of the Association.

By **Mr. William B. Young** of Jacksonville:

Q. Does your road own the system of tracks from Jacksonville to Chattahoochee?

A. We have a line from Jacksonville to Chattahoochee.

Q. Do you charge a less rate from Jacksonville to Chattahoochee than you do to intermediate points?

A. We do.

Q. Is there any water competition between Jacksonville and Chattahoochee?

A. The short line makes a rate—we do that only on passage. I suppose that is a point you desire to make. On freight or on passage.

Q. On both?

A. On freight we charge just the same as other line makes it. We do no freight business from Jacksonville to Chattahoochee. As a matter of fact that entire business is done over the line of the Florida Railway & Navigation Company. That road having the short line makes the rate between those points, and we live up to it.

Q. Are your rates not less between Jacksonville and Chattahoochee than between Jacksonville and intermediate points on that line?

A. On the points of our own line in Georgia between them?

Q. Yes.

A. I really cannot answer that question because we have never done any business between Jacksonville and Chattahoochee in the way of freight. We give from Jacksonville to points out on our road, the Georgia Commission tariff. We apply that if possible. If any business originates in Jacksonville and goes to points on our road, we apply the Georgia Commission distance table.

Q. Are your rates from Savannah to Live Oak less than the rates from Savannah to Thomasville?

A. Yes sir.

Q. Is there any water competition at Live Oak?

A. Thomasville is 200 miles from Savannah, and Live Oak is 171 miles. Thomasville is altogether in the State of Georgia.

Q. Do you charge a less rate between Savannah and Live Oak than to any intermediate points between Savannah and Live Oak?

A. We charge from the beginning of the Florida line, Marion, through to all points in Florida as far as Gainesville, the same rate.

Q. Then the rates are the same at Marion as they are at Live Oak?

A. Yes sir.

Q. Do you carry any freight from Jacksonville to Live Oak, Gainesville and those points?

A. No sir. We carried a lot of rock. I think that was the first freight we ever had. It was carried on the line of our road.

Q. Have you a freight rate from Jacksonville?

A. We could make one if it was asked for. As a matter of fact we are not doing that business.

Q. Have you such a rate?

A. We have. If it was called for we would apply the Commissioner's tariff, or such rates as we found in effect on the Florida Railway & Navigation Company's Road.

By **Commissioner Schoonmaker**:

Q. If I understand you aright, you say you do not take into consideration in fixing your rates the question of water competition.

A. No; I do not say that. I say the principal factor in making our rates is water competition going on in connection with the short haul from there. That would naturally fix our rate. We could not well go above it. Water is the principal element in making the rate.

Q. Do you take no other competition into consideration?

A. We do.

Q. What competition?

A. Competition in connection with rail lines and in connection with water lines.

Q. Do you take into consideration the business competition that you have spoken of?

A. No sir; we generally let business seek its own level. We would not undertake for one instant to make a rate from one point on our road that would enable a man to overcome market differences.

Q. What is your reason?

A. Simply the law of supply and demand. The natural way for the grain business to come down there would be to come down from the west. We would not, for instance, at Savannah, make a rate that would enable a man to get that same business down to Savannah and then turn around and make a profit out of it and rebill it and reship it from there. We would not make such a rate as that. We would consider that was bad policy. If we simply put that man on an even footing with his competitors, that is as much as he would have a right to ask for.

Q. You would consider that discrimination, would you?

A. We would, sir.

By **Mr. Stahlman**:

Q. You say you would consider discrimination the making of a rate on any product from the west, from Savannah to a point in Florida, which would enable the Savannah man to bring the product from the west to Savannah and ship it into the interior of Florida in competition with the direct shipment?

A. The question is hypothetical in its character, and embraces a good deal. I will give my understanding of the question. It is this: That it would be wrong for us to enable a man to bring his freights from the northwest, passing over our line, and making the point of sale at the terminal point of our line, and then bringing it back over our road again to make a delivery. I call that discrimination. We have our rates into Savannah, of course, and they come up over the western lines. Considering the market rates, suppose I should go in and enable that man to make a profit in a given service. Take Chicago and Savannah. That man bought the grain in Chicago and brought it to Savannah. To enable that man to sell it and make a profit, I would have to give him a reduced rate of freight to take it out

on my road; and I would say that was a discrimination.

Q. If you did not give him any reduced rate?

A. That is entirely right.

Q. In other words, if the rates through Savannah were not less than the rates direct, you would not consider it a case of discrimination?

A. No sir. We would not discriminate to create business in Jacksonville as against Savannah, neither would we in Savannah as against Jacksonville. We make our rates from Jacksonville the same as we do from Savannah.

By *Commissioner Morrison*:

Q. And if one place has a natural advantage you even them up?

A. We try to do so.

Q. You would rather make the profit yourself than let the merchant make it?

A. I don't know how that is.

By *Mr. Chisholm*:

Q. The question I asked was whether there were any rates enforced on that road where a less amount was charged for a longer than for a shorter haul which were not affected by water?

A. Water or water and rail does affect it.

Q. It is affected at Jacksonville by water directly?

A. Yes sir.

Q. And at the other points by water and rail?

A. Yes sir.

By *Commissioner Walker*:

Q. Coming down towards Jacksonville there are no points on that line where you charge more than you do for Jacksonville?

A. Possibly at some small stations down there we may—a little bit of a station there.

Q. It is a trifling thing, if it is true?

A. Yes sir.

By *Mr. Stahlman*:

Q. How would it be if you had a hundred and fifty stations that you had to level?

A. Then it would bankrupt us.

By *Mr. Chisholm*:

Q. Do you not receive business at junctional points which is under this same principle?

A. Yes sir.

Q. And they take the rate upon that through business which has been fixed by the other lines from which they receive freight at the terminals?

A. Yes sir.

Q. And that freight comes sometimes from the far northwest and passes through several states?

A. Yes sir.

(At this point, 2 P. M., the Commission took a recess for two hours. At 4 P. M. the Commission reassembled, all the members being present.)

C. D. Owens resumed the stand.

The *Witness*. On the eve of adjournment *Commissioner Walker*, in the hurry of it, asked me some questions, and in my answer I think it possible he may have misconstrued what I said. I now desire to set it thoroughly right. I used the word "east." Technically among freight men "the east" means the cities composed of Boston, New York, Philadelphia and Baltimore. In freighting or classification we always allude to those cities as "the east." The Interstate Commerce Bill uses the words "the aggregate." There I desire to be understood.

INTER 8.

We do charge, say from New York through to Dupont, a station on the Savannah, Florida & Western Road, a larger amount than we do from New York to Jacksonville, Florida. That is from the east. Coming from the west our rates are made to the junctional and terminal points by the lines north of us, and we accept to those junctional points or termini our pro rate of the total; while to an intermediate point we would charge the rates allowed us under the Georgia State Commission, which would be an amount that would make the aggregate in excess of the total through to the coast point I have alluded to. I will illustrate, by stating that the basing rates are what we call the rates from Ohio River points; and the Ohio River points are supposed to be Evansville, Louisville, and Cincinnati. The total would be twenty-five cents on class D, which is the principal article we transport. To Savannah or Jacksonville we can only get our pro rate of that amount; but if it came to an intermediate point, a nearer haul than Savannah, we would then take our proportion as allowed us under our local tariff adjusted by the Commission of the State of Georgia. For that reason we put in our petition for relief under this clause, thinking it was proper to do so in compliance with the law.

By *Commissioner Walker*:

Q. Then you do carry freight from the west to Savannah, Jacksonville, and Gainesville?

A. Yes sir; and we do it under a pro rate with our connecting lines.

Q. What roads do you get it from?

A. At Albany we get it from the Central Railroad of Georgia and its connecting lines. At Jesup we get it from the East Tennessee, Virginia & Georgia Railroad and its connections. Our eastern rates are subject to the same conditions. We do charge more from the east to a local station on our own road within the State of Georgia, than we do for a point within the State of Florida. The reason why is that the water rate dominates it. It comes down to a point in Florida, and takes the short rail haul from there in. We have to meet those rates by the competition of part rail and part water.

T. S. Davant appeared before the Commission, and having been duly sworn was examined as follows:

By *Mr. Henry Fink*:

Q. What is your present position?

A. General freight agent of the East Tennessee, Virginia & Georgia Railroad.

Q. How long have you been connected with the transportation business?

A. Since 1874.

Q. Then you are pretty familiar with it?

A. Yes sir.

Q. Will you please state to the Commission how the rates of the East Tennessee, Virginia & Georgia Railroad are made from New York to Memphis; upon what basis and what controls the rates?

A. The rates from New York to Memphis are controlled by the water lines from New York to New Orleans, and the Mississippi River to Memphis.

Q. What is the lowest rate you have ever known on first class goods by that route from New York to Memphis?

A. I have known the rate charged to be as low as fifty cents per hundred pounds.

Q. Will you please state how the rates from New York to Nashville are made; upon what basis, and what controls the rates from New York to Nashville?

A. The rates from New York to Nashville are based in this way: the rates are first made from New York to Chicago. Then Evansville is made 108 per cent of the Chicago rates, and the Nashville rates are made by adding the steamboat rates to the through rates to Evansville.

Mr. Fink. I wish to state to the Commission that we are preparing proof in support of our petition, and that proof will set forth exactly the manner in which the different rates are made, the reasons therefor, and what the rates are to competitive points. All the proof will be supported by proper affidavits, and will be ready to submit to the Commission as covering our entire case before the 6th of May. Our case is precisely the same as that of the other members of the Southern Railway & Steamship Association.

By **Mr. Stahlman:**

Q. Is it not true that the rates from Memphis, as well as being based on the rate from New Orleans plus the rates by river from Memphis, are also based on northern river points plus the river rates down to Memphis?

A. Yes sir; I should have mentioned that. The through rates from the east to Memphis are controlled by the combination via New Orleans, or the combination via Cincinnati.

By **Commissioner Walker:**

Q. How do you figure from Knoxville to New York?

A. The rates from New York to Knoxville are scaled on Chattanooga.

Q. What do you mean by that?

A. There are certain differences less the—

Q. What differences?

A. On first class, fourteen cents.

By **Mr. Fink:**

Q. Fourteen cents less?

A. Fourteen cents less. It is controlled by competition. Chattanooga is a distributing point, and we consider that the rates are regulated by competition at both points.

By the **Chairman:**

Q. You spoke of a combination of rates by way of Cincinnati. A combination of what?

A. Take, for instance, the rate by the trunk lines, or by the Chesapeake & Ohio Road to Cincinnati, and then the rate by river.

Q. The rate by river from Cincinnati?

A. From Cincinnati to Memphis.

By **Mr. Stahlman:**

Q. It was suggested this morning that perhaps the rates to terminal points might be advanced, and the rates to local and intermediate points reduced correspondingly. Would it be possible, with the existing competition at New Orleans, Mobile, Selma, Montgomery, Memphis, Vicksburg, and Nashville to advance the rates?

A. It is my opinion that the through rates, as they now stand, are as high as they can be held, and that to advance them would certainly drive the East Tennessee, Virginia & Georgia Railroad out of those competitive points.

By the **Chairman:**

Q. Are those points you mentioned all directly affected by water transportation?

A. All except Knoxville, sir.

By **Commissioner Walker:**

Q. As I understand you, to get the rate to Nashville you take the water rate from Louisville, do you?

A. From Evansville, but the same combination is made on Louisville.

Q. What water rate?

A. The Cumberland River.

Q. Is there a regular line on that river with an established tariff?

A. Yes, sir.

Mr. Fink. We will offer the rates in evidence.

S. A. Pearce appeared before the Commission, and, having been duly sworn, was examined as follows:

By **Mr. Haas:**

Q. State to the Commission what business you are engaged in?

A. I am engaged in the quarrying of granite.

Q. At what point?

A. At Columbia, South Carolina, and in Abbeville County, S. C.

Q. What effect, if any, will the strict construction of the fourth section, known as the long and short haul clause, have on your business?

A. As regards my business, under the rates which I now have I am enabled to send paving blocks to Cincinnati. As I understand the operation of the law, if it is enforced, the fourth section, it would entirely crush out that business.

Q. Do you do any work except paving work?

A. No; I do not.

By the **Chairman:**

Q. Upon what facts do you base your opinion?

A. Upon the supposition that the roads who haul the granite would not be able to haul at a rate which would enable me to put the granite into Cincinnati; that is, if they made the long haul adapt itself to the short haul basis.

Q. Is this opinion of yours an opinion that simply responds to the opinion of others engaged in that business? Is that the way you reach your opinion in the matter?

A. It is my own opinion, not based upon the opinions of others at all. I may say this, and, if the Commission would permit me to do so, I would like to read the memorial of the Columbia Board of Trade. There is something expressed in that which would present the views not only of the Board of Trade of Columbia, but it might cover the point which the Chairman of the Commission wishes to have brought out.

The **Chairman.** We should be very glad to have it. It is not necessary that you should read it, unless you deem it important to do so.

The **Witness.** It is very short.

The **Chairman.** Very well. You may read it.

(The witness then read the memorial above mentioned.)

Q. What competition is it that gives you low rates upon granite at Columbia by shipment to Cincinnati?

A. I do not ship from Columbia.

Q. From where do you ship?

A. In Columbia I am able, by favorable rates, to ship to Charleston and place my granite on the government jetty works at Charleston.

Q. You spoke of Abbeyville as the other point?

A. Yes sir.

Q. What is the competition that gives you low rates from there to Cincinnati?

A. The competition would not come immediately perhaps at the shipping point near Greenwood.

Q. Is it not water competition?

A. No sir; it is not water competition.

By *Commissioner Walker*:

Q. What is there in the Interstate Commerce Law that requires the raising of the rates on granite paving blocks from Abbeyville to Cincinnati?

A. If, as I have said, the local rates—if the long haul is adapted to the short haul, then we would have to pay the rate which would be established according to the short haul rate.

Q. Do you know anything about that yourself, or is that what the railroad officers have told you, giving you the figures?

A. We have had a glimpse of what we might expect in the rates which were given from Columbia and to Columbia.

Q. They gave you some figures and you thought those figures were what the Interstate Commerce Law required. Was that it?

A. No; that was not announced. It was announced generally that in order to conform to the Interstate Commerce Law, the through rate would have to be adapted to the short haul.

By *the Chairman*:

Q. Are there other quarries of granite between you and Cincinnati?

A. There are quarries in Georgia.

Q. Quarries where the rates from Cincinnati are greater than they are to your quarry?

A. No sir.

Mr. Haas. Will you allow me to show why a low rate is necessary?

The Chairman. I was not questioning that, but trying to see how it was that this long haul provision of the law applied to his case.

Mr. Haas. I will be able to show that the low rate is necessary to enable him to send his granite to Cincinnati, although the same reason does not apply to an intermediate point.

Commissioner Morrison. Let him explain how the man at the intermediate point who pays the high price now is going to get along with his granite.

By *Commissioner Bragg*:

Q. Have not the railroads always given you special rates to Cincinnati on these long hauls?

A. Yes sir. This contract was entered into before the passage of this Law.

Q. But they have given you special rates?

A. Yes sir.

Q. You could not ship granite from South Carolina to any long distance like Cincinnati unless you got special rates of some sort, could you?

A. No sir.

By *Mr. Haas*:

INTER 8.

Q. Could you ship a short distance, to Charleston, without special rates?

A. No sir.

Q. Why?

A. I would come in competition with the ocean transportation.

By *the Chairman*:

Q. What do you understand there is in the law that prevents your having special rates now as you have had them heretofore?

A. As I construe the law—I am not a lawyer—the rate is not to be fixed by any Commission. The law, as I understand it, does not prevent the railroad companies from fixing any rate that they choose. They, of course, cannot discriminate in regard to the rate. Through a sparsely settled country like this I can imagine that the business of the roads could not be carried on on the basis of the long haul. Therefore, if they have to conform to the law they must inevitably raise the long haul rate. If it is raised up to the basis of the short haul rate then we certainly could not get into Cincinnati.

Q. But I do not understand from you that there is any short haul rate that conflicts with your rate at all.

A. It would be classed, I suppose, with other goods. I do not know what classification they would put granite into, but we would have to go into the same classification with other goods that were hauled over the road.

By *Commissioner Bragg*:

Q. Do you understand that the Interstate Commerce Law authorizes the railroad company to charge just whatever it pleases, without regard to whether it is reasonable or not?

A. It must be reasonable, of course. I understand that it should be reasonable. But it does not fix any rate. There is no rate fixed.

The Chairman. The companies fix the rate in the first place?

The Witness: Yes sir.

By *Mr. Stahlman*:

Q. At Cincinnati, the rates from the Vermont granite district, the New Hampshire district and the Richmond district are excessively low, and therefore the competition between the South Carolina granite and the New Hampshire, Vermont and Richmond granite is very strong and it necessitates a lower rate to Cincinnati than it would to Nashville or Louisville, because the rates from Vermont, New Hampshire and Richmond are higher than they are to Cincinnati. Am I not correct in that?

A. Yes sir.

Q. Is not this the case: the custom house at Louisville is just being built, a large, magnificent building. The question came up whether they should use South Carolina granite, Vermont or New Hampshire granite, or Indiana brownstone. The competition was very strong between those different grades of granite and other materials. Hence it necessitated a lower rate to Louisville in competition with that than would have been necessary if the same character of building had been put up at Nashville. It is in order to enable the interests which you represent to compete successfully with the interests from other sec-

tions, that it is necessary to make a less rate for a long haul at times than for a short one?

The Chairman. Are you calling out information from him? If you are testifying, I want to put you under oath.

Mr. Stahlman. I ask if that is not substantially the situation?

A. That is the practical working of it.

By Commissioner Morrison:

Q. I understand you to say, not in so many words, that you cannot pay a reasonable price for carrying your goods to Cincinnati; and in order to help you, the roads now reduce your charges below a reasonable price. If the law compels them to put it up to a reasonable price then you are shut out of the market?

A. I would not put it on the ground of a reasonable price. I would say they put it at a price I can get into Cincinnati on and compete with other points.

Q. We have agreed that they cannot at any time, either with or without the law, put it above a reasonable price. When they put it at a reasonable price, then you are shut out of the market?

A. It might be a debatable question as to what was a reasonable price, of course.

Commissioner Morrison. We all agree that the roads cannot go above a reasonable price. The railroad managers themselves do not claim they can.

By the Chairman:

Q. Have you shipped granite to Nashville?

A. No sir; and no other point there.

Q. Have you shipped to Louisville?

A. No sir; no other point than Cincinnati. It is a new industry.

By Mr. Stahlman:

Q. Are you not aware of the fact that there has been granite shipped to Louisville?

A. Yes sir.

By the Chairman:

Q. From where?

A. From Richmond, I believe.

Q. From South Carolina also?

A. I do not know about that. This is a new industry I have established within the last year.

H. B. Hammet appeared before the Commission and was duly sworn.

The Witness. I desire to state that I am one of the representatives of the Board of Trade of Greenville, South Carolina, and that we have prepared a short memorial setting forth what we desire to say upon the subject. As a manufacturer of cotton goods I have prepared a supplementary memorial which I intended to read at the same time. I do not know the course you desire to pursue with reference to the matter.

The Chairman. You can submit the memorial of the Board of Trade; and as for the other, perhaps you had better give your evidence under oath. If you have reduced the facts to writing, there is no objection to their coming before us in that form.

The Witness. That is just what I have done. Although it is not in the shape of an affidavit, still I will take the oath.

The Chairman. You state that it represents the facts?

The Witness. It represents the facts as I

understand them. The chairman of the Board of Trade is present. He might read his own paper; or shall I do it?

The Chairman. Read it yourself, if you please.

The witness then read the memorial of the Board of Trade.

The Witness. I will now read a statement of facts which I have written myself and which is intended to accompany the memorial. As I consider myself under oath I suppose there is no objection to reading it. It is very short.

The witness then read the paper referred to.

By the Chairman:

Q. What is the difference between the rates before the 4th of April and those that were nominally charged then?

A. The rates that were furnished me for the mill in the Town of Greenville, as I understood them from the card which was sent in from their office, was about forty per cent higher. They were not so high at the mill which I manage on the Columbia & Greenville Railroad. They were nine cents a hundred pounds higher to Baltimore, Philadelphia and New York. They have now all been withdrawn from north of the Ohio River and west of the Mississippi, where we have large orders now awaiting the delivery of the goods, and which of course we cannot deliver at all.

Q. What do you understand created the necessity for raising those rates to your mill?

A. I really didn't see any at all myself. I don't think there was, so far as I understand the subject.

By Mr. Haas:

Q. You said in your petition that you thought your mills ought to have relative rates as compared with the east to points in the southwest?

A. Yes sir; and northwest.

Q. One instance occurs to me now. Suppose the rate from New York to Galveston to be fifty cents. Do you think you could stand about fifty cents?

A. I wouldn't expect to get as low a rate as New York did. I mean relatively the same.

Q. You would have to have about that rate; somewhere in that neighborhood?

A. Yes sir; relatively the same rate.

Q. Suppose the lines made rate for you from your mills to Galveston at sixty-five cents. You would consider that a reasonable rate on Galveston business as compared with the New York business, would you?

A. I am not really able to answer that. I think the New York rate ought to be more than our rate, because we are nearer.

Q. Assuming that to be so, would you think it would be an unreasonable rate if you were charged sixty-five cents to Galveston and seventy-five cents to an intermediate point where New York had a higher rate than the Galveston rate?

A. I do not know that I should be interested in that at all.

Q. If New York paid a higher rate to that point, could not you afford to pay a higher rate?

A. If the eastern mills did; if other mills did all over the country. If the mills in Fall River and Lowell paid a higher rate I could.

All I ask is to be placed upon an equality relatively. I do not mean that I ask the same rate from Greenville to Galveston that the Fall River men should have. I do not think that would be fair.

R. L. McCaughrin appeared before the Commission and was duly sworn.

The **Chairman**. You know what you want to say; please proceed and make your statement.

The **Witness**. I represent the Newberry Cotton Mills. I can say that we were induced by promises made to us by the railroads for cheap coal to build a cotton mill to be run by steam to compete with the water mills of Augusta and the water mills in the upper part of our State. We contemplated building a cotton mill there for several years, but waited for the completion of the Georgia Pacific Road to put us within reach of cheap fuel, as we have to compete with the water mills of Augusta and the upper part of our State. We have invested over \$300,000 there, and we think with a reasonable prospect of profit. We have not made any yet. Our rates of coal we regard as reasonable, and our rates for our goods to the eastern and western markets. We can live at it.

By **Mr. Stahlman**:

Q. Is that a point where there is no other railroad?

A. Yes sir; there is no competition.

Q. And you are satisfied with the rates you have?

A. Yes sir.

The **Chairman**. Is there anything further you wish to add?

The **Witness**. I have a petition that was handed to me by the representatives of the different mills.

The **Chairman**. If it is simply a petition not setting forth special facts beyond what you state, it is hardly worth while to read it. You can file it with us and that will be sufficient.

D. E. Converse appeared before the Commission, and, having first been duly sworn was examined as follows:

By the **Chairman**:

Q. What is your residence?

A. Glendale is my residence. I represent the Glendale and Clifton Cotton Factories, and I represent the City of Spartanburg as well. I have a short memorial which I will hand in. Our points were embodied in a memorial handed to you, by Maj. McCaughrin as regards the factories.

Q. You know, if you desire to bring out any particular facts.

A. I have no special statement, more than to say that we fear any interruption of the present rates of freight or those that have been existing heretofore, both local and through rates. We fear any interruption by the action of this Interstate Law. We prefer as manufacturers, and as citizens, to have it remain as it is.

Q. You have but one railroad to either of these points, have you?

A. We have two railroads; that is, we ship east and west on the Air Line, and then we

have a road from Glendale southward to Columbia or Charleston, South Carolina. We get about the same rates at all these points, on the Charlotte & Atlanta Road, given to both westward and northward freights. We have been satisfied with them, and we would remain satisfied.

Q. Do you mean that the points where your mills are located are treated as competitive points?

A. They are competitive points. They are allowed that.

Q. You have substantially the rates that are allowed to other competitive points?

A. We have substantially the same rates. Spartanburg, Greenville and our neighboring cities have substantially the same rates.

By **Mr. Haas**:

Q. The lines you are on, are substantially the same line?

A. Yes sir.

Q. Do you know that your rates to New Orleans are lower than they are to Montgomery?

A. If you will allow me to look at a table that I have with me, I will tell you. I have mislaid it and so I cannot answer that question.

Q. The object I have in view is to inquire whether your rates to New Orleans, for example, are lower than they are to Montgomery and intermediate points, and whether you could afford to pay as high a rate to New Orleans as to Montgomery, and still do the business. Do you recall any point where you have a lower rate for a long distance than for a short one?

A. I do not. I do not think we have.

Dr. C. E. Fleming appeared before the Commission and was duly sworn.

The **Chairman**. Make such statement as you desire.

The **Witness**. I do not know that I can say anything that will throw any light upon what has been said. We are all here representing one interest. We fear the result of any change. We fear it may operate to our disadvantage. That is all.

Q. Where do you live?

A. At Spartanburg.

Q. Are you engaged in any particular manufactures there?

A. No sir.

Q. You simply speak for the people in general?

A. Yes sir. I represent the Board of Trade of that city.

Richard McCoy of Riverton, Virginia, appeared before the Commission and was duly sworn.

The **Chairman**. Go on and make such statement as you desire.

The **Witness**. I represent a lime interest in Virginia; in fact, three lime interests, as Secretary of a Lime Association organized for the purpose of arranging the prices of lime in competition with lime, that comes from the coast of Maine. Otherwise, our interests are altogether adverse. We are competitors in the territory of the Richmond & Danville and Coast Line Railroads. I have a statement of facts here in the form of a petition.

The Chairman. State the facts that are in it, so far as they are within your knowledge.

The Witness. Our business has been created and maintained by rates fixed on the principle of how much our product will bring in certain markets, in competition with lime that comes from Rockland and Thomaston, Maine and is landed at the ports throughout our territory, such as Norfolk, Portsmouth, Richmond, Wilmington, Charleston, Newberne, Savannah and Fayetteville. We believe that if the rates at these competitive points are put in line with the local rates, that we will be entirely put out of these markets. For example, take Goldsboro, North Carolina, 487 miles from our works. It is only fifty-seven miles from tide water at Newberne.

By **Commissioner Schoonmaker:**

Q. What is your location in Virginia?

A. Our location is Riverton, Virginia, on the Virginia Midland Division of the Richmond & Danville Railroad.

By **The Chairman:**

Q. Do you market your lime in the direction of the coast from where you are?

A. Yes sir.

By **Commissioner Schoonmaker:**

Q. How much lime do you produce?

A. The entire kilns produce about a million bushels annually. At Fayetteville, North Carolina, the price is controlled by the Wilmington market, where the Rockland lime is landed, and thence by steamers from Cape Fear River to Fayetteville. That, of course, would control the price in the territory between Fayetteville and Bennettsville, on the Cape Fear and Yadkin Valley road. At Tarboro we have to compete with lime brought in by Albemarle Sound up the Tar River to Williams- ton. The same rule would apply to Charleston, South Carolina.

By **The Chairman:**

Q. Do you mean that you send lime to Charleston?

A. The kilns that I am immediately connected with do not, but the kilns on the Richmond & Allegheny Road, 50 miles north of Lynchburg do. I am representing them, and they were joint petitioners with me in this paper. At Columbia the price is controlled by the rate from Charleston to Columbia, fixed by the South Carolina State Railroad Commission. We would be driven out of that market. We have a good trade there, and we would be driven out of that market if the long haul was to be put in line with the intermediate points. They have Rockland lime delivered at Norfolk and Richmond that fixes our prices in a large portion of that territory east of the Blue Ridge and as far south as Charleston and Columbia.

By **Mr. Haas:**

Q. From what you know of these rates to the points that are near the coast, do you think the railroads could be reasonably expected to make their intermediate point rates as low and do all their local business at the relative low rates at or near the ports?

A. I unhesitatingly answer, no.

By **Commissioner Morrison:**

Q. Why?

A. Because the rate, for example, to Colum-

bia is very low, and the railroads say that only some twenty-five per cent of the business is business of that kind. Of course they could not be expected to sacrifice the shorter haul business to secure the long haul business that don't pay them. That is, as I understand it, their position. The rates are very low to these competitive points, and without these competitive points there would be such a curtailment of our business as would very seriously embarrass us and all the employees in connection with our work.

By **Commissioner Schoonmaker:**

Q. How large a force have you?

A. We have about forty laborers on our payroll at Riverton, but the works give employment to wood choppers and wood haulers, and furnish a market for cord wood in that remote portion of Virginia that would be unmarketable were it not for these kilns.

By **Mr. Haas:**

Q. How many men are employed in that particular industry in Virginia; not in your works alone?

A. The entire kilns would amount to three times the number I have named for the one I manage myself, perhaps more. I cannot answer that question with absolute accuracy.

R. E. Blankenship appeared before the Commission and was duly sworn.

The Witness: I am the chairman of a committee of the Chamber of Commerce, of Richmond, Virginia. We have a very short petition, which, with your permission, I will read. (Reads petition.)

By **Mr. Haas:**

Q. Will you state the business you are engaged in?

A. I am the President of the Old Dominion Iron and Nail Works Company, Richmond, Virginia.

Q. Do you ship nails and iron to Charleston?

A. I do.

Q. And to Atlanta and Birmingham?

A. Yes sir; and, in fact, all places in the south.

Q. Do you recollect whether your rates to Charleston are lower than to intermediate points?

A. Do you mean on that same line? Yes sir, they are.

Q. Are they lower to Birmingham, for instance, than they would be to a point on the Air Line Road north of Gainesville?

A. No sir; it would be lower to Columbia than to Chester.

Q. Do you think you could compete, for example, at Columbia with nails coming in from the east via Charleston unless you did have a lower rate to Columbia?

A. No sir; I could not, unless I sacrificed the difference in freight. The nail business wouldn't stand that just now.

Q. Would not the same rule apply when you come into competition with the factories at Chattanooga, Knoxville and these other points?

A. Undoubtedly, sir. We are peculiarly situated at Richmond. We are five hundred and sixty miles from Atlanta. There are factories all along in New England, and factories

close to the ports of Philadelphia and Baltimore. They come down to Wilmington, Charleston or Savannah, and deliver their goods by short lines or by rivers into the interior. When we start from the other direction we are met at Lynchburg—I will not allude to that, because it is about the same distance we are—but at Knoxville, at Chattanooga, Brierfield, Alabama, and also at Helena, we come in contact with factories that are much nearer Atlanta than we are. There is a whole line of factories down the Ohio River, and at Louisville there is a center for shipment. That is nearer to Atlanta practically than we are.

A. H. Christian appeared before the Commission and was duly sworn.

The Chairman. Proceed with your statement.

The Witness. I did not know I was called upon to make any statement. I would be glad to answer any questions.

By Mr. Haas:

Q. State your business.

A. I am a manufacturer of paper; Secretary and manager of the Richmond Paper Manufacturing Company, situated at Richmond, Virginia.

Q. Do you remember any of the rates charged to Nashville from Richmond on your paper?

A. I cannot say that I remember accurately the rates to Nashville. I am more familiar with the rates through the Southern States.

Q. What points do you recollect?

A. Wilmington, Charleston, Savannah, Atlanta, Birmingham and New Orleans.

Q. Do you remember whether the rates to any of those points that you mentioned are lower than to any other intermediate points?

A. No sir, I do not recall that they are. We do very little business with the intermediate points, however. Most of our trade is at trade centers and distributing points.

Q. Do you do any business at Goldsboro?

A. We do some business at Goldsboro; yes sir.

Q. You do not remember what your rate is to Goldsboro?

A. No, I cannot tell you what our rate is.

Q. What is the nature of the competition that you experience from Richmond at such places as Wilmington, Charleston, Nashville, Montgomery or Birmingham?

A. Our competition at Wilmington, Charleston, Jacksonville and Fernandina is principally from New York, Baltimore and Philadelphia. As we get further west our competition comes from Cincinnati, St. Louis and Chicago.

Q. Is that so at Birmingham?

A. Yes sir; it is true at Birmingham to a great extent, although we have competition from both points at Birmingham.

Q. Chattanooga, I suppose, is a still greater point of competition?

A. Yes sir. Our business, I would state, at many of these points has been made possible entirely by the low rates of freight which we have been able to secure in competition with the water lines.

Mr. Haas. The object of these witnesses is simply to show, as far as we can, that there

may be necessities for charging less for a long distance than for a shorter distance, even though there is no water competition.

J. S. Ellett, of Richmond, Virginia, appeared before the Commission, and was duly sworn.

The Chairman. If you desire to make any statement you may proceed to do so.

The Witness. The paper that has been read sets forth my views very fully. I am in the jobbing business and not in the manufacturing business. Our business would be very considerably reduced in the interior on account of the competition that is given to the interior points by the southern seaports.

The Chairman. Do you wish to add your testimony in support of this memorial?

The Witness. Yes sir.

H. H. Smith appeared before the Commission and was duly sworn.

The Witness. This is rather unexpected to me, gentlemen. I was not expecting to be called upon as a witness. I am one of the delegates.

By Mr. Stahlman:

Q. What is your place of residence?

A. Rome, Georgia.

Q. What is your business?

A. The cotton business.

Q. You are a cotton buyer and shipper?

A. Yes sir.

Q. What is the feeling in your community as to the operations of this law and the desire about it?

A. The feeling there is general that it will work very disastrously to our section of the country. We have presented a memorial here in connection with the general subject.

Q. What is the character of business of Rome outside of cotton?

A. We have manufactures of several different kinds. We make stoves there and machinery which is shipped to all parts of the country. It is a large shipping point. We handle about seventy-five thousand bales of cotton a year there.

Q. What do you know about the feeling of the people on the line—

The Chairman. That is hardly a proper inquiry. Bring out the facts. You would open an inquiry that would be interminable. It would be impossible for us to go into an investigation of that question, without calling upon the communities a good deal more generally than would be at all within our power. The investigation must necessarily be exceedingly unsatisfactory.

Commissioner Walker. The feeling of a community is only valuable as it is based upon facts which call for such a feeling. Those facts we can tell about.

Commissioner Morrison. If they have been given to understand that it will increase their rates, we know how they feel about it.

The Chairman. It would be necessary to inquire what this feeling was based upon.

Mr. Stahlman. I beg to make myself understood. It was not my purpose to undertake to demonstrate the feeling of the people living adjacent to the City of Rome as to the Interstate Commerce Act, but the feeling as to

the existing condition of things. As I understand it, the existing condition of things is based upon the suspension of the provisions of the Act, which leaves us substantially in the same position we were before the enactment of the law. What I am endeavoring to bring out—it may be improper, and if it is improper I beg pardon of the Chairman and of the Commission—is that so far as Mr. Smith's information goes, there is no dissatisfaction with the state of affairs that existed prior to the enactment of the law.

The **Chairman**. I think we have been quite liberal in taking testimony to that effect already. You can see it would open inquiries in every direction, which it would be impossible for us to pursue now.

L. Johnson appeared before the Commission and was duly sworn.

The **Witness**. I have a short memorial from the Naval Stores Manufacturers Protective Association of the State of Georgia.

The **Chairman**. Do you wish to say anything more?

The **Witness**. No sir.

By **Mr. Stahlman**:

Q. Are not the naval stores, factories or plants, whatever you call them, located largely at local points on the railroads?

A. Yes sir; principally.

Q. And you pay local rates on your merchandise, provender, etc., to your mills and factories?

A. Yes sir; from certain points we pay local rates.

Q. You are not favored as between yourself and other people on the line of the road?

A. No sir.

Q. You are satisfied with the rates of transportation?

A. Yes sir; we are perfectly satisfied.

By **Commissioner Walker**:

Q. Then what is the trouble? What are you afraid of?

A. We look at it in this way: If the freight is raised—

Q. But the freight is not going to be raised, as I understand it, because you are at local points.

A. Well, here is the idea: We draw our supplies under the through rate. We pay the local rate from Montgomery or Savannah, as the case might be, to the local points. If the through rate is raised, of course there will be a raise on the local rate. We get a great many of our supplies on the through rate.

Q. So you have been given to understand that the rates to the local points will be raised if the rates to the terminal points are raised?

A. No sir; we are not so informed.

Q. Then why do you expect such a thing?

A. Well, we are interested, of course, in the through rates.

By **Mr. Chisholm**:

Q. Where are your industries principally situated?

A. In the southern part of the State.

Q. Do you get your provisions, such as corn, hay, and raw materials, from the extreme northwest?

A. Yes sir.

Q. They come on through cars?

A. Yes sir.

Q. At low rates?

A. Yes sir.

Q. To distributing points?

A. Yes sir.

Q. Then you get the benefit of the low rate with simply the local added to the point where you are?

A. Yes sir; that is what I mean.

By **Mr. Stahlman**:

Q. And your product goes long distances to find a market?

A. No; the manufactured product is all shipped under the short haul principle to the coast; but the supplies principally come from the long haul. Of course there is a certain amount of the product that goes westward under those cheap rates; but the bulk of it goes by water transportation.

By the **Chairman**:

Q. Do you mean that you pay on your supplies higher rates than are paid to points beyond you that have a longer haul?

A. We generally always ship our supplies to the coast and then pay the local back.

By **Commissioner Walker**:

Q. And in fact they go down to the coast and you bring them back?

A. Yes sir.

By the **Chairman**:

Q. By rail?

A. Yes sir.

By **Commissioner Bragg**:

Q. To what point on the coast do you ship your supplies?

A. Brunswick is our principal market, on the line of the East Tennessee Road.

Q. How far from Brunswick is your concern located?

A. The ones I am interested in are about seventy or eighty miles away. We have several.

Q. As I understand, you buy your supplies in the extreme northwest, take them to Brunswick, and then pay the local rate back to where you are?

A. Yes sir.

By **Mr. Haas**:

Q. What road do you live on?

A. The East Tennessee.

By **Commissioner Bragg**:

Q. If it was arranged so you could take them off the cars at your place at the Brunswick rate that would not be disadvantageous to you, would it?

A. No sir.

M. F. Amorous of Atlanta, Georgia, appeared before the Commission and was duly sworn.

The **Chairman**. Proceed with any statement you desire to make.

The **Witness**. I am the general manager of the Atlanta Lumber Company. We are manufacturers and dealers in lumber. Our markets are principally north of the Ohio River at such points as Cincinnati, Chicago, Detroit, Erie, St. Louis, Omaha and local points beyond Omaha in Nebraska. Since the operation of the Interstate Commerce Act our rates north of the Ohio River have been raised, to Chicago \$1.25 a thousand, to Detroit about

\$2.25 a thousand, to Lima, Ohio and Urbana, Ohio about \$2.50 or \$3 a thousand, and to Buffalo about \$2.25 a thousand. This raise has been made entirely north of the Ohio River.

Our rates continue the same to the Ohio River, Evansville, Louisville and Cincinnati.

By the **Chairman**:

Q. Is there anything further?

The **Witness**. I am ready to answer any questions.

By **Commissioner Schoonmaker**:

Q. Are there other companies in Atlanta besides yours?

A. Yes sir.

C. In the same business?

A. Yes sir.

Q. How many?

A. There are twenty-one lumber dealers here and about five wholesale dealers and shippers who ship north of the Ohio River. They are also interested in sawmills south of Macon in this State. We ship from the East Tennessee Road, the Central Railroad, the Brunswick & Western and the Louisville & Nashville Railroad in Alabama. Our Alabama rates and Georgia rates are on the same basis. We are practically the same distance from Ohio River points. Our business takes a special rate to the Ohio River. I first started this business about five years ago. Up to that time there had been no lumber shipped from Georgia to the northwest by rail. I was aware that there were a great many empty cars being carried back to the northwest, and I thought the railroads would be glad to fill them up at a low rate of freight. With that view I made inquiries of our western lines to see if I could get some inducements in freight rates in order to place our products north of the Ohio River. I was encouraged by the W. & A. Railroad, particularly, from Atlanta to Chattanooga. They secured me free passes and gave me an opportunity to go through the northwest and prospect. I traveled all over that country, visiting almost every town north of the Ohio River, from 5,000 inhabitants up, out as far as Kearney, Nebraska, two hundred miles west of Omaha. I ascertained the prices of lumber in those different towns and what prices we would have to have in order to get some trade in that country; and then, knowing the cost of manufacture of our lumber, I made a proposition to the railroads as to what freight rate I would need in order to give them business and help them to fill up their empty cars going back. In the majority of cases they accepted, and since then we have been doing quite a business.

By the **Chairman**:

Q. Now, as I understand you, the rates north of the Ohio River have been raised?

A. Yes sir.

Q. So that you cannot do business there?

A. I have some contracts that I made in February and have partly filled.

Q. You do not understand that there is anything in this pending investigation that applies to those rates of freight, do you?

A. No sir; I do not.

Q. So that whatever may be the rates there, that question has nothing to do with this investigation? There is nothing we can do upon this investigation that will be of any service to you there?

INTER 8.

A. The point I desired to make was that the enforcement of the fourth section, which I understand is in force north of the Ohio River, would probably increase our rates.

Q. But we are not dealing with that now. We can make no order now that would have anything to do with the rates up there?

A. Certainly; but it may in the same way increase our rates south of the Ohio River.

Q. If you have any facts that you want to bring before us that bear upon the rates south of the Ohio River, we will hear them.

A. The fact is that the rates we have at present enable us to do business up to the Ohio River. I am under oath, and I state that fact.

By **Commissioner Morrison**:

Q. If you add a considerable increase at this point, you cannot do business?

A. No sir.

By **Commissioner Schoonmaker**:

Q. Is your lumber all produced in Georgia?

A. Georgia and Alabama. We manufacture, ourselves, in Georgia and deal in lumber from Alabama also.

Q. You manufacture, yourselves?

A. Yes sir; and we purchase from other men.

By **Mr. Stahlman**:

Q. Do you do a large business on the Macon & Brunswick Road?

A. Yes sir; the east Tennessee system south of Macon. Our shipments amount to two or three thousand cars a year.

Mr. Norcross. I would inquire if you wish to hear from the opposition tonight?

The **Chairman**. We are hearing from the petitioners now.

Charles E. Hockstrasser of Columbus, Georgia, appeared before the Commission and was duly sworn.

The **Witness**. Mr. Chairman and Gentlemen: I have, as the others have, a petition. I will not ask your time to read it, but will merely give the finale of it and make my explanation as short as possible. Representing the City of Columbus, Georgia, and the Board of Trade, we humbly request that your body make permanent the present temporary suspension of the fourth section of the Law as it affects the interests of our city, and allow us to be placed on an equality with Montgomery and Selma, Alabama, except as to the difference in our mileage.

I will say in explanation—the facts and proofs are in our petition—that Columbus occupies a peculiarly fortunate position at the head of navigation of the Chattahoochee River. With 415 miles of navigable stream, we are not entirely dependent on railroads for our facilities. But having those natural advantages, Columbus has invested as a city, and through its citizens, quite an amount of money in railroads to give us advantages that our rivals in trade have; and we very much fear that the operations of this law will injure our interests in those investments. We desire that the railroads shall divide our freighting business with our river. Another reason is that Columbus has been for many years a large manufacturing section, particularly in cotton goods. Not many years ago the trade was comparatively of a local character or confined to the States surrounding Georgia; but as all of our supplies

are brought from the west, it was not infrequent that unloaded trains went out from Columbus to western points. That being seen by the mill men, an arrangement was made for a satisfactory rate, and a trade was established with the Territories and States throughout the entire west and northwest, and also through Mexico, Central America and everywhere where goods of that character were in demand. The condition of trade rendered it necessary to increase the facilities for making these goods, and for that reason the mills have been extended, new ones have been built and others are being built now; and if the operations of this law should prevent that arrangement from continuing, it would injure very seriously that interest which has grown up only on account of the reduced rates on freights carried by formerly empty cars.

Another part of our petition asks that Columbus be placed on an equality with Montgomery and Selma. That was asked by Colonel Alexander of the Central Road in his petition. Our reasons for that are these: Montgomery is situated one hundred miles to our west. We are rivals in the trade of all the country between us and always will be. We have the same natural advantages that Montgomery and Selma have, by means of our river to any part of the world through the Gulf of Mexico; and we merely ask that that competition may apply to us and that he be allowed to give us the same rate that he asks for those points. We do not ask that you force him to do it. We propose to do that ourselves. We have got the river and have used it in the past. It has dictated our rates of freight and we propose in the future to use it more extensively for that purpose.

By *Commissioner Walker*:

Q. Do you mean it has not been treated as a competing point?

A. It is not asked for in a petition dated I think on April 8, by Colonel Alexander of the Central Road; and we claim that, the conditions being similar, we are entitled to the same rate, if we can force him to give it to us, that he asks to give to Montgomery.

Mr. Alexander. A single case was taken as an illustration in the first petition; but when the question came to be argued before the Commission, the same thing was asked for Columbus that was asked for every other competing point.

The Witness. If it was a mistake, gentlemen, we are glad to hear it, as we feel that our natural advantages give us an equal right to it; and for that reason alone we ask that we may have it when we can enforce the matter, which we think we can do.

J. M. Thornburg of Knoxville, Tennessee appeared before the Commission and was duly sworn.

The Witness. I was not aware I was to be called as a witness for the railroads. I supposed I was simply called that I might present the views of the Chamber of Commerce. I have one of the shortest of the petitions presented; and as our locality is somewhat differently situated from the others, I will ask your indulgence to read it. I do not desire to make any further explanations.

(The witness then read the petition in question.)

W. E. Kyle appeared before the Commission, and having been duly sworn was examined as follows:

By *Mr. George M. Rose*:

Q. What position do you now hold?

A. General freight and passenger agent of the Cape Fear & Yadkin Valley Railroad.

Q. How long have you held that position?

A. A few months.

Q. How long have you been connected with the freighting business of the Cape Fear & Yadkin Valley Road?

A. Six or eight years.

Q. Where does your road run?

A. Our road starts from Bennettsville, South Carolina, and ends at Walnut Cove, North Carolina.

Q. What systems of roads in North Carolina does it cross?

A. It crosses the Seaboard Air Line at Fayetteville, the Atlantic Coast Line; at Sanford again the Seaboard Air Line, and at Greensboro the Piedmont Air Line.

Q. What water competition does it meet?

A. We have the Pee Dee River at Bennettsville, South Carolina, and the Cape Fear River at Fayetteville, North Carolina.

Q. Are there any points on your line where less is charged for a long haul than for a short haul?

A. Yes sir; at competing points.

Q. Is that the case at local points on the line of the road?

A. No sir.

Q. At competing points do you charge less for a long than a short haul?

A. We charge less to Fayetteville than we do to stations on either side of Fayetteville, on account of water transportation.

Q. Where else?

A. At Greensboro we charge less.

Q. How are your rates to Greensboro fixed?

A. They are fixed by the General Traffic Manager of the Associated Railways of Virginia and the Carolinas.

Q. Have you any business connection or are you a member of the Association?

A. We are not.

Q. But you say they fix the rates?

A. Yes sir.

Q. And those rates are adopted by your line?

A. Yes sir.

Q. Are those rates good to Greensboro over every road?

A. Yes sir.

Q. How are your rates fixed as to Fayetteville?

A. Our rates are the Fayetteville rates, based on the river rates to Fayetteville. We have to meet the water rates.

Q. The question was asked by one of the Commissioners this morning, how long during the year the Cape Fear River was navigable. Can you answer that question?

A. It has been navigable for the past eighteen months. The government did considerable work on it and made it a good river, and they run on schedule time.

Q. Since the government has worked upon the river?

A. Yes sir.

Q. Are there daily lines of boats running

up and down the river?

A. I think so, sir. A boat arrives every day.

Q. What class of boats run on the river?

A. They draw very little water, I think about three and a half to four inches. The tonnage I suppose is ten or fifteen car loads of freight.

Q. You say your rates to Fayetteville are based upon this river competition?

A. Yes sir.

Q. How do your rates to intermediate points compare with your rates to terminal points?

A. At some of the points mentioned there is no difference, and at others probably from one to five cents.

Q. As a railroad man do you know any intermediate point on your road where the rates of freight are unjust or unreasonable?

A. No sir; I do not.

Q. Have any complaints been made to the Company since your connection with it at any of the intermediate points?

A. No sir. There is no complaint existing of any kind, nor from any point.

Q. Upon what is your road most dependent for its receipts?

A. We are dependent on our connecting lines largely for our receipts.

Q. At what points?

A. At Greensboro, Sanford, Fayetteville and Maxton.

Q. Then the largest receipts of the Company are from these connecting competitive points?

A. Yes sir.

Q. How many miles of road do you operate?

A. We operate 189 miles.

Q. How much of that road has been built within three years?

A. 140 miles.

Q. Has the business upon the line of the road between the stations been firmly established yet?

A. No sir; the country is rather thinly settled and the business has not been well established.

Q. And therefore you are dependent upon these competitive points for your rates of freight?

A. Yes sir.

Q. What effect would the enforcement of section 4 of the Interstate Commerce Act have upon your road?

A. As our road crosses the three systems that run into North Carolina it would be ruin to us. We would lose all of the business at the two largest points on the line of our road.

By *Commissioner Bragg*:

Q. Bennettsville is on the Pee Dee River, is it?

A. It is near the river.

Q. How far from the river?

A. About five and a half miles.

Q. You treat it as a competitive point, do you?

A. It is to us a competitive point for all Charleston business; heavy goods.

Q. By navigation on the Pee Dee River?

A. Yes sir.

Q. How many months in the year is that river navigable?

A. I really do not know, sir. I supposed it was navigable at the time they handled the

cotton there in the fall of the year, and in the spring when they received the fertilizers to make the cotton.

Q. Do you know it is navigable then?

A. Yes sir; I do.

Q. How far is Bennettsville from the ocean there?

A. I don't know how far it is.

The **Chairman**. We have perhaps been quite as liberal as it will be reasonably possible for us to be in receiving testimony on behalf of the petitioners. Should there be other evidence that the petitioners deem important to be brought forward before we leave town, and should we find time to take it, it might be taken, or it can be brought forward at one of the other places of meeting. We must give the opportunity for those who oppose the granting of the petitions to be heard here, as some can be heard here more conveniently than elsewhere, and perhaps we shall have no more than a reasonable allowance of time for them now. In the program marked out yesterday those opposing the petitions were asked to hand in the names of witnesses at our meeting this afternoon. Names have not been handed in, for what reason I do not understand, but I assume that it is in consequence of some inadvertence or accidental circumstance, or perhaps because there is no general organization of those who oppose the petitions. We do not wish for that reason to decline to hear any evidence that may be ready to be offered. At Washington, parties representing organizations in this part of the country appeared to oppose the petitions. If those organizations are represented here now, and will submit the names of witnesses now, we will take them up and have them examined. If towns, commercial bodies, or any organizations, desire to produce evidence at this time before us in opposition to the petitions, they may hand in the names and we will receive them at this time. If they are not ready at this time to give us a complete list, they may hand in the names of such witnesses as are now ready to be examined, and let the list be completed by the time we shall convene tomorrow morning.

A. J. Mosset appeared before the Commission and said:

I desire to offer on behalf of the Ohio and Mississippi River Transportation Lines a protest against the exemption of the rail lines from section 4 of the Interstate Commerce Bill; but as I understood that the gentlemen giving evidence in favor of the railroads had an argument that they wanted to bring in, I thought it would be out of place just now, as there is more or less of an argument connected with this thing. I would just as soon submit it as a memorial, without any argument.

The **Chairman**. Unless you wish to state special facts under oath, you had better just hand us the paper.

Commissioner Walker. Does it state facts that you are ready to swear to?

Mr. Mosset. Yes sir.

Mr. Mosset was then duly sworn, and read the memorial as a part of his evidence, after which he was examined as follows:

By the **Chairman**:

Q. Are you aware of any other memorials or papers of any sort?

A. We were not aware that you would receive any communications from the water lines at this point, and therefore nothing was prepared until the last moment.

Q. Do you expect to present something at some other meeting?

A. At Mobile, New Orleans and Memphis we will have large delegations to take care of our interests.

Q. Are there any witnesses here to your knowledge that desire to be heard?

A. I do not know. I came here with a committee, and one of them was taken sick and had to go home again.

Q. You are not aware of any oral evidence?

A. I do not know of any evidence that we can offer at this time.

Mr. Stahlman. Is that paper sworn to as a statement of facts?

The Chairman. Yes. It is.

By Commissioner Morrison. What is your occupation?

A. I have been steamboat agent and forwarding agent for the last twenty-one years.

Q. You are engaged in that now?

A. Yes sir; and I am also engaged in the railroad business. I represent the Southern Pacific Company for the water lines at Cincinnati, Ohio.

Q. Your object here now is to show us the injustice we do the people that are in the transportation business by water?

A. Our object is to show you that the plea advanced by the rail lines that the water transportation is of such a nature that they must make lower rates to the long haul river points than they must to the interior points, by giving you this statement of facts—that the insurance, the disadvantages of the conditions, the river being navigable for certain seasons of the year, and the difference in time ought to enable them to get much better rates than they do, and we would therefore not be competitors really against them. We have 1,600 miles to go over, while their shortest route, the Cincinnati Southern, is 826. They have every advantage and we every disadvantage. Our point is to show you that practically we are not much of a competitor to the rail lines.

By Commissioner Shoonmaker:

Q. Do you claim that the railroads fix the rates of transportation and that the water lines must conform to those rates?

A. They have since the opening of the Southern Road. Previous to that we had an arrangement with the Louisville & Nashville Railroad that worked admirably. My friend Stahlman and myself had an arrangement that was very fair to the shippers and consignees. It worked very well. When the Southern Road came into existence, we did make up little patches of arrangements from time to time, but naturally the competition between three or four routes—there would be some freight taken at a little less rate, and that disturbed the arrangement. I may say for the last two or three years we have really had no arrangement. There has been practically no rate. There has been published tariffs, but they have not been adhered to by either rail or water.

Q. What do you mean by the Southern Pacific Company?

A. The Southern Pacific Company from New Orleans and Texas points.

By the Chairman:

Q. The road you spoke of was the Cincinnati Southern?

A. Yes sir.

Q. That is what is called the Queen & Crescent?

A. Yes sir; the Queen & Crescent.

By Mr. Alexander:

Q. I understood you to read some of the rates from Cincinnati to New Orleans. Do you remember any of the rates?

A. Yes sir. Whisky has been carried for nearly two years at a dollar a barrel by all rail.

Q. Do I understand you to say that there is no charge on the river from Cincinnati to any local point between Cincinnati and New Orleans of more than a dollar a barrel?

A. This tariff shows that all the way points are included in the regular tariff, unless it would be an occasional plantation landing; but Donaldsonville, Baton Rouge, Bayou Sara and all the intermediate points are included, in the rates of rail tariff, because although the rail lines have no direct connection with these points, still they work into these points by way of New Orleans and by way of Memphis in opposition to us from Cincinnati.

Q. And from Greenville and all the local points?

A. Greenville is a direct point. There is a new road there, and that naturally has no rates whatsoever.

By Mr. Stahlman:

Q. You never charged any greater sum for a short haul than a long?

A. We can't do it, not since you began to make the tariff of rates to all intermediate points the same as you do to New Orleans. We can't do it. Our rate on whisky to New Orleans has been fifty cents, and our rate to Greenville has been the same. We have had to carry it for a little less to New Orleans, forty cents when the whisky was an average whiskey. We had to pay ten cents insurance and take it for forty cents. We have had to take it to Donaldsonville the same as New Orleans, and Greenville the same as New Orleans and Bayou Sara, Baton Rouge and all those points the same. You never would let us get any more than that.

By Mr. Haas:

Q. Then that was not the rate to New Orleans?

A. Some have a rate, and some have not.

By Commissioner Walker:

Q. Which is further south, Natchez or St. Joseph?

A. St. Joseph is. Here is the nominal tariff, but it is not in force. It is the nominal tariff, with the difference between the rail lines and the water lines.

By Mr. Alexander:

Q. You did not understand my question. I want the actual rates. Are the actual rates worked from Cincinnati to New Orleans, no lower than from Cincinnati to any intermediate local station?

A. The actual rates are the same. They

cannot be any more. The tariff specifies. I will read it for the gentleman's information. This tariff places a rate on the different classes and on the different specials to Greenville, Vicksburg, Huntington, Port Hickey, Baton Rouge, Memphis and Natchez. These are all the same.

Q. They are rail competing points?

A. No sir; they are not all rail competing points. Some are not, and some are.

By *Mr. Haas*:

Q. Is there no point between Cincinnati and New Orleans to which you charge a higher rate than the through rate?

A. We don't take whisky to a plantation landing at the same rate, because we couldn't land it. We would have to reship it.

Mr. Alexander. That is just what I want to know.

The *Witness*. The plantation landing is the only exception; but I will state this for your information: that just now take for instance the item of cooerage that is put up in northern Michigan. It is now going to all these plantation landings at the New Orleans rate by water. From the necessities of the case the rail lines have made such cheap rates that we can't get it, unless we take it to the way landings at the same rates as to New Orleans.

By *Mr. Stahlman*:

Q. Are we to understand you to say that the rail lines have taken business to New Orleans which can be re-shipped to the plantations at the local rate?

A. It goes that way. I don't know whether they re-ship it. I presume they re-ship some at Memphis, some at Vicksburg and, I presume, some at New Orleans. I know some goes to New Orleans; I do not know what proportion.

Q. Does that tariff which you have presented here, undertake to show the rates of transportation from Cincinnati, to all landings between Cincinnati and New Orleans?

A. The landings we do business with principally; not all of them, because there are a great many places not mentioned on that tariff that are on the river, small places not mentioned.

Q. You spoke of railroad combinations. Is there any such thing as a railroad combination, or pool, or division of business between steamboats on the Ohio and Mississippi Rivers?

A. Not now.

Q. Or a division of territory?

A. Not now. There used to be when you and I first went into competition. We had a combination.

Q. I am speaking now of combinations between steamboats or divisions of territory. Are there divisions of territory?

A. Yes sir; but they are all the same. They are owned by mostly the same parties. The Memphis & Cincinnati Packet Company have the business by river between Cincinnati and Memphis, for the reason that our large New Orleans steamboats could not land at these way landings with any profit to themselves, or with any advantage to the cargo. If we took that way freight in competition with the Memphis packets, and in competition with you all along the Ohio River, in five cases out of ten, if we carry it by, and go to New Orleans and

bring it back, and put it out on the way back, it would be the very thing the consignees would not like, and they wouldn't give us any more of it. That is the reason.

Q. I want to ask if your line from Cincinnati to New Orleans takes business for Memphis?

A. No sir; we do not.

Q. Is not Memphis a very good place to land?

A. Not very. We would rather not land. The packets going up and down stream have lately refused to have much to do with Memphis. The fact is, it costs all you make. If you have a freight bill of \$50, it costs about that to do the business.

Q. Is not your failure to take business between Cincinnati and Memphis due to an arrangement you have?

A. We have no agreement in writing or in any other way. We have simply fallen into that way of doing.

Q. You have no understanding?

A. No understanding in writing or in a positive way. It is just a kind of tact way of doing it. We take freight going up stream and we bring cotton—

Q. Do you take cotton out of Cairo?

A. Yes sir; and Evansville and all places going up.

Q. Do you take it going down?

A. No sir; because we cannot sometimes get to the elevator to unload. That is the reason. Our boats, when they leave Cairo, are loaded flat with the guards in the water, and the elevator is in a very dangerous place, at a fair stage of water, and we do not go there for that reason. We are running too much risk, and the profit is too small.

Q. Are your steamers so much larger than the Memphis steamers?

A. Yes sir; nearly twice as large; some of them nearly twice that size.

Q. Have you a line of steamers from St. Louis to New Orleans?

A. Yes sir; we have the steamer Thomas Sherlock, which carries 1800 tons; nearly three times as large as the largest boat at Memphis, 740. We have now no tariff. You will not let us have any. I gave you the rates. I have filed the supposed tariff and the differences.

Q. I think it is unreasonable to say we will not let you have a tariff.

A. You made the rates so very low that we have to carry in opposition to you, and we can't make any regular tariff. The business that goes to the local points where there is no competition isn't worth mentioning. I don't suppose one of our boats has enough to pay for the fuel she burns in landing it. It isn't worth mentioning.

Q. How many river landings are there between Cincinnati and New Orleans where the steamboats stop?

A. I couldn't answer that without referring to records.

Q. Are there as many as a hundred?

A. It depends on circumstances. The bulk of our cargo is for New Orleans, Vicksburg, Natchez, Baton Rouge, Bayou Sara and Greenville. Those places get the bulk of our cargo.

By *Commissioner Morrison*:

Q. There are landings where boats go besides those?

A. There are, but I couldn't say how many of them there are without reference to records. I could go to the books of our office and tell exactly; but I can't state from recollection. I do not see the books of our boats. I know, in a general way, by the engagement of freight for those points. I only know what goes out of Cincinnati, in a general way.

By **Mr. Stahlman**:

Q. Then I understand you to say you have no rates to any landings on the Mississippi and Ohio Rivers, except those named in the tariff?

A. These are the agreed rates between you and ourselves in September, 1885.

Q. I mean to points where your lines have not come in competition with the rail lines.

A. We have no regular tariff; no sir.

By **Mr. Alexander**:

Q. And your rates to plantation landings are higher, as I understand you, than those to other places?

A. We generally take freight to plantation landings at so much for the lot, because it is usually stock or a small amount of produce or something of that kind.

Q. But you expect those landings to pay you more than the competitive points?

A. What we call a bank landing—those pay us higher; that is, a plantation landing.

Q. Then your statement that there were no intermediate rates from Cincinnati to New Orleans—

A. No fixed rates.

Q. No rates being charged from Cincinnati to New Orleans, higher than the through rate, is to be qualified?

A. That meant according to this tariff. I said that at the time. The places are mentioned in the tariff.

Q. But that tariff is merely an imaginary thing?

A. It is not an imaginary thing. It is a thing Mr. Stahlman and ourselves got up, but it was never enforced.

Mr. Stahlman. Before the sessions are over I will undertake to show a tariff indicating the difference between the charges to intermediate points and terminal points.

The Witness. I will ask the Commission to give us a chance to rebut Mr. Stahlman on that.

By **Commissioner Bragg**:

Q. Do the people along the Mississippi River seem very much dissatisfied, or do they complain very much because the railroads have compelled you to carry freight so cheap.

A. No sir. The case stands in exactly this way: the people that live on the banks of the Mississippi River do not complain, because they know they have got us to fall back upon. They carry cotton for them, by the way, from Greenville and Vicksburg, at fifty cents a bale, and the minute they get a little further down on that road, they charge them \$3 a bale. There is a good deal of complaint from those people; but the people along the banks of the Mississippi River, reached by our steamboats, never complain, because they have us to fall back upon.

By **Mr. Stahlman**:

Q. Do you not know it to be a fact that the steamboats are charging a less rate, or do you not believe it to be a fact that the steamboats are

carrying cotton at a less rate from Memphis to New Orleans than they are from landings along the river between those points?

A. My line, proper, does not get Memphis cotton to amount to anything. The Memphis Packet Company has gobbled it all up.

Q. I mean from Memphis to New Orleans.

A. You are mixing the thing up. That is not our line of boats at all.

Q. I thought you represented all the lines on the river?

A. No; I didn't state that.

Q. Your line runs from Cincinnati to New Orleans?

A. Yes sir.

Q. Please state whether or not the steamboats do not carry cotton at a less rate from Memphis to New Orleans than they carry it from intermediate landings?

A. Our boats are always loaded when they reach Memphis. If they were not, we would be in a bad box; I tell you that.

Mr. Stahlman. I submit, if that is the case, you are not as poor as you think you are?

The Witness. We are a great deal poorer than we were when you and I had the arrangement together.

At this point, 7:15 P. M., the Commission adjourned until to-morrow morning at 10 o'clock.

ATLANTA, Georgia, April 28, 1887.

The Commission met at 10 A. M., all the members being present.

William Calder, of Wilmington, North Carolina, appeared before the Commission and said:

Mr. Chairman, I see a statement in the papers that a memorial was presented from the City of Wilmington, North Carolina, in favor of a suspension of the long and short haul clause. I would ask if that is the case. It was not done in my presence. I am chairman of the only committee that is to represent Wilmington here.

The Chairman. The clerk will give the information. I do not think it was brought to my personal attention.

Commissioner Walker. Here is a petition signed by quite a large number of men doing business in the City of Wilmington, North Carolina, favoring the petition of the Atlantic Coast Line for authority to charge less for a longer than for a shorter distance.

The Chairman. Would you like to be examined on the subject?

Mr. Calder. Yes sir. It was stated that was a petition of the Board of Trade. Such is not the case. It is probably an error. The petition is not dated. I don't know when it was sent out. It is not from any authorized body.

The Chairman. You may make such statement under oath in regard to the matter as you see proper.

Mr. Calder was then duly sworn and said:

I will simply state that the Committee of which I am Chairman are the authorized representatives of the Chamber of Commerce and Produce Exchange of the City of Wilmington, and after a very full meeting, and two or three days' discussion of this question they sent this committee here to present a cer-

tain memorial, which I will do at your bidding. The petition you have here is simply a petition of citizens and not a petition of the authorized representatives of the trade of the city.

The Chairman. You can present the memorial now and any facts in support of it that you care to bring forward.

The Witness. Here is the memorial. We have no witnesses, and simply desire to present the memorial.

The Chairman. Do you wish to make any statement of facts in the same connection?

The Witness. The facts are all in it.

The Chairman. The assertion of facts in this memorial you understand to be true, do you?

The Witness. Yes sir.

By Mr. Haas:

Q. (Handing to witness the petition first mentioned by him.) Do you know anything about the signatures to that paper; as to the responsibility of the gentlemen who signed the paper and their business standing in the community?

A. I do not know the genuineness of the signatures, but the names represent among the best men in Wilmington; a very good list of signatures.

Q. Do they not represent practically the largest business interests of Wilmington?

A. They do not. They represent large interests, but not the largest.

Q. I mean combined?

A. That would be a very wide question. They are very responsible names and very excellent men.

Q. I understand in the petition you present here you say you are satisfied with your own rates, but you complain of the discrimination against local points?

A. No sir; we are not satisfied with our rates. You charge us more from New York to Wilmington than you do to Jacksonville. That is not at all satisfactory. You charge us more than you charge Savannah or Charleston.

Q. What particular trade have you reference to?

A. The trade of selling goods to the interior of North Carolina; general merchandise trade.

Q. What competition have you from Savannah and Jacksonville?

A. Not any from Jacksonville; that is simply a comparison; but we have competition from Charleston and Norfolk.

Q. Whereabouts in North Carolina, for example, does Charleston compete with Wilmington?

A. It begins right at Wilmington and strikes the line of road running through the southern border of the State again at Wadesboro and strikes the line at Charlotte and enters the State of North Carolina at that point.

Q. Do you know of your own knowledge that any business of importance is done by Charleston into that territory?

A. I do, sir.

Q. Can you tell what description of merchandise you have reference to?

A. Very largely that of fertilizers.

Q. Which are largely manufactured in Charleston?

INTER 8.

A. Yes sir: some of them are imported and some manufactured.

Q. What point in North Carolina have you in your mind where you are being discriminated against at Wilmington in favor of Charleston?

A. I have no particular point in my mind. The discrimination is not in favor of Charleston so particularly, but we cannot reach the combination stated of their rates from eastern and western cities to Wilmington, combined with the local tariff out of Wilmington, and it practically excludes us from much of the territory. We cannot ship goods eighty-four miles from Wilmington and get a satisfactory rate on the Richmond & Danville road at Goldsboro, and into the interior of North Carolina. That has been our experience.

Q. What is the reason of that? What is it that fixes that rate, and how much higher is the rate?

A. You know the reason better than I do.

Q. You are representing an interest here and you charge that you are being discriminated against?

The Witness. What is the cause of it?

Mr. Haas. No; I want to know what discrimination exists in favor of Richmond or Norfolk against Wilmington on that North Carolina Road that you have reference to just now?

A. I am not prepared to state any figures as to the discrimination; but I simply state the fact that that is the tariff sent us for that part of the country. For instance, you haul goods 280 miles to Charlotte for eight cents more on a thousand than we are charged about 180 miles from Wilmington.

Q. On another road?

A. Yes sir.

Q. You referred just now to Goldsboro. We will take up the Charlotte question afterwards. Take some point on the North Carolina road, to which you referred just now when you said you could not work via Goldsboro on the line from Richmond. Take Greensboro. Would that be a fair example?

A. I am not prepared to go into the figures.

Q. I will give you the figures myself, if you are willing. Take either Durham, Greensboro, Concord or any point that would be a fair example?

A. Take Rockingham, North Carolina.

Q. You do not remember what the rate is from Portsmouth to Rockingham?

A. No sir, I do not. Take the rate on flour from Richmond to Rockingham.

Q. I have the fertilizer tariff here if that answers your purpose as well?

A. No sir, it does not. The fertilizer trade stands on a different principle from the general trade.

Mr. Haas. I am sorry I cannot refresh the witness' recollection. I have not my papers with me on that subject, not thinking they would be called for this morning. In the absence of figures, if the Commission will allow me some little latitude I will ask the witness as to the character of the discriminations.

The Chairman. Go on.

Q. You do not mean by your statement that the rate from Wilmington to Rockingham is higher than the rates from Norfolk to Rock-

ingham, and Charleston to Rockingham, do you?

A. I state you charge less from Richmond to Rockingham than you do from Wilmington; and the difference in favor of Wilmington as to mileage is very large; from 100 to 200 or more miles.

Q. You mean we charge a less rate per mile?

A. Yes sir.

Q. Not a less total rate?

A. Yes sir.

Q. The rate in the aggregate is higher from Richmond and Norfolk than it is from Wilmington?

A. Yes sir. It is stated in that memorial that the combination of eastern and western rates to Wilmington added to the local rates to the interior, practically excludes us from a large portion of the territory.

Q. In other words, what you really mean is this: That the rates from New York to Wilmington plus the rate from Wilmington to Rockingham, are higher than the rate from New York to Rockingham?

A. No. I say that you charge us to bring goods from New York and the west to Wilmington, when we sell them to the country—you put us at a disadvantage with Charleston, Norfolk and Richmond.

Q. I am not ready to admit that, but I am trying to get your explanation, and I am trying to help you to express an opinion as to whether that is really so, and if so in what way. I understood you to say at first that the rates from New York to Wilmington plus the rates from Wilmington to Rockingham were higher than the rate from New York to Rockingham on a through rate. Now you say that is not what you mean?

A. I do not say that.

Q. Will you state in what way you are being discriminated against at Rockingham?

A. I did not take Rockingham. That was your selection. You wanted that point. I simply said that your rates from Cincinnati to Wilmington are higher than the rates from Cincinnati to Charleston, practically the same distance. Your rates from New York to Wilmington are also higher than your rates from New York to Charleston; and in going into the interior from the two points, the local tariffs on your roads in North Carolina make it almost prohibitory that we should trade with some points there that we ought to trade with.

Mr. Haas. I have no doubt that is your view, from the manner in which you express it; but I want the information that the Commission will want in order to form their opinion. I am satisfied you and I will never agree about it, but I would like to get the information for the benefit of the Commission.

By Commissioner Walker:

Q. Is there an ocean line to Wilmington that belongs to the Southern Railway & Steamship Association?

A. There is only one line between Wilmington and New York, and that is known as the Clyde Line.

Mr. Haas. It is not a member of the Association?

The Witness. The conduct of that line is such as to make us believe that their rates

are fixed in connection with the railroad, so that it is not really a competing line. It enables the railroads to charge high rates to Wilmington, much higher than they charge to Charleston, although a greater distance.

By Mr. Haas:

Q. The only complaint then that you have to make is that, notwithstanding the fact that on general merchandise, which you select as the example, the rates from Wilmington are fair as compared with the rates from New York, they are not fair as compared with the rates from New York to Charleston, though Charleston does not work into the territory to which you refer?

A. No; I do not admit that; not entirely.

Q. Then I will put it another way: the only complaint you have to make is that the rates from New York to Wilmington, by reason of this alleged arrangement between the railroads and steamship company running to Wilmington, are higher than they are to Charleston?

A. Yes sir.

Q. Do you know the character of the competition at Charleston as between the water lines themselves?

A. I do not. I am not thoroughly posted on that.

Q. Do you know how many ships run from New York to Charleston?

A. I do not.

Q. Do you know that there are lines from New York to Charleston?

A. My information is there is more than one line from New York to Charleston.

Q. Do you know that there is a line from Philadelphia to Charleston?

A. I do not know it. I am under that impression.

Q. And Boston reaches Charleston of course also by water?

A. Yes sir.

Q. At Wilmington you have but one line of steamers?

A. One.

By Commissioner Bragg:

Q. What is the population of Wilmington, North Carolina?

A. It is generally estimated at about 20,000, in round numbers. It may be a little less than that. That is the popular estimate.

Q. Do you know about what proportion of the business there is done by the railroad, and about what proportion of it is done by the steamship lines on through business?

A. Into or out of the city?

Q. Both. Take it in first, and out afterwards.

A. I should say the railroads did the largest importing business into the city, and the steamers probably the largest out of the city—the steamers and foreign ships. There is a large foreign trade there.

Q. Where is Marl's Bluff?

A. It is in South Carolina, just beyond the line; I suppose it is about twenty miles. It is near the Pee Dee River.

Q. How far is it from Bennettsville?

A. The same distance from Bennettsville; that is, in another direction to the west of it.

Q. Where is Lake City, South Carolina?

A. That is north of Charleston.

Q. How far?

A. About eighty odd miles, I think.

Q. Do you know the time of the steamers from New York to Wilmington?

A. Yes sir. It takes them from forty-eight to sixty hours, I think, according to the weather.

Q. How many ships of the Clyde Line run between Wilmington and New York?

A. Generally three. There are always two.

Q. About how often? Give us as near as you can the schedule.

A. They have from one to two steamers sailing a week.

Q. What is the tonnage of those ships?

A. I think they are about eighteen hundred tons. That is my impression. I am not positive about that. They carry quite large cargoes.

Q. How is the insurance from Wilmington to New York?

A. I think by steamer it is about one per cent.

Q. Does Wilmington do much Baltimore business?

A. Not now, sir.

Q. Why not?

A. There was a steam line established there, but the competition between that and the railroads became so sharp that it was driven off.

Q. Does Wilmington do much Philadelphia business?

A. No sir; not very much.

Q. Why not?

A. I cannot say why, except that Philadelphia probably has not exactly the goods we want to buy. We did have a steam line years ago to Philadelphia, but that also was withdrawn and not profitable.

Q. Do you mean to say New York City is your best market at Wilmington for buying eastern goods?

A. Yes sir.

Q. How about Boston; do you do much trade with Boston?

A. Not a very great deal, sir. We export a good deal of cotton there on orders, but we do not buy much merchandise there.

By Mr. Haas:

Q. You say that you have no water line from Baltimore to Wilmington, and that the rail lines drove off, by reason of the very low rates, the line that existed there.

A. I did not say that. I said the competition was so great. I did not say the rail lines.

Q. How do the rates from Baltimore to Wilmington compare with the New York rates to Wilmington? Are they higher or lower from Baltimore?

A. I think they are lower.

Q. Although there is no water line from Baltimore to Wilmington, the rate, you think, is lower by the rail line from Baltimore than from New York?

A. Yes sir.

Q. That is correct. Now you have said in your previous statement that you believed an arrangement existed between the water and the rail lines by which the water rates would control?

A. Yes sir.

Q. Do you make up your mind to that be-

cause the rail lines charge a higher rate than the water lines?

A. No sir.

Q. Is it not a fact that the rail lines do charge a higher rate than the water lines?

A. If you add the insurance necessary by water it is not higher.

Q. The actual rate as it stands is what I mean.

A. The actual rate is higher.

Q. You are speaking of inward business. Do you think it would be profitable to Wilmington as a naval store and rice market that the relief we ask for should be withheld under the long and short haul clause? In other words, do you think that you could reach the markets that you want to reach in the west, northwest and southwest upon a strict construction of the long and short haul clause?

A. If it was applied to the whole country, I think we could.

Q. That is to say, you could compete with the Mississippi River on Louisiana goods in the northwest, provided the Commission rule that we have to charge intermediate rates on rice, the same as we charge to points reached by this competition of markets and competition of the Mississippi River?

A. I do not know why you select rice.

Q. That is a very important product about Wilmington.

A. It is not the leading product.

Q. It is one of the leading products. What other products have you that are leading?

A. We have naval stores and cotton.

Q. Could you ship naval stores to that section of the country, against Mobile which has the river?

A. We can't do it now.

Q. Why?

A. Because we understand you give Savannah a special rate, which cuts us out.

Q. You say "you." Do you mean the Atlantic Coast Line, or the water line by Baltimore?

A. The Associated Railroads. I don't mean you individually, but I speak of the railroads.

Q. I am very anxious to have your statement correct, because you are under oath. The Southern Railway & Steamship Association does not make the naval stores rate from Savannah?

A. I am not aware of that.

Q. Did you ever know of the Atlantic Coast Line taking any business from Savannah to the west—any naval store business?

A. Not of my own knowledge. I have not seen the stuff in transit. I cannot say of my own knowledge.

By Mr. Walters:

Q. I understood you said that there was no steamer line from Baltimore to Wilmington?

A. Not at present.

Q. And that the rates from Baltimore to Wilmington are less than those from New York to Wilmington, where there is a steamer line?

A. The distance is much less also.

Q. I understood you also to say that Baltimore had very little business with Wilmington at present?

A. I would not like to say, as to the volume of it. There is certainly less than formerly.

Q. You are not aware then, that the Baltimore and Wilmington business is a larger volume of business than any other business done to Wilmington?

A. The local business from Baltimore or the western business through Baltimore?

Q. All the business that passes between Baltimore and Wilmington?

A. If you take all the business that comes through Baltimore I should think you were right. If you take the business with Baltimore merchants I should say you were wrong.

Q. Then you are not aware that there is very little business that comes through Baltimore from the west to Wilmington?

A. I am not aware of that.

Mr. Walters. That is a fact.

By Commissioner Bragg:

Q. How many bales of cotton did you ship from Wilmington last season?

A. About 133,000.

Q. About what proportion of that went by water and what proportion of it went by rail?

A. A very large majority of it went foreign.

Q. By water?

A. Yes sir.

Q. What was the amount of your naval stores shipped from there last season?

A. I think some four hundred thousand barrels of rosin and seventy thousand casks of spirits.

Q. About what proportion of that went by rail, and what proportion of it went by water?

A. Most of that goes foreign.

Q. About what amount of rice do you ship from there?

A. We do not keep the statistics of rice shipments, and I cannot say.

Q. What statistics do you keep of other leading articles you export?

A. No others except lumber.

Q. How about lumber?

A. The lumber trade is very large.

Q. What would you say was the yearly value of it, as shipped from the Port of Wilmington?

A. I do not deal in lumber. I should say it was two or three million dollars.

Q. Does much of it go by rail?

A. No sir.

Q. Most of it goes by water?

A. Most of it goes foreign, and some coastwise by water.

Mr. Haas. I would like to get the witness straight on one question. I know he would not make a misstatement for anything. Commissioner Bragg asked a question, as to the amount of business done by rail and by water. I think the witness was under the impression when he answered the question, that it related to general business; but I think what Mr. Bragg wanted to know was what per cent of business went east by the rail lines, and by the water lines, and what per cent came from the east; as to what the proportion of the business was.

Commissioner Bragg. Yes.

The Witness. I understood the question to allude to the business out of Wilmington; the export business, and I answered with that understanding.

Mr. Haas. The export business to New York and other eastern cities?

The Witness. He asked me about the proportion.

By Mr. Haas:

Q. You said you thought the most was done by rail?

A. No sir.

Q. What proportion of business do you think is done by the rail lines, as against the water line to New York?

A. I think the water line has the majority, that is, of export business. I stated that originally. The water line has the majority of the export trade, and I think the railroad brings in much more merchandise than the water line.

Q. From New York?

A. I would not say from New York. I mean entirely. Really I could not say what proportion the railroad brings. It is just simply a matter of observation. I see certain goods come by sea, and certain by rail. The railroads themselves could answer that question very positively.

Q. You said the cotton mostly went foreign?

A. Yes sir.

Q. Does that cotton always go directly foreign or does it sometimes go via New York?

A. Sometimes via New York; generally direct.

Q. When it goes foreign, does it go by steamer or by rail?

A. By steamer.

Q. I mean when it goes via some other point.

A. I should think most of it went by steamer. It goes both ways.

By Commissioner Walker:

Q. What is the combination called the Associated Lines of Virginia and the Carolinas?

A. That is a matter of hearsay with me. We understand it to be ruled by the Richmond & Danville, comprising the Piedmont Air Line, which takes in the Seaboard Air Line, the Atlantic Coast Line, which takes in the Wilmington & Weldon, the Wilmington, Columbia & Augusta Railroad, and its branches—in fact, it practically takes, we think, every line of railroad in North Carolina, with the exception of the short line running from Goldsboro to Newberne. I would state that on that short line from Goldsboro to Newberne, if you will allow me, the local tariff is almost identical with the tariff fixed by the Georgia Railroad Commission; while the local tariff on all the Associated Railroads of Virginia and the Carolinas, is very largely in excess.

Q. In North Carolina is it very much higher?

A. Yes sir.

By Mr. Haas:

Q. How is that road owned?

A. I think the State owns it.

Q. Do you know how the interstate rates on that road to a point like Kingston, compare with the rates to La Grange? Take the New York rate to Kingston and the New York rate to La Grange?

A. I do not sir.

By Mr. Stahlman:

Q. How did they compare before the law was passed?

A. I couldn't say. That is out of my section.

By **Mr. Haas**:

Q. How do the present rates on the Atlantic compare with the rates before the Interstate Law was passed?

A. They are very much less. I cannot say what they are now, this law has been in operation so short a time.

The **Chairman**. I hold in my hand a memorial from the Board of Trade of Savannah protesting against the suspension of the law. I would inquire if there is anybody here representing that organization who desires to be heard on that subject? If not, we will simply place the memorial on file.

Mr. J. G. Oglesby, of Atlanta. I have here a paper given me by perhaps the largest cotton manufacturing industry in the south. It is in support of the petition.

J. W. Ponder, of Opelika, Alabama, appeared before the Commission.

The **Chairman**. Does your complaint bear upon the subject of the present investigation?

A. It is a complaint of discrimination against Opelika.

The **Chairman**. Do you, or does any one from your place, desire to be heard upon the subject of this investigation? If so, we will hear you. (Mr. Ponder was then sworn.) Do you understand the statements set forth in your paper to be correct?

The **Witness**. Yes sir; to the best of my knowledge.

The paper referred to was read by the witness as his evidence in the matter.

W. O. Harwell appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Ponder**:

Q. Where do you reside?

A. At Opelika, Alabama.

Q. What business are you engaged in there?

A. General business, but principally the grocery business; heavy business.

Q. How long have you been in business there?

A. I have been seventeen years in Opelika in business, but not for myself that long.

Q. On what railroad is Opelika situated?

A. On the Columbus & Western, and the Western Railroad of Alabama, and then we have a short line running out twenty miles to Lafayette, the East Alabama & Cincinnati.

Q. Are you familiar with the railroad rates from the west to Opelika, Montgomery and Columbus, and if so, please state them, and state how these rates affect Opelika?

A. We will take the western rates from Louisville, Evansville and other western points. These differences exist, as I understand them: The Opelika rate from these points on first-class freight is \$1.80 per hundred pounds; to Columbus, Ga., it is \$1.07, making a difference in favor of Columbus of twenty-three cents a hundred pounds upon freight from the west.

By **Commissioner Walker**:

Q. That freight goes through Opelika?

A. It passes over the road 29 miles this side. On second class our western rate from these

points that I mentioned is \$1.10 against 92 cents for Columbus, making a difference of 18 cents in favor of Columbus. Third class, 97 cents to Opelika; 81 cents to Columbus; difference, 16 cents.

Commissioner Walker. You need not go through those. They are on the schedule.

The **Witness**. The Montgomery rate has a greater difference. Now I will try to show how we are hemmed in under these rates. I will take our rate from any of these points to Opelika on grain, to illustrate it, and then take it for Columbus, and add the Columbus local back to Opelika, on bacon, or any of those things. Take bacon to Columbus, Georgia, and add the local rate from Columbus, twenty-six miles back, to our place. Supposing it is within three miles of Opelika; let Opelika ship to Youngsboro, three miles of us, and Columbus has a better rate. We are not able to get there. Take the western road and pass Opelika six or seven miles—I don't recollect the exact distance—our first station—and Columbus is able, with her local rates added to the western and Opelika's local added to the western, to deliver goods there so that we are not able to supply that point by rail, and all points beyond in the same proportion. Take the Western Railway of Alabama. Take Montgomery. Her rates are so by the local from Montgomery to Auburn, Alabama, within seven miles of Opelika, and the western rates of Opelika to the local to Auburn, seven miles, on grain—Montgomery has four cents a hundred pounds the advantage in seven miles on that end of the road. I will state that these are based upon the rates of the roads which we have here. They are actual, so far as we can manage them. To Montgomery, and her local added to La Grange, Georgia, which is 38 miles, and from the west to Opelika, and the Opelika rate added to La Grange—I will not mention the rates, but give the differences in favor of Montgomery. From the west the Montgomery rate locals added from Montgomery to La Grange, 88 miles this side of Opelika, these are the differences that exist in favor of Montgomery: On first class, 30 cents a hundred; on second class, 19 cents; third class, 12 cents; fourth class, 21½ cents; fifth class, 19½; sixth class, 15½; seventh class, 9 cents. Flour is 80 cents. Montgomery can ship a barrel of flour from the west to Montgomery, and ship it by our door, for 80 cents a barrel less than we could, and she can ship it to West Point. She can ship it anywhere less than we can. Now, as I understand the way the rates work with us, take grain from Chattanooga, Tennessee. We haven't a rate from there, of the railroad, but this is by those parties there who give their rates as they exist, and we buy corn delivered. That will give an illustration. Take a car load of corn and ship it from Chattanooga to Opelika, Alabama, and our rate is 23½ cents a hundred. Ship it over the same line of road by Atlanta, West Point and Opelika to Montgomery, 66 miles further, and 12½ cents I believe is the exact rate. Montgomery can take that car load of corn, take the locals back from Montgomery to Auburn, Alabama, right over the same road and in seven miles of Opelika, and deliver it there four cents a hundred cheaper than Opelika

can take her 28½ cents and add her local of 8 cents. So we cannot get to Auburn in that way. We cannot get to Cusseta, the first station this side. We cannot get to Youngsboro. We cannot get to Gold Hill, on the Columbus & Western. Take Lafayette, Alabama, 20 miles up that road.

Q. That is a branch road?

A. That is a branch road. I would like to be understood on that. I have not seen the manager of that road to talk with him for some time, but his rate has always been (and the last time I talked with him, and I know of no change) just the same on all through goods that Opelika pays. In other words, a car of corn comes from the west to Lafayette; when it goes to Opelika you add 12½ cents. If Opelika wanted to ship a car of corn to Lafayette, it would be the same. There is no difference there. Take Chattanooga. Our rate is 28½ cents, and Lafayette, Alabama, is 34½ cents. Now add 12½ cents that that local rate gets from Opelika to Lafayette, and you will find that Lafayette gets a car of corn from Chattanooga to Opelika for 1½ cents a hundred cheaper than Opelika gets it, unless that rate has been changed. I have heard the manager of the road say he got his locals on all goods, and I know nothing to the contrary.

Q. You do not mean less than Opelika gets, but less than Opelika can put it at?

A. Yes sir; and that road makes a concession. The other road gets her rates. Now, take the Columbus & Western from Columbus. All those points up there, Alexander City and all those points on that road, have a rate from the west that is based upon the Columbus rate with the local rates from Columbus to those points back upon that road; that is, where it is shipped from the west, as I understand it, and never passes over that road at all. Those rates are adjusted in that way, and yet those goods never touch Columbus and come to Opelika and there are distributed up those two roads, the East Alabama 20 miles, and the Columbus & Western 60 miles.

By **Mr. H. B. T. Montgomery:**

Q. Is it not a fact that the railroad takes the freight for Lafayette business for their proportion less than for Opelika business?

A. Let me see if I understand the question. Do you mean to say that freight from the west shipped to Lafayette—when it arrives at Opelika, the line of road that brings it gets less freight for it than it would if it stopped at Opelika?

Q. Yes.

A. That is my understanding. That is just what I stated on that car of corn. It is a fact unless there has been some changes, and I know of none.

Q. Is it not a fact that Montgomery in shipping goods by the C. & W. Road received from the Western Road does not get her full local as much as she charges to Opelika?

A. Yes sir; we have rates here that we can turn over to the Commission, if they like, showing when it goes to Montgomery that, there the Western Railroad and the Columbus & Western make a through rate from Montgomery to these points up that road by Opelika, so that they can pass and sell goods up that road for less than we can. In other

words, they don't take the local to Opelika and the local up that road, but they have a through on those two roads that gives them an outlet up in that section that we do not enjoy. Take meat, for instance, from the west. It passes right through Opelika to Columbus. We pay 8 cents a hundred, which seems but little; but on a car load it is \$20. We are only 29 miles apart and there is the territory between us. We have \$20 more to pay for a car of beef, although it passes right by us.

Q. How much more for corn?

A. Six cents a hundred. Corn usually runs from 80,000 to 85,000 to the car, making a difference on a carload of meat, corn, flour and that heavy class of goods from the west of about \$20; some of them a little more and some a little less. The principal part of the business I do—and I reckon I might safely say more than any house in town, in the direction of Columbus—I don't mean I do more business than any house in town, but in that particular territory, that is between Columbus and Opelika, 29 miles—my trade lies in that way principally since we first began business. Then we did a jobbing business until we were cut off. They can sell corn while it is only six cents a hundred—it is 3½ cents a bushel. Take a man that lives ten or fifteen or eighteen miles from Opelika and he will go to Columbus for 3½ cents. Hence, we have to sell him at cost. Columbus can make a fair profit while we sell at cost, and in that way they have just about got right up in our door all around. I would like to state this: on the same rates from Chattanooga and West Point, 20½ cents on grain from Chattanooga, Opelika pays 28½ cents and yet it passes right on only 29 miles further and Columbus pays 17½ cents. That is the reason we don't understand the working of the long and short haul. It seems we are not either the short or the long haul. We are just between. We were all in favor of the Interstate Commerce Bill and we are willing to leave it with the Commission. We think they can manage it better than we can. It needs adjusting some way. We are just between Montgomery and Columbus also. We have got the short haul when we go to Columbus and when you go the other way it is the long haul. (Laughter.) I would like to state this, too, and I can state it on every street in our town: I have been there seventeen years and have occupied houses in business on four of the best streets we have. The first house I did business in I paid \$600 a year rent. I was working for a hardware store then. That house last year rented for \$10 per month, only one fifth of the former rent.

By **Commissioner Schoonmaker:**

Q. Was that an exceptional case or the general rule?

A. I will state further. The house I occupy now is on a corner and considered a fair piece of property. It is owned by Dr. Fitzgerald. He told me seven or eight or ten years ago that it cost some \$5,500 to build it. I rent it for \$20 a month. It is 30 feet wide, 90 feet long, has a good cellar and a 25 foot vacant lot by the side for any other privileges I might want. To offset that we bought a piece of property in Alexander City, 60 miles up that road, for which we paid \$1,200 and that we rent for

\$250, making an investment 60 miles up that little road offset our rent there. In other words, a \$1,200 investment pays the rent of a store that cost \$5,500, except the rooms above. I can take on our main street nine houses that are now occupied by the best business firms there, and I don't know but one that pays \$300; the balance all less than \$200. Ten years ago all paid from \$500 to \$800 rent.

By Mr. Montgomery:

Q. Is not that house that rents for \$300 right in the principal part of the town?

A. Yes sir; it is the drug store building and never has been occupied for anything else, and brings the largest price. The one right by it was bought and sold at half cost about five years ago for \$2,250 less the taxes and insurance, and don't pay four per cent. If I wanted to buy it and figured it, and saw I couldn't—

By Commissioner Schoonmaker:

Q. Do you mean that is the general rule there?

A. Yes sir. I have mentioned two corners. Those are the best. I will mention one other. Fitzgerald paid \$3,500 for a half interest in it about five or six years ago. He bought the other half last year some time for \$1,750. That is half of what he paid five or six years ago. I attended to the deeds and things for him.

By Mr. Montgomery:

Q. Have you ever done a jobbing business?

A. Yes sir; when I first commenced business there.

Q. What is the difference on car loads of meat and car loads of corn in favor of Columbus?

A. The difference that exists between Opelika and Columbus is about \$20.

Q. What is the usual profit on car loads of meat and corn at wholesale?

A. We never fail to sell them if we can get \$5 a car on grain; a cent a bushel usually.

Q. Don't they usually sell for half a cent a bushel?

A. Yes sir; we all want a cent, but we sell for half a cent.

Q. What on meat?

A. It depends on the market, but about the same in proportion.

By Commissioner Morrison:

Q. They do like the long haulers; they get all they can?

A. Yes sir; but we are so fixed we can't get anything just now—hardly.

By the Chairman:

Q. You attribute this want of prosperity in your town entirely to the discriminations against you in matters of freight?

A. Yes sir; on goods and cotton. Take cotton with a discrimination of 35 cents a bale against us in favor of Columbus, and give her the advantage of other goods that we labor under and the two together has reduced our receipts from twenty-six or twenty-eight thousand to 11,500. I will state that Mr. Barnes says Lafayette will receive the 11,000. Last year was an extra crop. We received somewhere between thirteen and fifteen thousand. We put it liberal. Fifteen will cover it.

By Commissioner Walker:

Q. Do you know that Opelika is one of the

towns as to which the railroad companies have been authorized to charge for ninety days less for shorter distances than for longer, and that Opelika is mentioned in the temporary order made by the Commission?

A. Yes sir; I know it. I read it. We claim that we have equal facilities with those points, or substantially the same. They, I suppose, claim not; but in putting it down, when they strike Opelika, they put it in large letters, as they do all other distributing points. It seems to come in, in that way. I understand that the Commission, in speaking of them, mentioned us, too.

The Chairman. The rates seem to be larger than the letters, according to the statement.

The Witness. Yes sir.

By Commissioner Schoonmaker:

Q. Have you knowledge of other local points that are affected in the same way?

A. No sir; none that I know of that I could state the facts in regard to, exactly. We don't complain of the rate we pay, but we feel if they can haul to Columbus, they could certainly haul to Opelika which is a less distance, for equal rates. We are not opposed to railroads, for our town is a railroad town, as we think, and we hope soon to have some further outlets from there, as they are being built.

By Mr. Ponder:

Q. What you want is simple justice?

A. That is what we want. We can't sell goods in any direction.

By Commissioner Bragg:

Q. What is the population of Opelika?

A. Somewhere between 3,500 and 4,000.

Q. About how many business stores have you there?

A. Somewhere between 75 and 80. I have counted up, but not in the last year.

Q. Have you any banks there?

A. Yes sir; we have two.

By Mr. Stahlman:

Q. I want to ask you if you know it to be a fact that stations nearer the west than you, on the line of that road, are paying a greater rate than Opelika is paying?

A. I see that West Point, twenty miles this side, pays a less rate from Chattanooga than we do.

Q. Is it not true that Loachapoka, nearer the west than you, is paying a higher rate than your point?

A. Yes; from this way and from both, I suppose. She pays a little different rate.

Q. And Auburn, a point nearer than you, pays a higher rate?

A. Yes sir; she pays a higher rate.

Q. Is it not true that the rates to Opelika are less than to any other local point on the line of that road?

A. No sir; I have just stated that West Point and Cusseta pay a less rate than we do. Those are the nearest stations this side. I think Cusseta is the first. She pays 21½ cents on grain, and we pay 23½ and we are about twelve miles apart.

By Commissioner Walker:

Q. Which way does that grain come from?

A. Either way, I think.

By Mr. Stahlman:

Q. Are you not mistaken about the rates from the west to Cusseta?

A. I have got these rates from the men we buy and sell of, too. I reckon they are working under the reduced rates.

By **Mr. Alexander:**

Q. How long have the present rates been in effect at Opelika?

A. Do you mean the western rates exactly as they now stand?

Q. The comparative rates?

A. I don't recollect the exact dates, but it has been something about two years, I think.

Q. Do you know something of the situation of Columbus?

A. Yes sir.

Q. Is it on a river?

A. Yes sir.

Q. How long has Columbus been a competing point in getting low rates?

A. Not a great many years; I don't recollect how long; a few years ago. They have been kicking like we have for some time, until you hushed them up; some time back; a year or two; I don't recollect the time.

Q. Did you ever hear of any improvement made by the government in the navigation of the river to Columbus?

A. I don't recollect. I have heard a good deal about their not being able to get any goods up and down frequently when they didn't have plenty of rain.

Q. All Opelika wants is to be made a competing point?

A. I don't know how you railroad men term it. If I was to talk about competitive points by looking at your rates, I should take the points with the large letters; and if so, we are already that. We are merely asking for an equal rate, and we feel that we are entitled to it.

Q. You want the same rates as Columbus?

A. Yes sir.

Q. Between you and Columbus is a little town called Youngsboro?

A. No sir; Salem.

Q. Is not your comparative situation as good as Salem?

A. I don't understand the question.

Q. Are you discriminated against more than you think Salem is?

A. I have not noticed Salem rates only in this way: take Columbus and take Opelika and add both of our locals to those points and she is pretty badly hurt. We can't get there, and she is at the mercy of Columbus.

Q. Columbus is competitive and Salem is not?

A. Yes sir.

Q. Is Auburn a competing point?

A. No sir; I should not consider it so. She has no facilities whatever, and neither has Salem, for distributing goods. We distribute goods from the west to Salem. They come there and there the trains are made up.

Q. If Auburn was made a competing point and given Columbus rates, could not Auburn do a good deal of business and build up?

A. No sir, I think not. She has no roads to distribute over at all.

Q. She has all the roads you have, with seven miles further haul?

A. She is not situated right there. She has not the facilities for it, the depots and nothing of that kind.

Q. You are at the junction of two roads,

where two roads cross each other. Do you know who are the owners of those respective roads, or who practically controls them?

A. I couldn't say I knew positively, but it is generally understood that your system controls them—entirely so—the Central. We have always labored under the impression that the Louisville & Nashville was willing to make the concession; in fact they said to us that they were always ready to do it. It is the locals that your roads work for.

Q. The Louisville & Nashville have a small interest in one of the roads, have they?

A. I don't know. That is my opinion. I have understood that the Central owned enough to control it.

Q. Do you know anything of the history of the Western Railroad of Alabama, one of the roads that crosses there? Did that road ever go into bankruptcy?

A. Those matters I do not know anything about.

Q. You live on the line of the road. Don't you remember ever hearing of it?

A. I don't know that I do.

Q. Do you remember hearing of the road being advertised for sale and being bought by the Central Railroad—the Western Alabama to West Point, Montgomery and Selma?

A. If I have I don't recollect it. I know you bought the Savannah & Memphis.

Q. That also went into bankruptcy, did it not?

A. Yes sir; at least it was sold.

Q. Both of those roads then have been through bankruptcy and sold out?

A. I don't know about that. I can't answer those questions. I can state that our town is in about this fix: that when you were there and owned that road, was the time that the biggest decline commenced. I recollect your coming, and asking Mr. Crayton in my presence—you asked at that time if we knew what was the matter of the falling off of the trade of Opelika, and Mr. Crayton told you it was the rates you fixed to come from these points past us. I recollect that conversation in our house.

Q. Was not that near about the time that Columbus was made a competing point, although it had before been a local point?

A. I could not say as to the exact time, but I think it was several years ago, probably. Montgomery was doing us the greatest harm at that time.

Q. That was your nearest competing point?

A. You gave through rates from Montgomery up that road that passed us.

Q. Now it is Columbus that does you more harm?

A. No sir; I don't know that there is a great difference, as they both work about the same way. I could get the exact difference; but in substance it is made so that we can't get there. We have it amongst ourselves.

By **Mr. Ponder:**

Q. Do you know how many railroads Columbus has?

A. Just the same that Opelika has.

By the **Chairman:**

Q. They are all under this system?

A. Yes sir.

By **Mr. Stahlman:**

Q. You stated that you thought the rates were less to West Point than to Opelika, and gave as your reason the quotations of grain?

A. From some points. From West Point to Chattanooga the rate is 20½ cents a hundred against 28½ for Opelika.

Q. Is that the quotation by the commission merchants?

A. Yes sir; and that is the way they are shipped. We buy goods under these quotations and the railroad bill of lading guarantees these rates.

Q. Is it not a fact that the grain dealers, or some of them, undertake to make deliveries of corn at less prices than their competitors by underbilling freight and agreeing to deliver at certain markets in competition with other certain markets?

A. What do you mean by underbilling?

Q. Underbilling in weight.

A. Making the weight less than the invoice?

Q. Yes.

A. I will state this: I have been in the grocery business for eleven years and never honored a draft with a bill of lading attached to it that had a less weight in it than my invoice, for I thought if a man would hook from a railroad I was in bad hands.

Q. You have heard of such things, have you not?

A. I don't recollect what I have heard. I must say that out of the whole time I have never had a complaint with any foreign shippers. I never heard any trouble from the North, East, or West, where I buy goods. I never had any differences but what we could settle with a letter.

Q. The quotations of the merchants on grain or western produce as to the cost of transportation are not always reliable because of the price that is offered, are they?

A. We get bills of lading with these rates in them.

By the **Chairman**:

Q. And you honor them?

A. Yes sir.

By **Mr. Stahlman**:

Q. Assuming that the rates from Chattanooga to West Point are less than to Opelika, is it not true that the distance from Chattanooga to West Point is less than from Chattanooga to Opelika?

A. Yes sir; it is true. I don't know whether you would consider it the other way or not. We don't. You take it both ways.

Q. Is it not true that by one route the distance to West Point is less than to Opelika?

A. I don't know the distance both ways. I will have to get the mileage. There is not a great deal of difference, I don't think, in the rate from Chattanooga to Opelika than to Montgomery. Opelika's freight comes by way of Atlanta. I don't think there is much difference.

Q. I feel exceedingly kindly toward the people of Opelika, but I want to put the facts before this Commission. Is it not true that the distance from Louisville to West Point is shorter than it is to Opelika?

A. I don't know the distance either way, but I am satisfied if you were to ship anything on the Louisville & Nashville it would go by way of Montgomery.

INTER S.

Q. Is it not true that the rates from Louisville, Henderson and Evansville to Opelika are even less than to West Point?

A. Yes sir; I think so.

Q. I understood you to say, originally, they were greater.

A. No sir. They are greater from Chattanooga on that line of road. The tariff shows precisely the difference. There is a little difference either way.

Q. Is it not true that the rates from Louisville, Henderson and Evansville, to points intermediate between Montgomery and Opelika, being a shorter distance from the western points, are higher than to Opelika?

A. Yes sir.

Q. Is it not true that the rates from Louisville, Evansville and other western points to Opelika are lower than to points on either side on the same line of road except Columbus?

A. Yes sir. I would have to refer to the tariff to tell the exact difference; but here is the question you are after, and I want to answer it: Auburn pays, from the West, a trifle more than we do, I think, being seven miles nearer the West; but Montgomery pays a great deal less, and with her local can come up there even less than Auburn can.

By the **Chairman**:

Q. Your point is that at these local points between you and Montgomery, or even beyond Opelika, produce from the West can be delivered at less rates than at Opelika, being the first delivered to Montgomery. Provisions or other freight from the West can be delivered at these intermediate stations at less than the Opelika rate, by going first to Montgomery and then locally from Montgomery to the intermediate station?

A. I mean to say, take a car load of flour, grain or meat for Montgomery and then add the local from Montgomery to Auburn to the Montgomery rate, and then take the Opelika western rate and add her local and they have the advantage, not only over Auburn, but as I understand it, Montgomery has it over the West and us too.

Commissioner Morrison. Mr. Stahlman thinks you ought to be satisfied with that, because they treat your poorer neighbors worse than you.

The Witness. We got to complaining that Montgomery sold our merchants, and they said, "We will give you a rate you can live on, but not pay." They gave us that and let us go ahead.

Mr. Stahlman. What I endeavored to demonstrate was that Opelika, coming here as a complainant, was more favored than other localities similarly situated that were not here complaining.

The Chairman. Do you not overlook the ground of his complaint? He explained that very fully at the outset. The ground of the complaint is that the rates are so arranged that this business can be done by Montgomery and Montgomery can take away the local business around there—Montgomery and Columbus; and in point of fact Opelika is shut out. In that aspect of the case as he presented it, it was not very important what were the intermediate rates to these stations.

Mr. Stahlman. As I understand the point

in the gentleman's testimony and in the efforts of our friends from Opelika in coming here—and I have a very great respect for them—it is that this law may be enforced. The testimony has tended to illustrate that the enforcement of the law is a necessity to them.

The **Chairman**. That is the tendency of the evidence.

Mr. Stahlman. The testimony thus far has demonstrated that the rates to Montgomery, being the nearer point, are less, and the rates to Columbus, being a more distant point, are less for reasons which we think we can demonstrate; and that the rate to Montgomery, the nearer point, being less, and Columbus, the distant point, being less, those two cities are able to go from their terminal points to points on the line of the road other than Opelika, and sell goods at less rates of transportation than the City of Opelika, and can ship to Opelika and re-transport to points on the line of the road. Assuming that is wrong—I am rather arguing the question a little as I regard it—and apply the fourth section of the Interstate Commerce Act, and instead of Opelika having the benefit over its local points on the line of the road, and being able to build up a distributing market at Opelika, and distribute to the local points on the line of the road tributary to Opelika now, the rates from all the points in the West will be identically the same to the interior points as they are to Opelika, and hence Opelika's business will go "kiting," so to speak, and they will have none of it.

The **Witness**. That is not the way we understand it. If we understand the fourth clause of that section it leaves the power with these gentlemen to say whether we are similarly situated.

By **Mr. Alexander**:

Q. Would you like to have these competing rates given, not only to Opelika, but to Cusseta, Youngsboro, Salem, Lafayette, West Point, Loachapoka and all the places around?

A. I will answer the question in this way: Our idea was to state our case here and these gentlemen can apply that. I am glad they have the power to do as they see fit. We want them to have that power. I feel that they will not hurt you, but you have hurt us. I don't mean you personally. I mean your roads.

Q. I think the whole point between us is that you think that Opelika has advantages other points do not possess, and I do not appreciate it.

A. On that we would get a better rate from the West than Columbus would, and if she had a bigger rate than we did we would have got pretty close up to her doors, and while we lost on one side we would take it on the other. As it is we can't get in in any direction.

Q. Did it ever occur to you what the result would be if all the points had the same rate; say if Chattanooga or Chicago had exactly the same rate to Columbus, Salem, Youngsboro, Opelika, Auburn, Loachapoka and all that country? If the rates were on a dead level so that you could put a stamp on a barrel of flour and send it like a letter to any one of those points, did it ever occur to you where you would be then?

A. I do not think that would be right, and I am satisfied the Commission will take care of that.

By **Mr. Montgomery**:

Q. State the size of Cusseta and Auburn.

A. They are small places.

By **Mr. Ponder**:

Q. Have they facilities or advantages for handling these goods?

A. None at all.

By the **Chairman**:

Q. Do they appear on the rate bills in large letters?

A. No sir; they are very small.

By **Mr. Stahlman**:

Q. Is not West Point a pretty good town?

A. Yes sir.

Q. As large as Opelika?

A. No sir.

By **Mr. Alexander**:

Q. How large do you think a town ought to be?

A. I think when they are large enough to have facilities for handling the goods—I am not up to that business like a railroad man. If I was I could answer the question. I would like to call the Commission's attention to this: That on the Lafayette business they get a rate for less from the West than Opelika gets. They get a rate and ship up that road for less than we can. That road gets a local added to all western goods. In other words Opelika can ship a car of corn to Lafayette as cheap as if it came from the West.

By **Mr. Haas**:

Q. Suppose the roads to Opelika charge as much for business going to Lafayette as they charge when it stops at Opelika. Would that in a measure relieve your troubles?

A. I am not mentioning that as a matter of relief to us, but feel it is an injustice to us.

Q. The Lafayette man gets a lower rate than the Opelika rate, plus the rate from there to Lafayette?

A. Yes sir.

J. W. Ponder was recalled and further testified as follows:

The first thing I would call your especial attention to is our freight rate from Opelika to New Orleans.

Mr. Alexander. If you will allow me, as representing the petitioners, I would say that to save the time of the Commission, we will admit anything on the subject of rates. It seems to me it has been very fully gone into. We will admit that Opelika is away up on the bill. No point is made, and none of our argument will be based upon anything in regard to those rates.

Mr. Harwell. We would like to have Mr. Ponder state how it affects him.

The **Witness**. If they admit all the facts that is all that is necessary.

Commissioner Walker. How do we know what they are?

The **Witness**. The through rate has been withdrawn. In last October or November shippers of cotton from Opelika petitioned the Alabama Railway Commission that they were unjustly discriminated against. They went before the Commission and had a hearing,

That Commission decided that they were unjustly discriminated against and requested that the roads grant Opelika some relief; that they would lay themselves liable for damages if they did not. The roads refused to grant the relief and withdrew all through rates from New Orleans and we haven't any today. I go down to my agent and get the local rates on New Orleans, which has a market sometimes we would like to get to. I am a cotton shipper. They have got facilities in New Orleans and sometimes it is a specially good market. We don't get any through rates whatever from Opelika to New Orleans. The agent will tell me to ship the cotton locally to Montgomery on a rate of 27 cents a hundred for 500 average, and from Montgomery I will get a through rate of 45 cents a hundred equal to about 72, or something over. On Savannah we get a rate of 52. That is over the Central line, a long haul. They refused absolutely to grant us a rate to New Orleans because it don't go over their line. Savannah being our natural outlet most of our cotton goes that way. I can't go otherwise. We can't ship to Charleston because we have got a rate of 52 and at Savannah they give a rate of 52, and give us a rebate on compress. If we ship to Charleston they don't do that.

By **Commissioner Schoonmaker**:

Q. How much rebate?

A. This year 35 cents a bale. I think it has been 65.

By **Commissioner Walker**:

Q. Why can't you ship the cotton to Columbus? What is the rate there?

A. Ninety cents a bale. You see we can't adjust it. If we could ship our cotton on a very low rate to Columbus and get a through rate it would do. We can't do that. They so fix the locals that we can't get away from there to any other point.

By **Commissioner Morrison**:

Q. Unless you go their way?

A. Unless we go their way. Then it is all right. Montgomery is further from Savannah than we are. I don't know the exact miles, but the railroad agent told me the other day it is further. Looking at the map you will see it is further. They have the Central Railroad to carry the cotton to Savannah. They give Montgomery a rate of 45 cents a hundred, and Opelika, that goes over the Central Railroad, 52, so it has seven points the advantage of us. Those are the facts of the case. That is equally true of all the eastern points too. I will further state that West Point, Georgia, 82 miles above us, got the same rate on cotton to Savannah that we did. They come right by us.

By **Commissioner Schoonmaker**:

Q. What do you ask for?

A. We want it adjusted properly.

Q. What do you consider a proper adjustment?

A. We consider as we are nearer to Montgomery than Savannah we ought to have the same rates. They have no competition and neither have we. We are on the Central and so are they.

Q. Exactly what do you claim; the same rates as Montgomery?

A. To Savannah; yes sir. We would like to have the same rates.

INTER S.

Q. What do you claim about New Orleans?

A. We can't very well ask the same rates there, because we are sixty-six miles further; but we ought to have something better than between 45 and 72.

Q. What do you think you ought to have?

A. A rate of 50 or 55, or anywhere in reason, so we can do business in comparison with these other points around us.

The **Chairman**. Gentlemen, this completes the list of witnesses that has been handed to me. I would inquire if parties who oppose these petitions are present and desire to be heard further? If not, we must understand that as far as Atlanta is concerned, the hearing upon that side is closed. Have the petitioners any evidence in rebuttal that they desire to bring forward?

Solomon Haas, who had been previously examined, again appeared before the Commission and was further examined as follows:

By **Mr. E. B. Thomas**:

Q. Reference was made by the gentleman from Wilmington to the Associated Railways of Virginia and the Carolinas. Will you kindly state to the Commission the character of that Association?

A. It is an Association under contract to as far as possible maintain rates at junction points—between three lines known as the Seaboard Air Line, the Atlantic Coast Line and the Piedmont Air Line. The contract is now in course of preparation to be submitted to you gentlemen as indicated to you several weeks ago.

Q. You are the traffic manager of the three roads referred to?

A. Yes sir.

By **Commissioner Schoonmaker**:

Q. Is this a sub-contract under the Southern Railway & Steamship Association?

A. It is a contract entirely independent of that and does not come into its territory at all, except so far as the maintenance of joint rates is concerned.

By **Mr. Thomas**:

Q. Is not the object of the Associated Railroads a maintenance of agreed rates at competitive points, without any pool, allowing the business to find its own channels?

A. Yes sir; and I will say in addition to that, that whereas the three lines control the junction points within their own systems, the rates are not greater for the short distance than for the long, and that the intermediate rates are in no case higher than the junction point beyond it where such junction point is controlled by the three lines.

By **Commissioner Walker**:

Q. You say you are going to furnish a copy of the contract?

A. Yes sir; it is in course of preparation now. It would have been furnished sooner; but under an understanding it will be given hereafter.

Q. Is it the case that the local rates in North Carolina are about 40 per cent higher than in Georgia?

I really do not know; but admitting that to be true there is no reason why they should not be so if the rates are not unreasonable.

We are willing to take our chances with you, gentlemen.

Q. You do not deny the facts stated in that respect?

A. I cannot deny them because I really have not made the comparison. The roads in North Carolina have formed this Association. There are other roads than the one indicated by the gentleman from Wilmington that are not in the Association Contract, but I believe there are no two roads in the State that have the same local tariff, the roads being governed in their local tariffs very much like the roads of every other State. Reference has been made to the North Carolina tariff and the Georgia tariff. I hope you gentlemen will not understand that we think that our friend Major Campbell Wallace has treated us exactly right about the Georgia tariff. We are not banking on the Georgia tariff as a good tariff.

By *Commissioner Schoonmaker*:

Q. You do business under it?

A. We have to. It is a "ground hog case."

By *Mr. Thomas*:

Q. I will ask you to state the reasons for the drop in the rates according to the diagram now submitted.

A. Continuing the rate from Charlotte as far as it is practicable to do so, the rate advances until we strike a point where the rate bases on Columbia, which rate is made by Charleston. The highest rate that can be maintained here is the local rate added to the Columbia rate.

By *Commissioner Walker*:

Q. The local rate from Columbia where?

A. To these local stations north of Columbia. Take Blythewood, Ridgway, Winnsboro, etc. As you leave Columbia going towards Augusta, the Augusta and the Columbia rate being the same from New York, being made via Charleston or via Savannah, the local station rates intermediate can only be the rates added to Columbia or added to Augusta. Therefore the rates run up from Columbia and run down as they approach Augusta. Graniteville is also a junction point with the South Carolina Road, and it has been customary for years to give Graniteville Augusta rates. For that reason the rates are carried out from Graniteville upon a level, making the same at all the stations as Augusta. The Statesville rate has for years been the same as Salisbury; the distance being so short, we carry out the Charlotte level. There is a road from Statesville to Charlotte also. We come up from Statesville carrying the rates by a gradual advance until we get to the point where we strike a level as far as Asheville. Then we go up and carry it out to the end of the line. We have no rate beyond Statesville that is higher than the junction point beyond.

By *Mr. Thomas*:

Q. On the main line from West Point to Atlanta there is a depression in the rates, or a reduction, at Greenville, South Carolina.

A. I will start at the West Point end. The rates, as far as we are able to show, from New York, for a distance of about 350 miles, are no higher for any point than another intermediate point. At those points we have not the competition which controls the rate for us. But when we strike Spartanburg, we do strike a competition that has heretofore existed.

By the *Chairman*:

Q. What is that?

A. The competition by Augusta, and the system of roads under the control of the Central. The rates are reduced there.

Q. Competition by rail?

A. Yes sir. For that reason the rates are reduced. Competition exists at Greenville. The rates are carried out until we strike Gainesville, which is known as the junction point to Athens. There we have to go back on account of Gainesville. There the rate is made by the Georgia Railroad the same as to Atlanta. By contract with the people of Gainesville, they give Gainesville the same rates they give Atlanta.

Q. Is there a higher rate between Gainesville and Atlanta than the Gainesville rate?

A. No sir. We work back from Gainesville just enough to keep the people from paying a higher rate than the Gainesville rate plus the local.

Q. The same reasons obtain, do they not, in making the rates from Richmond to Atlanta?

A. Yes sir; the same rule there governs.

By *Commissioner Walker*:

Q. You have not on this line any depression at Spartanburg. Why not?

A. That is caused in this way: we have in this territory here not only competition of roads, but competition of Charleston on the one side, and Savannah, Atlanta, Richmond and Norfolk on the other. In order to satisfy all these parties, we have all the roads who are interested agree upon certain differences that shall exist. That makes the rate, perhaps, a little different from Richmond on this line than from New York, because the differences are not exactly alike. The South Carolina tariff is made upon a fixed difference at Charleston. The Richmond rate is made by taking the Charleston rate and adding so much for the Richmond rate.

By *Mr. Thomas*:

Q. Is that the schedule of all rail rates from New York by the Virginia Midland?

A. Yes sir.

Q. The rate is lower at Charlottesville than at the stations on each side. Will you state the reason for that?

A. The reason for that is the competition by water to Newport News, and from Newport News to Charlottesville, which makes a very decided depression there as against our rail line by Alexandria.

Q. The same depression exists at Lynchburg?

A. By Norfolk and Norfolk & Western.

Q. And at Danville again?

A. That is on account of the rates to Danville, by their own lines by water, and Richmond, in order to enable the rail lines to come in there with their rates.

Q. Is that the schedule of rates of the Columbia & Greenville division?

A. Yes sir.

Q. There is a depression at Greenville?

A. Yes sir; the rate is affected by the rate from Augusta, and Greenville the same.

By the *Chairman*:

Q. In several places on these diagrams there appear depressions which are the result of concessions to competition by rail?

A. No; not at this point.

Q. In several places?

A. That is only on the Virginia Midland.

Q. What I wanted to direct your attention to was this: Suppose there was a strict enforcement of the fourth section of the Act. Would not, in many cases, that competition necessarily disappear so that there would not be such an arrangement?

A. Yes sir; we have already arranged to eliminate a good many points which really ought not to have existed—competitive points. This was done before we had a meeting with you. We intended to so arrange these rates as would, perhaps, meet your views a little better than this sheet does; but under your order we had to suspend its preparation, because it was necessary in reducing some of the local points to increase others. Take a point near Greenville that had to be raised unless we reduced all the points to the level of the competitive points. Under your order we cannot advance a single local station, and, for that reason, we have just left it there.

By *Commissioner Walker*:

Q. State what point of depression you are intending to line up.

A. Greenville is one of the points.

By the *Chairman*:

Q. Do you intend to line that up so that these differences will disappear; that is, so that there will be no intermediate higher rate?

A. Yes sir.

By *Commissioner Walker*:

Q. Will that reduce some of the locals?

A. Yes sir. One reason why we could do that was on account of the South Carolina Commission. The road running through Georgia into South Carolina was required by the South Carolina Commission to use a continuous tariff which made the rate naturally very low; but under a more recent decision they held that the road might not use a continuous tariff, but might use a joint tariff, which would make it higher.

Q. There is nothing in the order that forbids the raising of some of these points?

A. No; but we cannot raise those without getting into the same trouble we are in now.

Q. You can raise them a little and reduce the local rate?

A. Yes sir; but our object was to line up the whole business and let it all conform.

Commissioner Walker. There is nothing in the order that would prohibit your making that arrangement.

By *Mr. Thomas*:

Q. What would be the effect of bringing up the rate at Charlottesville, Lynchburg, Columbia and Augusta?

A. We have now this trouble: the Chesapeake & Ohio Road refuse to give us any business because we could not work as low a rate to Charlottesville as they want us to work through Charlottesville to their stations. That business is worth \$100,000 a year, but we cannot make Charlottesville as low as Staunton.

By *Commissioner Walker*:

Q. Do you mean you cannot afford to make Charlottesville as low as Staunton itself is?

A. Yes sir. We have raised Charlottesville because it did not require an increase in any local station. We simply brought Charlottesville

ville to the point where we had the local stations, and made that rate a higher rate than the Staunton rate, preferring to lose the Staunton business rather than to lose the local business.

By the *Chairman*:

Q. You say it is worth \$100,000. You mean it amounts to that?

A. Yes sir.

By *Commissioner Walker*:

Q. Was it not really an advantage to you to get rid of it?

A. No sir. Our companies run rates on exactly that basis. We will make up a list of rates and submit them to you, and if you gentlemen think they can be improved, if you will simply say the law does not require us absolutely to hold on to the local station rates, I think we can make a satisfactory rate, certainly as far as our associated lines are concerned. There is one thing I think we ought to explain, on account of all the railroads here represented. The Central Railroad which is working a rate of \$1.25 to one point, works a rate of \$1.61 to another. It wants to reduce those local station rates and does not want to increase Greenville to the high point. It wants to raise Greenville some and reduce the local stations. That will necessitate the increase of some few stations near Augusta. Under our construction of the order we cannot do that. If you will relieve us of that, we will get up a set of rates that will meet all the requirements.

Commissioner Walker. I think you had better understand that corrections of that sort will not be considered by us a violation of the order.

The *Witness*. Any rates that are unreasonable rates we know of course will not be regarded.

On the 5th of April it was said yesterday very high rates were charged, and you want to know what was in the Interstate Bill that made us charge those rates. The answer to that is simply this: We did not know what the short lines were going to charge. We did not know what rates we could make under a strict construction of the fourth section. We fixed upon a rate. Take Atlanta for example. Then we ran up all our intermediate rates to conform to that rate. That was the reason why, pending our argument on the 5th of April, these high rates went into effect. Another question was brought out frequently yesterday: the advance in the rates for a short period on manufactured products, cotton goods. That was for the reason that it became necessary for us to revise the classifications we had in force giving to the products of southern cotton more than a sixth class rate, while on the same character of goods shipped by individuals we were charging second class rates. Of course that was a discrimination that we had to avoid, and to do that we struck out southern cotton mills and put all cotton mills on a parity, reducing the rates from second to fourth class and increasing from sixth to fourth class, knowing that to a great many points where we come in close competition with the eastern mills we would have to make special rates. It is certain we will have to make some special rates, which of course will conform to the general ruling.

The *Chairman*. I will ask again if there is

any other witness who desires to be heard or that parties desire to bring forward, either in opposition to these petitions or in rebuttal of the evidence that has been produced on that side? I hear of none. I will now ask if anybody desires to be heard to discuss the evidence?

Argument of Hon. W. S. Chisholm.

All of the petitioners before the Commission ask the same relief, which is a suspension of the fourth section of the Act. The facts which have been elicited in the different cases are in some respects different; and there are two constructions which may be given to this section. One construction will materially affect the companies which I represent. The other construction will affect them but will not affect them so seriously. Section 4 provides:

That it shall be unlawful for any common carrier subject to the provisions of this Act to charge or receive any greater compensation in the aggregate for the transportation of passengers or of like kind of property, under substantially similar circumstances and conditions, for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance.

The first point is upon the meaning of the words "aggregate compensation." Do they refer to the aggregate joint rates, or to the aggregate rate upon one particular line? My suggestion is that the words refer to the aggregate rate upon a particular line. I read in connection with section 4 to sustain that interpretation, section 6. Section 6 provides:

"That every common carrier subject to the provisions of this Act shall print and keep for public inspection schedules showing the rates and fares and charges for the transportation of passengers and property which any such common carrier has established and which are in force at the time upon its railroad, as defined by the first section of this Act. The schedules printed as aforesaid by any such common carrier shall plainly state the places upon its railroad between which property and passengers will be carried, and shall contain the classification of freight in force upon such railroad, and shall also state separately the terminal charges and any rules or regulations which in anywise change, affect or determine any part or the aggregate of such aforesaid rates and fares and charges."

Here is an interpretation of the word "aggregate" in the schedule which is required to be published according to section 6; and the word "aggregate" refers to, and is to be determined by an addition of the terminal charges and any other charges which may be established by any rule or regulation in force upon that line.

Further on in section 6 there is a provision made for joint rates:

"Every common carrier subject to the provisions of this Act shall file with the Commission hereinafter provided for copies of its schedules of rates, fares and charges which have been established and published in compliance with the requirements of this section, and shall promptly notify said Commission of all changes made in the same. Every such common carrier shall also file with said Commission copies of all contracts, agreements or arrange-

ments with other common carriers in relation to any traffic affected by the provisions of this Act to which it may be a party. And in cases where passengers and freight pass over continuous lines or routes operated by more than one common carrier, and the several common carriers operating such lines or routes establish joint tariffs of rates or fares or charges for such continuous lines or routes, copies of such joint tariffs shall also, in like manner, be filed with said Commission."

In this section, referring to joint tariffs, the Commission will perceive that the plural number is used all the way through. They speak of lines. In section 4 the reference is to a common carrier in respect to a line. The plural is not used. It is a common carrier and the word "line" is used. The further limitations in section 4 all support this view, because it says that the limitation shall be for a shorter than for a longer distance over the same line in the same direction, the shorter being included within the longer distance. Now if I should be right in that interpretation, then the longer and the shorter haul apply to such rates as may be made by a common carrier having one line, or a common carrier operating several lines, but still under one management or control as defined by the first section of the Act. Then, if this rate is to be applied only to the line and you are called upon afterwards to make a joint rate or to unite in a joint rate, I then claim that under the proviso of the first section this interpretation is also strengthened. The first section prescribes:

"That the provisions of this Act shall apply to any common carrier or carriers engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, when both are used, under a common control, management or arrangement, for a continuous carriage or shipment, from one State or Territory of the United States or the District of Columbia, to any other State or Territory of the United States or the District of Columbia," etc.

The Commission will notice that after the words "Or from any place" there is a stop and the disjunctive then begins, and after the disjunctive there is another kind of traffic provided for. The first part of it provides for the passenger traffic between states and territories. When we strike the disjunctive it provides:

"Or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States, and also to the transportation in like manner of property shipped from any place in the United States to a foreign country, and carried from such place to a port of trans-shipment, or shipped from a foreign country to any place in the United States and carried to such place from a port of entry either in the United States or an adjacent foreign country; *Provided, however,* That the provisions of this Act shall not apply to the transportation of passengers or property, or to the receiving, delivering, storage or handling of property wholly within one State, and not shipped to, or from a foreign country, from or to any State or Territory as aforesaid."

The first section makes two species of property. One species is that carried from State to State or from State to Territory. That is provided for by continuous lines. The other species is property which comes from a foreign country. The property which comes from a foreign country is stamped with the character of the traffic which is controlled by this bill. The property which comes from different States is not stamped with the character of this bill if it is received in a State and transported to its destination in the State.

To illustrate now this idea with regard to the Savannah, Florida & Western Railroad. At Savannah we do business with the Ocean Steamship Company and we do business with the Charleston & Savannah Railroad. The Charleston & Savannah Railroad in turn does business with the Atlantic Coast Line. The Atlantic Coast Line in turn does business with the Pennsylvania Railroad. The Savannah, Florida & Western commences in Georgia, at Savannah. There is no limitation in the Act upon the receipt of its freight. It receives freight either from the Charleston & Savannah Railroad in Georgia or it receives it from the Ocean Steamship Company in Georgia. It handles it in Georgia. It transports it then from Savannah to Thomasville, Bainbridge and Albany. Under the construction which I claim for the Act that traffic from Savannah, after it is received by the Savannah, Florida & Western Railroad, is not subject to the provisions of the Interstate Commerce Bill, if it is handled, received and delivered in Georgia. If it is handled, received and delivered in Florida, then it does become subject to the provisions of the Interstate Commerce Act. In further illustration, if it goes to Albany, at Albany the Savannah Road connects with the Central Railroad, and that system connects with the Louisville & Nashville and other roads. The freight goes to Albany, and if that freight is to go from Albany it is received. Now the Savannah, Florida & Western Road is not a part of any continuous line. It is not operated, nor is it managed by either of these systems. They have nothing but joint rates. It is a system of joint rates. They receive this property at Albany, and if it is transported to any point in Georgia, then the carriage by the Savannah, Florida & Western is not affected by the Interstate Commerce Bill. But if it is transported to Florida it is affected. Therefore, if I am right in this construction, the principal part of the business which this road does, being the delivery of this produce and of this commerce in the State of Georgia, is not affected by the Act, and it would only ask to be relieved from that portion of the Act which relates to the business delivered in the State of Florida.

Many, however, differ from me in this proposition, and hold that the word "aggregate" does not mean what I have contended it does, but that it refers to an aggregate of joint rates. If that should be the meaning, then there is not a station upon the Savannah, Florida & Western Railroad, either in the State of Georgia or in the State of Florida, that is not materially affected by the Bill; and that would bring us to the construction of section 4. In that connection we inquire what would be the

power of this Commission in interpreting that law, under the facts of the case, to grant relief? My position about it is that this Commission has ample power to grant relief and to suspend this Act whenever a court would be authorized to do so, or to declare that the case was not a case of similar circumstances or conditions. My position is that whenever a court would decide that a rate was just and reasonable, or whenever a court would decide that there was and could be no unjust discrimination, this Commission has the same power to review the facts of the case; and if in their judgment a court would be justified in relieving the carrier, they can exercise the same power; that their power, in other words, in granting relief under section 4, is concurrent with the courts. It may not be the same relief, but they can exercise the same powers of judgment that a court would exercise. I claim further that the Commission has greater power than the courts. The Commission may go further and investigate a case and may grant the relief by suspending this section, although the case may not be a proper one for adjudication before the courts.

That being so, what principles, as gathered from this Act, should be the guide of the Commission in granting the relief, not only upon the petition which I represent in this case, but which would be applicable to all the petitioners? I read section 1 simply so far as it relates to rates. Section 1 prescribes that rates shall be just and reasonable. Take that section alone, disconnected from the other portions of the bill. "Reasonable" and "just" are words that are legal terms. They have been in use for years. They have been construed by the courts of this country and by the courts of England. Reasonable and just rates have been held to be rates which are not excessive. To illustrate: it has been held by the courts when only that question was involved, when it was not mixed up with the question of discrimination, or any statutory prohibition, and the only point was, "Is the rate reasonable and just," that the question before the court was, Is the rate excessive? And the principle was laid down that a rate might be reasonable and just, though it be \$1 to A, fifty cents to B and nothing to C. In most cases, however, combined with this principle of reasonable and just rates or charges, there have been other questions before the court than those alone, arising out of legislation upon the subject of unjust discriminations, or the common law upon the subject of unjust discriminations, independent of reasonable and just rates. This Act has itself prescribed what shall be the measure of unjust discrimination. It is defined in section 2, and it is very limited. To make an unjust discrimination, there must be a greater charge for a like contemporaneous service in the transportation of a like amount of traffic under substantially similar circumstances and conditions. That section, in my judgment, applies principally to personal discrimination, and is not before the Commission upon the construction of this Act any more than it is a part and parcel of this whole system. Section 3 provides:

"That it shall be unlawful for any common carrier subject to the provisions of this Act to

make or give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic, in any respect whatsoever, or to subject any particular person, company, firm, corporation, or locality, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever."

In the first case it provides that there shall not be an undue or unreasonable preference or advantage. It next provides against an undue or unreasonable prejudice or disadvantage. Now that was put in the Act to meet the class of cases where there has been discrimination, not in rates, but in the conduct of the transportation. As an illustration, A brings his goods to the depot today, and B does not bring his goods until tomorrow. The train departs tomorrow. B, on account of favoritism, or preference, has his goods shipped, and A's goods are left over for the next train. The same kind of preference had existed in the delivery of goods. In order to enforce section 4 the traffic must be under similar circumstances and conditions. Now my point, as far as the Commission is concerned, is that all these should be taken together in deciding whether or not you should grant relief by suspending section 4. The question as to whether the rate is reasonable and just should be considered. The question whether there has been any undue preference or advantage, whether there has been undue or unreasonable prejudice or disadvantage in any respect to any person, should be considered, and then as to whether it is all under similar circumstances.

I submit without argument simply a statement of the proposition that the circumstances cannot be similar when there is the difference between through and local shipments. In the first place, the receipt of a through shipment is often nothing more than the uncoupling and the coupling of a car; whereas, the receipt of a local shipment, received at a local point, or even at a through point, involves the collection, the billing, the handling and the shipment. Then there is another element in connection with the through shipment, a shipment received from some other line, or a shipment even beginning at one terminal point of a company and going to another terminal point of a company. Here are through cars; cars frequently unbroken. The cars must go through. All those facts should be first taken into consideration. Next, each company has generally provided itself with costly terminal facilities. They do a large amount of business at those terminal points, or even at the junctional points. They have a large force always employed, and a large force must be employed at the local or noncompetitive points. At such stations frequently the employees are not kept in employment. The work is desultory, but the pay goes on all the same.

The great question to be considered is whether the shipment is competitive or whether it is noncompetitive. If it is competitive, and the competition is by water lines, it seems to me that the statement of the case argues it and nothing more. Also, if it is competition by water lines, or part water and part rail, in

each of those cases the rate is also dominated by the water line, if the water line has any important part to play in the transportation; and in such cases the railway company must meet, not the net rate, but the rate fixed by the water line, or it must lose the business at the competitive point. Of course this very doctrine of competition comes up also in cases where the competition exists between two railroads, and hence the great principle that is before this Commission today; the great point which they are asked to settle, as I understand it, a point applicable to all the petitions, is that they should recognize the distinction and the differences as they now exist between competitive and noncompetitive points, whether that competition has arisen from rail and water, from water alone or from rail alone; and the Commission is appealed to because the testimony has shown this state of facts existing: That the whole business south of the Ohio River and the Potomac River for years and years has grown up under a system by which these competitive points have been recognized; and the contest before the Commission for the last two days has been upon the part of these competitive points to retain their position, and on the other side to pull them down and to obtain in some slight degree the advantages the others have acquired. When the Commission find that an entire section of the country has grown up under a system, would it not be wise, does it not appeal to their discretion, does it not appeal to their sense of justice, that that system should not be suddenly abrogated? That these competitive points where money has been spent, where manufactories have been built, where trade centers have grown up, should not, without warning, except the passage of this Act at the last session, all be wiped away with a resulting financial revolution in this section of the country almost equal to the Civil War?

As I understand the appeal of all the companies, it is that this state of things shall not be disturbed at present; that the Act shall at least be suspended until Congress can act upon it again, and until the people themselves can be heard more fully upon the subject. Have you the power? It seems to me that you have, unquestionably. You have the power, because your power to suspend is unlimited. You have the power, because you would be in a proper exercise of it in deciding that the circumstances and the conditions are not similar. You have the power again under the third section, which prescribes:

That it shall be unlawful for any common carrier subject to the provisions of this Act to make or give any undue or unreasonable preference or advantage.

This Act was passed when a certain condition was in existence. Would it not be giving now, at this time, an undue and unreasonable preference, in the present state of the country, to the local noncompetitive points, and would it not, in the language of the latter part of the section, be putting an unreasonable prejudice or disadvantage upon the competitive points and upon the trade centers which have been built up and have been nourished by the system?

In conclusion, I simply ask on behalf of the

Savannah, Florida & Western Railroad, and on behalf of the Charleston & Savannah Railroad, that the names of those two companies shall be added, if this order is continued, to the list of the companies enumerated in the order; and that in addition to the places enumerated, Jesup, Waycross, Chattahoochee and Yemassee be added, as to which the operation of the fourth section shall be suspended.

The Chairman. We have been accustomed to ask those who request orders of us to draft the order that they think themselves entitled to upon their petition, and present it for our examination in the light of the facts.

Commissioner Walker. I think the papers we have here will answer.

Argument of Mr. J. F. Hanson, of Macon, Georgia.

Mr. Chairman and Gentlemen: The business situation in Georgia, and I imagine the same is true with reference to most of the Southern States, is rather peculiar. Our agricultural population, which constitutes a very large proportion of the productive population of the State, is engaged in cotton culture. By reason of this fact cotton is our only money crop, and consequently the agricultural interests of this State have to be carried very largely by the mercantile interests. The farmer buys his supplies, fertilizers, etc., from the dealer in the smaller towns. The dealers in the smaller towns concentrate their demands upon the jobbers and dealers in the centers of trade in the State. I make this brief statement now, and beg you will bear it in mind, because I propose a little later on to make an application by which I think I can illustrate the result of the enforcement of the long and short haul clause of the Interstate Commerce Law. It is a well known fact to all of you that the local rates in Georgia are fixed by our State Commission. It is generally conceded, I think universally conceded, that the local rates of freight in Georgia are as low as our railroads can stand. I think it is generally conceded it is impossible for them to stand any considerable reduction in their locals and maintain their property. This being the case, the only effect of an enforcement of the long and short haul clause in the law, would be to increase through rates. Now, I want to make this statement: that, representing the business interests of this State as I do, my conception of this question is the conception of the question entertained by the business interests of the State as far as I have had an opportunity to investigate the matter; and while I am as friendly to the railroads as any man in the country, appreciate their value and appreciate the assistance they have rendered to the important interests of the country, I have not now, and never have owned a dollar's interest in a railroad in the State. I am interested only as a large shipper of freight. I am interested in this question, because, in my judgment, it affects the prosperity not only of the State of Georgia, but of the entire Southern States.

If you concede the point that our railroads cannot reduce their locals any further, the effect of an enforcement of this clause in the law will necessitate an advance in our through rates. I know that the opinion obtains, and

probably that impression has been made upon the Commission, that all these interests that have assembled and by memorial, petition and evidence, have asked you to suspend permanently this clause in the law, have been induced to act thus by a threat on the part of the railroads to put up the through rates of freight. So far as I am concerned I have accepted the assurances of the men connected with our railroads with reference to this question. They are the same men I have dealt with for many years, and I will say that they have never deceived me on any occasion. I am assured by these men, some of whom I know very intimately, personally, that they have applied the local tariffs that would be necessary in order to adjust local rates to present through rates under the Interstate Commerce Law, and that the result shows that it would be utterly impossible to maintain the railroad property of this country upon that basis. Receiving the assurance in such a positive form, I accept it as correct, and I infer from it that the only effect of enforcing this law so far as the territory covered by the Southern Railway & Steamship Association is concerned, would be to advance our through rates. If the Law is enforced, the through rates must be advanced. I accept the assurance of these gentlemen that they cannot operate their roads and maintain their property if they reduce their locals.

What would be the effect? Several very remarkable demonstrations have been made here and several very remarkable facts have come to the surface. The agricultural population in this State are practically the consumers of the State. We have seen delegations coming from all sections of several States. We have listened to numberless memorials. So far the agricultural interests of this section have not appeared before your Commission. Why? It is for the simple reason that the agricultural interests of this country have no grievance to redress. They are not here appealing either for a reduction of through rates, or an advance of local rates, and for the simple reason that within the State, under the operation of our own State Railroad Commission Law, there is a condition of perfect peace as between the railroads and the shippers of freight. It is not only time that the agricultural population of this State, which are both consumers and producers, have not been represented here, but the further fact is demonstrated that there is no contest here to protect either producer or consumer. There is but one question that is in controversy. There is but one point about which there is any conflict, and that is with reference to equalizing the advantages of dealers. It is a commentary, and a sad commentary, upon the condition of affairs that exists and upon the transportation problem, that all this turmoil and strife comes from a contest as to who shall handle the supplies of the only productive class in this section of the country. I do not think that that is an unreasonable statement. It is warranted by the facts. This Interstate Commerce Law was based upon a demand on the part of small dealers in smaller places to be put upon an equality with large dealers in the centers of commerce and trade in this State. If any class of people in this country demanded the passage of this Law, it was the

smaller dealers of the country. The arguments adduced before this Commission show not that the local rates are too high; so far as Georgia and Alabama are concerned, no man in my hearing has complained that he was charged too much. The only complaint that has been made here, so far as I have been able to hear the testimony, was that while one man is charged a given price, another man is charged a little less. The question of unreasonable or unjust rates, so far as I have been able to catch the testimony that has been offered, has not been raised before this Commission. I repeat that the point in controversy is the leveling of advantages between jobbing merchants in the commercial centers and at the competing points of the State, with dealers at local or noncompetitive points and in smaller places. That constitutes the issue.

Now, Mr. Chairman, I propose to illustrate the effect of this Law provided our through rates must be advanced. I assume today, with all the candor and earnestness of my nature, upon the information to which I have alluded, that, so far as Georgia is concerned, it is not practicable to reduce the local rate. What would be the effect if the through rates are advanced? Take Atlanta and Jonesboro. I mention those points only in illustration. Jonesboro does not complain to-day that her rates are too high. If she lodges any complaint with this Commission, if, as representing the smaller points who constitute the parties in interest upon one side of this question, she asks you to enforce the conditions of this law, it is by reason of the fact, not that Jonesboro's rates are too high, but that Atlanta's rates are too low. That is the logic of the whole controversy. Now, what will be the effect? Suppose, for instance, the long and short haul clause of the law is enforced, and Jonesboro for all western or eastern rates is put upon a comparative basis with Atlanta. The result will be to increase the through rates to Atlanta. The through rates to Jonesboro may be less than the through rates to Atlanta, now, with the local from Atlanta to Jonesboro added. It will get, coming from the East, the same rates that Atlanta would get; and coming from the West it would probably pay a little more. The effect is to advance the rates upon all the products handled by the jobbers of Atlanta. Now, owing to the peculiar economy or want of economy, whichever you may term it, that characterizes our agricultural interests in this State—every gentleman present who is familiar with the financial economy of Georgia knows that I take a correct position with regard to this matter—the people in the surrounding country that trade at Jonesboro do not rely upon Jonesboro primarily for their supplies. The merchant at Jonesboro requires all the assistance he can get from the merchant in Atlanta in order to carry him through the season. The whole agricultural interests of the State must be carried by main strength from the first of March until about the first of October. It taxes the banks, the cotton factories, the jobbing merchants, and all the other agencies from which the country merchants can derive any assistance, in order to enable him to carry the planters who are his customers direct. He does not draw his sup-

plies of bacon from Chicago or Kansas City. He draws them from this city. If the rates to Jonesboro were the same as they are to Atlanta, he would still be compelled to draw from this point, for the reason that the question of credit enters not only into the transactions in bacon, but into the transactions by which this country raises its cotton crop. Now, if it be true that it is not practicable to reduce the local rates on freight, and to equalize the position of Atlanta and Jonesboro, you must advance your through rates. What is the result? The merchant in Atlanta who buys his ten car loads of bacon in Chicago, ships it here and sells one of them to a merchant in Jonesboro, by virtue of the fact that under the conditions of this law you must advance your through rates, is compelled to pay an advance in order to lay the bacon down at this point. He charges an advance to the merchant at Jonesboro, and the merchant in turn charges it to the farmer, and the consumer has it to pay. Now I submit that this is a fair statement of this case, not only with reference to the industrial organism of this country but with reference to the effects that must come from an increase of through rates, which I maintain upon the assurance of these gentlemen is absolutely sure to come if that provision in this Law is enforced.

There is another interest that I wish to occupy a few moments of time in calling to your attention: the manufacturing interests of the State. I maintain that what is a just and reasonable rate of freight depends upon competition as a condition; and while it may not be suspected (for probably a great many have not thought about it) there is a vast difference between the conditions that influence and control, and determine the question of competition as between our jobbing merchants and our manufacturers. Whatever the effect of this Law may be if it is enforced, and if my assumption is true: that through rates will be advanced so far as the merchants are concerned, the effect will be much more detrimental to the manufacturing interests. As I said just now, the conditions of competition determine very largely the question of just and reasonable rates. To illustrate, take a jobbing merchant in the City of Atlanta. He competes with Augusta, with Macon, with Columbus, with Knoxville, with Chattanooga, with Rome and with Athens. In handling domestics or in handling notions or any other class of goods, the question for him to ascertain is whether or not his rates are equal to those of his competitors. If this be true, the question of rates that would affect a manufacturer in the South very seriously, would affect a jobber immaterially, for the reason that the business of the jobber is localized. There is not a jobber interested, so far as I have been able to ascertain, in any memorial that has been presented to this Commission, in any trade outside of the territory covered by the Southern Railway & Steamship Association. Take the cotton mills of this State for instance, and contrast the territory to which they sell goods with the territory of the jobbers, and see what the conditions are. There is not a cotton mill operated in Georgia or in any of the other Southern States to-day whose product

does not go to the entire country. We ship goods everywhere. The mills that I am managing have a trade that is scattered over thirty States. Now while you propose to determine what is a fair and equitable rate to a jobber in view of the competition he has to meet, the same rule should be applied to the manufacturer. We are located in this territory, but we are shipping goods beyond the territory, and consequently we are not only affected by the competition between each other, as a jobber is affected by competition between himself and his competitors in neighboring cities, but we are affected by competition existing in other States, or by reason of varying circumstances surrounding the transportation business. Other freight rates vary very radically from our own. I do not propose to go into this question at any length. I will be very brief. I know the idea prevails that there is vast advantage in manufacturing so far as the South is concerned. To sum the whole matter up, our advantage here, stretched to the utmost extent, is limited by probably five eighths of a cent a pound, certainly not over three quarters, in the cost of our raw material. While we have this advantage in raw material, there are other very great disadvantages under which we labor, and to which our competitors in the Middle and New England States are not subject. For instance, we are situated a thousand miles from our base of supplies for machinery, findings, etc. Upon the enormous weight of all this machinery we have to pay freight when we construct a mill. Repairs are perpetual and we have to pay freight upon the material for repairs. Notwithstanding the fact that a great deal has been said about the cotton manufacturing development of the South, I am prepared to maintain here, or anywhere upon the result of experience—and this position will be substantiated by any board of experts that may be brought from New England—that in inferior construction, in cost of our mills, in faulty production and in expensive production, consequently in the lower price at which we have to sell our products, we are placed at disadvantages that far outweigh any advantages we derive from the small margin we have in the price of cotton. What is the effect when we come to compete with a mill in the Middle States, or in the New England States, for the trade in the West? We ship goods to Cincinnati and St. Louis, from the Ohio River points all over the Northwest, and into New England. We start out with a bare advantage of five eighths of a cent a pound. If we are running mills in the Southern States that cost \$45 a spindle to construct, and if their construction is imperfect in many instances, as against mills that do not cost over \$25 a spindle in New England, you can see at once that the amount of capital invested in our business upon which we have to earn returns is far in excess of an Eastern mill, and far outweighs any advantage we may derive from our cheaper cotton. This suggestion will bear investigation. I have become firmly convinced not only that our advantages are much smaller than we estimated them, but the advantages of New England are very much superior to what we generally considered; and I have said over and over again that if I had to

INTER 8.

invest money in a cotton mill for my children, I would invest it in New England. That is my judgment standing in this presence. I deliver it here as I have delivered it on many other occasions when the question was under discussion.

The conditions under which our railroads operate in this section of the country are essentially different. It takes an average of twelve acres of cotton to produce a ton staple. The great bulk of the railroad business in this State—I have not taken the pains to get the figures—consists of the cotton crop and the Western supplies that are shipped here, including fertilizers. That certainly constitutes the freight that would be affected by the Interstate Commerce Law. Of course our lumber trade is very largely within the State. Our shipments of lumber to other States are yet small. It must be clear to any reasonable mind that in a sparsely settled section of the country, whose population is almost solely engaged in agriculture and requiring twelve acres of land to produce a ton of staple—it must be plain to anyone that in a country thus situated, the volume of freight is much less than it is in a country like the West, the Middle or the New England States, where the agricultural product in one instance will yield probably six to twelve times the freight that an acre will in this country. In the Middle and New England States they have a vast diversity of other interests that increase the volume of trade many fold over anything that we can expect to see in this section of the country for a long time to come. If it be true that the volume of freights in the South is light, it must be true that our roads in the South cannot operate for the same rates or for as low rates as the great traffic lines which run through the thickly populated States, furnishing a vast volume of freight.

Now upon this very brief and imperfect presentation of the case, I conclude first that it is impossible for our railroads to reduce their locals. They say it is; and for that reason the effect of that enforcement of this Law will be an increase in the through rates. By virtue of the very condition of things which I have explained that increase of rates must be paid for by the consumers of the produce shipped into these States. I maintain in the second place that what is necessary to determine a fair and just rate of freight, varies as between the merchants and manufacturers of this section, because the business of the merchant is localized, and he is interested only in obtaining rates that will enable him to compete with his immediate competitors. I maintain in the third place that the conditions that surround the manufacturing interests of the State are essentially different from those to which the jobber is subjected, and for the simple reason that instead of having the business localized as the jobber has, the manufacturer is doing a business with the entire country, and hence he is affected by the rates of freight that prevail in sections of the country where his competitors are located. I maintain in the next place that as conditions involving the volume of freight are radically different as between the Southern and the New England, Middle and Western States, it is impossible for our railroads

to do business at the rates that the great trunk lines can afford to take by virtue of the vast difference in the volume of the business. I insist that these conditions under the construction of the law are radically different. They are not at all similar. And while I do not propose to undertake the discussion of any legal question involved, it seems to me that if it is illegal for a railroad to charge different rates of freight under similar circumstances and conditions, it would be wrong to enforce an arbitrary rule applying to the railroads of all sections of the country, with reference to this long and short haul clause, where the differences are so radical as those I have imperfectly indicated.

A great deal has been said here with reference to water transportation. The gentleman who was on the stand yesterday explained to you very fully, and I will not attempt to improve upon what he said, the assistance that the lumber interests in this section have received, by virtue of the fact that cars were coming here loaded with western supplies, and going back empty, and the railroads, in order to get something out of the return trip, had given a very low rate upon lumber, and thus this interest had been very much benefited. If you will think of the situation a moment, if you will reflect that this State—and what is true of Georgia I suppose is true of the other States—is a large consumer of western produce, you must realize the fact that what the railroads can derive from return freights must determine in a large measure the rates at which they can bring goods into this country. These low rates of freight we now enjoy. The rates are low enough. As I said awhile ago, so far as Georgia is concerned, I have not heard a man complain that rates were too high at any point. The only complaint that has been made is that at some points they were lower than at others. Men insisting that rates were too low to Atlanta have not said they were too high to Jonesboro. These low rates of freight have not only enabled our people to obtain cheaper supplies, but they serve another great purpose; and if anything should come to disturb the existing order of things, it will affect the industrial portion of the country very seriously. It must be plain to any man that these low rates of freight furnish the means by which the excessive products of one State or section can be exchanged for the excessive products of another State or section. The west has more bacon, corn, grain and flour than she can consume. We have not enough to live upon. We bring their corn, grain, and flour to our consumers and we load their cars with granite, with lumber, with factory products, or with any other products of which we have an excess. By virtue of this order of things we are furnished facilities for interchanging the surplus products of the States. What is the result of it at last? Who gets the benefit of it? The men in Ohio, in Indiana, in Illinois or some other western State who get the benefit of our demand for their produce, and our consumers here who get the benefit of low prices for an article of necessity. On the other hand, we are enabled to ship products for which we have no use. We are compelled to seek a market for the products of our cotton mills, or we

must stop. The State of Georgia today is producing more cotton goods daily, I imagine, than she consumes in a week; probably more than that. I doubt if the consumptive demand for the cotton factory products of this State would equal in a year what the mills will produce in a month. If there is to be any serious interference with rates of freight, there must be interference with this interchange of products, and consequently it must react upon industrial conditions, both west and south. What is true with reference to the cotton goods of the south and the products of the west, is true with reference to the products of all other sections; and the effect of any change by which the through rates of freight are advanced, must be to reduce the profit of producers, and increase the price the consumers must pay at both ends of the line.

There has been a great deal of complaint because the rates are lower at points near the coast than they are at this section of the State, for instance, with reference to western produce. I beg here to call your attention to one fact that seems to have escaped the mind of a good many or all of our friends. It is that in determining the question of water competition to the Atlantic ports, you seem to have left out entirely the effect of the sailing vessels. The lumber trade of the coast is carried very largely in sailing vessels. In determining the rates of grain, for instance, at Savannah or Charleston those rates are determined, I imagine, not only upon through rates by the great trunk lines to Baltimore, and from Baltimore to Savannah by steamer, but by the trunk line, rates from the west to Baltimore, and from Baltimore to Savannah by sail. Every man knows that the sailing vessels that are doing the coasting trade are operating, in a majority of instances, each upon its own hook, independently. They are not organized into companies, and the question of rate is a question of contract for a single trip. While that state of affairs gives the ports advantages so far as rates are concerned, the people derive the benefit from it at last; and if it is necessary for the railroads to give a lower rate to Savannah upon a barrel of flour than they give to Macon by virtue of the fact that they would lose the carriage of it if they did not do it, I do not see, so long as I get a barrel of flour at a reasonable rate of freight at Macon why I should concern myself about it. To find fault seems to me to be "dog in the manger" policy. That is another phase of the case as presented here, that no man seems to complain that his rates are too high. The only complaint is that the rates of other people at other points are too low.

Mr. Chairman, I have thus hastily and imperfectly run over this ground; and, on behalf of all the memorialists who have presented memorials on that line, and of our own Board of Trade, I beg you, from all the considerations that have been presented, to make the suspension of the fourth section of the Law permanent. Instead of waiting for complaints, in order to enforce it, make the suspension permanent, and then revoke that suspension whenever satisfactory evidence is submitted that the policy was wrong in the first instance in suspending it. We cannot afford the disturbances that must come to this section of the country by

reason of the fact that our through rates must be increased. In support of my proposition that local rates cannot be reduced, speaking especially with reference to Georgia, I cite the fact that our friend from Wilmington this morning in his memorial indicated that he thought the policy would be for the railroads of North Carolina to bring their locals down to the level of the Georgia State Commission, and leave their through rates undisturbed. There is evidence from another State that the exceedingly low rates that prevail in this State have attracted attention. The people of North Carolina, the memorialists of Wilmington, ask no more than that the local rates of North Carolina shall be brought down to the Georgia level and that their present through rates shall not be disturbed. That was the proposition as I understood it, and I submit it to you as a very strong argument in favor of my proposition and my faith in the representations of these gentlemen that so far as Georgia is concerned, our railroads cannot maintain themselves upon lower rates of freight and that the consumers of the State should not be taxed by any advance in through rates.

Argument of Mr. D. P. Hill:

I am a farmer, and as we are not represented, and it has been said we have not been heard, I would like to make a few remarks in opposition to the lines indicated by the two gentlemen who have just been heard. I have no testimony to give, but I would like to make a few remarks. I come from that class which it is said are not represented, an unorganized class, it is true. We have no representatives here. We have held no meetings. We have trusted the Law in the hands of the Commission. I represent an unorganized set of people, the farmers. The farmer is not here to-day. He has held no meetings. He has sent no agents here. But when we are told upon this floor that there is no complaint from the farmers, I say the complaints went up to the Congress of the United States from all over this land, until you had to formulate the common law into a statute. The farmer is not here to complain. Why? He is scattered all over the country. His business is such that he is not grouped together. He is not here as are the people in the towns. He is scattered over the country, driving the plough, wielding the axe, felling the forest, and producing for the good of the country. That is the man that this bill was intended to benefit. That is the man that the farmers of this country ask this Commission to stand by and reduce these intolerable freights and charges upon them that they have lived under so long.

It has been said by the gentleman that that will break down these terminal points. If the terminal points have been built up in defiance of law, if they have been built up by injustice to the people, it is time there should be a division of the spoils, and that the people should reap some benefits from the running of railroads through the country. We have had protection in every shape in this government long enough, in God's name. The farmer is not here to complain, and therefore I suppose it is to be considered he is satisfied with all that these railroad gentlemen, their attorneys and retain-

ers, may see fit to put into your ears. The farmer is contented with the Bill, and wants the fourth section executed. He believes it will do him justice, and his neighborhood and people. That is what the farmer expects from this Commission. He expects the law to be carried out faithfully and honestly, and I believe it will be.

The last gentleman told you the people in Jonesboro can do business better by trading with Atlanta than at other points, because they must get credit here in Atlanta, and they would not be benefited by lower freights. Why, if you reduce the freight to Jonesboro, if you put them upon an equality with Atlanta, I presume some of the Atlanta capital would go to Jonesboro to do business. Atlanta might lose a man or two, but Jonesboro would be the gainer. Is that any crime to the country? Is it ruinous to us? No. We want the fourth section in force because we expect to receive benefits. I speak for the farmer; the man who makes the tonnage for the railroad; the man who makes something out of the earth, who furnishes the cotton and the corn which is to be transported, and who has paid from time immemorial and is doing it today high freights upon everything he makes and everything he gets. In God's name haven't we suffered long enough? It is strange to me that they have not made complaints before, and that the Congress of the United States did not enact long before the redress that has now been given in this law. I can only liken it to what Mr. John Bright said the other day speaking of how our people had submitted so much to this protective tariff, with an overflowing treasury with millions in it lying useless. He said he could only explain it upon one idea, and that was that the manufacturers were organized and the consumers were nothing but a disorganized mob.

No; we are not here. We trust to the Law. We expect the Law to be executed. But, gentlemen, as I have only a little time, if you will allow me, I have a few thoughts committed to paper that I will read, and then not take up your time any longer. I know I cannot do a great deal of good, because you cannot expect much good from a farmer, but you will get the farmers' idea:

A great deal is being written about the Interstate Commerce Bill and the Commission appointed to execute the same, and from what is said one would suppose the Congress, President and Commission are the enemies of railroads, and seeking their utter destruction. Can anyone believe for one moment that these functionaries fail to recognize the blessings of railroad transportation in this age of progress and development and seek to do it injustice? Such a proposition is silly, puerile and unjust. The law enacted by Congress is nothing more nor less than a formulation of the common law. Now, if the railroads have been observing the law, does it lie in their mouths to complain that Congress has provided a quick, speedy remedy by the Commission or courts to settle differences between common carriers and their patrons? I have always supposed those who have law on their side are anxious for speedy trial and swift justice. But the railroads take a different view of the matter, and from one end of the country to the other they denounce

the Law, the Commission and Congress, as if it were a crime to make them obey the law of the land, which ages of experience has proven wise and just to all parties.

If railroads have been observing the law and trying to live up to its requirements, is it not passing strange they should be holding conventions and calling on the Commission for advice, counsel and instruction, how to act so as to be within its purview? No, these mammoth corporations have acted so long without obeying the law that they had supposed they were a law unto themselves, and when the law-making power provides speedy remedies to control their conduct, they seek by all manner of means to bring the law in disrepute and evade its just requirements. Many thoughtless people say the stockholders built the railroads with their money, and they should be allowed to use their property in such manner as to yield the greatest profits. How absurd this proposition. It has from time immemorial been the law of the land to control and keep within proper bound capital that seeks to make profit out of the public, and regulate the same, so that the weak and poor may be protected against wealth and power, whether in the hands of individuals or corporations. The man of means builds his mill or ferry, but the law says what he shall charge for his service; the capitalist lends his money for gain, but the law says "Thou shalt take no usury." If it be just that the law should control capital and money in these instances, is it not much more so in the case of railroads upon which the people must depend for transportation? The right of eminent domain being vested in the people, and they having lent its use to railroads for public use, it is the imperative duty of the law-giving power to see to it that the public be treated justly and fairly in the use of the same.

Most of the States have enacted laws and appointed commissions to hold in check these vast and powerful corporations, but State Commissions being powerless to control beyond the jurisdiction of the State, railroads have circumvented the state authority by rebates, pooling, and unjust charges for short hauls compared with long ones; and the people, justly indignant, pressed upon Congress the enactment of such laws as would compel the railroads to do equal justice to all persons and places. The law is wise, just, and equal to all, and time will soon prove its inestimable value. The great efforts of the railroads to evade the law of Congress by buying and leasing connecting roads, only show their anxiety to deal with the people in the future as in the past without restraint, and upon such terms as their greed for gain may dictate.

Have railroad commissions injured railroads? Let us see. Georgia has a stringent railroad law, and a Commission that has seen it executed to the letter and spirit, yet there are more railroads being built in Georgia than at any previous time in the history of the State; and so I might say of other States with railroad commissions.

Now, as long as railroads continue to multiply, we may rest assured capital is being profitably invested, and that commissions and laws are doing no harm.

Let the people stand by the State and Federal Commissions and Laws, and the time is not far distant when all the States and sections will feel that aggregated capital in railroads may bless, but is powerless for harm.

At this point, 2 P. M., the Commission took a recess for two hours. At 4 P. M. the Commission reassembled, all the members being present.

General E. P. Alexander addressed the Commission.

(Gen. Alexander's argument is to be submitted in print.)

The **Chairman**. This completes the hearing at Atlanta. We propose to resume it at Mobile, New Orleans and Memphis. I take pleasure in saying, on behalf of the Commission, that we have been gratified with the clear, concise and logical manner in which the parties on all sides have presented the facts; and we trust that our investigations will be greatly facilitated by what has taken place.

Thereupon, at 5:15 P. M., the Commission adjourned the hearing.

PROCEEDINGS AT MOBILE.

Names of Witnesses, in Order of Examination, etc.

W. Butler Duncan, President Mobile & Ohio R. R.

H. S. Depew, Traffic Manager Mobile & Ohio R. R.

T. M. B. Talcott, General Manager Mobile & Ohio R. R.

T. G. Bush, Mobile Chamber of Commerce.

Samuel Brown, Mobile Chamber of Commerce.

A. Proskauer, Mobile Cotton Exchange.

O. R. Hudley, Huntsville, Alabama.

J. P. Walker, Meridian, Miss., Board of Trade.

J. R. Satterfield, Selma, Ala., Board of Trade.

H. H. Stewart, Selma, Ala., Board of Trade.

A. C. Danner, Saw Mills, Shingles and Coal, Mobile, Alabama.

W. G. Cochrane, Tuscaloosa, Alabama.

C. W. Gibson, Aberdeen, Miss., Board of Trade.

Samuel Burnaugh, Merchant, Birmingham, Ala.

R. J. Peley, Lumber, Brewton, Alabama.

Daniel Smith, Pres. Gardeners Association, Mobile, Alabama.

E. B. Stahlman, 8d V. Pres. L. & N. R. R.

J. M. Culp, Gen. Freight Agent, Louisville & Nashville R. R.

D. G. Dunklin, Merchant, Greenville, Ala.

James Bowron, Sec. and Treas. Tenn. Coal & Iron R. R. Co.

Thos. A. Mack, Superintendent Eureka Furnace Co.

C. P. Williamson, Pres. Williamson Iron Co., Birmingham, Alabama.

Thos. Ward, Gen. Manager Birmingham Rolling Mill, Alabama.

B. B. McKenzie, Lumber, Alabama and Mississippi.

Mr. E. L. Russell. Please make your statement to the Commission.

The Witness. Mr. Chairman, I have embodied in the form of an affidavit, to which I have sworn, a statement of the facts which I propose to submit in support of so much of the petition as refers to the past and present condition of the Mobile & Ohio Railroad, the policy of its management, and the fact that it cannot afford to abandon any of its business or sustain a loss in its revenue, as stated in the petition. I would ask permission of the Commission to read that affidavit, and I shall be prepared to answer any further questions that the Commission may desire to put to me.

The Chairman. There is no objection to that.

(The witness then read the affidavit referred to.)

The Chairman. You have not explained in that statement what necessity there would be under the new legislation to abandon any of your business.

The Witness. That is a matter which the gentlemen who are called after me will expound. The Vice President will state the traffic difficulties and questions more clearly than I could.

The Chairman. You may remain here, so that if it is necessary to ask you any questions we can do so afterwards.

H. S. Depew appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Russell:**

Q. What is your occupation?

A. Traffic manager of the Mobile & Ohio Railroad.

Q. How long have you been in that position?

A. Since the first of last October.

Q. How long have you been in the traffic business?

A. I have been connected with railroads thirty-two years.

Q. Are you acquainted with the competition that the Mobile & Ohio Railroad Company encounters, both water and rail, at present?

A. Yes sir, I am.

Q. (Handing map to witness.) I will ask you to explain this map to the Commission so that they can understand the difficulties we encounter.

A. The red lines represent the water routes. Here (indicating) is the Mississippi, and here (indicating) is the Ohio. The line I now indicate represents the Mobile & Ohio Railroad. The blue lines crossing represent the roads that are connected with the Mississippi River and the Mobile & Ohio. From St. Louis to Cairo the Mobile & Ohio Railroad almost parallels the river within a few miles, meeting competition from the river in almost every one of its local stations.

The Chairman. Perhaps as you begin and go south it would be well to explain the general nature of your traffic, especially as regards the through traffic for which you have a long haul.

The Witness. Along the line of our road for 100 miles from East St. Louis, the country is entirely agricultural, producing wheat more

particularly, and upon the road are many flouring mills which sell their product in the St. Louis market or ship to the south, either by the river or the railroad, as they can get the best rates. From a point near Murphysboro south to Cairo, the country is heavily timbered, and produces mostly piling, ties and lumber. That is mostly a local business entirely. At Percy, some 65 or 70 miles from East St. Louis, we have a railroad crossing us fifteen miles to Chester, on the Mississippi River, from which we meet competition in making rates to the south. In fact, the river takes all our business mostly from points on our road near Percy to Chester, and thence south by river. At Cairo we, of course, meet the Ohio and Mississippi Rivers. The rates from Cairo to Memphis, Vicksburg, New Orleans, and way landings are very low, usually, and they compete for all the freight that is brought into Cairo and all the freight that is based upon Cairo's rates from the interior portion of Illinois, Indiana, and some portions of Missouri. At a distance of twenty miles below Cairo we strike the Mississippi River at Columbus, where the Iron Mountain branch of the Missouri Pacific Railroad also has a line running out into a section that produces corn and grain of various kinds. It is brought to Columbus and there goes south by river or by rail. Then we strike a point that is a few miles below the Nashville & Chattanooga Road which strikes the Mississippi River at Hickman, which also competes for the business that is naturally tributary to those points both north and south of Union City. At Rives, a few miles below, the Newport News & Mississippi Valley Railroad, which runs from Memphis to Louisville, also competes with that territory, and the river takes, and can take, certain products from a certain territory, both north and south of Rives. Eighty-nine miles below Cairo is Humboldt, the crossing of the Louisville & Nashville Railroad; 90 or 95 miles thence is the City of Memphis, where we strike the Mississippi River. One hundred and six miles below Cairo we strike the City of Jackson, Tennessee. That has no direct line running to the Mississippi River, although it is a competing point with the Illinois Central. It is only in competition with the river as far as it may be affected by the line from Humboldt. At Corinth we meet another line which is 93 miles from Memphis on the Mississippi River, the Memphis & Charleston Road. Fifty miles below there is the new road, the Kansas City, Memphis & Birmingham Road, which strikes us at Tupelo, which has been built about a month. They are competing for that business which is based on the rates made from St. Louis to Memphis, the local rate from Memphis out to our stations and to the stations it touches, affecting our rates both north and south. After leaving Tupelo, the point of crossing or junction of this road between that territory and Meridian, almost exclusively 150 miles, we are affected by competition from the Tombigbee River, upon which the Cities of Aberdeen and Columbus are situated, and to which this line has branches running from Artesia and Muldon. The Illinois Central has lines also running to those points. At times this river has boats which make very low rates into these points and which necessa-

riously take the traffic and the business of all points between Macon, which is 40 miles above Meridian, clear to Tupelo, where we strike the line that runs from Memphis, direct to the Mississippi River. So we have practically the competition of two systems of rivers, the Alabama and the Tombigbee, running from Mobile, and the Mississippi River at Memphis. At Meridian we have a very strong competition from the Mississippi River at Vicksburg. A line from Vicksburg to Meridian is entirely within the State of Mississippi and is not within the jurisdiction of the Interstate Commission, as I understand it; which is also true in regard to these roads that are mentioned, the Newport News & Mississippi River, and the Louisville & Nashville, both being entirely within the State of Tennessee. Also at Meridian we have lines diverging east, a line direct to New Orleans, and our own line to Mobile. Mobile is situated upon the Gulf, and we meet the competition of the rates made by the Mississippi River to New Orleans, and the rail rate from New Orleans to Mobile, which is made necessarily low, otherwise both schooners and steamers could be placed upon the lake and through the Mississippi Sound and make very low rates to Mobile.

Q. From St. Louis to Meridian what influences the rate?

A. The rates by river from St. Louis to Vicksburg and those by rail, 140 miles to Meridian.

Q. The river and the road being beyond the jurisdiction of this Commission, being exclusively in the State of Mississippi, is the rate in Mississippi fixed by a railroad Commission?

A. Yes sir; that is, maximum rates, as I understand it. They can make lower rates if they see proper.

Q. The river and this road combined determine the rate at Meridian?

A. Yes sir.

Q. If the Mobile & Ohio Railroad Company was not allowed to meet the rate as determined by the river, and the V. & M., could you do any business over this portion of your line in bringing western products into this territory?

A. No sir; we could not. If we were obliged to maintain the same relative rates between intermediate stations, we could not afford to do it.

Q. You say the Louisville & Nashville runs from Memphis to Humboldt, and the Newport News & Mississippi Valley to Rives?

A. Yes sir.

Q. Both of these lines from Memphis are within the State of Tennessee, are they?

A. Yes sir.

Q. So that the rate of the Mississippi combined with these rates, which are beyond the jurisdiction of this commission, could determine the rate?

A. Yes sir; they can make the rate.

Q. They can compel us to receive freight at every one of these points as domestic freight in Tennessee?

A. Yes sir.

Q. And there the State could fix the rate south and north until we struck the south and north line of Tennessee.

A. They could fix the rate, but there is no Commission in the State of Tennessee.

Q. Not at present?

A. No sir.

Q. At Meridian, Mississippi, by the rate fixed from here to Meridian, and the Commission fixing the rate south to the state line and north to the Tennessee line, they could make us do its business at the rate fixed by the Commission as internal domestic commerce?

A. Yes sir.

Q. That part of our line then would be dead?

A. It would be entirely. It would not have any advantage of the haul from St. Louis to Corinth, 315 miles, or more than that to Meridian, very nearly 550 miles; 520 miles.

Q. From St. Louis to Mobile what determines the rate in Mobile?

A. The same element; river rates to New Orleans and the rates from New Orleans to Mobile.

Q. Would the same principle apply coming North?

A. Yes sir.

Q. And to the eastern points?

A. Yes sir.

Q. Have you the rates fixed by the State Commissions?

A. Yes sir.

Q. Has Illinois a State Commission?

A. Yes sir.

Q. Has the Railroad Commission of Illinois fixed the local rates?

A. They fix the maximum rates to govern us in the State of Illinois.

Commissioner Walker. Please file with the Commission the rates as fixed by the Illinois & Mississippi Commissions.

Mr. Russell. We will do that.

Q. If you are not allowed by this Commission to meet competition at all these different points, could you get any of that competitive business?

A. No sir; I could not get any of the competitive business, if we were not allowed to meet the rates made by the river and those points that reach the river by railroad.

Q. In the case of the different roads leading from the Mississippi to where they intersect the Mobile & Ohio Railroad, as a matter of fact, almost all the local stations which are called noncompetitive are affected more or less, are they not, by this competition?

A. Yes sir. It is a peculiar traffic we have there. The business along the line of our road south of Corinth, you might say, is dependent upon cotton. The station that cannot buy the cotton from the planter and producer, loses the business, and they will haul cotton across our track twenty-five, thirty and forty miles where they can get a few cents more per pound or per bale for their cotton. Towns like Aberdeen, Columbus and other points on the river that enjoy the competitive rates produced by the river and the boats, would be able to pay more for their cotton as against the local stations between Corinth and Meridian, and consequently they would lose the trade. We are necessarily obliged to shade our rates from those cross points reached by rail, and come in competition with these points on the river, in order to meet the rates made by the river to those points; otherwise we would lose the traffic entirely and we would have to draw it a very short haul from the center of our road.

INTER 8.

Q. This territory between Jackson, Tennessee, and Corinth, Mississippi—is the proximity of the Tennessee River such as to affect the rates?

A. Yes sir. They took sixteen hundred bales of cotton on the Tennessee River right away from our line last season.

Q. This is a competitive territory with water transportation?

A. Yes sir; they even haul cotton from the station of Henderson, right on our road, over to the Tennessee River.

Q. The same case applies here by the Bigbee running parallel?

A. Yes sir; we will have to meet those rates at our stations or else the cotton will leave us and go to those points and go down the river. The Kentucky Commission does not fix the rates, but the Commission have approved the rates we make. Here are the rates for Mississippi, Kentucky, Alabama and Illinois.

Q. In Mississippi they fix the rate, do they?

A. Yes sir.

Q. And give it to us to operate under?

A. Yes sir. Here are our rates (submits rates.)

By Commissioner Walker:

Q. Are these the rates since the modifying order was made?

A. Yes sir; they were the same rates that were in effect on the 31st of March. I sent you gentlemen copies of these with the necessary certificates on them. Here is our fruit tariff to Mobile. (Submitting tariff.)

By Mr. Russell:

Q. Have you any rates fixed by the river, or do they give you any rates?

A. They give us no rates, generally. We find out what their rates are from time to time.

Q. You find it out when you find the business going that way?

A. Yes sir; of course. There is no arrangement between the rail and water lines at all in regard to rates. On the other hand, we have to follow the river rates, because the President of the Anchor Line Traffic Company, the largest company on the Mississippi River, said to me personally, a few weeks ago, it made no difference what rates the railroad made, his rates were so much less; and consequently we don't name any rates. We simply compete with the river, if there is enough in it. Sometimes there is, and sometimes there is not. Sometimes they make it so low we can't afford to meet them. We can in the interior, however.

Q. If we were to put all our rates at local noncompetitive points, on the basis of the present competitive points, would they not go below that?

A. They would, necessarily, of course, and it is based upon that. We couldn't begin to compete with them, except to our local points, because we have the benefit of the rate from the river there, which enables us to get rates sometimes that otherwise we wouldn't be able to work at.

Q. Without having our hands untied at all the competitive points, it is a combination of water and rail you would be unable to meet in rate?

A. Oh, no sir; we couldn't do it.

Q. Could we afford to put our local rates at

noncompetitive stations, what few we have along here, on a basis with the competitive rates?

A. We have done so, to a certain extent. We have to scale them from the fact that a point like Tupelo, or Corinth, or West Point, which is a crossing near the river, is in direct connection with the river. If their rates are much lower than the stations each side of them, it would naturally draw the business to that point to the detriment of the stations on each side. Hence, we have to scale those rates; and a low rate to any one point on our road naturally fixes the rates to the points nearest; but we scale it up and down from those points as the case may be. We are in the habit of doing it.

Q. It is to the interest of the Railroad Company to protect its territory on the road, or to try to protect it?

A. We think so; and we try to do it as near as we can.

Q. You fix the rates so as to try to protect the stations, and yet to control the business?

A. Yes sir; and still we have to meet the competition at these other points in connection with the river.

By the **Chairman**:

Q. Has it been the case that at any time within the last year or so you have been obliged to abandon any business at Mobile because the rates by water were so low you could not afford to carry it?

A. No sir.

Q. You have carried whatever has been offered to you?

A. Yes sir; we have.

Q. Is that true at other competitive points?

A. Yes sir; at those competitive points on the line of our road we have met competition.

Q. And you have taken such business as was offered to you?

A. Yes sir.

Q. You have not abandoned any business in consequence of the competition?

A. We have not abandoned any business in consequence of the competition.

Q. Could you tell what proportion of the business carried south on your road has been business to those points where the rates are forced down by water competition.

A. I am not positive, but I should judge about 65 per cent. I am not positive about that.

Mr. Russell. Give it approximately.

The Witness. I see Colonel Talcott has the figures on that. I am not prepared to answer that question.

Mr. Russell. That is all set forth in the schedule attached to the affidavit.

The Witness. (Referring to schedule.) The through tonnage total is 257,000 against 227,000 local in 1885 and 1886.

Q. What do you mean by local as distinguished from through?

A. The local tonnage is tonnage going from one point to a local station on our road, and the through tonnage is tonnage from a competing point to a competing point.

Q. Then the tonnage from St. Louis to Cairo would be called through tonnage?

A. I think so; yes sir.

Q. And from Cairo to Tupelo?

A. It has not been so considered, but it might be hereafter.

Q. I wanted to know simply what was to be understood from your figures there?

A. Tonnage from one competing point to another.

Commissioner Walker. That has not been so treated heretofore.

The Witness. We are speaking of Tupelo. That has recently become a competing point within the last three or four weeks.

Mr. Russell. At Corinth and Meridian it would be true.

The Witness. Yes sir; Meridian, Mobile and New Orleans.

Q. Between these several competing points the rates would be higher than from one competing point to another?

A. Yes sir; in some cases.

Q. Do you think the competition is such that it would be practicable for you to equalize the rates as between the local and the competing points?

A. It would be very disastrous to the Mobile & Ohio Railroad to be obliged to do it.

Q. You say the competition by water determines the rates. Do you mean that the rates are put down first of all by the water carriers invariably rather than the carriers by rail?

A. Yes sir; the water carriers make the rates first and the railroads, as far as our line is concerned, if we see proper meet their rates at a fair rate of insurance higher. We make a higher rate than the water lines do usually, and can maintain a small differential above their rates.

Q. For the last few years it has been the case about all the time that you have had no understanding with the water carriers as to the rates to be charged?

A. I know of no understanding for a number of years. I have not been connected with the southern roads, however, for three or four years, and I couldn't say positively in regard to that; but for fifteen years prior to 1883 and for the last six months we have had no arrangement with them.

Q. Then your opinion that the railroads could not afford to do business under a strict application of the fourth section of the new law is based upon the supposition that it would be impossible for you to equalize the rates?

A. We could not.

Q. Between local and competitive stations?

A. In my opinion we could not possibly do it.

Q. Do you think the people who have been your customers for the transportation of goods along the line of your road from local points have been satisfied with your rates?

A. So far as I know I think they have been.

Q. Have you had complaints occasionally?

A. Sometimes we have had complaints; yes sir.

Q. What have been the nature of those complaints? Have they been at times of your rates, or have they been of discrimination between towns?

A. Both; sometimes one and sometimes the other. There have always been complaints, more or less. I have not received very many complaints, however, since I have been con-

nected with the Mobile & Ohio Road. I have not been connected with it but a few months.

Q. Tell us what complaints you have received during that time, from whence they have come, and what has been their nature?

A. The main complaints that we get have been from some of our local stations that wanted the same rates that were made from East St. Louis and Cairo. Some wanted lower rates in order to help their manufactures. As a general thing, we make concessions at our local stations to persons who are in the manufacturing business. For instance, we make as low rates as we can on certain products on our line. On the southern portion of our Cairo division we make as low rates as we can on the products of that country, ties, piling and wood blocks that are shipped some to Cairo and some to East St. Louis for the manufacture of fellows, spokes and chairs. It is nothing but wood, and it has to be carried at a low rate in order to allow the manufacturers to get their raw material. That also is true south of Cairo through the heavy lumber district between there and Humboldt. That is local however.

Q. Do you make those concessions by way of classification of the freight?

A. In some cases we do and in some cases we make them simply arbitrarily.

Q. In some cases you make them to a particular business.

A. Yes sir; but they are made open to the public for whoever wishes to take advantage of them.

Q. Do you mean that you make them to everybody who cares to take advantage of them?

A. Certainly. We make a rate of \$10 a car between two stations on wood blocks, which is open to everybody who wants to ship wood blocks between these stations.

Q. But when you do that to one kind of wood manufacturer, do you make the same rate to all other kinds of wood manufacturers?

A. I would; yes sir.

Q. I speak of your course in the past?

A. Yes sir.

Q. When you make it to one kind of manufacturer, do you make it to all other kinds of manufacturers?

A. Yes sir. We try, in other words, to nourish and develop all the manufacturers on our line, and if it is necessary we help them in that way.

Q. Where you make a concession to a manufacturer at a local point, and a manufacturer may also exist at a competing point, you do not put the rate down at the local point to the same figure it is at the competing point, I suppose?

A. I don't recollect of an instance that is parallel with your question. I should say we would; if the point should come up, I should say we would. I think I would. It is simply a question of letting the manufacturers live. The timber is growing there. I am speaking now particularly of timber. It is a class of business that requires very low rates in order to move it, and in order to allow the manufacturers to continue their business, whether at competitive points or otherwise.

Q. You give it of course sometimes to orig-

INTER 8.

inate manufacturing I suppose as well as nourishing it?

A. Possibly; yes sir.

Q. Suppose at some point between Corinth and Jackson, a particular wood manufacturer should spring up and another at Corinth at the same time. Do I understand that in a case like that you would give the same rates to the man at the little way station that you would at the competing point?

A. We could afford to do it on that particular class of business, because it is very small. If we made a rate at Corinth for a party on wood to Cairo for instance we could afford to make the same or less rates at any point between Corinth and Cairo, because it is a commodity that is—

Q. What I want to get at is your general custom, if you have one.

A. We have no general custom in such a case.

Q. Cases of that sort you deal with specially?

A. Yes sir; individually.

By *Commissioner Morrison*:

Q. You carry in Illinois under the Illinois State rates?

A. Yes sir.

Q. From East St. Louis to Cairo?

A. We don't charge the full Illinois State rates, except in some instances. In the lower classes we do not.

Q. According to the Illinois classification there is no instance where more is charged for a shorter distance than a longer one?

A. No sir.

Q. Have you been charging by that scale?

A. No sir.

Q. I mean for freight carried in Illinois?

A. Yes sir; I understand you. You mean, in other words: Have we charged less to Cairo than we have to a point this side. For instance, suppose we were at East St. Louis—

Q. Starting at East St. Louis the rate fixed by the Illinois Commission gradually rises until you get to Cairo?

A. We have the river competition between East St. Louis and Cairo, and we have not scaled our rates north of Cairo to conform to it.

Q. You have paid no attention to the Illinois rates in Illinois?

A. Yes sir; we do in our local business proper.

Q. I mean the business from East St. Louis to Cairo?

A. No sir; between East St. Louis and Cairo we do not.

Q. They are both in Illinois?

A. Yes sir.

Q. How do you get around that?

A. Well, we have the printed tariffs and they are filed with the Illinois Commissioners, and they have not disturbed us on it for a good many years. We have not charged more than they prescribed, but we have charged less, as the competition of the river required us to do it.

Q. For the longer distance?

A. Yes sir.

Q. This rate does not seem to have the Cairo point on it. It begins at East St. Louis and stops at the last station outside of Cairo. What is the object of that?

A. Because the Cairo rates are lower than the rates to these points.

Q. But under the law they could not fix them lower, could they?

A. I think they could. We have so taken it, and the railroads in Illinois have been working upon that theory.

Q. They gradually rise from East St. Louis down to Cairo. Take the fourth class freight. That begins at seven cents and goes up to twenty-three. You have not followed that out, I understand?

A. We have not followed that out as far as Cairo proper is concerned between East St. Louis and Cairo. We have met the competition by the river. I did not intend to be understood as competing with Illinois rates. If I made that statement it was a slip of the tongue.

Mr. Russell. He means he never exceeds the maximum rates fixed.

The Witness. We never charge up to the maximum rates between East St. Louis and Cairo. Between our local stations we do.

By Commissioner Walker:

Q. Supposing a man on one of those local stations has a car load of flour he wants to send to Mobile. Does he get the East St. Louis rates?

A. He does now.

Q. How long has he been getting those rates?

A. Since the first of April.

Q. That was not your previous custom?

A. No sir; we charged about six cents a barrel higher from those local points than our East St. Louis rates. That was the general custom of all the roads in Illinois, both east bound and south bound.

By the Chairman:

Q. Is there any hardship in respect to that business in charging the East St. Louis rate at local stations?

A. I think not.

Q. That is, you think you can conform to that rule north of Cairo, do you?

A. Possibly we could, so far as we are directly situated in Illinois, which is only a few miles from East St. Louis. We could not do it on all our business, I think; still we might.

Q. Point out where you think you could not do it.

A. For instance, I don't think we could be governed—in other words, I think that while we might charge that rate to a flouring mill near East St. Louis, we would be unable to charge the same rate from Mobile. We couldn't make the same charges on all property to all local stations, and reduce our rates on a through basis.

Q. What freights do you carry to local stations that it would be necessary to charge higher rates?

A. In some cases we carry flour and grain.

Q. Those are your principal items, are they not, that you carry to local stations in there?

A. Yes sir; grain and flour.

Q. Will you tell us what has been your average rate from St. Louis to Mobile since you have been on the road?

A. On flour from 45 to 50 cents a barrel and 40 cents.

Q. What have been the highest intermediate rates?

A. We have charged as high as 80 and 85 cents a barrel.

Q. Where are the stations at which you have charged those rates?

A. Those stations are between these two points.

Q. Between Decatur, Corinth and Meridian?

A. Yes sir; and stations below Corinth and below Meridian also.

Q. Is that a considerable business?

A. Yes sir; it is a considerable business; that is, it is a large proportion of traffic; but very little is shipped there except merchandise, bacon, grain and flour.

Q. You do not ship merchandise to Mobile very much, do you?

A. Not much; no sir.

Q. So that the prices of merchandise would not be much affected by the equalization?

A. Not to Mobile.

Q. Are there any other items of freight that are considerable in amount that would be affected by a process of equalization?

A. Those are the largest proportion of our shipments.

Q. Have you brought with you any detailed statement of what your freights have been for the last year at the several stations?

The Witness. The several different kinds of freight to each station?

The Chairman. Yes.

A. No sir; I have not. We could file it with you gentlemen, if you desire it.

By Commissioner Walker:

Q. You have divided your freight into classes of competitive and noncompetitive?

A. Yes sir.

Q. What constitutes competitive freight under that division?

A. Freight either to or from a point that is in competition with other lines, either water or rail; sometimes both.

Q. How many such points have you included in this sheet you have submitted?

A. All of the points between Mobile and St. Louis.

Q. How many are there?

A. The first would be Enterprise.

Q. No; the first would be Mobile.

A. Excuse me. Yes. Then Enterprise; next Meridian, then Lauderdale, Artesia, West Point, Tupelo, Corinth, Jackson, Humbolt, Rives, Union City, Columbus, Cairo, Percy and East St. Louis.

Mr. Russell. Also Columbus and Aberdeen.

The Witness. Columbus and Aberdeen reach us at Artesia, and West Point.

Q. Out of all that business you have classified as competitive business about how much of it is Mobile business?

A. I think a large proportion of it, so far as tonnage is concerned, is Mobile.

Q. What do you mean by a large proportion; 85 per cent, 75 per cent, or what?

A. I couldn't tell without looking at the figures, but I should say the larger proportion of the tonnage was to Mobile.

Q. Do you mean more than half?

A. Yes sir; I should think so.

Q. Upon this sheet which you have filed as your freight tariff a large number of those

places you have mentioned do not seem to have any competitive rates given them?

A. They are not given on this sheet. This sheet is just exactly as it was printed, although there have been what we call special rates made to those points.

Q. Then this sheet does not correctly show the rates the other points get?

A. That sheet does not correctly show the rates they have had heretofore at some of those points.

Q. If that was posted in a station, then, it would not convey true information to one town as to the rates its neighbor was getting?

A. It would at this time, because we are working, so far as this sheet is concerned, under the Interstate Law.

Q. Are you working according to that sheet?

A. Yes sir; we are now. I am speaking of it before. We were not then.

Q. Your rate then from East St. Louis on flour in barrels to Mobile is 50 cents, to Meridian 70 cents, and to a large number of stations here that are grouped together between Waynesboro and Eight Mile \$1.13. Is that so?

A. Yes sir; I think so. Car loads \$1.07.

Q. When you get up above Meridian it is over \$1?

A. Yes sir; for some distance, until we strike what we call this group which is affected by the competition of the rates on the Tombigbee River. We have to make those rates the same or nearly the same.

Q. Aberdeen and Columbus are not now treated as competitive points?

A. Yes sir. I mean the rates are made to them on a competitive basis.

Q. But their rates are stated in this sheet?

A. Yes sir.

Q. And they are the same as the adjoining places?

A. Yes sir; they are the same rates that were made by the competition and it was necessary for them to be made, as you will see, lower than other rates.

Q. They are not lower than any rates further north?

A. No sir. They are a good deal lower—

Q. On flour, in car loads, the rate is 98 cents, and that is the highest rate down to that point?

A. Yes sir; but that whole section is grouped, otherwise we would make the rates to Aberdeen and Columbus much lower and still keep up our grouping, if it was not for the effect which the Aberdeen and Columbus rates have on the stations between, for instance, Macon and Okolona, something over 100 miles.

Q. Are Aberdeen and Columbus now treated as competitive points in the sense that freight coming to those places is charged less than freight to points further north?

A. No sir; they are not treated as competitive any further than simply as the rates were fixed prior to the first of April. Those are the rates that were in effect at that time, and the rates that are in effect now. We had no occasion to change them, either to lower them or to raise them. Do I understand you correctly?

Q. I am only trying to understand you.

INTER 8.

What I want to know is whether this sheet, as it stands now, is what you are working under now to all the points named on it?

A. Yes sir.

By *Commissioner Bragg*:

Q. You give special rates to manufacturers and industrial enterprises, do you not, to help in the development?

A. Yes sir; sometimes.

Q. And you do it because there is a statute of the State of Alabama that authorizes it, do you not?

A. Yes sir; in Alabama we do.

Q. The railroad Commission Law of Alabama authorizes that?

A. Yes sir.

Q. What is your tariff on a barrel of whisky from St. Louis to Mobile?

A. I couldn't say exactly. I think it is somewhere in the neighborhood of 90 cents or \$1.

Q. Your tariff shows, does it not?

A. Yes sir.

Q. Just look at it and tell me.

A. (After examining tariff.) 80 cents per 100 pounds.

Q. How many hundred pounds are there?

A. We generally calculate a barrel of whisky will weigh about 880 pounds. That would be \$1.14 a barrel.

Q. What is the freight rate on a barrel of whisky from New Orleans to Mobile by water?

A. I couldn't tell you. I don't know as there is any established rate by water.

Q. What is it by rail?

A. I think it would be about 57 cents.

Q. On a barrel?

A. Yes sir. I think so. I am not positive. I haven't got their rates, but I think that is about it.

Q. Do you know what is the freight on a barrel of whisky by steamboat on the Mississippi River from St. Louis to New Orleans?

A. Yes sir; I can tell you. (Examines paper.) I haven't them here, but I think they were in effect 17½ cents a hundred. They figured 850 pounds to the barrel, but we will say 880. That would be about 65 cents a barrel.

Q. Is your rate from St. Louis to Mobile made to meet the river rate from St. Louis to New Orleans?

A. Yes sir.

Q. There is a railroad known as the Louisville, New Orleans & Texas Road that runs along down the Mississippi River much nearer than your road to the river, is there not?

A. Yes sir.

Q. How much nearer does it run to the Mississippi your road on an average?

A. I should suppose 100 miles probably. There are points where it would be 100 miles. Memphis is 93 miles away. It would average 100 miles.

Q. That road competes directly with the Mississippi River at various points, does it not?

A. Yes sir; I believe it does.

Q. Do you state to us as your opinion or as a matter of fact that that road does not protect your road at all against the competition of the Mississippi River?

A. In what way?

you make your rates on cotton from Mobile to New York at forty-five cents a hundred, and out of all the cotton that is shipped to Mobile from the interior you carry only about two or three thousand bales from here to New York?

A. I may be mistaken, but I think we only carried a very small portion of it this year. A good portion of the cotton went from here to Liverpool, and went to New York by ocean. There is another road running between here and New Orleans that is a great deal shorter than we are. We are a roundabout line. We have to take it to Meridian.

Q. Had your road any understanding or agreement with any other railroad or any ship line by which you should not charge more than that on cotton?

A. No sir.

Q. Or that you should charge that much?

A. No sir. We have an agreement with the Louisville & Nashville Road as to the rates to New York and New Orleans.

Q. You maintain that?

A. Yes sir.

Q. What is that agreement in substance?

A. Simply an agreement that we will charge those rates.

Q. Whether you get much cotton or a little?

A. Yes sir.

Q. You do not cut as you do at Memphis?

A. We have not very much this year. I presume we have done it. I am speaking of this year only. I have not been connected with this road very long. We have not been cutting this year very much. We have been pretty honest, I think.

By *Commissioner Walker*:

Q. What do you say you get for that cotton you take from Mobile to New York?

A. Forty-five cents a hundred.

Q. How many miles is the rail haul?

A. The short line?

Q. The line the cotton went by.

A. Some of it went thirteen or fourteen hundred miles, I should judge; twelve or thirteen hundred. We took some to Cairo, and some we took to other points this side.

By *Mr. Russell*:

Q. I want to ask if the Mississippi Commission, in fixing the rates of the Mobile & Ohio Railroad, do not recognize competitive points?

A. Yes sir.

T. M. R. Talcott appeared before the Commission, and having been duly sworn, was examined as follows:

By *Mr. Russell*:

Q. What business are you engaged in?

A. I have been connected with railroads for a great many years.

Q. How many years?

A. Since 1855; that is, about thirty-two years.

Q. What positions have you held in the railroad service during that time?

A. I commenced as an engineer in the construction work. For eighteen or twenty years past I have been a general manager of railroads.

Q. Of what railroad were you general manager?

A. Prior to the time I came to the Mobile

& Ohio Road I was the general manager of the Richmond & Danville Railroad. I occupied that position for some twelve or thirteen years.

Q. Are you the general manager of the Mobile & Ohio Railroad at present?

A. I am, sir.

Q. How long have you been in that position?

A. About two years and a half.

Q. From your experience, then, you thoroughly understand the transportation business?

A. I think I do understand it generally.

Q. You have studied it very closely?

A. I have studied it very closely. I do not profess to know all about it, though.

Q. Does it ever cost a less sum in an aggregate to transport a given amount of freight for a longer than for a shorter distance?

A. Yes sir; sometimes. Sometimes the difference in terminal charges alone, the cost of receiving and delivering freight, would pay for the transportation a long distance.

Q. Is there any other reason beside the great cost of maintaining stations for light business, why local freight costs more than through freight?

A. Yes sir. The general cost of transporting through freight is less than that of transporting local freight.

Q. If through and local freights are carried on the same train, is not the cost of transporting them a like distance the same?

A. In one sense, yes; but the additional cost of transporting the through freight over and above the cost of transporting the local freight which has to be transported, is very much less than the cost of transporting the local freight on that train. It does not add in proportion to the increased amount of freight to the cost of the train.

Q. What is the relative cost of transporting equal amounts of local and through freight on the same train?

A. Well sir, answering to the best of my recollection of the results of my investigation into that subject, I should say that adds it about 23 or 24 per cent to the cost. Therefore, I may say the cost of the local business being taken as 100, the cost of the through added to that would be about 23 per cent.

Q. That is as twenty-three is to one hundred?

A. Yes sir. I have not those figures accurately fixed in my mind, but that is approximately correct.

Q. Is the cost of transporting through less than the cost of transporting local freights when they are transported on different trains?

A. It is sir.

Q. When you speak of the cost of transportation what do you mean?

A. I mean the cost of moving the freight from one place to another on the train.

Q. Are there not other expenses besides the mere cost of transportation; and if so, what are they?

A. There are. There are the terminal or station expenses, and there are also the fixed expenses of the road.

Q. How do the terminal or station expenses on through freight compare with those on local freight?

A. They are very much less; as much less.

Q. In any respect?

A. I don't think it does. I never knew of its protecting us to any great extent.

Q. It competes with you, does it not?

A. It competes with us as it competes with the river. All of those roads are in competition with each other.

Q. But it competes with the river to a much greater extent than it does with you?

A. It has more close competition with the river I should judge than we do.

Q. I understood you to say in answer to Judge Cooley that the Mississippi River boats made the rate, and then that you conformed to it. Did I understand you correctly?

A. The boats make the rates, and if we see proper we make our rates to conform.

Q. Did I understand you correctly to answer Mr. Russell in his examination that you did not know what the rates on the river were; that they kept the rates hid from you?

A. In some cases they do.

Q. Is it not their rule? Is it not only now and then, and only after great effort, that you find out what their rate is in any instance?

A. The Anchor Lines generally do keep their rates printed; that is, they have a printed blank that they fill in, and they furnish it to certain of their shippers. They furnish it to the Merchants' Exchange, and they are the nominal rates that the Anchor Line charge.

Q. But they charge as much more as they please?

A. They charge as much more as they please; and in some cases to large shippers in large quantities, to be shipped at one time, they will make special rates for them, and charge much less than their regular established rates.

Q. Will you please inform us how it is that you are able to make your rates conform to or compete with rates thus hid and kept secret from you, and of which you know nothing until after they are made?

A. Sometimes we cannot, and the boats take the freight. We don't get it simply because we don't know what their rates are.

Q. And, therefore, you just shoot around in the dark and make the best rates you can?

A. Sometimes that is true; there is no doubt about that.

Q. What is the cotton rate over your road from Mobile to eastern points, New York and Boston?

A. The cotton rate has been 45 cents a hundred pounds; \$2.25 a bale.

Q. To New York?

A. Yes sir.

Q. What is it now?

A. I do not know.

Q. What is your cotton rate from Meridian to New York?

A. Two dollars and seventy-five cents.

Q. What is it from Enterprise?

A. I couldn't say without looking, but I think it is about the same.

Q. What is it from Aberdeen?

A. Aberdeen is \$4.05, I think.

Q. What is it from Artesia?

A. I think it is the same. I am quoting from memory, but I am nearly correct. I would have to look at the tariff to be sure, but I am getting it approximately correct.

Q. What is it from Corinth?

A. It is very low from Corinth. It is based upon Memphis. On compressed cotton I think it is about 50 cents a hundred; \$2.50 a bale, I think.

Q. Will you please explain to us how Memphis compels you to make such a rate as that at Corinth?

A. Simply because the actual rate on compressed cotton from Memphis to New York is 30 cents a hundred, which is \$1.50 a bale, and the rate by the Memphis, & Charleston Railroad to Corinth is so low we would have to make a low rate from Corinth in order to get any of the business. I will say that we get very little of it. It is taken mostly by the Memphis & Charleston Road.

Q. If I understand you, Memphis makes a lower rate on cotton for New York and eastern points, with no other competition than that of the Mississippi River, to New Orleans and thence by ocean, and alone at Mobile the competition of the ocean?

A. That is it, so far as the actual facts are concerned. The Memphis rates should be 33 cents a hundred. They should be 118 per cent of the St. Louis rate; that is the rule; but as a matter of fact, owing to the competition at Memphis by railroad and water, taking the cotton to New Orleans, and there taking the low ocean rate from New Orleans out, they have been obliged to cut those rates in order to do the business all around. In some cases it has affected our rates to the east, in consequence of the fact that they had to make lower rates in order to meet the competition from the river to New Orleans and the ocean rate from New Orleans to New York.

Q. What is the ocean rate from Mobile to New York on cotton?

A. I really do not know. There is no established ocean rate that I know of. There is no regular line of steamships running to New York.

Q. Upon what is your rate from Mobile to New York based, if there is no established ocean rate?

A. It is based upon the rate that was made all rail from Mobile to New Orleans and the ocean rate from New Orleans added.

Q. What is the ocean rate from New Orleans?

A. Thirty cents.

Q. What is it from here to New Orleans?

A. Fifty or 75 cents: 75 cents is the rate—15 cents a hundred added to 30 makes 45 cents.

Q. You maintain these rates I have questioned you about, do you?

A. We have this last season; yes sir.

Q. From Mobile, Enterprise, Meridian, Aberdeen and Corinth?

A. Yes sir. We have taken no cotton, however, from Corinth. I don't think we have taken a bale.

Q. About what amount have you carried from Mobile east?

A. Well, but a very small quantity; I don't know exactly how much; two or three thousand bales, I presume.

Q. Not more than that?

A. No sir, I think not. I may be mistaken. I can very easily give you the information if it is important.

Q. You compete here with the ocean, and

you make your rates on cotton from Mobile to New York at forty-five cents a hundred, and out of all the cotton that is shipped to Mobile from the interior you carry only about two or three thousand bales from here to New York?

A. I may be mistaken, but I think we only carried a very small portion of it this year. A good portion of the cotton went from here to Liverpool, and went to New York by ocean. There is another road running between here and New Orleans that is a great deal shorter than we are. We are a roundabout line. We have to take it to Meridian.

Q. Had your road any understanding or agreement with any other railroad or any ship line by which you should not charge more than that on cotton?

A. No sir.

Q. Or that you should charge that much?

A. No sir. We have an agreement with the Louisville & Nashville Road as to the rates to New York and New Orleans.

Q. You maintain that?

A. Yes sir.

Q. What is that agreement in substance?

A. Simply an agreement that we will charge those rates.

Q. Whether you get much cotton or a little?

A. Yes sir.

Q. You do not cut as you do at Memphis?

A. We have not very much this year. I presume we have done it. I am speaking of this year only. I have not been connected with this road very long. We have not been cutting this year very much. We have been pretty honest, I think.

By *Commissioner Walker*:

Q. What do you say you get for that cotton you take from Mobile to New York?

A. Forty-five cents a hundred.

Q. How many miles is the rail haul?

A. The short line?

Q. The line the cotton went by.

A. Some of it went thirteen or fourteen hundred miles, I should judge; twelve or thirteen hundred. We took some to Cairo, and some we took to other points this side.

By *Mr. Russell*:

Q. I want to ask if the Mississippi Commission, in fixing the rates of the Mobile & Ohio Railroad, do not recognize competitive points?

A. Yes sir.

T. M. R. Talcott appeared before the Commission, and having been duly sworn, was examined as follows:

By *Mr. Russell*:

Q. What business are you engaged in?

A. I have been connected with railroads for a great many years.

Q. How many years?

A. Since 1855; that is, about thirty-two years.

Q. What positions have you held in the railroad service during that time?

A. I commenced as an engineer in the construction work. For eighteen or twenty years past I have been a general manager of railroads.

Q. Of what railroad were you general manager?

A. Prior to the time I came to the Mobile

& Ohio Road I was the general manager of the Richmond & Danville Railroad. I occupied that position for some twelve or thirteen years.

Q. Are you the general manager of the Mobile & Ohio Railroad at present?

A. I am, sir.

Q. How long have you been in that position?

A. About two years and a half.

Q. From your experience, then, you thoroughly understand the transportation business?

A. I think I do understand it generally.

Q. You have studied it very closely?

A. I have studied it very closely. I do not profess to know all about it, though.

Q. Does it ever cost a less sum in an aggregate to transport a given amount of freight for a longer than for a shorter distance?

A. Yes sir; sometimes. Sometimes the difference in terminal charges alone, the cost of receiving and delivering freight, would pay for the transportation a long distance.

Q. Is there any other reason beside the great cost of maintaining stations for light business, why local freight costs more than through freight?

A. Yes sir. The general cost of transporting through freight is less than that of transporting local freight.

Q. If through and local freights are carried on the same train, is not the cost of transporting them a like distance the same?

A. In one sense, yes; but the additional cost of transporting the through freight over and above the cost of transporting the local freight which has to be transported, is very much less than the cost of transporting the local freight on that train. It does not add in proportion to the increased amount of freight to the cost of the train.

Q. What is the relative cost of transporting equal amounts of local and through freight on the same train?

A. Well sir, answering to the best of my recollection of the results of my investigation into that subject, I should say that adds it about 23 or 24 per cent to the cost. Therefore, I may say the cost of the local business being taken as 100, the cost of the through added to that would be about 23 per cent.

Q. That is as twenty-three is to one hundred?

A. Yes sir. I have not those figures accurately fixed in my mind, but that is approximately correct.

Q. Is the cost of transporting through less than the cost of transporting local freights when they are transported on different trains?

A. It is sir.

Q. When you speak of the cost of transportation what do you mean?

A. I mean the cost of moving the freight from one place to another on the train.

Q. Are there not other expenses besides the mere cost of transportation; and if so, what are they?

A. There are. There are the terminal or station expenses, and there are also the fixed expenses of the road.

Q. How do the terminal or station expenses on through freight compare with those on local freight?

A. They are very much less; as much less.

I may say, on the Mobile & Ohio, as the result of my examinations, as seven cents compared with sixty cents in some cases.

Q. It costs that much more to handle the local?

A. It costs as much as sixty cents in some cases, and it costs as little as seven cents in some cases at junctional points which include the through freight. That includes the through, and the through must be even less than that. It cannot be more.

Q. What do you mean by the fixed expenses; what are they?

A. By fixed expenses I mean those expenses that are not affected by the transportation done; either a greater or a less amount of transportation done.

Q. Can you give a full explanation, so that the Commission may understand it?

A. They include the maintenance of road ways and structures; everything that is under the rails which is affected by the volume of the traffic; the taxes, the insurance on property and also the cost of administration, to a very large extent. Administration is generally considered a fixed expense.

Q. A railroad would have these fixed expenses whether it did any through business or not; if it did exclusively a local business?

A. Yes sir.

Q. What proportion of the total expenses of the Mobile & Ohio Railroad are the fixed expenses?

A. A little less than 40 per cent sir.

Q. If the present freight tariff on the Mobile & Ohio Railroad were increased, what are the expenses that would be increased?

A. The terminal expenses would be increased slightly, and the car and train expenses would be increased materially.

Q. Would these expenses, or any of them, be doubled if the present freight traffic were doubled?

A. No sir; none of them would be doubled; some nearly so, but none of them actually, unless the increased traffic was divided into through and local in exactly the same proportion as the present traffic. Then both train and car expenses would be exactly doubled.

Q. What proportion of the whole expense of the freight service are train expenses, and how much would they be increased if the freight traffic of the Mobile & Ohio Railroad were doubled?

A. The train expenses are pretty nearly 24 per cent. They may be one more or one less on the Mobile & Ohio. They would be increased by doubling the traffic in the same relative proportion of through and local very nearly, if not exactly, double.

Q. What proportion of the whole expenses are car expenses, and how much would they be increased if the freight traffic of the railroad were doubled?

A. According to my recollection about 23 or 24 per cent. It would not vary much from that. If the traffic was doubled in the same proportion as now, through and local, that would be about the sum; but not if the through was increased and not the local. That would not be done. It would not double those expenses, or the train expenses either.

Q. Are not the train expenses less for through than for local trains?

A. Yes sir.

Q. Can you explain that?

A. I speak of the through trains on the Mobile & Ohio Road, and the through trains are moved on shorter schedule, there being no stops to distribute and receive local freight. The consumption of fuel and some other expenses are therefore less on the through than they would be on the local trains.

Q. Do cars generally carry heavier loads on through or on local trains?

A. On through trains they generally carry heavier loads, for the reason that parts of loads are taken out at many stations in distributing local business; besides which the through business is generally more heavily loaded into the cars. We have more of it and can load the cars to better advantage.

Q. You get more tonnage out of the same amount of car service?

A. We get more tonnage out of the same amount of car service on the through than on the local trains.

Q. Does the heavier loading make any material addition to the cost of carrying the cars?

A. It adds necessarily to the consumption of fuel and it adds necessarily to the wear and tear of the train. It adds somewhat, but not a great deal, to the wear of the running gear; but it does not affect quite a number of the expenses or the road.

Q. Would not the car expenses be less for through than for local business by reason of the longer haul?

A. Yes sir; they would be, for the reason that on the long haul we get more service out of the cars at the same time than we do on local business, and as some of the expenses of maintaining cars are due to the time and not to the mileage, that would be the case.

Q. Then your engines and cars make a greater mileage per annum on through business than they do on local business?

A. They do sir?

Q. Is not the cost of motive power less on through than on local trains?

A. It is in this respect: that the larger amount of work being done by the motive power on through trains than on local trains it is a smaller element of cost in the transportation.

Q. Do you include interest on the value of engine and cars as part of the train and car expenses, or should it not be taken into account as an element of the cost?

A. We do not include it as a part of the expenses, but it undoubtedly should be taken into account as a part of the cost, being interest on the working capital.

Q. Should not the interest on the warehouses used for freight be taken into account in determining the station or terminal expenses; and if so, would it be greater charge on through or on local freights?

A. It should be taken into account, and it would be a greater charge on local than on through freight, for the reason that a very large proportion of the through freight is not received in warehouses, and delivered into warehouses, but is received in cars already

loaded and is delivered partly the same way. Of course it has at some point, either at the commencement or at the end of the trip to be treated in that way; but so far as the Mobile & Ohio Railroad is concerned, that is our experience.

Q. So at a local station you have to have a station house and an agent to do the business, if you do not do a ton a day or a week?

A. Yes sir; sometimes the State Commissioners require us to have those when the business is very small and sometimes we are very willing to do it ourselves when not compelled, in order to give the facilities to enable business to develop there which otherwise could not be developed.

Q. Is it not your opinion that the local freight should pay all the fixed expenses on a railroad?

A. It is my opinion that the fixed expenses should be paid by the local.

Q. For what reason?

A. I think that the principle is one than can be compared to the highways of the country over which the wagon transportation is done. For instance, each county pays for the maintenance of its own roads. The adjoining counties passing through there get the benefit, and they maintain their own roads. The system of railroads has grown up by the construction of roads to accommodate the local business, and it is only by extensions and connections made, sometimes designedly and sometimes accidentally, that the through lines are established. When those roads are local, in many cases the local business paid for the maintenance of the road; and when the new additional business was offered by means of connections, it added nothing to the maintenance of the road; and at least there can be, in my opinion, no injustice in making the local business pay for the maintenance of the road that accommodates the local business.

Q. Should the cost of transportation have any influence upon the rates, except to determine the lowest rates to be charged under any circumstances?

A. I think not sir. I think that it should undoubtedly control the rates so far as to allow no rate to be made at less than the cost of transportation; but I am unable to see why a small profit out of a business is not as good when made, or a large amount of business if it cannot be made otherwise, either in a large volume of haul for short distances or in freights hauled for long distances—just as good as made out of a smaller amount of transportation. I think the value of the products at the place of production, and their value at the point of consumption, must necessarily control rates to a very great extent.

By the Chairman:

Q. You speak of through business and local business. In your testimony what have you called through business?

A. I mean the through business which is carried long distances over the road between termini or between junction points or between termini and junction points.

Q. Do you mean, speaking of your own road, the business which is carried from one of these competing points to another?

A. Yes sir.

INTER 8.

Q. That is what you mean by through rates?

A. Yes sir.

Q. And local business is what originates between any two of those points. Now as I understand you, you say the cost of handling a given amount of local freight between those points is very much greater than the same amount of through freight carried the same distance?

A. Yes sir.

Q. It is very much greater?

A. Yes sir.

Q. How do you make that out?

A. I make it out in this way: In the first place the through rate we get by competition is for freight in excess of the regular freight that is shipped, and therefore I consider that it is not to be charged with the fixed expenses.

Q. Exactly. You start out then with the theory that the fixed expenses should be charged upon the local business?

A. I do.

Q. And it is in that way that you make out the cost of handling the local freight to be so much more?

A. In that way it is that I make it cost so much more; yes sir.

Q. They you say, too, that the cost for station and other expenses is very much more for local freight?

A. Yes sir.

Q. Do you mean that strictly now?

A. I do; yes sir;

Q. Take your station expenses at these competitive points. Do you say that the station expenses at the local stations between are greater in proportion to the business than at the competitive points?

A. I do sir.

Q. In making that estimate, do you take into account your station buildings and everything of that sort?

A. Yes sir; I take the actual cost of handling the business.

Q. Do you take into account the expense of the buildings at the stations for the purpose of doing business?

A. No sir; I have not been taking into account the cost of buildings or interest on it; but that is an element that should be considered. I had not considered it.

Q. You do not charge that to either kind of business?

A. No sir.

Q. But you start out with a theory that the fixed expenses should be thrown upon the local business? Tell us why that should be done.

A. I start with that idea on the principle that the roads—I will make an illustration of it as coming within my own experience. A road is built up to a certain number of miles in the country from a market town, a central point. It accommodates the local business of that country. That road is extended from time to time, until it reaches the state line. That was the terminus of the road. All the business of that State went over the road and maintained the road. A road is built up in the adjoining State and connected with that road. That gave the opportunity to do through business. We were glad to take on that road,

which happened to be under my management, any business we could get from the adjoining state that would pay more than the cost of transportation—through business—because it was that much additional net revenue in the treasury of the company.

Q. Has there been any road within your knowledge built in recent times for the mere purpose of accommodating local traffic; as for instance the traffic between Mobile and the first competing point north of Mobile?

A. Yes sir.

Q. Name any such road?

A. I will have to go back to where I have been. I am too recently here. The Richmond & Mechlenburg was so built in Virginia, to furnish an outlet to the business of Clarksville via Keysville on the Richmond & Danville Road. The construction of that is one instance sir.

Q. How is it with the Mobile & Ohio Road? Was that built to accommodate exclusively the business between these competing points in such a sense that the cost of all these fixed charges ought to be put upon the local business?

A. It was built under charters from the several States undoubtedly with the intention of making a continuous line, but also for the accommodation of the States.

Q. Was not that road built just as much for the through business as for the local business?

A. That I could not say sir, because I am not familiar with the history of the Mobile & Ohio Railroad.

Q. Is it not a fact that a road is quite as likely to be built for through business, mainly or exclusively, as to be built for local business mainly or exclusively; and are there not in this region of country, roads that have been built almost exclusively for through business?

A. I cannot say that there have been any roads built almost exclusively for through business in this country, but I may be ignorant of the facts in the case. So far as my advice as an engineer is concerned, I can only say that I would rather advise the building of a road for local business than for competitive business in this country, from my experience in it.

Q. I think you would be quite wise in that; but of course the facts are what we are endeavoring to get at. I want to get, if I can, the basis of your theory, that fixed charges ought to be imposed upon the local business rather than the through business; and for that purpose I would like to ascertain, if the fact is within your knowledge, whether as a matter of fact the roads are more likely to be built for local business exclusively, than for through business, or for local business mainly, rather than for through business.

A. I could not answer that of my own knowledge, for the reason that I am not a builder or projector of railroads.

Q. In order to get at what ought to be paid by the local business, you spoke of charging what it would cost to bring it out. You would charge higher rates upon it because the price is low at the point where you find it. Is not the price or the value of the product that you find there, dependent very largely upon what you charge to bring it out?

A. To some extent; yes sir.

Q. Is it not almost exclusively?

A. It does largely influence the price.

Q. If instead of charging so much upon it, instead of applying a theory that imposes the fixed charges upon it, you were to apply a theory so as to impose it upon the through traffic, rather than upon the local traffic, or to equalize it between them, would not the effect be that the competitive traffic would receive much more benefit from the transportation than it now does, and the local traffic much less?

A. If we charge the fixed expenses to the competitive traffic?

Q. If you apportioned them between the local and the through traffic, instead of charging them all to the local traffic?

A. We should reduce the volume of our competitive traffic by that means, and we should reduce the profit in our treasury that much.

Q. That might not be so under all circumstances, might it?

A. I do not know of any circumstances in which it would not be the case, except where we are not doing business we might do.

Q. But certainly when you speak of the value of your service to the local traffic, and estimate that value by the increase in the price, that increase is almost co-incidental, is it not, with the charge you impose upon it for carrying it? Is not that the fact? The value you impart to it by bringing it forward is the amount you charge for bringing it forward, is it not?

A. I do not think we add to the value of the product we transport, by transporting it.

Q. It is worth so much more. Here, for instance, you pick up local traffic at a station north of Mobile, and bring it to Mobile. You charge a dollar for bringing it to Mobile. It is worth a dollar more when you get it here than it was when it was up in the woods, and therefore you say your services in bringing it down are worth a dollar?

A. No sir.

Q. How do you estimate it?

A. In the first place, I think it is worth more here, not because we bring it here. It is worth more here, and therefore it would stand transporting. It might not stand transporting. For instance, bricks won't stand so much of a rate as bacon will. If we could not transport bricks at a price that would enable them to be put on the market, for the difference in the through rate between where they are made and where they are sold, they simply would not come there. If we had to charge as much for bricks as we do for bacon, they certainly would not come.

Q. The bricks at the local stations north of here, would be worth as much there as here, less the cost of bringing them here, would they not?

A. Yes sir.

Q. And then the value up there would be in proportion to what you charged?

A. It would depend upon what it cost to get them to market. Transportation is an element in trade,

By Commissioner Morrison:

Q. Do you remember what you charged for

bringing a barrel of flour from St. Louis to Mobile?

A. No sir; I do not. I am not familiar with the rates. I could only tell by referring to the tariff; but I can do that.

Q. Do you remember at what local point between East St. Louis and Mobile you charge an equal rate to the rate you charge to Mobile?

A. No sir; I could not tell you.

Commissioner Walker. It is on the schedule. It is the fifth station on the list, and it is not one fifth of the way down.

Q. You charge for one fifth the distance the same rate you do for the whole distance. I understand the road was built for the accommodation of the local traffic, and therefore they must pay the Mobile rate.

A. No sir; I don't think the rate there is dependent on the Mobile rate. The Mobile rate is dependent on something else, and the freight could not be carried except at that rate.

Q. I understand you to justify it on that ground; that the road was built for local accommodation, and therefore they could justly and rightly bear an increased tax.

A. A higher rate than for through business; yes sir.

Q. The truth about the history of the matter is that this road was built in exactly the other way, as I remember it. It was a land grant road. Land was granted on condition that the road should go to Mobile. That is my recollection about it. It was to be a through road.

A. It was a land grant railroad. I know that fact.

By Commissioner Walker:

Q. I should like to know, in a word, what you have been talking about when you were talking about through freight and local freight. Through freight, if I understand you, is freight that originates at any of these competing points?

A. Yes sir.

Q. And local freight is freight that originates at local stations?

A. Freight that originates at local stations; yes sir.

Q. So that freight that starts from East St. Louis you call through freight?

A. Yes sir.

Q. Whether it goes to Mobile or whether it stops at Eight Mile?

A. No sir; not necessarily. It is through freight over one division of the road.

Q. How do you treat freight that originates at East St. Louis, in this discrimination you have been talking about making? If it stops at Cairo, what is it?

A. It is through, sent on through trains.

Q. If it stops at Meridian, what is it?

A. Through.

Q. If it stops at Eight Mile, what is it?

A. If it stops eight miles out here at a station, it is through for the upper division. It is through over several divisions. It may be distributed and landed on a local train at the last point.

Q. Then, in making the proportions in the figures that have been submitted, did you divide your road up into divisions?

A. Our divisions are made, necessarily.

Q. You do not answer my question. In
INTER S.

making these schedules that have been put in here, did you divide your road into divisions?

A. In the rates?

Q. In determining what is through freight and what is local freight?

A. No sir. The through freight on the tariffs is competitive freight.

Q. Freight that could be taken by other roads in competition with the Mobile & Ohio Road?

A. Yes sir. The local is that which is destined to or shipped from a local point.

Q. Freight which is destined to or shipped from a local point?

A. Yes sir.

Q. That is different from what you stated first?

A. That is it.

Q. Wherever it is taken on?

A. Yes sir.

Q. Whether taken on at a junction point or at a local point?

A. Yes sir. It has got to be carried on a local train, in order to be delivered at that local point. The through is practically the competitive business.

By Commissioner Bragg:

Q. What were the cotton receipts of the Port of Mobile last season?

A. The total cotton receipts I do not know, nor could I tell you exactly what they were last season by the Mobile & Ohio, because I have not the figures.

Q. I am not asking exactly to a bale. I am only asking approximately.

A. I suppose somewhere in the neighborhood of two thousand bales. I don't know.

Q. How much would you say approximately there were this season?

A. I should say about the same, sir, as far as I know.

Q. You were speaking of the local stations along this road bearing the fixed charges. Do you not know as a historical fact that the Mobile & Ohio Railroad was largely built by means of a donation of land made by the Congress of the United States, extending along that line of railroad from Mobile, Alabama, to Cairo, on the Ohio?

A. I do sir. My knowledge of that is that the United States Government gave to the several States certain lands which were donated by the States to the Mobile & Ohio Railroad Company to build its road.

Q. And they were on each side of the line of road from Mobile to Cairo?

A. I don't know about that; only in two States, I think; that is my impression. I do not know. I don't find any records of the land.

Q. In Tennessee?

A. In Tennessee or Kentucky. I don't find any records of land grant lands; none whatever.

Q. But a very large quantity of land was donated in Alabama and Mississippi?

A. I know nothing of the lands, except so far as they are now on hand; not very easily got rid of either.

Q. The City of Mobile subscribed very largely to the building of the road, did it not?

A. I know nothing of that.

Q. Don't you know that, as a matter of historical fact?

A. I do not; I have heard so.

Q. And the counties along the line given them did the same thing as the cities, did they not?

A. I don't know, sir.

Q. Don't you know that, as a matter of historical fact?

A. I do not.

Q. You are not very familiar then with the history of this road?

A. No sir; I am not.

Q. What are your cotton rates from Aberdeen to Corinth?

A. I should have to look at the rate sheets to answer that. (Examines rate sheet.) It is the rate made by the Mississippi Commission, \$1.75 per bale.

Q. You charge that?

A. Yes sir.

Q. From Meridian, what is the rate to Corinth?

A. The rates are the maximum rates fixed by the Commission, \$2.50 a bale.

Q. From Enterprise, what is the rate to Corinth?

A. From Corinth to Enterprise \$2.50, the same as Meridian.

Q. What is your cotton rate from Aberdeen to Mobile?

A. I will have to speak of that from memory. I think it is \$2.50. That is my recollection; but I couldn't speak positively.

Q. What is it from Meridian to Mobile?

A. I think it is \$1.75, sir.

Q. What is it from Enterprise to Mobile?

A. The same, I think, as to Meridian, sir. I am speaking altogether from memory, and I have not looked at those rates for some time past.

Q. In point of fact the Mobile & Ohio Railroad was built upon the idea, from the start, that it should be a railroad from Mobile to Cairo on the Ohio River. If that is so, and if in point of fact the government of the United States further made large donations of land to it, and bonds were subscribed by the City of Mobile and other local points along the line to aid in its construction, do you still think and say, under those circumstances, that the local points along the road ought to bear all the fixed charges, and that the through freights ought to have the benefit of them?

A. I do not see that that makes any difference, sir. My understanding about the land grant roads is that when the government made those contributions it was because the States were too poor to build railroads for the accommodation of the country, without some outside aid, and therefore the United States Government came in and helped the States to build the roads that they could not otherwise build.

Q. It was not the road itself that was furnishing these lands?

A. No sir; as I understand.

Q. It was not the company that was furnishing these bonds that Mobile and other points subscribed for?

A. No sir; of course not. The bonds and the land were in the nature of subscription. I suppose that was the way the railroads were all built at that time; by subscription of stock.

Q. About how much of the cotton at the port of Mobile was exported last season?

A. I think between twenty-five and thirty thousand bales were exported by steamers. I don't know anything about any other exports.

Q. Do you mean from the Port of Mobile proper?

A. Yes sir.

Q. Have you any cotton factories here?

A. No sir; not that I know of. There is one factory that uses some cotton, that makes a cotton rope, I think; but I don't know of any other.

Q. Is it not a matter of fact that the balance of that cotton went by rail by way of New Orleans, and was shipped from there?

A. I think not sir. I don't think it all went that way.

Q. Where did it go?

A. I think a considerable amount went by rail to the eastern cities from here. I don't know how much last year, but in past years I have looked at it, and I have found usually from thirty-five to forty thousand bales were shipped out of Mobile. Whether it went to the northern cities or not, I can't tell, because our records don't show; but I think the shipments from Mobile by the Mobile & Ohio.

Q. Last season the Mobile & Ohio took only two or three thousand?

A. No sir; I don't think the Mobile & Ohio would have fallen off from thirty-five to forty thousand bales to as low as two or three thousand; but what it is I don't know. We have not made up the statistics, and they have not come under my eye yet. We don't generally make them up until about this time in the season. I don't understand that this was the amount taken out by the Mobile & Ohio. My impression is that Mr. Depew referred to what the Mobile & Ohio took for New Orleans, and not to what it took out of Mobile. We don't take much for New Orleans. We take very little.

Q. But you do take it over your main line to eastern points?

A. Yes sir; some goes to eastern points, and some may go to interior factories. I don't know where it goes to. All I know, where I have looked out and noticed, is that we take generally from thirty-five to forty thousand bales of cotton out of Mobile, of which I am sure not more than two or three thousand bales go to New Orleans, via Meridian. I say I am sure. I am not sure, but I would estimate it is not more than that.

T. G. Bush, of the Mobile Chamber of Commerce, appeared before the Commission and was duly sworn.

The Witness. I will read our memorial, which is very short, and then make a short statement. (The witness then read the memorial of the Mobile Chamber of Commerce.) I would simply state, Mr. Chairman, very briefly, that the Mobile Chamber of Commerce was induced to take this action by reason of the fact that up to the present time in the history of the commerce of Mobile, since railroads have been bringing through freights to this city, they have universally recognized the rates of water transportation by way of New Orleans down the Mississippi River, coming down the Ohio River and the Mississippi River, and either coming from New Orleans by

water to the City of Mobile, or coming from New Orleans to Mobile by rail. As far as I know, the rates that prevail to-day are the rates that were regulated by the water routes on flour, provisions of all kinds, and grain. That seems to be the rate. For instance, the total cost on a barrel of flour down the Mississippi River to New Orleans is in the neighborhood of 30 cents and about 20 or 25 cents from there here, making a total of 50 or 55 cents. I believe the present rate from St. Louis to-day, all rail to New Orleans, is 82 or 85 cents; about that proportion. The merchants of Mobile have no apprehension whatever as to the course that may be taken in regard to this Law, as they are getting their freights to Mobile at a reasonable rate, having access to all eastern cities and centers by the ocean, and having access to the western cities by the Mississippi River. They apprehend, however, that if in the enforcement of this Law, so far as Mobile is concerned, not knowing whether that would result in the raising of through rates or the lowering of local rates, they were entirely thrown upon water transportation for their goods, so far as the West is concerned, their interests would be endangered by the long time consumed by water transportation. Indeed, merchants who deal heavily in that class of goods would necessarily be compelled to carry unusually large stocks, anticipating their wants. Prices nowadays of articles of that kind are subject to such sudden and violent fluctuations that that would subject the merchants here to very great losses. For instance, I can recall a year only two or three years back, when, from the beginning of the season, as we term it here in the fall, until late in the spring, those heavy articles of western produce were on a continual decline. Our merchants made nothing. They more generally lost on such articles. Then, again, we feel that in this progressive age we ought to be entitled to the privileges of rapid and quick transportation that are accorded all cities by rail in competition with others. It is a matter of fact that our city is unfortunately situated, in so far as the country immediately contiguous to it is concerned. We have to go over a belt of poor barren pine country nearly 100 miles, to reach those markets to which we are accustomed to sell, and to which we distribute our supplies and our merchandise. If we are not in some way enabled, by reason of the geographical position we have, by reason of the blessings under providence and nature we have by our location, to get our goods here at a low rate, we cannot become a distributing center on railroad lines especially. We have our rivers, a system of rivers perhaps unexcelled by any in the Union; and if we are cut off from railway transportation by reason of being unable to compete, we are left entirely to the rivers. Of course we do not know what course the railroads will pursue as to their local tariffs, and therefore we do not know how imperative it will be for us to lay our goods down here at the lowest possible price. We have irregular lines of steamers from New York to this place. The advantage accruing from that has been evident, from the fact that it has produced a considerable reduction in rail rates from New York to Mobile. A line of steamers from here to New York compels a

recognition on the part of railroads of Mobile as a port. This line has been somewhat irregular, and for that reason, and for the reason that there is scarcely a good excuse why a steamship should charge less from New York to Mobile than from New York to New Orleans, it has put its rates considerably below the rates existing by rail. For instance, if we take the first class rate by rail, say 75 cents a hundred, the steamships put their rates at 50 cents. I doubt whether the business was at all lucrative to the steamship line at that price; but from the fact that it was necessary, in many instances, for merchants to delay the shipment of their goods in order to avail themselves of the opportunity of patronizing this line, it was necessary for them to offer extra inducements. However, if it was a regular line, with a steamer running once a week from New York to Mobile, it would have compelled a reduction of rates by rail on all lines running into Mobile. We then simply, in substance, ask, believing that the letter of the fourth clause of this bill means there are some places that, at the discretion of this Commission, can be omitted, and can have these privileges that they naturally enjoy, we feel that we are not transgressing propriety to ask of you that Mobile shall be numbered among those places.

By *Commissioner Bragg*:

Q. What is the time by steamship from here to New York?

A. It is about seven or eight days on an average.

Q. What is the time from New Orleans?

A. About the same. They sometimes make the time, I think, in six days. They have faster steamers there; but the same steamer and the same speed, I presume, would make about the same time from here as from New Orleans; not much difference.

Q. Is it or not a fact that the City of Mobile has subscribed largely to build up these railroads in the interior?

A. I think it did, sir.

Q. The Mobile & Ohio?

A. Yes sir.

Q. The Mobile & Montgomery?

A. Yes sir.

Q. And the Mobile & New Orleans?

A. I don't think they subscribed anything to the Mobile & New Orleans. The losses were very great, of course, to the original subscribers. The difficulties that arose during the war put the roads into bankruptcy, and they changed hands and ownership, and the original owners, of course, lost their stock.

Q. All these roads down here did go through bankruptcy, did they not?

A. Yes sir, all of them.

Q. I mean consequent upon the war?

A. Yes sir.

By the *Chairman*:

Q. Are you interested in any of the railroad property terminating here?

A. No sir; I am interested and connected with the Mobile & Birmingham Road we are trying to build from here to Birmingham. My interest is commercial. I am a merchant in Mobile.

Samuel Brown appeared before the Commission and was duly sworn.

INTER S.

A. I do not; I have heard so.
Q. And the counties along the line given them did the same thing as the cities, did they not?

A. I don't know, sir.

Q. Don't you know that, as a matter of historical fact?

A. I do not.

Q. You are not very familiar then with the history of this road?

A. No sir; I am not.

Q. What are your cotton rates from Aberdeen to Corinth?

My impression is that Mr. Depew referred to what the Mobile & Ohio took for New Orleans, and not to what it took out of Mobile. We don't take much for New Orleans. We take very little.

Q. But you do take it over your main line to eastern points?

A. Yes sir; some goes to eastern points, and some may go to interior factories. I don't know where it goes to. All I know, where I have looked out and noticed, is that we take generally from thirty-five to forty thousand bales of cotton out of Mobile, of which I am sure not more than two or three thousand bales go to New Orleans, via Meridian. I say I am sure. I am not sure, but I would estimate it is not more than that.

T. G. Bush, of the Mobile Chamber of Commerce, appeared before the Commission and was duly sworn.

The Witness. I will read our memorial, which is very short, and then make a short statement. (The witness then read the memorial of the Mobile Chamber of Commerce.) I would simply state, Mr. Chairman, very briefly, that the Mobile Chamber of Commerce was induced to take this action by reason of the fact that up to the present time in the history of the commerce of Mobile, since railroads have been bringing through freights to this city, they have universally recognized the rates of water transportation by way of New Orleans down the Mississippi River, coming down the Ohio River and the Mississippi River, and either coming from New Orleans by

water to the City of Mobile, or coming from New Orleans to Mobile by rail. As far as I know, the rates that prevail to-day are the rates that were regulated by the water routes on flour, provisions of all kinds, and grain. That seems to be the rate. For instance, the total cost on a barrel of flour down the Mississippi River to New Orleans is in the neighborhood of 80 cents and about 20 or 25 cents from there here, making a total of 50 or 55 cents. I believe the present rate from St. Louis to-day, all rail to New Orleans, is 82 or 85 cents; about that proportion. The merchants of Mobile have no apprehension whatever as to the course that may be taken in regard to this Law, as they are getting their freights to Mobile at a reasonable rate, having access to all eastern cities and centers by the ocean, and having access to the western cities by the Mississippi River. They apprehend, however, that if in the enforcement of this Law, so far as Mobile is concerned, not knowing whether that would result in the raising of through rates or the lowering of local rates, they were entirely thrown upon water transportation for their goods, so far as the West is concerned, their interests would be endangered by the long time consumed by water transportation. Indeed, merchants who deal heavily in that class of goods would necessarily be compelled to carry unusually large stocks, anticipating their wants. Prices nowadays of articles of that kind are subject to such sudden and violent fluctuations that that would subject the merchants here to very great losses. For instance, I can recall a year only two or three years back, when, from the beginning of the season, as we term it here in the fall, until late in the spring, those heavy articles of western produce were on a continual decline. Our merchants made nothing. They more generally lost on such articles. Then, again, we feel that in this progressive age we ought to be entitled to the privileges of rapid and quick transportation that are accorded all cities by rail in competition with others. It is a matter of fact that our city is unfortunately situated, in so far as the country immediately contiguous to it is concerned. We have to go over a belt of poor barren pine country nearly 100 miles, to reach those markets to which we are accustomed to sell, and to which we distribute our supplies and our merchandises. If we are not in some way enabled, by reason of the geographical position we have, by reason of the blessings under providence and nature we have by our location, to get our goods here at a low rate, we cannot become a distributing center on railroad lines especially. We have our rivers, a system of rivers perhaps unexcelled by any in the Union; and if we are cut off from railway transportation by reason of being unable to compete, we are left entirely to the rivers. Of course we do not know what course the railroads will pursue as to their local tariffs, and therefore we do not know how imperative it will be for us to lay our goods down here at the lowest possible price. We have irregular lines of steamers from New York to this place. The advantage accruing from that has been evident, from the fact that it has produced a considerable reduction in rail rates from New York to Mobile. A line of steamers from here to New York compels a

recognition on the part of railroads of Mobile as a port. This line has been somewhat irregular, and for that reason, and for the reason that there is scarcely a good excuse why a steamship should charge less from New York to Mobile than from New York to New Orleans, it has put its rates considerably below the rates existing by rail. For instance, if we take the first class rate by rail, say 75 cents a hundred, the steamships put their rates at 50 cents. I doubt whether the business was at all lucrative to the steamship line at that price; but from the fact that it was necessary, in many instances, for merchants to delay the shipment of their goods in order to avail themselves of the opportunity of patronizing this line, it was necessary for them to offer extra inducements. However, if it was a regular line, with a steamer running once a week from New York to Mobile, it would have compelled a reduction of rates by rail on all lines running into Mobile. We then simply, in substance, ask, believing that the letter of the fourth clause of this bill means there are some places that, at the discretion of this Commission, can be omitted, and can have these privileges that they naturally enjoy, we feel that we are not transgressing propriety to ask of you that Mobile shall be numbered among those places.

By **Commissioner Bragg**:

Q. What is the time by steamship from here to New York?

A. It is about seven or eight days on an average.

Q. What is the time from New Orleans?

A. About the same. They sometimes make the time, I think, in six days. They have faster steamers there; but the same steamer and the same speed, I presume, would make about the same time from here as from New Orleans; not much difference.

Q. Is it or not a fact that the City of Mobile has subscribed largely to build up these railroads in the interior?

A. I think it did, sir.

Q. The Mobile & Ohio?

A. Yes sir.

Q. The Mobile & Montgomery?

A. Yes sir.

Q. And the Mobile & New Orleans?

A. I don't think they subscribed anything to the Mobile & New Orleans. The losses were very great, of course, to the original subscribers. The difficulties that arose during the war put the roads into bankruptcy, and they changed hands and ownership, and the original owners, of course, lost their stock.

Q. All these roads down here did go through bankruptcy, did they not?

A. Yes sir, all of them.

Q. I mean consequent upon the war?

A. Yes sir.

By the **Chairman**:

Q. Are you interested in any of the railroad property terminating here?

A. No sir; I am interested and connected with the Mobile & Birmingham Road we are trying to build from here to Birmingham. My interest is commercial. I am a merchant in Mobile.

Samuel Brown appeared before the Commission and was duly sworn.

A. I do not; I have heard so.
Q. And the counties along the line given them did the same thing as the cities, did they not?

A. I don't know, sir.

Q. Don't you know that, as a matter of historical fact?

A. I do not.

Q. You are not very familiar then with the history of this road?

A. No sir; I am not.

Q. What are your cotton rates from Aberdeen to Corinth?

A. I should have to look at the rate sheets to answer that. (Examines rate sheet.) It is the rate made by the Mississippi Commission, \$1.75 per bale.

Q. You charge that?

A. Yes sir.

Q. From Meridian, what is the rate to Corinth?

A. The rates are the maximum rates fixed by the Commission, \$2.50 a bale.

Q. From Enterprise, what is the rate to Corinth?

A. From Corinth to Enterprise \$2.50, the same as Meridian.

Q. What is your cotton rate from Aberdeen to Mobile?

A. I will have to speak of that from memory. I think it is \$2.50. That is my recollection; but I couldn't speak positively.

Q. What is it from Meridian to Mobile?

A. I think it is \$1.75, sir.

Q. What is it from Enterprise to Mobile?

A. The same, I think, as to Meridian, sir. I am speaking altogether from memory, and I have not looked at those rates for some time past.

Q. In point of fact the Mobile & Ohio Railroad was built upon the idea, from the start, that it should be a railroad from Mobile to Cairo on the Ohio River. If that is so, and if in point of fact the government of the United States further made large donations of land to it, and bonds were subscribed by the City of Mobile and other local points along the line to aid in its construction, do you still think and say, under those circumstances, that the local points along the road ought to bear all the fixed charges, and that the through freights ought to have the benefit of them?

A. I do not see that that makes any difference, sir. My understanding about the land grant roads is that when the government made those contributions it was because the States were too poor to build railroads for the accommodation of the country, without some outside aid, and therefore the United States Government came in and helped the States to build the roads that they could not otherwise build.

Q. It was not the road itself that was furnishing these lands?

A. No sir; as I understand.

Q. It was not the company that was furnishing these bonds that Mobile and other points subscribed for?

A. No sir; of course not. The bonds and the land were in the nature of subscription. I suppose that was the way the railroads were all built at that time; by subscription of stock.

Q. About how much of the cotton at the port of Mobile was exported last season?

A. I think between twenty-five and thirty thousand bales were exported by steamers. I don't know anything about any other exports.

Q. Do you mean from the Port of Mobile proper?

A. Yes sir.

Q. Have you any cotton factories here?

A. No sir; not that I know of. There is one factory that uses some cotton, that makes a cotton rope, I think; but I don't know of any other.

Q. Is it not a matter of fact that the balance of that cotton went by rail by way of New Orleans, and was shipped from there?

A. I think not sir. I don't think it all went that way.

Q. Where did it go?

A. I think a considerable amount went by rail to the eastern cities from here. I don't know how much last year, but in past years I have looked at it, and I have found usually from thirty-five to forty thousand bales were shipped out of Mobile. Whether it went to the northern cities or not, I can't tell, because our records don't show; but I think the shipments from Mobile by the Mobile & Ohio.

Q. Last season the Mobile & Ohio took only two or three thousand?

A. No sir; I don't think the Mobile & Ohio would have fallen off from thirty-five to forty thousand bales to as low as two or three thousand; but what it is I don't know. We have not made up the statistics, and they have not come under my eye yet. We don't generally make them up until about this time in the season. I don't understand that this was the amount taken out by the Mobile & Ohio. My impression is that Mr. Depew referred to what the Mobile & Ohio took for New Orleans, and not to what it took out of Mobile. We don't take much for New Orleans. We take very little.

Q. But you do take it over your main line to eastern points?

A. Yes sir; some goes to eastern points, and some may go to interior factories. I don't know where it goes to. All I know, where I have looked out and noticed, is that we take generally from thirty-five to forty thousand bales of cotton out of Mobile, of which I am sure not more than two or three thousand bales go to New Orleans, via Meridian. I say I am sure. I am not sure, but I would estimate it is not more than that.

A. I think a considerable amount went by rail to the eastern cities from here. I don't know how much last year, but in past years I have looked at it, and I have found usually from thirty-five to forty thousand bales were shipped out of Mobile. Whether it went to the northern cities or not, I can't tell, because our records don't show; but I think the shipments from Mobile by the Mobile & Ohio.

Q. Last season the Mobile & Ohio took only two or three thousand?

A. No sir; I don't think the Mobile & Ohio would have fallen off from thirty-five to forty thousand bales to as low as two or three thousand; but what it is I don't know. We have not made up the statistics, and they have not come under my eye yet. We don't generally make them up until about this time in the season. I don't understand that this was the amount taken out by the Mobile & Ohio. My impression is that Mr. Depew referred to what the Mobile & Ohio took for New Orleans, and not to what it took out of Mobile. We don't take much for New Orleans. We take very little.

Q. But you do take it over your main line to eastern points?

A. Yes sir; some goes to eastern points, and some may go to interior factories. I don't know where it goes to. All I know, where I have looked out and noticed, is that we take generally from thirty-five to forty thousand bales of cotton out of Mobile, of which I am sure not more than two or three thousand bales go to New Orleans, via Meridian. I say I am sure. I am not sure, but I would estimate it is not more than that.

T. G. Bush, of the Mobile Chamber of Commerce, appeared before the Commission and was duly sworn.

The Witness. I will read our memorial, which is very short, and then make a short statement. (The witness then read the memorial of the Mobile Chamber of Commerce.) I would simply state, Mr. Chairman, very briefly, that the Mobile Chamber of Commerce was induced to take this action by reason of the fact that up to the present time in the history of the commerce of Mobile, since railroads have been bringing through freights to this city, they have universally recognized the rates of water transportation by way of New Orleans down the Mississippi River, coming down the Ohio River and the Mississippi River, and either coming from New Orleans by

water to the City of Mobile, or coming from New Orleans to Mobile by rail. As far as I know, the rates that prevail to-day are the rates that were regulated by the water routes on flour, provisions of all kinds, and grain. That seems to be the rate. For instance, the total cost on a barrel of flour down the Mississippi River to New Orleans is in the neighborhood of 30 cents and about 20 or 25 cents from there here, making a total of 50 or 55 cents. I believe the present rate from St. Louis to-day, all rail to New Orleans, is 82 or 85 cents; about that proportion. The merchants of Mobile have no apprehension whatever as to the course that may be taken in regard to this Law, as they are getting their freights to Mobile at a reasonable rate, having access to all eastern cities and centers by the ocean, and having access to the western cities by the Mississippi River. They apprehend, however, that if in the enforcement of this Law, so far as Mobile is concerned, not knowing whether that would result in the raising of through rates or the lowering of local rates, they were entirely thrown upon water transportation for their goods, so far as the West is concerned, their interests would be endangered by the long time consumed by water transportation. Indeed, merchants who deal heavily in that class of goods would necessarily be compelled to carry unusually large stocks, anticipating their wants. Prices nowadays of articles of that kind are subject to such sudden and violent fluctuations that that would subject the merchants here to very great losses. For instance, I can recall a year only two or three years back, when, from the beginning of the season, as we term it here in the fall, until late in the spring, those heavy articles of western produce were on a continual decline. Our merchants made nothing. They more generally lost on such articles. Then, again, we feel that in this progressive age we ought to be entitled to the privileges of rapid and quick transportation that are accorded all cities by rail in competition with others. It is a matter of fact that our city is unfortunately contiguous to it is concerned. We have to go over a belt of poor barren pine country nearly 100 miles, to reach those markets to which we are accustomed to sell, and to which we distribute our supplies and our merchandise. If we are not in some way enabled, by reason of the geographical position we have, by reason of the blessings under providence and nature we have by our location, to get our goods here at a low rate, we cannot become a distributing center on railroad lines especially. We have our rivers, a system of rivers perhaps unexcelled by any in the Union; and if we are cut off from railway transportation by reason of being unable to compete, we are left entirely to the rivers. Of course we do not know what course the railroads will pursue as to their local tariffs, and therefore we do not know how imperative it will be for us to lay our goods down here at the lowest possible price. We have irregular lines of steamers from New York to this place. The advantage accruing from that has been evident, from the fact that it has produced a considerable reduction in rail rates from New York to Mobile. A line of steamers from here to New York compels a

recognition on the part of railroads of Mobile as a port. This line has been somewhat irregular, and for that reason, and for the reason that there is scarcely a good excuse why a steamship should charge less from New York to Mobile than from New York to New Orleans, it has put its rates considerably below the rates existing by rail. For instance, if we take the first class rate by rail, say 75 cents a hundred, the steamships put their rates at 50 cents. I doubt whether the business was at all lucrative to the steamship line at that price; but from the fact that it was necessary, in many instances, for merchants to delay the shipment of their goods in order to avail themselves of the opportunity of patronizing this line, it was necessary for them to offer extra inducements. However, if it was a regular line, with a steamer running once a week from New York to Mobile, it would have compelled a reduction of rates by rail on all lines running into Mobile. We then simply, in substance, ask, believing that the letter of the fourth clause of this bill means there are some places that, at the discretion of this Commission, can be omitted, and can have these privileges that they naturally enjoy, we feel that we are not transgressing propriety to ask of you that Mobile shall be numbered among those places.

By *Commissioner Bragg*:

Q. What is the time by steamship from here to New York?

A. It is about seven or eight days on an average.

Q. What is the time from New Orleans?

A. About the same. They sometimes make the time, I think, in six days. They have faster steamers there; but the same steamer and the same speed, I presume, would make about the same time from here as from New Orleans; not much difference.

Q. Is it or not a fact that the City of Mobile has subscribed largely to build up these railroads in the interior?

A. I think it did, sir.

Q. The Mobile & Ohio?

A. Yes sir.

Q. The Mobile & Montgomery?

A. Yes sir.

Q. And the Mobile & New Orleans?

A. I don't think they subscribed anything to the Mobile & New Orleans. The losses were very great, of course, to the original subscribers. The difficulties that arose during the war put the roads into bankruptcy, and they changed hands and ownership, and the original owners, of course, lost their stock.

Q. All these roads down here did go through bankruptcy, did they not?

A. Yes sir, all of them.

Q. I mean consequent upon the war?

A. Yes sir.

By the *Chairman*:

Q. Are you interested in any of the railroad property terminating here?

A. No sir; I am interested and connected with the Mobile & Birmingham Road we are trying to build from here to Birmingham. My interest is commercial. I am a merchant in Mobile.

Samuel Brown appeared before the Commission and was duly sworn.

The Chairman: You may make your own statement.

The Witness. Gentlemen, I am simply here as a member of a committee appointed by the Chamber of Commerce—with Mr. Bush. Mr. Bush has fully represented the ideas I am here to represent. I approve the ideas of Mr. Bush as presented. I don't know that I have anything further to say.

By the Chairman:

Q. You understand the facts as stated by him to be correctly stated, do you?

A. Yes sir.

Q. And that is all you care to say about it?

A. Yes sir.

Q. What is your business?

A. Bagging, ties, grain and naval stores.

A. Proskauer appeared before the Commission and said:

I have a memorial to offer on the part of the Mobile Cotton Exchange.

The Chairman. We had expected and desired, if we could do so, to close the evidence in support of the petitions, before we took up any in opposition. I understand that the evidence now offered tends to the defeat of the petition. That being the case I would inquire, before taking the testimony of this witness, if there are other witnesses here that parties desire to examine in support of the petitions.

Mr. Proskauer. The Mobile Cotton Exchange does not desire to offer any evidence. It is perfectly satisfied with offering to your honorable body the resolutions adopted by the Exchange.

The Chairman. But you wish to put the memorial upon our record.

Mr. Proskauer. Certainly, and only with a view to stating this: If the question is upon relieving the City of Mobile and the Port of Mobile, from the operations of section 4 of the Act we, certainly were under a misapprehension. The Mobile Cotton Exchange understood that the suspension of section 4 was asked along the whole line of railroads leading into and from Mobile. It is against this proposition that this resolution is presented to you. If the Commission desire to have evidence, we will be able to present it.

The Chairman. You will of course exercise your own judgment as to the bringing forward of evidence. You can do that hereafter.

O. R. Hundley of Huntsville, Alabama, appeared before the Commission and said:

I desire to present a memorial from a portion of the State. I do not appear as a witness.

The Chairman. Is it from some organized body?

Mr. Hundley. No sir; only a meeting of citizens from one of the towns in the northern portion of the State, bearing upon this question and upon that side of the question which you called attention to. If it is the desire of the Commission that I should be sworn, I will do so with pleasure.

The Chairman. You may be sworn. You may say as little as you please, in addition to what the paper contains, but we want to know

that in your opinion, such facts as you bring forward here, whatever may be their form, are true.

Mr. Hundley was then duly sworn.

The Chairman. State what your paper is.

The Witness. There was a public meeting called by the citizens of Huntsville, Alabama, in the northern portion of the State, on last Monday, to express their views and their ideas in reference to the question of the suspension of the fourth section of the Interstate Commerce Bill. At that meeting, the following preamble and resolution was adopted by a unanimous vote, and as Chairman of the Committee which is in attendance, I present the paper to the Commission. I will read it. (Reads paper.) In addition to that, Mr. Chairman, I wish to state that the \$40,000 alluded to here which was subscribed to secure a line connecting with the Nashville, Chattanooga & St. Louis Railroad was not a stock subscription, but a direct donation, not expecting any stock, and no stock is to be issued for it. It was a gift to that road to build its line of road, in order that we might have a competing line. In addition to that, as stated in this resolution, we have subscribed recently within the past two or three months \$50,000 to get a road from Birmingham to Huntsville, giving us an outlet in that direction. That road is now being constructed. Our citizens believe, by getting these roads in there, we will get competitive rates to long distances, and have subscribed liberally of their means to secure it. This resolution was adopted at this meeting unanimously. I think I can state that the sentiment of our people in that city and in that county and country contiguous thereto is undivided, and that there is but one sentiment in regard to that section, and that is that they would be glad if it could be suspended indefinitely. It would be to their interest. We have in our town several industries there that are growing up. We have a cotton factory there which makes cotton yarn only. It does not manufacture cloth. They sell these yarns mostly to Philadelphia. They have the largest sale in Philadelphia of anywhere else, and, as a matter of course, they desire to get cheap transportation through to Philadelphia; as cheap as possible. Huntsville is not on the river. It is ten miles from the river, and we have no river connection.

By Commissioner Bragg:

Q. Is Huntsville conceded competitive rates at this time?

A. No sir; not that I know of.

Q. Has it ever been conceded competitive rates that you know of or ever heard of?

A. No sir; it never has. That is the reason we have subscribed this money; in order to secure it.

Q. Have you taken a bond from these railroad companies, that they will give you competitive rates when they build that road?

A. No sir; we have taken no bond.

Commissioner Bragg. I advise you to do that. (Laughter.)

J. P. Walker of Meridian, Mississippi, appeared before the Commission and said:

I desire to present this petition, which is al-

ready sworn to. It is a short paper, and is from the Board of Trade of the City of Meridian. (Reads petition.) If the Commission desire to ask any questions touching the matter set forth in that petition, they may do so of myself or the gentleman who is with me from that city. Perhaps the petition is sufficiently explicit.

By **Commissioner Bragg**:

Q. You have competitive rates at Meridian, have you not?

A. That is true; yes sir.

Q. And have had for how many years?

A. Eight or ten years.

Q. I wish you would state to the Commission what determines those competitive rates and why you get them.

A. We have competing lines of railroad touching at that point.

Q. What lines?

A. We have five lines of railroad touching there, the Mobile & Ohio, the East Tennessee, Virginia & Georgia, the Alabama & Great Southern, the New Orleans & Northeastern, and the Vicksburg & Meridian.

By **Mr. Stahlman**:

Q. Is it not true that you are close to the Mississippi River by one of the routes from the West, and the traffic coming from the river is diverted to you?

A. I don't know that I exactly understand you.

Q. You are close to the Mississippi River in connection with the Vicksburg & Meridian Road?

A. One hundred and forty miles. Meridian is the eastern terminus of the Vicksburg & Meridian Railroad.

J. R. Satterfield, of the Selma, Alabama, Board of Trade, appeared before the Commission and said:

The paper which I wish to present is sworn to and I do not propose to testify to anything. It is not necessary for me to be sworn. (Reads paper.) We have attached to the petition a statement which is sworn to by Messrs. Stewart & Maas; and as it is in Mr. Stewart's handwriting I will ask him to come forward and read it, and he may wish to state something outside of the paper as a witness.

H. H. Stewart, of Selma, Alabama, appeared before the Commission and was duly sworn.

The Witness. We did not know we would have the honor of appearing before you personally, not knowing altogether the form of taking evidence excepting by petition. The gentleman associated with me, and myself, have sworn to this statement and had it written out. I will read it. (Reads paper.) That, sir, was the testimony that we expected to submit in writing, not knowing we would have the honor to appear before you in person.

By **Commissioner Schoonmaker**:

Q. What is your population?

A. It is about 12,000. We are a small town, but a very large distributing center.

Q. How long have you had the benefit of competitive rates?

A. We have gradually been building up for fifteen years.

INTER 8.

Q. You have water competition there?

A. We have, via the Alabama River, affected somewhat by the Mississippi on the west of us.

Q. Is it on account of your water competition that you have competitive rates, or because the city is favored as a distributing center?

A. It is on account of water and rail competition, both. We have two or three lines competing for our freights.

Q. And your people are all anxious to have your competitive rates continued, are they not?

A. Yes sir.

Q. And you oppose the allowance of competitive rates to the cities or towns near you?

A. There are no cities very near us but what already have the competitive rates.

Q. They all have competitive rates?

A. Yes sir.

By **Commissioner Bragg**:

Q. The Alabama River is navigable all the way to Selma?

A. Yes sir.

Q. Selma is 110 miles south of Montgomery by river?

A. Yes sir, about that. I don't know the distance.

Q. You have one line there to the east, the East Tennessee, Virginia & Georgia?

A. We have two.

Q. I am asking if you have that line?

A. Yes sir.

A. It goes to the east by way of Norfolk, Virginia?

A. Yes sir.

Q. Then you have the Western Railroad, of Alabama, that carries you to the ocean by way of Savannah and Charleston?

A. Yes sir.

Q. You have the Selma & Meridian Railroad extending to Meridian and the Mississippi River at Vicksburg?

A. Yes sir. We have those two systems now.

Q. And the Mobile & New Orleans by the same route, that is, by the Selma & Meridian Railroad from Meridian, and then the Queen & Crescent to New Orleans?

A. Known as the Northeastern, I believe.

Q. And then the Mobile & Ohio Railroad to Mobile?

A. Yes sir; we intersect with the Mobile & Ohio.

Commissioner Bragg: I ask you these questions because your petition does not state these facts.

By **Mr. Stahlman**:

Q. On business from the west you have a line down the Mississippi River via Vicksburg, the Vicksburg & Meridian, and the Alabama Central.

A. We frequently get freight that way.

Q. Then you have a line via the Mobile & Ohio, and Lauderdale and the Alabama Central?

A. Yes sir.

Q. Then you have a line via the Louisville & Nashville, and Calera?

A. Yes sir.

Q. And one via the Cincinnati, New Orleans & Texas Pacific and Auburn, have you not?

A. Yes sir.

Q. So that you have practically four competing rail lines, with one rail and water line from the west?

A. I think that is so sir.

Q. Besides the competition by the river up and down the Alabama?

A. Yes sir.

A. C. Danner appeared before the Commission and was duly sworn.

The **Witness**: I have three papers that I wish to lay before you. I have been authorized to do so by the proper parties connected with them, and I think they will give you the opinion of the three trades they relate to. One is the sawmill trade of Mobile, one is the shingle trade of Mobile, which is quite a large industry here, and the other is the coal trade. I will not take up your time in reading them. They all amount to substantially the same thing. They ask that the fourth section be suspended permanently. It is to their interest that it should be so. I would like to say for myself that I am largely interested in shipping lumber, shingles, and coal. As to coal, I believe I am the largest wholesaler on the seaboard in the Gulf. It is a new business here, and we come in competition in handling it with coal from the east and also with coal from Pittsburgh by the Mississippi River. I handle coal in New Orleans, and have received there this year about 15,000 tons of Alabama coal. It is an entirely new business. The railroad has aided us in building it up. They give us a lower rate to New Orleans than they give to some points nearer the mines. We will not be able to remain in New Orleans in the business of Alabama coal if the rate is put up any at all. In fact, it is almost necessary now for us to have a lower rate on account of the cheap transportation down the Mississippi River. I am handling coal in Jacksonville, Florida. They give us a lower rate there than they do other points nearer. We come in competition there with the Cumberland coal and with the anthracite coal from Philadelphia, Pennsylvania and eastern ports. If our rate to Jacksonville is raised, we will have to come out of there. We can't do the business. As to lumber, we are shipping now lumber, and have been shipping lumber by rail—dressed lumber—to points north of the Ohio. Since the operation of this law, all that business has stopped so far as I know and so far as any of us know. We have not been able to ship a car load. The same thing is practically true of shingles. We have a large business from here in shingles. There are eight shingle mills making shingles in and around Mobile. It is a new business and the trade is nearly all north of the Ohio River, very largely. It has all been stopped practically. While we don't know what will be the effect of putting this clause into operation, and don't pretend to know—we were doing very well, we were building up our business and increasing it, and now it is stopped as far as north of the Ohio River is concerned.

By **Mr. Stahlman**:

Q. You do not understand that the stoppage of that business is due to any advance of rates on the part of roads south of the Ohio?

A. No sir; we have the same rates to Cincinnati.

By **Commissioner Schoonmaker**:

Q. How large a body of men have you employed in mining?

A. I sell for several different mines. There are some very large mines up there. I don't know how many men they employ. The Pratt Coal Company I represent here mine in the neighborhood of 3,000 tons a day now. It is one of the largest concerns in the world, I believe, in that line.

W. G. Cochrane, of Tuscaloosa, Alabama, appeared before the Commission and was duly sworn.

The **Chairman**. You may make your statement.

The **Witness**. I come on behalf of Tuscaloosa, Alabama. The City of Tuscaloosa is situated on the Warrior River. They have an idea, and in fact it is, I believe, allowed by the Law, that certain benefits shall accrue to cities and places which have water transportation in competition with the rail. I believe it is left at the option of this Commission to grant that. In pursuance of that idea the citizens of Tuscaloosa held a meeting, the Board of Trade held a meeting, and the Board of Aldermen held a meeting, and appointed a committee consisting of myself, Mr. D. A. Sercy and Mr. T. H. Hayes, who are here with me to meet this Commission and present to you this short petition. This petition is signed by all the citizens and business men of Tuscaloosa. It is rather an unusual document. There are a great many signatures, but the paper is very short and I will read it. (Reads petition.) This paper is signed by the mayor of the city, by the entire Board of Aldermen, and by about one hundred or so citizens, merchants and business men. They also instructed us to ask this Commission that they would name Tuscaloosa among the cities and points mentioned in the order given at Washington.

By **Commissioner Schoonmaker**:

Q. What road are you on?

A. The Alabama & Great Southern, the Queen & Crescent. We have only one road, but we have a river. Our river is not open all the year, but very nearly all the year; long enough to be of great service to us. Mr. Sercy, who is a very large merchant there, is here, and I would like him to make a statement before this body.

Q. How large is your town?

A. We are on both sides of the Warrior River. We estimate the corporate limits, which is small, to be about 5,000 people. We have the State University, the State Asylum, several large mills and a good many other enterprises there, and we are right at this time going into other large enterprises. We want to be placed in a position where we can claim competitive rates by means of our water. We can force them to rates for seven months in the year, but if we are on this list we can probably get the rates the whole year.

Q. Suppose other towns of your size want the same rates; you could get along, could you not?

A. Yes sir.

Q. I do not mean competitive rates, but the

same rates; I refer to other towns that are not competitive centers.

A. No sir. We have been laboring under some disadvantages already. We have a neighbor or two that have two or three railroads very close, and have some advantage over us. We are projecting two other roads, and those roads will be built, doubtless; but it will be some little time. We have this river. Before these roads were built there at all Tuscaloosa did a large trade. It was once the capital of the State, and all our cotton—we have rich bottoms—was carried on the river and all our merchandise was carried back, but owing to the fact that it took so much goods to run through from the latter part of June to the first of October, it was found necessary to get a railroad there to have it come quicker. It doesn't take so much stock, and the railroads are a great advantage, if you can keep them within due bounds.

The Chairman. It may be proper to state to you that the road upon which you are has not asked the Commission to make your rates lower than those to the local points. We have no application before us that would permit us to do what you desire.

The Witness. We merely ask this in this petition: we ask that we may be put upon the list; that this road may, if it should see proper to do so, give us these rates. It claims it cannot give us these rates. We are really on a navigable stream. We are at a point that has always been known as the head of navigation. It is a very important matter to us, and if it is understood Tuscaloosa is in competition with rail by its water way it will place us in a position to help us.

The Chairman. But we have no general power to go through the country and equalize matters, and to make the railroads give certain rates to certain points. We do not fix competitive rates. We do not determine what they shall be. On the application of any particular road that asks permission to have its case made an exception under the Law, at a particular point, we have a right to inquire into it and see whether it is reasonable that there should be such an exception; but they have not asked for any exception at your point at all, and we have nothing before us.

The Witness. Couldn't that town ask for it itself? Would that be outside of the record?

Commissioner Morrison. Not unless it owns the railroad.

The Witness. It doesn't own the railroad, but it is on the railroad.

Commissioner Walker. That is outside of our jurisdiction.

The Chairman. Yes; it would be entirely outside of our jurisdiction, even if we thought it would be just. We cannot interfere when there is no special application before us.

The Witness. We were not aware of that. We took the Law to mean that a point situated as ours is—it would place us entirely in the power of the road; we would have to go to the road and ask it to ask you.

The Chairman. The Law supposes they will so grade their rates as to make them just between all the points on their line, in conformity to the Law itself, unless they think they are unable to do it. If they do think

INTER 8.

they are unable to do it, and there are reasons why an exception should be made at any particular point, then the Law supposes they will come before us and make the application. They have not done it in your case at all. They make no such application, and therefore we suppose they expect to apply the Law strictly according to its terms. They have a perfect right to do that if they see fit.

The Witness. It may be we ought to have met you at New Orleans. That road, I believe, will be before you there.

The Chairman. I mention this fact because, obviously, as matters stand now, we have no jurisdiction to do what you would like to have us do.

Commissioner Walker. I think they are coming to Memphis.

The Witness. I think it is probable they will meet you hereafter. In any case, I would like my application to go on file and be considered.

The Chairman. It shall go on file. This road, I imagine, will come before us. They are not here today, as far as I know.

The Witness. If the road should name points at which they wanted to have competitive rates allowed, and leave out our point, would there be no way by which this Commission could reach that?

The Chairman. I do not know whether we could compel them to ask permission to make an exception. Up to this time they have not asked an exception.

Commissioner Walker. In point of fact they do not ask for any relief except the Vicksburg & New Orleans.

Commissioner Bragg. The Law takes care of people where the railroads do not.

The Chairman. Your papers will go on file, and if there should be any application hereafter, it shall be considered in connection with any such subsequent application.

The Witness. If any question should arise as to the traffic and the water way, we would like to have an opportunity to make proof, if it should be necessary.

C. W. Gibson appeared before the Commission and said:

As Chairman of the Committee on Transportation of the Aberdeen Board of Trade of Aberdeen, Mississippi, I am directed to present this petition to your honorable body. (Reads petition.) It is not necessary for us to elaborate upon this petition. We have tried to make it short and to the point. What we want of the railroads is a tariff for revenue so adjusted as to meet competition. (Laughter.) We respectfully ask a continuance of our hearing at New Orleans, where we will present a petition bearing especially upon the Illinois Central Railroad Company. I presume they will bring evidence there.

The Chairman. You can appear there or anywhere else in support of your petition.

Samuel Brunaugh of Birmingham, Alabama, appeared before the Commission and said:

At a meeting of the merchants of the City of Birmingham, Alabama, the following preamble and resolutions were adopted: (Pre-

amble and resolutions read.) Birmingham is situated at the crossing of a number of railroads, and more are being built every day. It is in fact going to be in a short time the center of a considerable railway system and we haven't any river near us to enable us to get cheap freights. The railroads have always taken neat care of us in the past, and all we ask is to let them do it again.

By **Mr. Stahlman**:

Q. What do you mean by saying the railroads have taken neat care of you?

A. They have always enabled us to sell goods in competition with the points we meet in the territory tributary to Birmingham.

Q. You have had rates equal to those?

A. Yes sir; which have enabled us to meet them in an equal way.

Q. How many railroads have you?

A. We are at the crossing of three railroads, not counting some of the branch roads; but of the trunk lines we are at the crossing of three.

By **Commissioner Bragg**:

Q. What lines are they?

A. The L. & N., the Cincinnati Southern otherwise known as the Alabama Southern, and then we have the Georgia Pacific. We have been the terminus of that road for a number of years.

By **Mr. Stahlman**:

Q. And then the road from Kansas City is being built?

A. It is being built very fast.

Q. Is the Central Railroad of Georgia coming to Birmingham?

A. It is supposed to come there; in fact it is building there now.

Q. You have three lines now?

A. Three trunk lines now.

Q. In six different directions?

A. Yes sir; and they all come into one union depot.

I. J. Pooley of Brewton, Alabama, appeared before the Commission and said:

We are not so fortunately situated as a good many of those that have been speaking before you. We are on one railroad only. We have no water navigation for our lumber. We are lumber men. We are geographically situated far from the markets that use our products and believe the long haul would be injurious to our business. This memorial has been signed by all of our lumber men and all of our merchants except one firm. (Reads memorial.)

By the **Chairman**:

Q. What road are you on?

A. We are on the Louisville & Nashville Road. We have a tariff of rates from the C. B. & Q. that I thought I had brought with me.

By **Commissioner Walker**:

Q. Your trouble is in getting rates north of the Ohio River?

A. Yes sir; we have had an advance of from five to seven cents at many points we have been shipping to north of the Ohio River.

Daniel Smith appeared before the Commission and having been duly sworn was examined as follows:

By the **Chairman**:

Q. Where do you reside?

A. I reside three miles from the city; Mobile is my post office. As president of the Gardeners Association of this county it has been made my duty to present this memorial or petition which I will read. I shall not have much to say afterwards. (Reads petition.) We have been induced to present this petition from the fact that as stated here we find the enforcement of that section will destroy utterly the business in which we are now engaged—and which is carried on to a considerable extent.

By **Commissioner Schoonmaker**:

Q. What are your products?

A. Vegetables principally.

By **Commissioner Walker**:

Q. Where do you ship them?

A. Chicago, Indianapolis, St. Louis, Cincinnati and Cleveland.

Q. You ship from Mobile?

A. Yes sir.

Q. How does this section affect your trade?

A. We fear that by the enforcement of it, the further we go the more freight we will have to pay. That is exactly why we are afraid of it.

By the **Chairman**:

Q. Is there competition in this particular business up the line of the road?

A. Yes sir; there is later on in the season; but at this particular season of the year there is not so much. We have competition from Florida and from Louisiana.

Q. I mean on the line of the road on which you ship?

A. On the line of the road at this particular time there is not, but in a week or two weeks from now there will be, as the season advances in the north.

By **Commissioner Bragg**:

Q. Early spring vegetables are what you are talking about?

A. Yes sir; such as we have to get to market before the 15th of June or we have no market at all. What is left on hand at that time is utter loss. We apprehend that the enforcement of this section will make the freight charges against our products amount to about 84 per cent on the gross sales. That is the estimate we make, taking the local points and the distant points. That of course will destroy any business.

Q. What is the aggregate value of the annual shipments of this class of products here?

A. It approximates now about half a million dollars from this point.

Q. It has been in that neighborhood for several years, has it not?

A. Yes sir; it has been for the last three or four years; but the last three years have not been profitable years, and that is the reason it has remained about stationary. This year we think it will run somewhat ahead of the last three years, which have been very backward, very unfortunate years for us. We are led to this conclusion for the further reason that this industry gives a support to not less than six thousand persons, and nine tenths of them are today unable to support themselves two weeks if deprived of their present employment. I know I am within the bounds of the facts when I say that nine tenths of them are now

unable to support themselves two weeks if they were deprived of the present employment they have.

By *Commissioner Walker*:

Q. What road does this freight go over; the Mobile & Ohio?

A. We ship on the Louisville & Nashville, and on the Mobile & Ohio.

Q. You say you are afraid as it gets up towards Chicago the rates will be increased by the locals?

A. That is what we are afraid of.

Q. Those roads up there have not asked for any suspension of the Law?

A. That is exactly it; we are afraid if the law is enforced against us there the rates will be increased, for instance, in Chicago, the same as they are today—will be higher. They are already as high as we think we can well stand it and live. The freight rate today on a sale made in Cincinnati on today's quotations is 13½ per cent of the gross sales. If it is increased much, of course no business can stand it, in our opinion.

By *Mr. Russell*:

Q. How many car loads a day are you shipping now?

A. I don't know exactly how many car loads are going out from here. I am not shipping many car loads a day.

Q. I inquire about your organization.

A. I think yesterday there went out eight carloads; and a little later on the number will be much larger. I think eight car loads went out.

Q. The Mobile & Ohio has always given you a good rate, has it?

A. Yes sir; we are not complaining much of the rate; only if it gets much higher we will have to complain and quit our business; that is all.

Q. The suspension of the fourth clause for the Louisville & Nashville, and the Mobile & Ohio will give you the Cairo, St. Louis, Louisville and Cincinnati markets?

A. Yes sir, and it would give us Memphis, I suppose. I suppose that suspension would reach all our markets.

Commissioner Walker. Do you claim you want to charge more for truck of this sort from points further north of here than from Mobile?

Mr. Russell. Oh no sir.

Commissioner Walker. Then I don't see what this application has to do with the case.

Mr. Stahlman. The railroads want to apply the same rule to the traffic from here that they would apply to any traffic to and from Mobile.

By *Commissioner Bragg*:

Q. State to the Commission what these vegetables are?

A. I didn't state them particularly, because I supposed everybody knew what vegetables were.

Q. Different kinds of vegetables grow in different parts of the country.

A. I will state what I mean. I mean cabbages, potatoes, beans, peas and onions. I might mention several others, but I think that is about enough to give an idea of what I mean't by vegetables.

Q. You mean strawberries, I suppose.

INTER S.

A. I don't mean strawberries when I say vegetables.

By *Commissioner Walker*:

Q. Can those things go by water?

A. They go by rail altogether. We can't ship them by water.

By *Mr. Stahlman*:

Q. You have said you cannot stand any higher rates than you are paying. That is true, is it?

A. I think that is very true. We couldn't stand much higher and live.

Q. And it is a large industry that has been built up within the last few years?

A. Yes sir.

Q. And the railroads have done a good deal to help you to build it up?

A. I think they have. We feel satisfied.

Q. They have put on fast trains?

A. Yes sir.

Q. And refrigerator cars?

A. Yes sir; we are very well satisfied.

Q. Everything is moving on well?

A. Yes sir. Our complaint is they don't give us as much time as we want, but they are improving.

Q. Your trouble arises from the apprehension that the law will disarrange the rates?

A. Yes sir.

Q. Some of the rates have been withdrawn from points north of the river?

A. Yes sir; and we are afraid others may be.

Q. As far as you know, the lines south of the river have not withdrawn or advanced any rate?

A. Not that I am aware of. I think to Memphis they remain the same. As we understand it, the suspension is not permanent, and we are afraid when the present suspension expires then we may suffer.

Commissioner Walker. I think you have a wrong idea about the Law.

The *Witness*. If we had known it we would have been much easier.

The *Chairman*. I should like to ask Mr. Stahlman a question right here, under oath.

Mr. E. B. Stahlman was duly sworn.

The *Chairman*. Does your road charge more, upon such products as this gentlemen sends north to Cairo and markets beyond, from local stations than it does from Mobile?

Mr. Stahlman. I am not prepared to answer that. I will get Mr. Culp to answer it for me.

The *Chairman*. Mr. Culp was sworn the other day.

J. M. Culp, who had been previously sworn, was further examined as follows:

By the *Chairman*:

Q. Does your road charge more upon these products from local stations than it does from Mobile?

A. It has done so in the past.

Q. Does it now?

A. I believe at present the rates are higher at points north of Mobile.

Q. Do not those rates, according to the testimony of this witness, operate as rates that are absolutely prohibitory upon the business north of here?

A. No sir; I think not.

Q. Is not this gentleman mistaken in what

he says as to not being able to afford higher rates if the men north of here can afford higher rates against him?

A. Perhaps not. It may cost him more money to raise his crops than it does north of here.

Q. Do you think he cannot raise vegetables as cheap here as at stations north?

A. Possibly not. Rates from Mobile to points this side of distant markets would be higher than to the distant markets.

Q. What I want to know is whether the rates upon the same articles which he sends forward, and which he says will not bear any higher rates, are in point of fact higher from the local stations north of here?

A. I can and will tomorrow get the rates and let you know exactly. I know in the past they have been higher, and I think they are at present.

The **Chairman**. What I want to know is whether the rates that have been made by your road upon market gardening are such rates as are prohibitory; because I judge from this man's evidence they would be.

Mr. Stahlman. If the Chairman will permit me, I will answer under oath what my judgment is concerning it, and what would actuate me in adjusting the rates and in assuming it cost more to produce vegetables near Mobile than it would at an interior point. I would say in the first place that the land upon which the vegetables were raised would cost at least 300 per cent more near Mobile than it would at an interior point 100 miles from Mobile; and the interest on that money is quite a consideration.

Daniel Smith resumed his testimony and said:

I would say in connection with that, by permission, to be successful here we think it necessary to apply and do apply from sixty to seventy-five dollars worth of fertilizer to every acre of ground we cultivate. In this land we think it is necessary, and without it we can't succeed.

By the **Chairman**:

Q. I have no doubt you practice true economy and that it is true economy that you should fertilize your land highly. Are not those fertilizers delivered and spread upon the land here more cheaply than they would be up the road?

A. I am not prepared to answer that.

Q. If you could raise vegetables for the markets of Louisville, St. Louis, Cincinnati, and Chicago more cheaply up the road twenty or fifty miles than you can here, would you not be likely to go there rather than raise them here?

A. I couldn't do it, because my interests are here in such a shape that I couldn't transfer them without a considerable loss, more loss than the difference in the cultivation.

Q. People are very apt to go where they can do business most economically and successfully?

A. Sometimes they do; but sometimes they can't do exactly what they would like to do. I am so situated I couldn't pull up and leave if I wanted to. I am attending to some business that I can't leave or transfer.

Q. Is it your opinion that this business you carry on now can be carried on more profitably

at the same rates at some station up the road than here?

A. I am not prepared to answer that question. We base our calculations, or our fears are based somewhat, upon the fact that on a short haul and a long haul as compared the long haul is the one we are enjoying now; but if the short haul rates are applied, it will result exactly as I say: that about 85 per cent of our gross sales would be freight.

Q. I wanted to see how it would operate in case of a man in your business with whom a short haul was the rule?

A. I don't know how it is applied from Greenville on, but from here to Greenville on a sale made today at the quotations in Cincinnati it would be 15½ per cent of the gross sales at Greenville. Cincinnati is five and a half times as far from Mobile as Greenville, and if it was applied as we are afraid it might be under a strict construction of that section, to Cincinnati, we would there pay five and a half times as much freight as we now pay, or as we pay to Greenville.

By **Commissioner Walker**.

Q. Have the railroad officers said to you that they proposed to put in force any such construction as that?

A. No sir; they have not said so.

Commissioner Bragg. I don't think they ever will.

The **Witness**. I hope they never will.

Commissioner Bragg. I don't think you need worry about that. Cincinnati is a competitive point, and so is every other point.

The **Witness**. I am in hopes they never will. I am not afraid of the railroads unless they are forced to it.

Commissioner Walker. There is nothing that forces them.

By **Commissioner Schoonmaker**:

Q. Were you asked to appear here?

A. Yes sir; my associates requested me to come and present that petition.

Q. Were you requested by any railroad people to come?

A. No sir; I come simply in the interest of our business.

Mr. Stahlman. We never apply any rule calculated to hurt anybody.

The **Witness**. I am not afraid of the railroads. We are none of us afraid of the railroads unless they are forced to do it. We are afraid this Bill is to force them to do it.

Commissioner Bragg. The Interstate Commerce Law does not come within 40,000 miles of it.

The **Witness**. I am very glad to hear it. I will report that to my association.

D. G. Dunklin of Greenville, Ala., appeared before the Commission, and having been duly sworn, said:

I have here a petition from the merchants of the City of Greenville, Ala., and locations between Montgomery on the M. & M. division of the L. & N. Road 135 miles north and about 43 miles south of Montgomery. We have no competitive rates. We have but the one railroad. It has treated us better than the former management; but our community desire that the Interstate Commerce law be enforced in full. We think you did right in suspending it for

90 days for a chance to consider; but we think the Law that was enacted by a wise Congress has certainly a very able Commission, and we desire that it be enforced. That is all we have to say. It is all embodied in our petition. I was authorized to present that petition.

By Mr. Stahlman:

Q. You live on the line of the Louisville & Nashville Road?

A. Yes sir; the M. & M. division.

Q. You say the present management is treating you a good deal better than the former management?

A. It is so stated in the petition.

Q. They have reduced your rates?

A. Yes sir.

Q. You have no special complaints against the road?

A. We have no special complaints against the road. We had a very heavy lawsuit against the former management, which this company compromised when they bought out the franchise.

Q. Your rates compare favorably with the rates of other stations on that line?

A. I couldn't say. We have some complaints. We think in some things it is rather heavy. I was just told by the gentleman who was on the stand before me, so far as shipping vegetables was concerned, it was absolutely prohibitory.

Q. Do you ship any vegetables to your place?

A. I don't; but he remarked to me he shipped some today or yesterday and the freight to Greenville was prohibitory; he couldn't think of shipping there again. Of course we understand that we are not a competitive point; but we claim that we are the largest shipping point from Mobile to Montgomery. We ship from 18,000 to 22,000 bales of cotton annually. We have a large trade there.

Q. There is no town adjacent to you on the line that has any advantages over you?

A. Not that I am aware of.

Q. Where do you ship the cotton now?

A. We formerly shipped to Mobile, but it goes the other way now and your road gets the advantage.

Q. Couldn't our road get the advantage if it came to Mobile?

A. Yes sir, it would; but we can't afford it. Formerly I shipped myself from twelve to fifteen hundred bales of cotton to Mobile. In the last six years I have shipped ten bales.

Q. Where do you ship now?

A. We sell it there. We have buyers from Boston, from Fall River and all those points. They buy our cotton at home. We ship but very little cotton. There are some discriminations of course. We will take for instance sugar, molasses and rice from New Orleans. We pay 46 cents. They frequently ship it around from Meridian, and it don't make any difference which way it goes, we get it at the same rate. They ship it up the Mississippi and around and we get it at the same rate, 46 cents a hundred pounds. Montgomery, 44 miles further, gets it for 24 cents.

Q. What is sugar worth in New Orleans?

A. From 4½ to 5½ cents.

Q. What do you sell it at at Greenville?

A. 7½ and 8 cents for the best.

Q. It costs you five cents delivered at Greenville, and you charge 2½ cents profit?

A. No sir; we charge 1 and 1½ cents profit. We are only 44 miles from Montgomery and we pay nearly twice the freight that they do.

Q. Do you think the Montgomery merchant gets that much margin on his sales?

A. I am not aware how much margin.

Q. Do you think the Mobile merchant does?

A. We frequently buy in Mobile. We usually buy in New Orleans. We buy our bacon and corn and everything of that sort.

Q. Do you buy your grain from the west?

A. Yes sir.

Q. And flour?

A. Yes sir.

Q. What is the rate on flour from the point you buy?

A. It has been 78 cents.

Q. What point?

A. We have been buying from St. Louis and some in Illinois.

Q. At what profit do you sell the flour?

A. From 50 to 75 cents a barrel. We sell it for 25 cents for cash.

Q. Don't you think the Mobile and Montgomery merchants you are complaining of would be glad to have 15 or 20 cents profit per barrel on flour?

A. We are not complaining of the Montgomery merchants.

Q. You want the Montgomery rates as I understand?

A. We think there is too great a discrepancy. We think it is a little too great. We are only 44 miles from Montgomery and our rates are nearly double. At the same time, they would take freight clear through to Michigan for the same rate that they would to Greenville. I think the rate from New Orleans to Atlanta—certainly Atlanta is a very great railroad center—I think they charge 82 cents, and I think to Chattanooga they charge 21 cents.

Q. There are three lines from New Orleans to Atlanta?

A. Yes sir.

Q. And four rail lines and half a dozen steamboat lines at New Orleans?

A. We have shipped frequently our goods by way of Mobile from Baltimore, New York and Boston. We had a transaction last year that was something I couldn't figure out exactly. I wanted very nearly a car of barbed wire for myself and my neighbors. I went to three points, St. Louis, Cincinnati and Louisville, Kentucky, for prices and the rate of freight to Montgomery and the rate of freight from either of those points to Greenville. I got those rates and it was to my interest to buy the barbed wire from Belknap of Louisville.

Q. Still your rates are lower now than they were before we got possession of the road?

A. Yes sir.

Q. And the road is in better condition?

A. Yes sir. Let me get through. The route from Louisville to Greenville is a continuous line without any change. I shipped that barbed wire, about 16,000 pounds I think, to Montgomery and reshipped it and saved I think thirteen or fourteen dollars. I would like for some gentleman to tell me why that road didn't bring that freight to me at the same rate, without unloading it, without a transfer

and without two bills of lading and two freight rates.

Mr. Stahlman. I will say under oath, if necessary, that that was simply a clerical error. I want to state what I state under oath: that in the multiplicity of business, the great volume of business the Louisville & Nashville does, it cannot always be correct in everything.

The Chairman. Do you mean that such a thing could not happen in the regular course of your business according to the regular established rates?

Mr. Stahlman. Not without there was an error on the part of some clerk. It don't stand to reason that the Louisville & Nashville Road would fix a rate to Montgomery and exact a rate to Greenville from Louisville or any other point that would enable the shipper to ship to Montgomery, delay the car and then reship to Greenville at a less rate. Louisville & Nashville interest would be clearly to let that car go right through at the rate to Montgomery plus the rate to Greenville.

The Witness. Here is the gentleman now that paid the freight for me.

Mr. W. F. Vandivier. I will state I do not have any recollection of the matter, and I would also state in justice to the Louisville & Nashville Railroad that I would have to agree with Mr. Stahlman in regard to the matter; that it certainly must have been a clerical error, from the fact that I have recently had occasion to examine every phase of the adjustment of freight rates and I have never found such a discrepancy as that. Yet at the same time if Major Dunklin says that that is a fact—I didn't of course know anything about the matter until I heard Major Dunklin relating it here—I would say it was true. At the same time I would agree with Mr. Stahlman it must be a clerical error.

The Witness. You have no recollection of paying the freight?

Mr. Vandivier. I have; but as to the amount of freight and the adjustment of it I could not state. I think I am safe in stating that there are no such rates in effect as would bring about the result referred to by my friend Major Dunklin.

The Witness. I would say that in our memorial we say nothing against our railroads. We are satisfied they are doing the best they can. We have no competition. They do very well, but sometimes we think they might do better. This Law was framed by a wise body of men. They had it under consideration for quite a number of years, and I want to see what effect it will have.

By Commissioner Schoonmaker:

Q. You said you sold your cotton to agents. Is it sold and delivered on the plantation or at some other point?

A. It is sold and delivered in the city. It is cotton I purchase. I raise cotton and purchase.

Q. Is it usually sold on a plantation and delivered at some other point?

A. If I understand the question, it is brought to the city and placed in warehouses.

Q. By the planters?

A. Yes sir. We purchase that cotton in our

business and we sell when we get 50, 60 or 100 bales.

By Commissioner Bragg:

Q. What is the population of Greenville?

A. About 8,000.

Q. How many stores are there?

A. About 30 to 35.

At this point, 8:15 P. M., the Commission adjourned until tomorrow morning at 9 o'clock.

MOBILE, Alabama, April 30, 1887.

The Commission met according to adjournment, all the members being present.

James Bowron appeared before the Commission having been duly affirmed was examined as follows:

By Mr. Albert S. Marks:

Q. With what business are you connected, and in what way?

A. I am the Secretary and Treasurer of the Tennessee Coal, Iron & Railroad Company.

Q. State its properties and where situated.

A. Its properties consist of about 200,000 acres of coal and iron land in the States of Alabama and Tennessee, of some five blast furnaces in operation, two in Alabama and three in Tennessee; five in construction, four in Alabama and one in Tennessee; of nine coal mines in operation in Alabama, producing 8,000 tons of coal per day; seven in Tennessee, producing 2,000 tons of coal per day; besides iron ore mines, foundries, and connecting lines of private railroads incident and necessary for the development and operation of the business.

Q. How long have you been connected with those properties?

A. I have been connected with the company, either under its present organization or with one of the constituent companies which has been merged into it, ever since I came to America, ten years ago.

Q. How much iron are you producing now?

A. We are producing today an average of 500 tons per day of pig iron.

Q. What is the capacity to be when the furnaces are finished?

A. By the end of this year or the middle of next year our daily capacity will be 1,000 tons of pig iron.

Q. How many employees have you?

A. We employ between three and four thousand men at present.

Q. What will your immediate number be?

A. On the completion of the works which are now building we will employ about six thousand men.

Q. I will ask you to state to the Commission, with respect to the manufacture of iron in the Birmingham district where your company is operating, as to how that business started there, under agreements with the railroads touching the carriage of your pig iron. Give the history of it briefly.

A. Ten or twelve years ago the manufacture of coke pig iron was practically nonexistent. There was but a single furnace in operation in Alabama making coke iron, with a product of not exceeding 40 tons per day. Today that industry has developed into a daily output of 600 tons, with furnaces now in construction which will raise it to 1,600 tons per day within the ensuing eight or nine months. The business

has been based upon and exists by the supply of distant markets. There is no local consumption which would justify the existence of any such business.

Q. What is the local consumption?

A. The local consumption of the States of Alabama and Tennessee, in the aggregate, does not exceed 150 tons per day.

Q. (Handing paper to witness.) Look at that paper and say whether it embraces the markets to which you ship your iron North, East and West?

A. Yes sir. I have seen this paper before, and recognize it as a list of the points.

Q. Into how many of the States and Territories are you making shipments?

A. I notice from our order book that last year we shipped iron into thirty-eight different States and Territories.

Q. State to the Commission upon what basis the capital was invested there with the companies.

A. It has been based in each case, where we have constructed furnaces and located mines, upon formal contracts entered into with the railroad companies for periods of years, by which low rates of transportation have been guaranteed to us for these heavy products; we in many cases guaranteeing that we would ship a given quantity, either of coal or iron, so as to insure to them a large, regular and continuous business.

Q. Look at the paper I now hand you and state what has been the increase of the business at Birmingham in the last two or three years.

A. This paper exhibits the tonnage received and forwarded by the Louisville & Nashville Railroad alone, and shows an increase from 38,000 tons in the fiscal year ending June 30, 1878, to 748,000 tons in the fiscal year last ended, and to an approximate amount of about 950,000 tons in the fiscal year which is now elapsing.

Q. That is a statement made by the Louisville & Nashville Railroad?

A. Yes sir; an increase of about twenty-five fold.

Q. I wish you would explain to the Commission what the condition of the import and export transportation was into Alabama and Tennessee from the North; I mean as to the weight and bulk of the freight coming South and the condition of the cars returning.

A. There was then and still is a large surplus of cars coming south loaded over those returning to the north. That statement shows a preponderance in 1878 of 4,000 tons of tonnage received over and above that forwarded. The last fiscal year shows a surplus of 107,000 tons of receipts over those forwarded.

Q. That is at Birmingham. How would that be with reference to the remainder of the State? How much was the per cent, say half a dozen years ago, of the surplus—of the unloaded cars returning north?

A. In tonnage it was probably ranging from 30 to 40 per cent; but in bulk, on account of the goods received from the North being more bulky than those shipped to the North, the volume of cars coming inward, and which would have returned empty but for southern loads, was probably as high as 75 per cent.

Q. State whether the fact that they had the empty cars returning was the inducement for the development of the industry and commerce there in that iron production?

A. Decidedly so. It was made quite a prominent point by railroad men when we were negotiating our contracts for freight with them.

Q. State to the Commission what has happened with respect to your shipments since the passage of the Interstate Commerce Law, and explain to them how it affects the iron producers of the South.

A. Our sales are entirely stopped. We cannot sell anything anywhere. In the last forty days, instead of selling 500 tons of iron per day, we have not been able to sell over an average of 50 tons per day, and the sales we have made have been to points which are reached mainly by water transportation. In other words, instead of making sales almost daily of from 500 to 5,000 tons of round lots for interior cities, the only sales that we have made over 100 tons since the passage of the Interstate Commerce Act have been for New York City, reached, of course, mainly by sea, via Savannah.

Q. I will ask you to state whether or not, under your original contracts with the roads, they have found these markets for you at the rates that they agreed they would accept, and whether your business has been built up in that way.

A. Yes sir; they have in every case adhered to the contracts we have made with them; and inasmuch as our contracts have always embraced clauses giving us the benefit of the most favored customer, and as from time to time the cost of transportation has been reduced, the railroads carrying our products to distant markets have given us the benefit, and have improved upon the original contracts.

Q. I want you to state whether your contract with the railroad was, that, whether they could carry the freight at a profit or not, they were still to carry it?

A. There is no stipulation as to any profit at all.

Q. As your profit went down were they to reduce their rates?

A. That was not the case in the original contracts.

Q. Was it the case in the subsequent contracts?

A. We have made subsequent contracts, by which the rates of transportation upon the iron itself have been made contingent upon the realized profits of the iron, working upon a sliding scale, up and down.

Q. In what quantities as to train loads do you offer the iron to the railroad at Birmingham?

A. Frequently in lots from half a train to a train at a time, making up half a train load of ten cars or twenty cars, or a full train load, in our own furnace yards, so that the switch engine could just take it out, have it billed, and have it shipped right straight off.

Q. How do the rates of transportation to Columbia, Tennessee, as charged by the railroad compare with your through rates beyond to the other points in that State, and so through Kentucky?

A. Of course the local points like Columbia

have rates that would be decidedly higher than to any such competitive points as Louisville, Cincinnati, Chicago or St. Louis.

Q. As to the rates that the railroad chooses to charge to Columbia, that is a matter over which you have no control?

A. None whatever.

Q. Is that true throughout Kentucky, and through the different States of the North that you pass through to reach your markets?

A. Yes sir; our through rates in all cases, so far as I have personal knowledge of local rates, are lower than the local rates to intermediate points.

Q. State whether, in view of the small amount you have named, there is any market in the South for the production of the iron industries of the South?

A. Certainly not. The entire consumption of pig iron in the Southern States would not keep one half of our own works running, let alone those of all the other gentlemen engaged in the business.

Q. You say this paralysis has existed from the time of passage of the Law?

A. Yes sir.

Q. Tell the Commission what it is that the iron men desire for their protection.

A. We want relief in such form as the Commission feels itself able to give. If the maintenance of the fourth section of the Act prohibits the railroads from maintaining the low through rates that we want, then we want the temporary suspension of the fourth section made permanent. If it does not affect the railroads in carrying out the old contracts upon the faith of which we built our works and invested our capital, then we want an authoritative declaration to that effect, so that they may know it and govern themselves in their action toward us accordingly.

Q. As I understand you, all of you are now suffering seriously, and it is not a matter of any consequence whether it is a real or an imaginary trouble.

A. I am sorry to say there is nothing imaginary about it. The trouble as far as we are concerned is very real.

By the Chairman:

Q. Have you with you any of the contracts about which you have spoken?

A. I have not, sir, but I can furnish them. I came here unexpectedly, being away at another point, or would have brought them with me.

Q. Those contracts are in writing, as I understand you?

A. Yes sir.

Q. If you please you may forward them to us as soon as you get home.

A. Do you prefer the originals?

Q. Oh no; if you will give us copies of them that will answer.

A. I will do so.

Q. What capital is invested in these enterprises of which you have spoken?

A. The enterprise under which I serve is an aggregation of six, and the entire capital stock is \$10,000,000, and the bonded debt is \$6,000,000, representing \$16,000,000 of money which is really being used in the business.

Q. Do you mean that \$10,000,000 has been

put in as actual capital in addition to the sum that represents the indebtedness?

A. As far as I am able to judge, I do. Some of the stock, at different times during the entire history of the various companies, has been sold at a discount to persons who have bought it. Against that, however, for a period of many years the money which has been earned in the business has been appropriated to capital account and improvements; and I believe the one will fairly offset the other.

Q. Will you tell us who these parties are that formed the companies; I do not mean the names, but from whence they came, whether they were parties residing in the vicinity, or residing elsewhere; and if so, where?

A. The company which I first served in this country was composed entirely of Englishmen and represented the investments of some two hundred gentlemen from the coal and iron regions of the north of England. That company was the Southern States Coal, Iron & Land Company. The Sewanee Furnace Company was composed of gentlemen resident entirely in Tennessee. The Pratt Coal & Iron Company, or the Pratt Coal & Coke Company as it was originally, was composed chiefly of gentlemen resident in Tennessee and partly in New York. The Ellis Furnace Company represented Alabama, Tennessee and Kentucky capital. The Lynn Iron Works represented Alabama capital. The original parent company into which the others have merged, which was originally the Tennessee Coal & Railroad Company, embraced originally New York capital exclusively, but after several changes, during which time the control of it has passed into Tennessee and out again, it is now owned chiefly in New York.

Q. The operations of this consolidated company, as I understand you, are at Birmingham and vicinity?

A. Birmingham and the vicinity constitute the largest individual point out of several.

Q. About what is the population of Birmingham?

A. I am not a resident of the city and I would not like to do it injustice in the hearing of some of my friends. It was I think about 40,000 at the last census; but if I said it was less than 60,000 they would mob me when I get outside, so I would like to be taken as answering 60,000, with a mental qualification. (Laughter.)

The Chairman. We will see you are protected in that statement.

The Witness. It is fair to say and it is due to Birmingham, I should say this: that the business which Birmingham represents is in no sense identical with its municipal boundaries. For example, one of our own works, our chief works, is outside of the municipal boundary of the city and will involve a population of between ten and fifteen thousand people, which could not be counted at all as part of the city population proper, and still the business is essentially the business of Birmingham.

Q. Do you know the quantity of the coal land owned by this organization?

A. Yes sir; we own about 108,000 acres of coal land.

Q. Can you tell something near what the investment of this company has been, in buildings and machinery?

A. I would say not less than 5,000,000.

Q. Do I understand you to say in your opinion, the sum of \$16,000,000 has been actually invested in the lands, and in the buildings and works of this company?

A. That is my judgment sir.

Q. And its capital represents an actual investment of money to the full extent?

A. Yes sir; I think it does.

Q. Has the stock been very much the subject of sale in the market?

A. Yes sir; it is listed on the New York Stock Exchange, and subject to daily transactions. Last December the stock reached as high a point as 116. To day it is not more than 44 or 45.

Q. When did this decline begin?

A. My statement is open to be misleading, unintentionally so. A readjustment of internal working, in new works and adding both to the bonded debt, and the capital stock took place since it was at 116, and the highest quotation that the stock has had on its present basis is 54½.

Q. When was that?

A. That was about February last.

Q. Since then it has continued to decline?

A. Since then it has continued to decline.

Q. Is there any special cause for the decline?

A. I do not know of any other than the general stagnation of the iron trade, within the past few days and weeks.

By Mr. Marks:

Q. Tell the Commission how many acres of iron ore land your company owns?

A. As I said at the beginning, we own about 200,000 acres of land, of which 108,000 are coal lands and the remainder practically all ore land. We do not buy land unless it is either coal or ore land.

By the Chairman:

Q. You spoke a moment ago of the number of men in your employ. Has the number of men employed by you diminished in consequence of the stagnation of business?

A. We have not yet shut down any department or work, because we believe, we hope and believe no such consequences are going to follow the administration of this Act as will continue to paralyze our business.

Q. Is the fear of the operations of this Act, the sole cause of the stagnation of business?

A. Most emphatically; I believe it to be so.

Q. You express the opinion, do you, that that is the sole cause?

A. I do, most emphatically.

Q. But up to this time you have not dismissed any of your men. You are continuing them in your employ?

A. We have heavy contracts upon our books, which will carry us on for probably ninety days to come.

Q. And you are proceeding in the fulfillment of those contracts?

A. Yes sir.

By Mr. Marks:

Q. I want to ask you with reference to your contracts. Do you have to make them for a long time in advance?

INTER 8.

A. Yes sir; it is necessary to make them so. The largest individual consumers of pig iron are the manufacturers of gas and water pipe. They, in their turn, make their contracts chiefly with municipalities; and as only certain times of the year, especially in the North, are available for laying gas and water pipe, the ground being frozen in the winter, contracts for such work are usually made considerably in advance; and in our company we contract three, six, nine and sometimes twelve months for deliveries of round lots of iron to these pipe makers, and it is necessary for us to be in a position both to guarantee our own price at the furnace and to guarantee the rate of freight.

By the Chairman:

Q. Then you do not accumulate a stock on hand?

A. We could not afford to, in the magnitude of our business.

Q. You do a business upon contracts for performance in the future?

A. Yes sir.

Q. That is the course of your business generally?

A. Yes sir; the value of our pig iron amounting to about \$10,000 per day, we cannot afford to accumulate stock very long.

Q. Has there been, or has there not been, an over production in your line of business through the country in general?

A. Not within the past eighteen months. On the contrary, within the last eighteen months the consumption has been greater, and is greater to day than the production; and the stock of coke made pig iron is diminishing month by month. The stock of iron such as we make west of the Alleghany Mountains is at least sixty to seventy thousand tons less to day than it was six months ago.

Q. Then you expect the demand in the line of your business to keep up; not to diminish but to increase; and the question as I understand from your testimony is whether, in respect to your own business, you are to be crippled by this Act?

A. Yes sir.

Q. And not whether there is, in consequence of an over production anywhere, to be a diminished demand for your productions?

A. I am sufficiently familiar with the business to know that there is no lethargy in the trade, because of over production today; and I am satisfied and know perfectly well that if I could say today, to our customers in St. Louis, Milwaukee, Chicago, Pullman and Detroit that we would deliver iron to them three months or six months from today and fix the prices upon the same freight rates that we have been enjoying for years past, we could sell twenty, thirty or fifty thousand tons of iron inside of twenty days.

Q. Who are your competitors in this business?

A. We have varying competitors in almost every district. Take first the New York and New England district where we deliver. Our chief competitors there are the Anthracite Manufacturers of the Lehigh Valley; and in Philadelphia the Eastern Pennsylvania men and above all the Scotchmen. Take for instance the City of Providence. We have some

large customers in Providence. Our competition with them is exclusively with the Scotch manufacturers who can send iron as ballast in tramp steamers from Glasgow that expect to load back again with grain or anything else they could pick up. Take the Lake District, Buffalo, Cleveland, Chicago and Detroit, which are very important markets to us—the last three more than the first one—and we have to compete with Western New York, Ohio, Western Pennsylvania and the furnaces of the Lake District drawing their ore from Lake Superior by water, and bringing their coke a comparatively short distance from Connellsville. We come down to St. Louis, which is an extremely important market to us, being the distributing point for the west, and we find there furnaces on the spot, drawing their ore in the immediate locality from Pilot Knob, and drawing their supplies of fuel down the Ohio River from Pittsburgh.

Q. You have the coal and iron right together at present?

A. We have.

Q. While locating your work at Birmingham, was it your opinion that the cost of production would probably be less there than almost anywhere else in the country?

A. It was.

Q. Has that been made good by the result of experience?

A. I think it has. I think the extension eleven fold within the past ten years of the business is sufficient proof.

Q. Is it your opinion now, that you manufacture more tonnage than the iron manufacturers of Pennsylvania do?

A. It is.

Q. And of Michigan?

A. If it were not so, we would not be able to pay even the low rates of freight which the railroads charge us and still get there.

Q. And of Missouri; you manufacture more tonnage than they do, in this part of the country?

A. Yes sir.

Q. Is it because of these contracts which you have with the railroad companies for very low rates that you are enabled to deliver the output of your works to the markets you have spoken of, the Ohio market, the Michigan market and the Missouri market, in competition with the works right upon the ground?

A. Yes sir; we couldn't begin to do it if we had no special rates and had to pay local rates.

Q. Is it your opinion that the manufacturers in Pennsylvania, Michigan, Missouri, would regard that as just on the part of the railroad companies; that by reason of these very low rates they should have manufactures laid down at their doors, manufactures that were made at a distant point, but more cheaply than they could make them? Is not the tendency of that to drive them out of the business where they are?

A. I have always supposed that legislation was intended to imply the greatest good to the greatest number, and that whatever might be their opinion on the subject, the consumers of pig iron throughout the North and West, who number fifty for every producer, would hold up their hands and invoke blessings upon the head of the Commission if you enable us to

continue to furnish them with that cheaper pig iron which enters into the foundation of every important manufacturing industry, for the construction of its machinery in every direction.

Q. But are not these advantages which you obtain in your business advantages for which somebody else pays?

A. No sir; I think not; and I will show why I think so, if you will permit me to trespass thus far upon your time. The life of an industrial plant, such as that which is involved in the production of pig iron, is limited. Given that any plant was in existence in the north ten or twelve years ago, its life to-day is ended. Every work which has been established, every modern work in existence and in operation in the North today, has been established in view of the existence of works in the South which could and do produce more cheaply, and has been established taking the risk; and I venture to submit for your consideration whether the subjection of the southern producers to local rates of freight would not be in effect to rival the French system of Octroi, and build up a cordon wall of local protection for each State, which might with equal justice be carried out into each individual county and each civil district, instead of giving the whole inhabitants of the United States the benefit of unrestricted and free competition, one with another.

The **Chairman**. Of course we do not propose to enter into any argument of the question with you. That is not our purpose.

The **Witness**. I did not venture to offer it in that sense.

The **Chairman**. What we want is to draw out from you the reasons upon which you think the railroad companies should be permitted to make rates for the advantage of works where the manufacture is cheaper than it is elsewhere in the country, that will enable those works to compete at the very doors of those other manufacturers that have not the same advantage of very cheap production, but must, nevertheless, contend for existence as against you.

The **Witness**. Will it be necessary for me to offer any further reason than the sanctity of contract upon which we came here?

The **Chairman**. When you submit your contracts we will examine them.

The **Witness**. That shall be done.

By **Mr. Marks**:

Q. State to the Commission whether or not the hay, grain, flour and manufactured goods of the North and West are shipped here, and whether or not those cars in the main were returning empty, and that was the reason why you availed yourselves and could avail yourselves of the cheap rates you did obtain?

A. Yes sir.

Q. Because the bulk of the commerce was in their favor?

A. Yes sir.

Q. Is it not still in their favor?

A. That is so. We never require to ask the Louisville & Nashville Road once in fifty times for a car to load pig iron to an internal point in Illinois, because the Illinois Central cars coming down here with produce can be loaded direct back.

Q. You can load pig iron on any sort of cars?

A. We can load pig iron on any sort of cars. It is the best kind of freight that the railroads can handle.

Q. I will ask you as a question of fact. Is it not simply a question whether the cars shall go back empty or whether they shall go back loaded with pig iron?

A. Decidedly so.

Q. And that is the reason you got those rates?

A. It was, and is still.

By the **Chairman**:

Q. Do you mean that nothing goes back in that direction from this section?

A. I mean there is a surplus of cars coming South more than those which go back loaded.

Q. Is not the tobacco very largely manufactured, in fact mainly manufactured at the North?

A. But after giving credit for all the cars which go back to the North with the southern products, this is still true.

Q. The cotton is very largely sent that way; and is not the fruit business now a very large business from the South?

A. Surely; but permit me to draw this point very especially to your attention: That the southern products are, owing to the climate, simply a season class of freights. There is a time, I frankly admit, for two or three months, when the handling of cotton, the corn, the tobacco, the sugar, and also (for local and domestic use) the coal, in the Southern States brings a pressure upon the railroads for cars that they have great difficulty in meeting; but we give them freight every day in the year.

Q. I understand that; but you spoke in such a way as to lead to the inference that almost nothing went in one direction and a great deal in the other.

A. Practically there would be scarcely anything to go back in the dull summer months.

By **Mr. Marks**:

Q. What is the difference between the value of a train load of cotton and a train load of corn?

A. That is out of my element. I would rather some other witness would say.

Q. Is it not true of the southern products that for bulk and weight they are much higher in value than the products of the West and North, so as to make the exchanges unequal in bulk and weight, as a rule?

A. I think so, generally; but I cannot speak as an expert upon a question of that kind.

Q. Outside of lumber and wood and iron we ship no manufactured products North and West, do we, or but very little?

A. Very little indeed; very little. The great preponderance is coming South.

Q. The whole of our supplies come from the North and West?

A. The great preponderance comes to us over what we ship.

By **Commissioner Morrison**:

Q. Beside the competitors that you meet in New York City, you meet a competition from the State of New York also?

A. Yes sir.

Q. I do not want to inquire into your business affairs, but have you any open sales made

of your product locally? What do you sell your products for here—say for the last few months?

A. An average of about \$14 a ton at the furnaces.

Q. What does it cost you to get a ton to New York?

A. About \$3.75 via Savannah.

Q. That would make it cost nearly \$18 there?

A. Yes sir.

Q. Do you know anything about the local rate of sales in Pennsylvania?

A. I don't know very much. I only know it by the prices that we ourselves realize there. We sell a little in Philadelphia, but not so much as in New York.

Q. I do not know that it belonged to this investigation, and so you need not state it if you have any objection. It is stated in the newspaper accounts of your wonderful feats down here in producing iron products, that you make tons of iron as low as nine or ten dollars?

A. I am afraid Mr. Watterson is responsible for that.

Q. No sir; such an intelligent gentleman as Mr. Hewitt, who makes iron himself, thinks it can be made for as low a figure as ten dollars.

A. Occasionally, undoubtedly, it can; but the difficulty is that very few people, in desiring to put the most favorable construction on the resources of any section, give allowance for the series of expenses in the manufacture which are incident to every second or third year, in the relining and practical renewal of the plant. From every two to three years it is necessary in the case of each individual furnace to spend, according to circumstances and according to the good fortune and good management of the plant, from seven or eight up to as high as thirty thousand dollars in repairs.

Q. In that respect you are like the railroads; you have to be renewing all the time?

A. Yes sir. Making allowance for that, I would say that we have not yet attained that point; or year in and year out no furnace has reached the ten dollar limit.

Q. How much exactly do you say you pay to New York?

A. Three dollars and seventy-five cents is my recollection.

Q. How much does your Scotch or English competitor pay?

A. I have been, and still am, interested in shipping myself, having been interested in the business in England; and I have known iron to be handled from Glasgow to New York for twenty-five cents a ton. The habitual, usual freight, however, that at which I would undertake personally, if it were necessary to have twenty thousand tons brought inside of the next three months, is \$1.75. That is a standing rate.

Q. Then it costs you two dollars more to get to New York from here than it does from Glasgow?

A. Yes sir.

Q. And then if the foreign iron pays six dollars duty you have four dollars the advantage?

A. Supposing our case is the same.

Thomas A. Mack appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Marks**:

Q. State your connection with the iron industry at Birmingham.

A. I am the Superintendent of the Eureka Furnace Company. I am also a director in the company, and have been for four or five years.

Q. How many companies have you engaged there in the production of iron?

A. We have in Birmingham district the Tennessee Coal, Iron & Railroad Company, the Sloss Steel & Iron Company, the Debareleben Iron & Steel Company, the Eureka Company, the Woodward Iron Company, the Pioneer Mining & Manufacturing Company, the Williamson Iron Company, the Mary Pratt Furnace Company, the Birmingham Rolling Mill Company, and the Birmingham Iron Works. There is in addition the Gadsden Furnace, that might be called in the Birmingham district, and two or three within thirty miles of Birmingham besides. Those are in the immediate locality.

Q. How long do you say you have been engaged there in the iron business?

A. About five or six years.

Q. Tell the Commission about the history of your organization there, your arrangement and development, and how it was brought about.

A. The history will go back to the war. It was built, I believe, under the patronage of the Confederate Government in 1863, and was run by them, I believe, until it was destroyed by the United States cavalry in 1865. It was started up in 1866 or 1867, and failed. It was started up again in 1878 or 1874, and failed again. It was started up under its present organization in 1876, and is now running.

Q. State the conditions under which you reorganized it in 1876, and why it is that you succeeded with it?

A. In the first instance there was no railroad when run by the Confederate Government. It afterwards had railroad transportation, but the railroad was a new one, poorly built, costly managed, and with high rates of freight which taxed us out of existence. The second failure was largely due to the same cause, with the additional cause that there was not a thorough and sufficient knowledge of the district as an iron manufacturing district. The third and present attempt was organized with a specific understanding with the railroad company. Heretofore our freights were from \$4 to \$6 a ton to reach Louisville, as a minimum. The present rates of freight as a minimum are \$2.50 per ton. Those rates have enabled us to succeed, and we entered into a specific agreement with them for ninety-nine years.

Q. State particularly what your agreements were with respect to freights, as to how the freights were to be regulated.

A. Our rates of freight were based—at that time there was a long discussion between the railroad company and ourselves. The railroad company at that time considered three quarters of a cent per ton per mile was the minimum at which they could haul freight

and live. The furnace company conceded that \$12.50 a ton for making pig iron was as low as they could make pig iron and live. Both started as the basis of the minimum cost in each case at those figures, and then advanced. For every dollar we advanced in price they advanced so much in freight, until it went up to what we considered a maximum price of \$30 per ton for pig iron, and it only reached that one time.

Q. I will ask you to state whether the railroad, when the price is depressed, takes your iron without any real profit?

A. I am not enough of a railroad man to answer that. They say so.

Q. What is the capacity of your furnaces?

A. Our two furnaces will make about 60,000 tons a year.

Q. You sell your product over the North, West and East?

A. Everywhere North, West and East.

Q. What has happened to you since this Law was passed? What has been the effect upon your business?

A. In the first place, it has created a great deal of uncertainty, first in our own minds, and secondly, in that of the consumers. That has been the first effect. The direct monetary effect is this: We have made an agreement with quite a number of companies, some in Chicago and some in Pittsburgh, agreeing to deliver them so much iron running through the various months of the year, and agreeing to deliver it there at those points at a fixed rate of freight, netting to us so much money. We agreed with the railroads to deliver it at that rate of freight, and so we sold it to the parties at that price. The railroads come back and say they cannot haul it. They say they are not charging any more, but the roads north of the Ohio River are charging more. The result is that we are held to our contract and they are let loose from theirs, and we lose from three to five or twelve thousand dollars, as the case happens to be, according to the amount of the contracts. That is one of the effects. There is another effect. We have to sell iron for future delivery. It is the custom of the iron trade everywhere, in America and everywhere else, to sell for future delivery on long contracts. That is, we sell to a rolling mill say five hundred tons a month, delivered six, eight and ten months ahead. We sell to pipe works, to large car works, and various manufacturing trades. Unless we have a fixed rate of freight we cannot do that; and on the other hand, they cannot buy unless they know how long the contract price will continue, because they themselves are under contract. They must have a contract from us or they cannot make a contract with their people; and so the whole thing is tied up with a chain of contracts going from the last consumer to ourselves, the first producer.

Q. Have you the statement from the railroad association with you?

A. I have here a tariff in which they give us rates of freight that are nearly like those given last month when this Interstate Law was not in effect, and a little bit higher than they were a month before that, but they say at the foot of it "The rates to numerous points heretofore published are omitted from this circular on ac-

count of inability to obtain rates beyond the Ohio River" and "The rates named are subject to change before June." This takes the place of the list for the first of May. They issue it every month. It says "The rates named are subject to change before June, if changes are rendered necessary by an advance in rates beyond the river." When the Interstate Commerce Law takes effect, if there are any changes made they make changes. In other words, we can't make a contract and know what to deliver at, and our business is practically crippled. We can't make an offer to any man of what we can do. We are crippled now. This law has been suspended here, I understand, for ninety days, but that ninety days' suspension does not do us much good. What we want now is something we can go to work on, to carry on our business, and make our contracts under.

Q. You want the privilege of making them as best you can?

A. Yes sir. Today we cannot make a contract, and we cannot carry on our business.

By *Commissioner Morrison*:

Q. Because you do not know what it will cost you to fulfill it?

A. Because we don't know what it will cost us to fulfill it. What we want is a settled policy.

By *Mr. Marks*:

Q. All you want is to get the cheapest rate you can to all the points to which you ship?

A. Yes sir; we want to do the best we can.

Q. You live at Birmingham. Tell the Commission about Birmingham, its population, business and growth.

A. The population of Birmingham is about 40,000 people, I understand; that is the immediate neighborhood of Birmingham. The census may cut it down somewhat.

Q. What has been the increase there?

A. It is pretty hard to tell. I was first there in 1874. I came there with Mr. Bell, a celebrated British iron master, and there were then a few tenement houses, old rattletraps, and a saloon. There really wasn't anything. Today I don't know a more thriving town than Birmingham, and I have been pretty much all over the United States. It is a good place to joke at, but I only wish we could have got this Commission to come and see it. They would have been more fully impressed with it than anything we can say now.

Commissioner Morrison. We have no doubt about its being as you state; not at all. I was not intending to joke. I was laughing because I did not think Mr. Marks would succeed in improving the statement of the other gentleman. I think he will have to stand on that as far as the population is concerned.

The Witness. It is a subject of comment and joke by everyone; but I don't believe you gentlemen can fully appreciate the importance of Birmingham until you have seen it. You may conceive in an intellectual sort of way, as you do about pain, what the situation is; but you ought to wait until you have the toothache. You can't appreciate it unless you see it. There are coming there every day from four to five miles of freight cars for distribution. It is a marvel to most men that go there. It has grown up in a very short time.

By *Commissioner Schoonmaker*:

INTER 8.

Q. What other industries are there besides the coal and iron industries?

A. They are the basis of everything that is there.

By *Mr. Marks*:

Q. How does its shipping compare with the other cities of the South?

A. I believe it is the largest shipping point in the South, by a good deal.

By *Commissioner Schoonmaker*:

Q. Do you mean interior point or sea coast point?

A. Sea coast or interior. It was for that reason we urged the Commission to come personally to Birmingham as the largest shipping point in the South. It should have been visited by the Interstate Commerce Commission; that is if they want to collect personal evidence.

By *the Chairman*:

Q. You say four or five miles of freight cars come there every day for distribution. Do those cars come there loaded?

A. Not all the cars. A great many of them are South bound. Some are North bound. The South bound freights are always loaded, I believe.

Q. The South bound cars are always loaded?

A. Yes sir; going through with provisions, grain and manufactured products from the North.

Q. How is it with those that come to your place and stop there?

A. Those that stop there we just unload and load with pig iron, and send them back.

Q. The question was whether they all come there loaded?

A. The South bound trains; yes. The South bound freight is nearly always loaded.

Q. I mean those that come to Birmingham and stop there, loaded with supplies to be unloaded there.

A. Yes; I understand. Not being a railroad man, I cannot answer with certainty.

Q. I refer to those that stop and do not go any further. I ask in regard to those that come to Birmingham, stop there and take loads from there, back. Do they always come there loaded?

A. There are a great many of them that come from the south, may be—

Q. I am asking about those that come from the north?

A. I think so; but not being a railroad man, I can't answer you definitely, on that point. I can only say that those that come from the north, as a rule, are loaded.

Q. They are loaded?

A. They come there loaded; yes sir.

Q. Have you any idea of the number of cars loaded at Birmingham per day to go North?

A. I do not know that. There must be a great many.

Q. You think at least an equal number come from the North loaded, and deliver their loads at Birmingham. Is that it?

A. An equal number to what?

Q. To those that go back North?

A. I don't quite appreciate your question.

The Chairman. Never mind then. If you are the proper person, I should be glad to have you make and forward to us, at Washington, a statement of the shipments from Birmingham and to Birmingham.

The Witness. I should be pleased to do that.

The Chairman. Let it cover some definite period of time.

The Witness. Say from 1875.

Commissioner Schoonmaker. That is longer than necessary.

The Witness. I only want to show the growth since the policy of these roads has been adopted and carried out.

Commissioner Schoonmaker. That is all right, if it does not involve too much labor.

The Witness. Oh no sir; I would be glad to do it.

Mr. Stahlman. We will show that the volume of traffic to Birmingham, and the volume of traffic out of Birmingham, and also the volume of traffic for points south of Birmingham, are so largely in excess of the northward movement that the empties going North are put off at Birmingham with a view of getting loads that we could not get at points South.

The Witness. That is where we get nearly all our empty cars; northbound empties.

Mr. Stahlman. The rates on pig iron from Birmingham have conformed to the rates from other iron districts in Alabama; no doubt that this bill will alter the value of not less than two to three hundred million dollars' worth of property. I mean to say that if it should put it into the hands of the roads, to destroy the industries there, it would affect the values of not less than three hundred million dollars.

Commissioner Walker. They had it in their hands before the bill was passed.

The Witness. They had it in their hands, and the result was they brought it from nothing to what it is. If it is taken out of their hands, where will it go?

Q. Is your plant embraced within the system of the other gentleman?

A. No sir.

Q. How much capital is invested in yours?
A. About \$1,200,000; that is, our capital stock and our indebtedness. We think our property worth a little more than that, as the stock is above par. Ours is not nearly as large as theirs, and it does not employ as many men; but all of us are increasing and looking forward to further increase.

By the Chairman:

Q. What area is embraced within this iron and coal region?

A. Properly speaking the whole belt extends from Tuscaloosa, in this State, right to the shores of Lake Ontario. There is a steady iron belt. The part comprised in this property is in the States of Tennessee and Alabama; about a hundred and fifty miles in Alabama, and about, I think, an equal number of miles in Tennessee. That contains ore and coal. The greater part of it is yet undeveloped territory. It is being developed as fast as men and money can get at it. Of course the products are the crude, raw products, because there is not any market for refined goods, and there are no means to work them if we have the markets. We have to send them off.

By Mr. Marks:

Q. Can you state what is the amount of capital invested in these industries there? Or if you cannot now state, will you give a written statement of it and hand it to the Commission?

A. I can make out such a statement. I can only approximate it orally now, roughly. I couldn't give you any correct statement.

C. P. Williamson appeared before the Commission, and having been duly sworn was examined as follows:

By Mr. Marks:

Q. State what connection you have with the industry at Birmingham and vicinity.

A. I am President of the Williamson Iron Company.

Q. State how long you have been engaged in that industry at Birmingham?

A. In manufacturing, that is, foundry, machine and boiler works for twelve years; and for the last two years, a blast furnace in addition.

Q. What is the name of your association?

A. The Williamson Iron Company.

Q. State to the Commission upon what conditions it was that you entered into the manufacture of pig iron, with the railroad company, as to rates of transportation and delivery of iron to points North?

A. Being to a certain extent conversant with the arrangements made with the older furnace companies that had been in existence and operation for some time, and knowing that they were reasonably satisfactory, I approached the chief officer of the railroads connecting with our place, and had the assurance that we should have the same rates and protection given to the other furnace companies, if we entered into the manufacture of pig iron.

By Commissioner Schoonmaker:

Q. Are you all on the same basis as to rates?

A. Yes sir.

By Mr. Marks:

Q. I want you to state to the Commission what has been the effect upon your industry of the operation of this Interstate Commerce Law.

A. In the pig iron part of our business it has been a serious damage to us. Indeed it has suspended almost entirely the sales of pig iron north of the river. We have made no sales since the passage of the Act, north of the river.

Q. You heard the other gentlemen examined about the general details of the freights, the empty cars and matters of that sort. Do you concur in their statements?

A. Yes sir.

Commissioner Schoonmaker. Will you let one of your witnesses tell us something about the approximate extent of the resources?

Mr. Marks. Yes sir.

Q. What is the extent of the iron and coal fields there?

A. I do not know sir. I am not well enough conversant with that. Some of the other witnesses can tell.

Q. What is the depth of the best veins of ore there?

A. I should prefer to leave that statement to Mr. Mack or Mr. Bowron.

Thomas A. Mack was recalled and further examined as follows

By Mr. Marks:

Q. What are the thickest veins of iron ore at Birmingham?

A. About thirty feet.

Q. What are the thickest of your veins of coal?

A. About twelve feet. We use about five feet.

Q. What is the extent of the territory that embraces the iron and coal fields?

A. The coal fields are about 12,000 square miles; that is, the Warrior, the Coosa and the Cahaba coal fields and their tributaries.

Thomas Ward appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Marks**:

Q. State your connection with the iron industry?

A. I am the general manager of the Birmingham Rolling Mill Company.

Q. What is the extent of your business?

A. We manufacture about 25,000 tons of finished iron per annum.

Q. Tell the Commission what has been the effect upon your business of the operations of the Interstate Commerce Law.

A. It has simply paralyzed the business everywhere; in fact, to such an extent that we have already closed down one of our departments, and are stopping the improvements of upwards of \$100,000 we are about completing. We can't see our way clear to put it in operation, from the present phase of the Act.

Q. Before this period did you have your rates of transportation fixed with the railroad companies, and at such rates as you could deliver at a profit in the northern markets?

A. Certainly. It was on the same basis as the furnaces.

Q. State to the Commission what effect it has had any way, and the particulars of the effect?

A. We have found it entirely impossible to make quotations in patterns, and in consequence they could not give us any orders. We have been unable to get rates from the railroads, and hence our business has been positively paralyzed.

Q. State to the Commission what it is you wish; that is to say, do you want simply to be left free as you were before to make the best rates you can for your traffic with the railroads?

A. Entirely so.

By **Mr. Stahlman**:

Q. Are you familiar with the organization of your company?

A. Yes sir; I have been in the company since it was first organized.

Q. As a matter of fact, has it not been necessary for the railroads to make lower rates than the contract called for?

A. The railroads have on various occasions modified their contract to enable us to compete with other mills at competing points.

Q. Your competition is largely at river points?

A. It is largely at river points, and also at interior points in the West.

Q. And with New Orleans?

A. With New Orleans, Texas and the Pacific Slope. I might say, in connection with the Pacific Slope, that the present interpretation

tion of the Act has increased the rates 865 per cent.

Q. The railroads carry iron produced by rolling mills in the South, from other points also?

A. Yes sir.

Q. As far as your observation goes you do not know that they have discriminated in your favor to the detriment of others?

A. I do not think they have. In fact we have very frequently thought the reverse.

B. B. McKenzie, representing lumber interests of Alabama and Mississippi, appeared before the Commission and said:

I desire to file a petition in support of the pending application. We are not able to ship any lumber now on the rates in force north of the Ohio River. We have been compelled to cancel contracts.

The **Chairman**. Are you willing to make oath to the facts stated in this memorial?

The **Witness**. Yes sir; I will do so.

Mr. McKenzie was then duly sworn and examined as follows:

By **Commissioner Schoonmaker**:

Q. Do you intend to include with the memorial the telegram attached, which relates to the cancellation of contracts since the Law went into effect?

A. Yes sir. I can show other cancellation of contracts for the same reason.

Mr. Stahlman. I will state that this is a telegram that was sent by a large firm, indicating that there has been a number of contracts canceled by reason of the withdrawal of the rates north of the Ohio River.

The **Witness**. The experience of all the lumber men is the same as Mr. Flower's. He couldn't be here and merely telegraphed his evidence.

By **Mr. Stahlman**:

Q. Your general trouble is the uncertainty and the withdrawal of rates?

A. Yes sir. We can't ship any lumber North. We have no trouble where the fourth section has been suspended.

Q. You do a fair business up in that country?

A. Yes sir.

Q. It is a large industry in Alabama is it not?

A. About \$20,000,000 in Alabama.

Q. In many parts of the State it is a source of income and wealth to the population?

A. Yes sir; it has developed part of the State that was worthless before.

Q. It furnishes employment to numbers of people?

A. Yes sir.

Q. There are like industries in Mississippi and Georgia?

A. Yes sir. We represent Mississippi and Alabama. We had a meeting of the mill men of Mississippi.

Q. So far as your observation extends you have no complaint to make against the railroads prior to the enforcement of this Law?

A. We ask in our memorial that the basis of making the rates be returned to where it was before the first of April.

Q. You do not feel that you have had any

special privileges over anybody else?

A. No sir.

Q. Engaged in like business, in the same business, in this Southern country?

A. No sir.

By *Commissioner Morrison*:

Q. Your trouble seem to be that you can't get any through rates.

A. We get through rates, but it is a combination of locals.

Q. Are they higher than they were?

A. Considerably higher north of the Ohio. They are not higher south. We get the same rates to Cincinnati, Louisville, Henderson, Evansville and St. Louis that we got before.

Q. The local rate that they charge north of that added to the through rate south makes more than you paid before?

A. Yes sir; it is the through rate south added to local rate North. It is a through rate to Louisville. For instance, to Indianapolis we pay the old through rate to Louisville and then a local rate from Louisville to Indianapolis. I believe we have a through rate to Indianapolis now. There was two or three weeks that we didn't have.

Q. Do you know from what points North to what other points they charge more than they did before the passage of the Law—points to which you have been in the habit of shipping?

A. To Kansas City and to Omaha.

Q. From where?

A. From St. Louis and Springfield, Ohio, and to all those smaller towns like Springfield, Illinois.

Q. From St. Louis to Kansas City?

A. Yes sir. The increase is beyond St. Louis.

Q. Do you know what line you ship over from St. Louis to Kansas City?

A. No sir.

Q. Do you know that the main line from St. Louis to Kansas City is all in the State of Missouri, and this Law has nothing to do with it?

A. I do not know that. It is freight that originates in Alabama.

Q. You said they were local rates. Your Alabama rates are all right. The trouble is beyond St. Louis, between St. Louis and Kansas City. If that is true, this Bill has nothing to do with it, because that local rate from St. Louis to Kansas City on the main line is all in the State of Missouri, and this Bill has nothing to do with it at all. It does not apply to it.

A. I suppose the rates have been advanced on account of the fear of the operations of this Bill.

Q. As it does not operate on them at all, it would seem that that fear was borrowed for the occasion.

A. I understand this freight originates in Alabama, and is a part of a through rate. It is interstate commerce.

Q. What you complain about is the rate beyond St. Louis, and between St. Louis and Kansas City?

A. It is the same to Omaha. Take Omaha.

Q. Let us take the place you begin with. Let us not shift your ground. I am trying to show you it is probably true that you are

talking of something you do not exactly understand.

A. I don't claim to understand it.

Mr. Stahlman. I will try to make it clear and I think I can. While the line from St. Louis to Kansas City is purely a state line, there are others that are not purely state lines. The strongest competitor in this section of the country for that trade is via Memphis, and the Kansas City, Memphis & Springfield Railroad. That line is an interstate road, and cannot participate because it has not been relieved; and hence it puts the other line in a position to localize if it desires, or to say it will not participate in the interstate business, because it interferes with the business between intermediate points on the line between St. Louis and Kansas City. That is the trouble.

Commissioner Morrison. He has got to St. Louis without any trouble. You have treated him so kindly he has no fault to find with you. Probably you jump him off into the Mississippi River and he gets to St. Louis on one of these rival waterways, and don't complain until he gets to St. Louis. When he is at St. Louis he has passed the point where any of these other conflicting roads will come in competition with him. He is away beyond that point. There is a rival road to the Missouri Pacific, which has a direct line from St. Louis to Kansas City. This rival, I presume is the Chicago & Alton Road, that goes back over to East St. Louis, goes up the river and back again. They have not increased their rates.

Mr. Stahlman. That is the information. Those lines have for prudence withdrawn their prorating arrangements or their special rates on this interstate business. There is a large proportion of the business to which Mr. McKenzie alludes that does not go by way of St. Louis. While he may think it all depends upon St. Louis it does not depend on St. Louis, because a large proportion of it goes by way of Memphis—the Mississippi business.

Commissioner Morrison. There are a great many things about which we are all a little mistaken. It is true of Mr. McKenzie, and it is probably true of the rest of us. I have no doubt he wanted to state it as he understands it.

The Witness. The Omaha rate is in the same condition as Kansas City. I have to put them all together. I don't know of any difference. I supposed the freight all went by St. Louis, as it looks like the most direct route.

The Chairman. I will ask you, Mr. Stahlman, to explain how he would be relieved by the granting of your petition, in respect to these rates north of the Ohio or west of the Mississippi, when we have no application from north of the Ohio or west of the Mississippi that would affect any of these rates.

Mr. Stahlman. I beg to say in response to that, that the application of the Louisville & Nashville Road—and this fact has been overlooked—is for relief on business from St. Louis and from points beyond St. Louis. We ask relief on business to St. Louis and points north. Now the point is this: If this relief is granted to us, although the railroad itself over which we propose to transport this traffic may not have applied for it, the relief having been

granted to us in that way, the road will feel at liberty to take our business. Further, I do not understand the Interstate Commerce Act to require that the railroad which participates in the relief from the operations of the fourth section shall necessarily ask for that relief; that it may be applied for by a connecting road, by an individual shipper, or by a community; and having obtained the relief through that source, it may avail itself of it or decline, leaving it free with that railroad company to do so or not; that is my understanding. The application of the Louisville & Nashville Railroad clearly states what we ask in that respect; and in view of the relief which we have obtained, we have been able to restore the existing condition of things with several of the lines north of the Ohio River. Others have stood back and said: "We will wait the result of further investigation, and let you know later on what we will do."

The Chairman. You are precisely in the position now that you will be if this order is made permanent, so far as that question is concerned.

Mr. Stahlman. Except this: that inasmuch as it is only a temporary relief, and inasmuch as there may be some little doubts surrounding the question, the lines which have assumed to carry out strictly the provisions of the fourth section have said to us, or have intimated—I don't know that any of them have said it—"We will abide the result of the investigation of this question, and then we will give you the rates." You understand that although we have had friendly relations existing with all of our connections, we have never been in a position to demand that they should take our business on the basis of a pro rate, or on the basis of a special arbitrary rate, and it has all been done by mutual agreement generally mutually beneficial. This is a question that just occurred to me last evening, after our Tuscaloosa friend had come forward and been told that the road itself must apply. I began to look into it, and I began to look into our application, and I found that our application covered it, and that it was not absolutely necessary, on my construction of the Law, although I may be mistaken about it, that the road terminating or passing through a point should necessarily be required to ask for the relief; that anyone else might ask for it.

The Chairman. But they have asked for it, and it has been granted upon the face of the petitions. Will you state to the Commission what roads north of the Ohio or west of the Mississippi have declined, since this order was granted in your favor, to receive property from you on the old terms?

Mr. Stahlman. I am afraid I can't do that. Perhaps Mr. Culp can.

Mr. Culp. The Evansville & Terre Haute Road for Chicago business, and for points on its own line; the Cincinnati, Hamilton & Dayton Road for pig iron to points on its own line; the C. C. C. & I. Railway on pig iron to Cleveland. Other roads have declined to restore the former status to points on their own lines.

The Chairman. Name any road.

Mr. Culp. I will name some of them. I can't name them all. I will name the Pitts-

burgh, Cincinnati & St. Louis; the Cincinnati, Washington & Baltimore, the Cincinnati, Chicago, St. Louis & Indianapolis—I believe they told us we might use the former basis to Chicago, and therefore we have put it down as one of the roads on Chicago business to restore the former status. On all other business than Chicago, the C. I. St. L. & C. On all other business than Cleveland, the C. C. C. & I. Railroad.

The Chairman. In Cleveland, as I understand, it is limited to iron.

Mr. Culp. Yes sir. The Louisville, New Albany & Chicago and the J. M. & I.

The Chairman. On what?

Mr. Culp. I am now speaking of the roads which have declined.

The Chairman. They have declined in respect to all freights?

Mr. Culp. The Louisville, New Albany & Chicago Road, I am advised by Mr. Welch, has, since I left home, advised that on iron to Chicago they will accept the old basis. Mr. Welch now informs me that the statement is rather too broad, and I withdraw it.

Mr. Stahlman. How is it with the Ohio & Mississippi?

Mr. Culp. The Ohio & Mississippi does not interchange.

Mr. Stahlman. How about the Peoria, Decatur & Evansville?

Mr. Culp. It does to points on its own line, according to my recollection. The Louisville, Evansville & St. Louis Railroad does.

Mr. Stahlman. Of those named there is the Evansville & Terre Haute, the Cincinnati, Hamilton & Dayton, and the Louisville, Evansville & St. Louis that have come in since the relief was obtained?

Mr. Culp. Yes sir.

Mr. Stahlman. The others have so far declined?

Mr. Culp. Yes sir.

The Chairman. Can you name any others?

Mr. Culp. Those are all our connections. I believe I have named all. As the others withdrew the rates and notified us that they would not allow those rates, although I have communicated with them all, I cannot tell you whether they have definitely answered or not. After the suspension of the fourth section, I communicated by telegraph with nearly all of our connections, and by letter with a few. I cannot now tell you whether all of them replied or not, but I believe I have given you all of those that did. Some of them answered that they would not, and others may not have answered at all.

Mr. Stahlman. On all those that refuse to consent the result has been an advance of rates north of the Ohio River?

Mr. Culp. Yes sir.

John T. Milner appeared before the Commission, and having been duly sworn said:

I have a paper which is too long to read.

The Chairman. State the point of it, and we will take it and read it by ourselves, if you desire that course adopted.

The Witness. I will read the substance of it. I don't know as I could state it very well.

The Chairman. From whom is it?

The Witness. From the coal companies I represent.

us, and to New Orleans the same things holds good. We commenced as soon as the Louisville & Nashville brought to New Orleans, making an enormous business in New Orleans in connection with the Pittsburgh people, who raised prices up. We furnished from the same district about 100,000 tons of coal in 1882 and 1883. The exact figures cannot be given by Mr. Anderson in New Orleans. He did it all. Now we don't furnish more than 20,000 tons, owing to competition of the Pittsburgh people.

Stahlman:

Is there a contest between Pittsburgh and New Orleans, or is it not?

Air: at New Orleans. When we commenced business at New Orleans the price of coal was at least a dollar more than it is now to the consumer; but the competition brought there when we commenced business in New Orleans reduced it so low that the low freight that we have, which is only half a cent a ton a mile to New Orleans, had the effect to do as I have said—our annual shipments there of 100,000 tons are less than 20,000 tons. The exact figures cannot be had in New Orleans.

Do your Alabama mines have Pittsburgh competition to meet at Vicksburg also?

Air: yes sir; we have the Pittsburgh com-

We have it at Nashville; we have it at Memphis; we have it at Vicksburg; we have it at New Orleans, and we have it sometimes even at Mobile.

This difference in respect to coal from Pittsburgh to New Orleans and from our mines some 425 miles, when a barge and carry it 2,000 miles, is not abraded or broken up into dust. Bituminous coal from our place and

New Orleans, and it seems to me it has gone to dust just from the shaking of the cars. At New Orleans the Pittsburgh coal always goes to market in a far better condition than ours does. That is one thing we have to contend with in addition to the cost of freight.

Stahlman. I want to say I have a feeling that I don't exactly know how I got it, but I am on our side of the house. It is then, Alabama.

Airman. We will take it.

Sher, of Cullman, Alabama, appeared before the Commission and said:

I have a memorial from the merchants of this place praying you kindly to suspend the operation of the Railroad Act. I am a dealer in furniture in that locality, and I am shipping goods all through the south. I have anted rates from the Louisville & Nashville Company all over their lines and

and so. If the long haul was enforced I am afraid I would be debarred out of my sales, for instance Memphis, New Orleans, Mobile, Pensacola and other points.

It works very injuriously with me.

Commissioner Morrison:

When you say if the long haul is enforced, you mean by that if the rates are raised?

A. Yes sir. My rates are very low, gentlemen. The company has been kind enough to give me competitive rates to all points.

By the **Chairman**:

Q. Do you have written contracts?

A. Yes sir.

Q. Have you them with you here?

A. No; I have no written contract. I simply get rates from the company.

Q. You have no written contracts?

A. No sir; but the rates are guaranteed to me and I guarantee them to my customers, and have done so for eight or ten years. Our country is a grape and fruit growing country. We have nothing else. That is the main stay of our farmers. They generally go North in car load lots. Through the Louisville & Nashville Company they get very low rates to New York, Chicago, Cincinnati, Louisville, Nashville and also St. Louis. If the rates of freight were increased on our farmers it would be ruinous to them. Our country is rather a poor country. We colonized it about twelve years ago. It is a hard way of making a living, but we are satisfied—particularly so with the conduct of the Louisville & Nashville Company towards our people and our merchants. That is all I have to say.

By **Mr. Stahlman**:

Q. You meet competition in your furniture business at Memphis?

A. Memphis and New Orleans.

Q. From St. Louis and Cincinnati?

A. And Mobile, Pensacola and also other points.

Q. And the railroad has made you rates so as to enable you to build up a business at that place?

A. Yes sir. I can compete with any manufacturer on this point and also other points. I am well pleased with the rates given.

By **Commissioner Schoonmaker**:

Q. What furniture do you make?

A. Cheap furniture such as is used in the south by poor people; bedsteads, sofas, wardrobes, bureaus etc.

Q. You don't make any fine furniture?

A. No sir.

By **Mr. Stahlman**:

Q. The rates are necessarily obliged to be low to enable you to do business?

A. Yes sir.

By **Commissioner Schoonmaker**:

Q. You make a good profit on your furniture, do you?

A. My furniture is very cheap, and I make a mighty small profit. If I made a big profit I would have grown rich in ten years.

J. C. Haas of Montgomery, Alabama, appeared before the Commission and presented a memorial from citizens of Montgomery, stating under oath that he had read the memorial, and understood the statements therein contained to be the truth.

The **Chairman**. We have received quite a number of similar papers from other sources this morning, which we have taken for examination. I have not stated them in detail, but with one exception they are in the same general direction. Of course they will all receive our attention.

Mr. Marks. I have here a statement of INTER S.

the per cent of empty cars North, which I will file.

A. Proskauer, who had been previously sworn, appeared before the Commission and said:

As I stated yesterday, the Mobile Cotton Exchange had no desire to submit any evidence; but as it was suggested to me yesterday that some of the statistics of the Cotton Trade of Mobile should be submitted, in order to show in which way and in which manner the trade of the port had been violently diverted. I merely desire to state a few facts in connection with the decline of the trade of Mobile, and the causes, which we believe not to have been the mismanagement of the railroads alone, but the management and discrimination against Mobile. The Cotton Exchange, in adopting the resolutions which I had the honor to present to you yesterday, has taken the position that the competitive rate, or the through rate, as it was called by these gentlemen representing the railroads, in order to meet competition by water routes, should at first be fixed by the railroad, and then submitted to your honorable Commission for approval, which is, I assume, a suspension of the long and short haul clause in special cases. Starting out from this proposition, the Mobile Cotton Exchange takes it for granted that Mobile, having splendid water routes, will certainly have the benefit of those rates, provided the railroads see fit to compete with the water routes. To judge from past history, the railroads have not only seen fit to compete with the legitimate water routes, but they have seen fit to destroy them; and no sooner have they destroyed the water routes than they return immediately to their first love, and raise the rates in such a way as to absolutely ruin some of the enterprises connected with the cotton trade. We have, from time to time, competitive rates established along the different railroads, that is, at such seasons of the year when we have high water. Then we have exceedingly cheap rates, with unlimited promises on the part of the railroads that these rates will be maintained, provided we give them the preference; and frequently these rates are made even lower than the boats will make them: especially so, of course, when it affects coast-wise trade. No sooner is the water low in the river and navigation is stopped than these rates are put back to their original rates. At times there is a difference of 200 per cent and more. Then, of course, we are at the mercy of the roads. The Mobile Cotton Exchange take the Interstate Commerce Act to mean that the railroads will not be able under the new Law to repeat this offense; that they have the privilege to reduce the rates after you have given them the rate—to establish competitive rates with water routes under certain conditions and in certain cases, and to suspend the long and short haul clause of section four. Of course they have the right to reduce the rate of freight, but they will not have the right to advance it again without giving ten days' notice, so that all the parties interested in the matter can be heard before you.

The Interstate Commerce Bill, I take it, has

been the result of the cry of anguish that had gone out from a large number of people, in fact from the masses of this country. I think the bill is very satisfactory to the railroads; that in fact every clause contained in that Act is of great benefit to the railroads. It protects them in a great many things and in a great many acts for which they have spent vast amounts of money, in order to keep peace among themselves. But there is one little clause in there, section four, which attempts to relieve the people somewhat. Whether it is all the people have a right to demand, it is not for the Mobile Cotton Exchange to say, but for a higher tribunal. No doubt you gentlemen will have seen that this Law should either be strengthened or weakened in its force, and the next Congress will heed your suggestions in that respect. But before all of your conferences so far no one has been heard except the side of the railroads. You have not heard from the complaining interests, from the mercantile interests proper, but you have heard only from the interests which have been scared from time to time into the fear that the railroads are going to ruin their trade utterly.

You have heard yesterday from the vegetable trade and the coal trade and the iron trade, all of which has not a particle of competition; while we here at the Port of Mobile complain that the coal is not landed any cheaper here than it is at New Orleans, and we may justly complain, because Mobile, by reason of its position, is certainly entitled to have its nearest neighbors as their best customers. As to coal, it ought to have the entire South American trade and it ought to have the entire trade of the West Indies. But the railroads take great pains to compete with our brothers in the West, to compete with Pittsburgh at New Orleans, in order to reduce the rate a few cents, but they don't take any pains to compete with our brethren on the other side of the Atlantic, who ship their coal very cheap to these ports. It seems to me further that if we were to submit the rates our roads charge to the opinion of the coal combination of Pennsylvania, I am satisfied they would lift up their hands in astonishment at the very mild rates that are obtained by our roads here, as compared with the roads in Pennsylvania.

By Commissioner Schoonmaker:

Q. Why do you think Mobile ought to have a monopoly of the coal trade?

A. It ought not to have a monopoly.

Q. That is just what you said.

A. It ought to have the preference before New Orleans, that the coal should not pass through Mobile at the same rate as it goes to New Orleans. New Orleans is 186 miles further than Mobile, I believe.

Mr. Stahlman. Do you know the rates to New Orleans?

The Witness. I will talk to you after I get through, Mr. Stahlman. I don't want to answer any questions now.

Commissioner Walker. I have here a paper which shows the Mobile rate is 66 cents, and the New Orleans rate 47 cents.

Mr. Stahlman. That is not the total rate. That is only the rate per mile.

The Witness. If you will simply add up

the aggregate of the mileage you will find 44 is considerable less than 66.

Mr. Stahlman. I want to say that that is only designed to show the per mile rate that the Alabama Road receives to Montgomery on that business; and the rate from the mines to New Orleans is higher than to Mobile.

The Witness. I am perfectly willing to accept any statement the railroads have to make, but I think the Commission ought by this time to have sufficient of the railroad statements.

The Chairman. Go right to the facts and state them.

The Witness. In 1860 the two roads leading out of Mobile east had been built mainly by Mobile capital and largely with the assistance of the City of Mobile. The roads had been finished as far as Montgomery on one side and as far as the Ohio River on the other. For the year ending the first of September, 1860, the receipts of cotton at Mobile and our exports direct from Mobile were 842,729 bales, or $\frac{1}{2}$ of the entire cotton crop of that year. In the year ending the first of September, 1867, I estimate the receipts of Mobile at about 225,000 bales. We have now 210,000 bales. Of those the railroads brought, the Mobile & Ohio 49,000, the Louisville and Nashville 63,000; and of the 63,000 brought by the Louisville & Nashville, 53,000 went right through to New Orleans. Of the 49,000 brought by the Mobile & Ohio Railroad, 11,000 went through to New Orleans. I take it to be that the arbitrary allowed by the connecting roads—of course you will make allowance that we are not in a position to see their books or any of the transactions, or any of the private rates or public rates that are made by the railroads. It is impossible for us to present the facts and figures that the railroads are able to present to you. For that reason we can only suppose that the rate of freight from Mobile to New Orleans when added to the rate of freight made by the Mobile & Ohio Railroad is about twenty-five cents a bale. We take it for granted that the Louisville & Nashville Railroad charges to us that ship from Mobile to New Orleans at an extra expense to the company of probably one cent to five cents a bale for extra handling, sixty-five cents a bale; and charges to the parties from other parts of the road at the rate of probably twenty-five cents a bale more added to the rates they obtain. These rates have changed so frequently that of course we are not able to trace them; but that is the general disposition, and it has at times been admitted by some of the officers of the company; at other times it has been denied. The Mobile & Ohio Railroad exported by steamers chartered by themselves this year 29,000 bales. We have received by boats from the rivers 98,000 bales of cotton, or more than twice as much as from the combined system of railroads. When you take into consideration that violent means are resorted to by the railroads to divert even that little cotton, such as putting boats on the river and carrying it up the river at hardly any price, in order simply to put it on board of their trains at through rates for the East or for other points, it is certainly remarkable that we, a port which ranks on an equality with the high-

ast cotton port in the United States—that is, actual cotton ports; I don't speak of the eastern ports like New York, but New Orleans, Mobile and Galveston—that the receipts should be reduced from one sixth of the entire crop to one sixteenth part of the entire crop. The receipts of 210,000 bales we have had left us 116,000 bales actually handled in Mobile. Of this the rivers have brought 98,000 bales, and the remainder is to be placed to the credit of the railroads. Of the river cotton I suppose there was probably from 5,000 to 8,000 bales that went through by reshipment from here to New Orleans. There certainly must be something wrong somewhere. If you remember, I asked a question of my friend Major Dunklin from Greenville in regard to the causes that led him to divert his trade from Greenville instead of bringing it to Mobile where the market was $\frac{1}{2}$ of a cent higher, placing it in Montgomery, for instance. The rate to Montgomery in those days I believe was about \$1.80 a bale and Mobile about \$2.40 a bale. The difference in price would certainly repay these gentlemen for shipping here; but it was a customary thing with the railroads to leave the natural traffic which couldn't run away from Mobile, which wants to get to Mobile—to carry that simply at their convenience, leave it three or four weeks at the depots, or until such times when cars were most convenient to them; but the other way it was certainly always very convenient for them to carry it. It is perfectly plain when they carried cotton from Greenville to Montgomery at \$1.80, that at Montgomery they had a chance to carry the same cotton again in some direction or other; but at Mobile they came in competition with other points. Then again it is a well known fact that for years we were not able to obtain any shipments of cotton by boat for Montgomery on the Alabama River and Selma on the Alabama River, and at other points where the railroad touches, because the railroads put on boats on these rivers in order to interfere with the traffic; and where the legitimate rate from Montgomery to Mobile was about fifty cents, the regular rate by rail, the boats refusing to take it for some reason or other, pooling with the roads, put it up as high as \$1.50 a bale. The direct exports from Mobile have been reduced from over 850,000 bales of cotton in 1880, so that in the year 1887 we are reduced to the respectable amount of 46,800 bales for foreign, which includes 29,000 bales exported by the Mobile & Ohio Railroad by steamers which they chartered for their benefit, and of course for the benefit of the port—I must say right here that the Mobile & Ohio Railroad, having its only terminus at this port, is certainly determined to encourage exports from this point, when not interfered with by other roads, and forced to divert the legitimate trade of Mobile in other channels. This is of course my opinion individually and I have no facts to present; but this is the general disposition of the people. Our exports during the present year to domestic coast-wise ports north of Hatteras were 18,971 bales. I don't think this needs any further comment. The only cotton that we can rely upon as coming to Mobile is from the Mobile & Ohio Railroad this side of Enterprise, say from about Shubuta, say a distance probably

ENTER 8.

of about eighty miles above here. The only thing we have to rely upon is the river trade. From the Louisville & Nashville we get virtually nothing; and if the only thing that the law provides for the protection of the people is that little clause in section four and that is to be enforced, then I am satisfied in a few more years from now Mobile will cease to be a port in name. I do not think the other ports are in any worse position. They have only been struck later by the same cyclone. When you reach New Orleans I am satisfied the same thing will be brought to you and probably a little more embellished, because their misfortunes have not been quite as great as ours. They have been very sudden in late years. Galveston is the same way. When it is taken into consideration that these are the highest markets, the question is why is the producer gouged and oppressed by some force to ship at a less freight rate to artificial trade centers, in order to destroy the natural trade centers? What I mean by artificial trade centers are those towns, waste places or other villages that have been created by the interests of converging and competing lines of railroad, by the same policy that has from time to time been seen in every neighboring road, and did not care either for the interests of the neighboring road, and certainly not for the interests of the towns or cities, but only to produce such artificial values as would best subserve their interests.

Mr. Bragg asked yesterday in regard to the amount of assistance that these roads had received from Mobile, but the time was so short I was unable to obtain the data. One thing I can distinctly remember is that in 1869 the Mobile & Montgomery Railroad asked the endorsement from the state of two and a half millions in bonds for the purpose of building the bridge at Tensas, and the State granted that aid to the road. In 1869 that was granted. It was the most remarkable thing that this road stood in the highest credit, because it had no bonded debt. It was the first mortgage bonds of the road; and the members of the Legislature who were opposed to everything in the way of internal improvement voted for the measure; but the road stood in such high credit that when they took to the New York market the bonds indorsed by the State of Alabama, the capitalists of New York and England said "Gentlemen, we are willing to take those bonds, but in fact we prefer to take your own bonds in the place of them from the State." They returned the bonds indorsed by the State, because the capitalists said the State of Alabama was indorsing too many doubtful bonds. That road only a few years afterwards was wrecked, and the City of Mobile I believe owns today somewhere in the neighborhood of \$650,000 of the preferred stock of that road. The road was wrecked by a number of capitalists representing what was termed the Louisville & Nashville system. The Louisville & Nashville system obtained possession of the road, and I believe the very depot facilities which they sold the other day to the Mobile & Birmingham Company, or what used to be the Grand Trunk Railroad Company—I don't believe they have ever been paid for by the Louisville & Nashville system. This shows you how little time it takes to wreck railroads under the

management that has undertaken to destroy the natural centers at the expense of artificial centers.

We believe, Mr. Chairman, that the question of competing lines ought to be solved by the enforcement of this Bill. The enforcement of this Bill will certainly enforce competing lines to have reasonable rates, as well as the lines that claim and demand now unreasonable rates in order to compete with other unreasonable rates. We believe that a strict enforcement of the Law at this time will probably be the most advantageous to this part of the country. A strict enforcement of the Law will teach the people who have been scared into violent measures and into deceptive and imaginary ideas by the railroad authorities, the effect that the Law will have upon trade generally; and it will teach also the railroads who have never respected any Law, to cease kicking but to go and put their shoulders to the wheel and attempt at least to get a just construction on the Law, and attempt to carry out the Law as far as they are able. I am satisfied the Law was not made in order to injure the railroads. The Law was intended that the people should not be permitted further to be injured. It is simply to call a halt to the system that has been in vogue so far. I doubt exceedingly whether the wisest and the most profound students of political economy would for one moment undertake to predict the result that would follow to any branch of the business by the enforcement of the Law. Whether injurious or beneficial, it is simply a question that is to be tried. It is to be enforced and the people will have to be educated to it, as well as the railroads.

By *Commissioner Schoonmaker*:

Q. How do the prices of cotton to the producer compare with the prices of cotton some years ago?

A. They are the lowest we have ever had, with the exception of one period. We have had for the past two weeks the lowest average prices since the close of the war.

Q. How long have they been so low?

A. They have been gradually declining. If you will permit me, I can turn to the facts.

Q. How do the prices to the producer compare with the prices of the past?

A. That will require two different replies. Do you mean to ask whether the net price to the producer has been comparatively lower?

Q. Lower or higher as the case may be.

A. The actual price of cotton; the average price, is the lowest we have had for thirty years or more; but cotton has since the close of the war been comparatively high. At times for instance when a bale of cotton cannot be carried from Corinth to Mobile for less than five dollars, the producer was better off, for that would be $2\frac{1}{2}$ per cent on the price of the cotton or $8\frac{1}{2}$ on the price of the cotton. Finally when a bale of cotton was worth \$100 it was 5 per cent on the price of the cotton. But a bale of cotton now is worth only an average of say \$40 on a 500 lb bale. When you attach to that the price of \$2.75 for carrying it, the percentage remains the same; but when you carry it for the producer to the nearest market, or rather, to the market nearest tide water, which is to the producer the highest, the producer is better off. But if you force it directly

in another direction the producer loses the difference between the price that he would have obtained in the Mobile market, and the price he obtains there. In Ocala, for instance, the buyer don't pay to the purchaser the actual net value he would obtain for the same cotton coming to New York via Mobile; but the advantage is entirely to the manufacturer or to the manufacturer's agent, or to the new railroad routes.

Q. You mean then the planters realize less for their cotton now than they did in the past?

A. Yes sir; proportionately. The planter realizes less actually and realized less proportionately also. Another thing that must be mentioned is that the port charges of Mobile are the lowest of any port in the United States, and the conveniences for storing and handling here is the largest of any port in the United States. I have said we believe an enforcement of the Bill at this moment would be of the least disturbance to trade in this section. The trade at this season of the year is very light, if any at all. If you permit the railroads to continue under the old plan during the summer, the disturbance during the opening of the season, when the crop ought to be moved very rapidly, would be very great. I don't want to accuse these gentlemen of attempting it, but the cry from the producer and from the parties interested, on account of the disturbance of the trade, will be very great, and it would probably amount simply to a wholesale request to wipe out the Law, or to suspend it, because it would be a cry of despair. Therefore we believe an enforcement at this time is the most opportune and would be the least disturbance to this part of the country. The other interest that Mobile has had in former years, which is the shipping interest—I need not point out to you that every boat that lands at our wharves from the river, distributes on an average of from 800 to 1000 dollars, and every vessel of 1,000 tons' capacity distributes from 5,000 to 8,000 dollars, and if you permit the railroads to go on as they have been doing, and allow them to continue under a suspension of section four, you will simply give them the continued power to keep on destroying, if they have not entirely destroyed, a languishing interest in this country. This is not an interest that is a local interest to Mobile, but it is a national interest. It is the shipbuilding interest. If you permit the railroads to destroy all your southern ports, and simply retain one or two of your more favored northern ports to do the business of this country, then of course it does not remain a question of political economy why the shipping interest of the United States is declining.

By *Commissioner Bragg*:

Q. Does it not occur to you that iron and coal and all these other interests have about as much right to complain now as cotton has to complain in the fall?

A. Certainly; but iron and coal are not competing with any rates that go out from this city. We have only got one iron and coal region. The difference in distance on those roads is so small that there really should be no fight among them. As to the iron or coal from these regions nearest tide water point, I was told this morning that a gentleman ships

from Birmingham via Savannah to New York or to Europe for \$3.75 a ton. They take iron from Birmingham via Savannah, where it is reshipped on a vessel. It don't go by rail from Savannah to New York, but it is reshipped on a vessel.

Q. What difference does it make to the coal and iron interest if they encounter this active competition, such as the witnesses have testified to here, whether the competition comes from Alabama or from Pittsburgh?

A. I want to explain to you. If these gentlemen find competition via Savannah in order to oblige the lines of the southern system, why not let the same stuff come to Mobile at a dollar a ton, or say at 75 cents a ton, if these roads are so very anxious to help the iron and coal interest? They certainly are able to bring it to Mobile at a dollar or at 75 cents a ton. There is no competition on that route from the Birmingham region to Mobile. There is no long and short haul there. There is no shorter haul than that. At Mobile they can find plenty of vessels that will take it to New York at the same rates as Savannah.

Q. The transportation of cotton occupies only a few months here, does it not?

A. This year it has occupied only a few months.

Q. I mean from the interior to the sea ports.

A. It lasts generally from September until late in March, and then in small dribblets during the summer.

Q. On the contrary, the coal and iron interests last the whole year round?

A. Certainly; but you see if they would seek, and if the roads would give, the coal and iron interest the nearest route to tidewater, then they would be benefited, and we would have no occasion to grumble at these gentlemen.

Q. Don't you suppose they send it to where they can get the most for it?

A. They don't sell it in Savannah.

Q. Do you suppose it is a matter of sentiment with the coal and iron men to be sending it up to northern points? Don't you suppose they send it to where they can get the best prices for it?

A. I take it for granted; but I only alluded to the rate to New York of \$3.75 per ton, and I am satisfied it could go from Mobile or via Mobile at the same rate, and probably a little cheaper.

By **Mr. Russell**:

Q. I understood you to say that the Mobile & Ohio brought all the cotton it could to this port, except what competition forced it to carry to other markets?

A. Yes sir; at least that is our impression.

By **Mr. Stahlman**:

Q. You are a cotton shipper here?

A. Yes sir.

Q. How much cotton did you ship during the last year?

A. I have been able to ship very little; but I have shipped some seasons as high as 42,000 bales direct from Mobile.

Q. How long since?

A. About seven or eight years since.

Theodore Welch appeared before the Commission and, having been duly sworn, was examined as follows:

INTER 8.

By **Mr. Stahlman**:

Q. What is your position and where do you reside?

A. I live in Montgomery. I am the General Freight Agent of the Louisville & Nashville Railroad from Decatur south.

Q. You heard yesterday the gentleman who preceded you say that the rates from stations on the Louisville & Nashville Railroad or Mobile & Montgomery Road to New Orleans, were only about 25 cents per bale higher than to Mobile. How is that?

A. The rates from stations on the South and North Alabama Railroad from Decatur to Montgomery and from Montgomery to Mobile are 75 cents per bale higher to New Orleans than to Mobile.

Q. What is the rate from Mobile to New Orleans on New Orleans shipments?

A. From depot to depot 65 cents per bale.

Q. How are the rates adjusted on the Mobile & Montgomery Road as between Montgomery and Mobile?

A. Upon the same general basis as Montgomery and other terminal points. In other words, the same distance would pay the same rate to Mobile as to Montgomery. These rates were approved by the Alabama State Commission some years ago.

Q. There is no discrimination, then, in favor of Montgomery as against Mobile?

A. On the contrary, if it is possible to show a discrimination I will say that the rates fixed by the Commission of Alabama, of which Captain Bragg was President, have not been charged beyond the limit of \$2. In other words, when the \$2 limit under this scale provided by the Commission was reached, then we charged but the \$2. That would be true in either direction, but it does not benefit Montgomery, because there is no cotton raised south of the point where the \$2 rate will take effect. There is a good deal of cotton raised north of the point where the \$2 rate will take effect which might go to Mobile on a less rate than that fixed by the Commission.

Q. I will ask you to state what the rates are now, and what the average rate is from Montgomery to New York on cotton. What is the difference between the two rates generally? How much higher is the rate from Montgomery to New York than from Mobile?

A. From 20 to 35 cents per hundred pounds.

Q. That is, Mobile has an advantage in the rate to New York over Montgomery of about a dollar?

A. I will give the figures exactly as they stand. The rate from Mobile to New York is 45 cents on compressed cotton.

By the **Chairman**:

Q. That is the rail rate?

A. Yes sir. The rate from Montgomery to New York on uncompressed cotton is 75 cents.

By **Mr. Stahlman**:

Q. How much do you pay for compressing?

A. Ten cents at Montgomery.

Q. The rate from Montgomery to New York is 65 cents?

A. Yes sir.

Q. And the rate from Mobile to New York is 45 cents on the same class of freight?

A. Yes sir; a difference of 20 cents. I will add that the rate from Mobile to what we call

the New England points prior to the 5th of April was 50 cents on compressed cotton. To many points it is continued by agreement since the 5th of April. From Montgomery to Boston points the rate is 85 cents on uncompressed cotton, 10 cents off, making 75 cents.

Q. Really, then, if anybody should complain it would be for Montgomery?

A. Naturally.

Q. I will ask you to look at the paper I now hand you and state to the Commission what amount in bales was exported from Mobile via New Orleans?

A. Are you speaking of rail cotton or all cotton?

Q. Rail cotton; cotton shipped from Mobile that went via New Orleans, either for sale or for export.

A. Via the Mobile & Ohio Railroad, all rail, 8,881; via the M. & M., that is, the Louisville & Nashville, 6,807; by water to New Orleans, 4,936; by rail, Louisville & Nashville, to New Orleans, 68,485.

Q. The total is about three quarters of all the business that has gone by New Orleans, is it not?

A. Yes sir; quite that. I have not figured it up exactly. By the Mobile & Ohio Railroad to New Orleans, 1,692 bales. This is the movement down to and including April 22, for the year commencing September 1, 1886.

By Commissioner Bragg:

Q. You have been the general freight agent of the Louisville & Nashville Railroad Company from Decatur south for several years?

A. Since 1880.

Q. During that time you have resided at Montgomery, Alabama, I believe?

A. I have sir.

Q. Have you been during that period familiar with the competitive rates of Montgomery, Alabama?

A. Quite so.

Q. About what have been the cotton receipts of Montgomery, Alabama, along during that time?

A. They have ranged from 100,000 to 132,000 bales.

Q. Regularly?

A. Yes sir. This year will barely touch 100,000 bales.

Q. I will ask you this question: Whether the competition at Montgomery, Alabama during all that time has not been such between the Louisville & Nashville system and the Georgia railroad system to the Alabama River that it has been exceedingly difficult for the railroads to maintain their rates there; in other words that they keep coming down a little lower?

A. There have been times when the rates were reduced; yes sir.

Q. When Montgomery would run lower than Atlanta from the cause I have mentioned?

A. There have been such times.

Q. Merely from the sheer force of competition?

A. Yes sir.

Q. The rates have been lower than Atlanta and Columbus?

A. Yes sir; that has been the case at times.

Q. Although Atlanta and Columbus were

much nearer to eastern points than Montgomery?

A. I cannot answer so much for the Atlanta rates. Our own rates have been subject to changes growing out of competition.

Q. Of the kind I mentioned?

A. Yes sir.

By Mr. Stahlman.

Q. Does not the same competition exist at Selma, practically, with the river?

A. A little more so, since the river is navigable all the year up to Selma. It frequently is not up to Montgomery.

By Commissioner Bragg:

Q. How much of the year does it lack being navigable to Montgomery?

A. Last year there were some weeks. We had a very long dry spell when I think no boats went to Montgomery.

Q. That was a most unusual thing, was it not?

A. I think it was; but there is always good water to Selma; that is, fairly good water.

Q. And generally year after year it is to Montgomery?

A. I don't know that I recall more than two or three years during the last nine when there has been any sand floating on top of the water.

Q. That is in the middle of the summer when there is no cotton being shipped and no business being done at all?

A. Yes sir.

T. M. R. Talcott who had been previously sworn and examined again appeared before the Commission.

The Chairman. You intended to prepare a statement to submit here?

The Witness. It is not ready. I thought it would be with these papers, but I find it is not. It is being prepared.

Commissioner Morrison. I will state again to you what I want. I want to know, if you please, what your charges are on a barrel of flour from St. Louis to Mobile; then the distance from St. Louis to Mobile; and then what is the first local point south of St. Louis to which you charge the same rate that you charge on the same article shipped through; and the distance from St. Louis to that point.

The Witness. I will have the statement made.

The witness subsequently submitted the following:

The rate on flour from East St. Louis to Mobile is 50 cents; and the nearest point to East St. Louis at which this rate is charged is Moscow, 184 miles from East St. Louis. The rate named is per barrel, and the distance to Mobile from East St. Louis is 644 miles.

E. L. Russell, solicitor of the Mobile & Ohio Railroad, appeared before the Commission and having been duly sworn said:

On yesterday Captain Bragg cross examined Colonel Talcott somewhat about the history of the Mobile & Ohio Railroad. He has only been in the service about two years, and is not acquainted with it. I wish to state about its being a land grant road. Congress donated

some public lands to the Mobile & Ohio Railroad Company, or conveyed it by an act of the States of Mississippi and Alabama.

The Chairman. If you will embody that in your argument we will take it as testimony.

J. M. Culp who had been previously sworn and examined again appeared before the Commission and gave the following evidence:

The rates on potatoes and cabbage and other vegetables comprising the shipments from here are from Mobile to Cincinnati, car loads 84 cents per hundred pounds, less than car loads 84 cents per hundred pounds. From local stations on the Mobile & Montgomery Railroad, car loads 40 cents per hundred; less than car loads 55 cents per hundred pounds. From Mobile to Louisville, car loads 30 cents per hundred pounds; less than car loads 30 cents per hundred pounds. From local stations on the Mobile & Montgomery division, car loads 30 cents per hundred pounds; less than car loads 40 cents per hundred pounds. From Mobile to Evansville car loads 28 cents per hundred pounds, less than car loads 40 cents per hundred pounds. From local stations on the Mobile & Montgomery division, car loads 33 cents per hundred pounds; less than car loads 48 cents per hundred pounds. From Mobile to Nashville, car loads 24 cents per hundred pounds; less than car loads 24 cents per hundred pounds. From local stations on the Mobile & Montgomery division to Nashville, car loads 25 per hundred pounds; less than car loads 35 cents per hundred pounds.

Mr. Russell. The Commission manifested some desire to know the movement of commerce to and from Mobile. Mr. Duncan, President of our company will furnish a full statement to the Commission.

Mr. Proskauer. I wish to call Mr. W. T. West as a witness.

Mr. West. I have no statement to make, and no idea of coming before the Commission. This is all new to me.

Mr. Proskauer. The facts simply are that up to several years ago the naval stores trade of Mobile has been flourishing and large direct exports have been made. For the last few years there has been nothing doing in that line of business. I thought Mr. West would be able to tell us how it is the naval stores are carried now forcibly by rail, east and west.

The Chairman. Are you in that trade?

Mr. West. Yes sir.

The Chairman. Do you wish to make any statement respecting it?

Mr. West. No; I have no statement to make respecting it.

Mr. Proskauer. If he is not a willing witness—

Mr. West. I am a willing witness, but I have no desire to come before the Commission in the matter.

Mr. Proskauer. Please give us your information, or what information you have in regard to the decline of the naval stores trade and the causes.

Mr. West. It would take some time to do that; perhaps more time than could be given me before this Commission. There are many causes and many opinions on the subject. I

would hardly be willing to venture an opinion at such short notice.

Mr. Proskauer. Perhaps Mr. West may be permitted to reduce it to writing and hand it in.

The Chairman. Certainly. We shall be pleased to have it.

Mr. West. I can do that at my leisure.

The Chairman. Suppose at the same time you send a copy of it to Washington, you send a copy also to Mr. Stahlman and show a copy to Mr. Russell. If you want to send us any further statement you may do so, but with the understanding that you show it to Mr. Russell before it comes to us.

The Chairman. Does anyone desire to make any statement to us under oath? If not, we shall declare the taking of the testimony at Mobile closed. I will say, and am happy to say, that I think the Commission feel they have gained a good deal of valuable information here, and that they have been pleased with the manifest fairness of the witnesses in bringing forward their statements of fact and their conclusions from them. Mr. Russell desires to submit an argument, and will do so in print and send it to us hereafter. I will add that we should be gratified to receive arguments from any other source, from those who favor these petitions, or from those who oppose them. Such arguments may be sent to us at Washington, and should be forwarded as speedily as possible that we may have them before us when we enter upon our final examination of the evidence. The investigation at Mobile will now be declared closed. We shall resume it at New Orleans on Monday.

The Commission thereupon at 12.15 adjourned as above stated.

PROCEEDINGS AT NEW ORLEANS.

Names of Witnesses, in Order of Examination, etc.

W. W. Finley, Gen. Freight Agt. Texas & Pacific R. R.

Nathan Gregg, Wholesale Groceries and Cotton, Shreveport, La.

James Crangle, Broker, Shreveport, La.

Isalah Hardy, Asst. Gen. Freight and Pass. Agt. V. S. & P. R. R.

L. Lipman, Banker, Yazoo City, Miss.

J. C. Haskell, American Salt Company.

H. C. Waite, of Minnesota.

R. L. Saunders, Jackson, Mississippi.

William Oliver, Mississippi Mills, Wesson, Miss.

A. W. Houston, San Antonio & Aransas Pass. R. R.

John J. Gragard, Chamber of Commerce, N. O.

Ashton Phelps, N. O. Cotton Exchange.

Sidney Bernhimer, Port Gibson, Miss.

Hon. N. D. Wallace, representing N. O. Produce Exchange, Sugar Exchange, Mechanics & Lumber Dealers' Exchange, and Merchants and Manufacturers' Association.

William Campbell, New Orleans, La.

& Coast Line Steamboats, Shreveport, Louisi-
ana.

E. C. Carroll, Agent Anchor Line Steam-
boats, Vicksburg, Miss.

A. M. Halliday, Steamboating, New Or-
leans, La.

NEW ORLEANS, LA., May 2, 1887.

THE COMMISSION met at 10 A. M. in the
room of the United States Court, all the
members being present.

The Chairman. Gentlemen, in the course
of certain investigations which the Commis-
sion appointed under the Act to Regulate Com-
merce is pursuing, we find ourselves now in
the City of New Orleans. We are here for the
purpose of continuing these investigations. It
may not be necessary to do so, but to guard
against possible misapprehension, misappre-
hension which we have seen has prevailed to
some extent in other quarters, it may be well
to say at the outset that the scope of our au-
thority in the premises is very much limited,
and that we do not propose to go beyond it.
Our investigations are under the Act which I
have mentioned, but they are not for any pur-
pose of questioning the propriety, the justice
or the expediency of that legislation. All that
has been settled for us. We are here simply
to determine the question whether, in pursu-
ance of that legislation, we shall, in certain
specified cases that have been brought to our
attention, make exceptional orders, orders
that shall relieve certain exceptional cases
from the ordinary operation of the legislation.
That is all we propose to do, and that is all we
have any authority to do. Therefore, any
testimony that might be offered on behalf
of any parties that should seem to question the
propriety or the justice of the legislation,
would be altogether out of place, and we trust
will not be offered. The parties applying for
these exceptional orders are certain railroad
companies. They have put in their petitions.
We shall receive the evidence that may be of-
fered on their behalf; but we shall receive
equally any evidence that may be offered on
behalf of other parties who may think their
interests or the interests of the communities
that they may come forward to represent,
would be subverted by the granting of the
petition. We shall also receive any evidence
that may be offered on the part of other parties
or other communities tending to disprove the
applications that have been made. To pro-
ceed orderly we shall take up first the evidence
offered in support of the petitions. When
that has been done we shall take up the evi-
dence that may be presented in opposition to
the petitions. We trust that it will all be pre-
pared for us in such a way that the taking of
it may proceed regularly, promptly and ex-
pediently, so that we may conclude the in-
vestigation as speedily as possible.

With these brief remarks we shall proceed
at once to the taking of testimony. The only

names of witnesses that have been handed to
us so far are those of the committee from
Shreveport, who are ready, I believe, to sub-
mit their testimony now. I will call for it at
once.

Hon. N. C. Blanchard, of Shreveport.
Myself and five other gentlemen, appointed a
committee by a meeting of business men and
merchants of Shreveport, are here for the pur-
pose of presenting the case of Shreveport with
reference to the fourth section of the Act, ask-
ing its permanent suspension as to the rail-
roads centering at Shreveport. We have pre-
pared our petition, which is verified by the
oath of the committee, but upon consultation
this morning among ourselves, and with one
of the receivers of the Texas & Pacific Rail-
way, which is one of the railroads centering
at Shreveport, we have concluded it would be
better, perhaps, to present our case in connec-
tion with the case of the Texas & Pacific Rail-
way, as it will save the time of the Commis-
sion to do so. We are prepared to go into this
matter now if the Texas & Pacific Railway
are likewise prepared.

Hon. L. A. Sheldon, one of the receivers of
the Texas & Pacific. I was about to say that
the construction which I give the statute is
that an application for suspension under the
fourth section cannot be granted, except upon
the application of the carrier; and, therefore,
we have prepared a petition stating facts, and
that petition will be presented to the Commis-
sion.

The Chairman. We will consider it be-
fore us, and these gentlemen may present their
evidence.

Mr. Sheldon. I call upon Mr. Blanchard
and his associates on the committee to make
their statement in regard to it.

Mr. Blanchard. The City of Shreveport,
through its committee, has presented its views
in writing, which are sworn to. If the Com-
mission will permit I will read the application,
and perhaps the Commission may conclude
that no testimony going into details in these
matters is necessary. As we cannot tell ex-
actly what evidence the Commission may want
in support of the application, perhaps it would
be best for us to read the paper itself.

The Chairman. You may do so.

The paper was read.

Mr. Blanchard. If it is the will of the
Commission that we should go into this mat-
ter more in detail, we have the witnesses here
to put on the stand and take their testimony
on these points.

The Chairman. Until something appears
to question the statements we shall undoubt-
edly regard them as proved.

Mr. Sheldon. This memorial is made a
part of our application.

The Chairman. It will be taken as evi-
dence.

Mr. Blanchard. We understand then
that until these statements are questioned from
some quarter no further evidence on our be-
half is necessary?

The Chairman. We do not undertake to
decide each question by itself as we go along.
The parties must put in such evidence as they
deem important. We have no cause to ques-
tion the sufficiency of your evidence, but we

do not want to say you can stop right here and need not put in any more. That is for you to determine, not for us.

Mr. Sheldon. I propose then to put Mr. Finley on the stand. He is the general freight agent of the Texas & Pacific, and familiar with all its business.

W. W. Finley appeared before the Commission and, having been duly sworn, was examined as follows:

By Mr. Sheldon:

Q. You may state your occupation.

A. I am general freight agent of the Texas & Pacific Railroad.

Q. How long have you been employed in that capacity?

A. Since July, 1886.

Q. What was your occupation prior to that time?

A. I was assistant general freight agent for a considerable period.

Q. State to the Commission how long you have been connected with the freight department of the Texas & Pacific Railway?

A. Since March, 1883.

Q. State to the Commission whether you are familiar with the business of Shreveport and the facilities for transportation.

A. I am. People of Shreveport are dependent upon the Texas & Pacific Railway, the Shreveport & Houston Railway, and the Vicksburg, Shreveport & Pacific Railway.

Q. Point out to the Commission the location upon the map of Shreveport in connection with the various lines of transportation.

A. This (indicating on map) is the City of Shreveport. Here (indicating) is the Texas & Pacific Railway. Here (indicating) is the Vicksburg, Shreveport & Pacific. Here (indicating) is the Houston & Shreveport. Here (indicating) is the Red River coming down and paralleling the Texas & Pacific Railway. The Texas & Pacific Railway lines are deeply marked. Here (indicating) is the Missouri Pacific system reaching points in the west, diverging from the Texas & Pacific Road.

Q. You may state at what point it has a substantial or large business and over what lines.

A. I do not understand that.

Q. State to the Commission from what points, and to what points Shreveport does business; from what points it derives its supplies, and over what lines of transportation?

A. It derives its supplies in a very large degree from the Missouri River Territory and the States of Kansas, Missouri and Nebraska; and also derives a large quantity of its supplies from St. Louis, Cincinnati, Louisville, Nashville and points in that territory; also from the seaboard by rail and by steamships to New Orleans.

Q. State to the Commission what lines of transportation are so employed.

A. The Missouri Pacific Railway in connection with the Texas & Pacific Railway drains a very large territory. From the immediate western country it draws its supplies through the Missouri Pacific system in conjunction with the Texas & Pacific Railway; also by means of the St. Louis, Arkansas & Texas Railway in connection with the Texas & Pacific Railway.

INTER S.

The same country ships into Shreveport by way of Memphis & Vicksburg. The supplies from the territory east of the Mississippi River are distributed between the lines leading from that section through Vicksburg and through St. Louis, Columbus, Kentucky, Memphis, Tennessee and New Orleans.

Q. I will ask you to state what rail lines connect it with St. Louis?

A. The Texas & Pacific Railway, the St. Louis Iron Mountain & Southern Railroad, the Texas Pacific Railway, and the St. Louis, Arkansas & Texas Railroad. There are also rail lines from St. Louis to Shreveport that come down on the east side of the river, and come into Shreveport by way of Vicksburg, in conjunction with the Vicksburg, Shreveport & Pacific Railway.

Q. You may state to what points Shreveport ships cotton.

A. The cotton shipped this season has amounted to over 100,000 bales and has been shipped abroad and to eastern milling points. The largest proportion of the cotton goes to foreign markets. Shreveport, being in the midst of a cotton country where the largest percentage of production is cotton, is forced to go to long distances to get its supplies in the shape of grain and western produce.

Q. You may state to the Commission what effect the fourth section of the Interstate Commerce Law has on that traffic, especially that part of it which prohibits the charging of more for the longer than the shorter haul in the same connection.

A. The enforcement of the long and short haul clause has practically paralyzed the railroad interests at Shreveport. Since the Law took effect we have done nothing there in the shape of carrying western produce into that country. A suspension of it would enable us to meet at fair reasonable figures the competition which is offered by the water routes.

Q. You may state to the Commission what is the magnitude of the traffic of the Texas & Pacific between St. Louis and points on the Missouri River and St. Louis and the adjacent points, from the Atlantic Coast by way of New Orleans?

A. For reasons that I stated just now, Shreveport has to go abroad for its supplies of every kind; and the traffic is very large, as the fact of Shreveport shipping 100,000 bales of cotton, enabling it to draw that amount of cotton to its market, will indicate. I haven't got the exact figures, but I suppose 75 per cent of the business that goes into Shreveport is drawn from St. Louis and the Missouri River country, or points in Nebraska, Kansas and Missouri.

Q. What I particularly asked you about was as to the business at intermediate points from Shreveport. How much is there, and can that freight be sacrificed; can the company afford to sacrifice it?

A. In order to reach Shreveport from Kansas City we pass through the most populous part of Texas. We go through what are our largest points of supply in Texas, where the conditions are wholly dissimilar from those surrounding Shreveport. In order to do the Shreveport business on the enforcement of the long and short haul clause, we would have to reduce our rate to that territory, which would

involve the sacrifice of very large revenue, a revenue which we could not afford to sacrifice in order to engage in this Shreveport traffic. We pass through part of the same territory in hauling our freight from St. Louis to Shreveport.

Q. How about the business between the Atlantic Coast and Shreveport by way of New Orleans?

A. The question involved in that is not so grave as in the case of the business from the west, because our haul in connection with that business is not as important to us as the other.

By Commissioner Bragg.

Q. What is the population of Shreveport?

A. I couldn't state in exact figures. I think the memorial presents the fact.

Q. About what is it?

A. I should say Shreveport had about fifteen or twenty thousand people.

Q. Is the competition between the railroads at Shreveport sharp?

A. It has been very sharp.

Q. Between what railroads?

A. Between the Texas & Pacific Railway and the Vicksburg, Shreveport & Pacific in connection with the other lines in their system.

Q. Upon what lines of freight is the competition sharp?

A. It has been in the peculiar products of the West and the freight usually shipped from points along the river, such as Cincinnati & Louisville—whiskeys.

Q. About how long has that competition existed?

A. Since the construction of the Vicksburg, Shreveport & Pacific Road; in 1884 I think it was completed.

Q. Is there any competition at Shreveport between the Texas & Pacific Railway and the Red River?

A. Yes, sir; the present situation there demonstrates that. The business which has heretofore reached Shreveport in a very large degree by the Texas & Pacific Railway has been reaching there by water.

Q. Give us the facts as to how that competition manifests itself and has manifested itself.

A. In the fact that we have been forced ever since we have been running to Shreveport to accept to Shreveport considerably less than we could afford to make or have made to our intermediate territories in Texas.

Q. Give us some of the figures.

A. We have been getting on flour and meal, for instance, from Kansas City or milling points in that territory to intermediate Texas territory, \$1.10 per barrel. We have never within my recollection been able to obtain to Shreveport a higher rate than seventy-five cents a barrel on flour.

Q. That is caused by the steamboat, is it?

A. That was caused by the steamboat competition prior to the time when the Vicksburg, Shreveport & Pacific Road was completed to that point.

Q. Since the Vicksburg, Shreveport & Pacific Road has been completed to that point has there been any change at all in the rates?

A. The competition in the western product has resolved itself into competition between the railroads, from the fact that they immedi-

ately reach the territory, and there has been no inducement to ship by water, from the fact that we have been in a position, unrestrained by the law, to meet the competition.

Q. How many railroads meet at Shreveport, and from what points?

A. There are three railroads; the Texas & Pacific Railroad, the Houston & Shreveport Railroad, and the Vicksburg, Shreveport & Pacific Railroad.

Q. Is there any competition between the Houston & Shreveport Road, and the Texas & Pacific at Shreveport?

A. The competition up to this time has not been felt very sharply; they are in a position, though, in that location to create competition. They come from the South, and their principal competition would come in seaboard business by the way of the Gulf of Galveston and rail line thence.

Q. What is the general direction of the Texas & Pacific Railway from the City of New Orleans to Shreveport?

A. It runs in a northwesterly direction.

Q. Parallel with the Red River?

A. Yes sir. It touches the Red River first at Alexandria and again at Boyce twelve to fourteen miles above, and again at Shreveport. The country between the Texas & Pacific Railway and Red River from Alexandria above is competitive as between the river and the rail lines in a very large degree.

Q. Is there any competition between the river and the Texas & Pacific Railway south of Alexandria?

A. There is no competition below a point we call Cheyneyville, which is twenty-four miles south of Alexandria. We find low rates by river to Alexandria, inducing the people living between Alexandria and Cheyneyville to haul their freight across the country within a radius of twenty-four miles of Alexandria. After we leave Cheyneyville we commence to feel the effect of the Atchafalaya River and the bayous leading into it; and when we leave the Atchafalaya River we touch the Mississippi River.

Q. Where do you touch the Mississippi River?

A. At West Baton Rouge, about ninety-eight miles from New Orleans, and from West Baton Rouge to New Orleans we run within a quarter to half a mile of the Mississippi River.

Q. Nearly all the way?

A. Nearly all the way.

Q. Is there any competition between your road and the Mississippi River from West Baton Rouge to New Orleans at any point?

A. The competition is purely within the State of Louisiana, but it is very sharp.

Q. About what percentage of the business would you say your road does at Shreveport?

A. I should say we do at Shreveport from 60 to 65 per cent of interstate business.

Q. Do you mean of the entire business?

A. Of the entire interstate business.

Q. Do steamboats run all the year round from New Orleans to Shreveport?

A. They do not run through; that is, they may start a larger boat from New Orleans and make a transfer to the smaller boat at some intermediate point; but the season when they

cannot do it is inconsiderable; the condition is such that we may say we feel the water competition all the year round.

Q. They run small boats all the year around?

A. Practically by transfer, as far as I know of.

Q. Do you know about how many steamboats are engaged in the Red River trade to Shreveport?

A. The Red River Coast Line, as I understand it, is a consolidation of various interests. They are not running more than from three to four boats I believe at this time, but they have a very large fleet which is moored across the river here, and which they can call on at any time.

Q. Take the one item of cotton. Does your road bring any considerable amount of cotton from Shreveport to New Orleans?

A. From Shreveport this season out of 100,000 bales we have carried from forty-three to forty-five thousand bales. That cotton has been distributed between New Orleans, the foreign countries and eastern milling points. The cotton which we have brought to New Orleans is compressed cotton purchased by foreign buyers located in the City of New Orleans. It does not come here as a local consignment, but it is reshipped on their own ocean arrangements. In regard to other cotton we issue through bills of lading.

Q. About what percentage of the cotton from Shreveport was brought to New Orleans by steamboats last season?

A. I think the steamboats this year have taken to this point—the railroad business in cotton from Shreveport has amounted I believe to from eight to ten thousand bales this season.

Q. The balance of the cotton from Shreveport that was not brought to New Orleans either by boat or the Texas & Pacific Railway went where?

A. It sought the same markets by other routes. The Vicksburg, Shreveport & Pacific Road was in the market for New Orleans business and also for foreign and eastern business.

Q. In a general way about what amount of the cotton would you say went over the Vicksburg & Shreveport Road?

A. The Vicksburg, Shreveport & Pacific Road carried out of Shreveport last season, from the last statement I saw, about 89,000 bales of cotton. The difference between the shipments of the two routes, the Texas & Pacific and the Vicksburg, Shreveport & Pacific, has been very small this season.

Q. Are there any large towns on your road between New Orleans and Shreveport?

A. No sir; not as supply points. A great many of them are points of shipment; forwarding points for interior traffic.

Q. Give us the names of some of those places?

A. There is Alexandria, Mansfield, Robeline, Provencal and a great many of them are new towns located since the construction of the Texas & Pacific Railway in 1882.

Q. What are the physical characteristics of your railroad between New Orleans and Shreveport? Over what sort of country does it run, what kind of grades has it, are there many bridges, trestles, etc.?

INTER 8.

A. The grades are inconsiderable for the greater portion of the line between New Orleans and Shreveport. On that portion of the line between New Orleans and Alexandria where we cross these rivers and cross the smaller bayous leading into them, there is a great deal of bridging.

Q. Is there any bridging between New Orleans and West Baton Rouge?

A. No bridging to amount to anything. There is considerable trestle as we cross the swamps back of the sugar plantations.

Q. How is it in regard to bridges and trestles between West Baton Rouge and Alexandria?

A. We have there in that section of the line a bridge that is one of the most difficult to build in this country, I expect, across the Atchafalaya River. They were some two or three years in building it.

Q. What is the length of that bridge?

A. I couldn't give the figures.

Q. I do not mean exactly; but about how long is it?

A. I have never given it any investigation. I think you can ascertain elsewhere

Nathan Gregg appeared before the Commission, having been duly sworn, and was examined as follows

By **Mr. Blanchard**:

Q. You are a resident of Shreveport

A. Yes sir.

Q. And are in business there?

A. Yes sir.

Q. What is your business?

A. Wholesale grocer and cotton business, buying.

Q. How long have you been in business in Shreveport?

A. I have been there since 1866.

Q. How much cotton do you handle in the course of a year?

A. From twelve to eighteen thousand bales.

Q. What are your gross sales in your grocery business?

A. It averages about \$500,000.

Q. Annually?

A. Yes sir; about half a million dollars.

Q. What are Shreveport's cotton receipts annually?

A. They vary from eighty to one hundred thousand bales.

Q. What are they this year?

A. They amount this year to about one hundred and five or six thousand bales.

Q. Where does that cotton come from?

A. It comes from the States of Texas, Arkansas and North Louisiana.

Q. Where does that cotton go when it leaves Shreveport?

A. It goes to Europe, and to the northern millers.

Q. Is it compressed at Shreveport and shipped north, and across the Atlantic?

A. Almost entirely.

Q. What proportion of that 100,000 bales annually goes to New Orleans?

A. I can't answer that question.

Q. Very little of it?

A. I cannot answer that. After I sell the cotton I don't know where it goes.

Q. As a matter of general notoriety, very little of it goes south to New Orleans?

A. I can't advise you on that subject. I don't know where it goes after I sell it.

Q. How many people are there at Shreveport?

A. From twelve to fifteen thousand people.

Q. Shreveport is the center of supply of about how many people?

A. It is a very large population. It goes largely into Arkansas.

Q. Would it be several hundred thousand people?

A. Yes sir; it would be several hundred thousand people.

Q. In what States?

A. Texas, Louisiana and Arkansas.

Q. Shreveport then is near the Texas and Arkansas line?

A. Yes sir; it is about twenty miles from the Texas line at the nearest point, and about thirty-five miles from Arkansas.

Q. What are Shreveport's lines of transportation?

A. It has the Red River first, the Texas & Pacific, the Vicksburg, Shreveport & Pacific, and the Houston, Eastern Texas & Western Road. I believe those are all.

Q. Shreveport has rail connections, has it not, with the north, east and western country, over two lines of roads?

A. Yes sir.

Q. What water ways compete at Shreveport with the Railways?

A. There is the Red River mainly, and the Mississippi River by way of the Red River.

Q. Do steamboats run on the Red River and the Mississippi to New Orleans?

A. Yes sir.

Q. To St. Louis?

A. Yes sir.

Q. And sometimes to Cincinnati?

A. Yes sir; we have had boats from Cincinnati direct to Shreveport.

Q. Is not the Mississippi River a competing point with the railroads at Shreveport by bringing freight to Delta, opposite Vicksburg, and from that point to Shreveport by rail?

A. Yes sir.

Q. The V., S. & P. Road being altogether within the limits of the State of Louisiana?

A. Yes sir; we understand it is not subject to the Interstate Commerce Act.

Q. What was the effect of the Interstate Commerce Act upon the transportation business of Shreveport? Were rates advanced any?

A. They were advanced from 50 to 100 per cent. It has caused almost a complete suspension of our business so far.

By **Commissioner Schoonmaker:**

Q. You mean your railroad business?

A. Yes sir.

By **Mr. Blanchard:**

Q. Would the rigid enforcement of the fourth section of this Act have the effect of shutting out the railroads as competitors with the water routes?

A. I should think it would; yes sir; it certainly would.

Q. Would it be an interference with competition on the part of the railroads between each other?

A. It certainly would; yes sir.

Q. Can you mention any particular article of freight where the rates were advanced, say 100 per cent, on the going into effect of the Interstate Commerce Act?

A. I can.

Q. Name one.

A. The article of bacon, that is very largely consumed in our market. Our previous rate was 37½ cents per hundred pounds and it was advanced, I think, to sixty-seven cents; either sixty-four or sixty-seven cents; and the rate on flour also was advanced 100 per cent or more by rail.

By **Commissioner Schoonmaker:**

Q. Can't you give the figures?

A. Yes sir. It was advanced from about fifty-five cents to \$1.10 cents.

Q. From what points?

A. From St. Louis and all points west of St. Louis that we got our supplies from.

By **Mr. Blanchard:**

Q. I would ask you if Shreveport is not entirely and peculiarly affected by what is called the long haul?

A. It is peculiarly affected by it; yes sir.

Q. Is it not a fact that everything that we buy comes to us over a long haul, from a long distance?

A. Yes sir.

Q. And everything that we sell, that is to say, our cotton, is transported a long distance?

A. Yes sir; generally a long distance.

Q. Is not our traffic nearly altogether interstate traffic?

A. Yes sir; it is almost entirely affected by the Interstate Commerce Law.

Q. I will ask you with reference to the Texas & Pacific Railway as a competitor of the Vicksburg, Shreveport & Pacific which is a part of the Queen and Crescent route. The Texas & Pacific Railway from Shreveport to New Orleans is entirely, I believe, within the limits of the State of Louisiana.

A. Yes sir.

Q. Shreveport, I believe, is the western terminus of the V. S. & P. Railroad, is it not?

A. Yes sir.

Q. Does it not compete from Shreveport to New Orleans for passenger and freight traffic with the Texas & Pacific?

A. It does.

Q. Is it not a fact that the V. S. & P. with its connections form an interstate road; that is to say, to get to New Orleans they go through another State?

A. Yes sir.

Q. Take the case of a passenger. Can you mention how that competition would affect the V. S. & P. Railroad with its connections to New Orleans? I will ask you first, What is the passenger rate from Shreveport to New Orleans over the Texas & Pacific?

A. It is about \$11.50, I think.

Have you heard from the agent at Shreveport of the V. S. & P. road what is the least charge they can make for a passenger over their Interstate line to New Orleans?

A. He told me it would be \$14.10, I think.

Q. That was the least charge he could make for a passenger under the operation of the fourth section of this Act on his railroad?

A. Yes sir.

Q. What is the sentiment of that community, with reference to the fourth section of this Act?

The **Chairman**. It is hardly worth while to go into that.

Q. In order to induce some of these railroads to come to Shreveport its citizens have to some extent subsidized one or two railroads that have come there, have they not?

A. Yes sir; they have.

Q. And Shreveport has been enabled to get cheap through rates by reason of competition?

A. Yes sir; they have.

Q. Resulting from these rival railways and the river?

A. Yes sir.

By **Commissioner Bragg**:

Q. When freight was put off by the boats at Delta to be shipped to Shreveport was it on through bills of lading?

A. Not until lately, sir.

Q. How long since?

A. That order was made, I believe, last Thursday or Friday, sir, for through bills of lading.

Q. Prior to that time?

A. It was consigned to Delta and from there to Shreveport.

By the **Chairman**:

Q. When you speak of through bills of lading, what do you mean?

A. From St. Louis over the steamboat line to Shreveport by way of the Vicksburg Road.

Q. Between Shreveport and St. Louis?

A. Yes sir.

By **Commissioner Bragg**:

Q. Before the Interstate Commerce Law went into effect what was the freight rate from Shreveport to New Orleans by way of Vicksburg over the Vicksburg & Shreveport Road?

A. From New Orleans to Shreveport?

Q. Yes; or from Shreveport to New Orleans, the other way?

A. The shipments from Shreveport being exclusively cotton I have no knowledge of what the rates were coming this way; but from New Orleans to Shreveport goods are sold almost exclusively for delivery, delivery price; and in that way we were not aware of the rates.

Q. Is it or not a fact that before the Interstate Commerce Law went into effect the cotton from Shreveport went to New Orleans or went south and east generally either by the river or the Texas & Pacific Railroad, and did not go by Vicksburg and then down the river to New Orleans from Shreveport?

A. My understanding was that most of the cotton shipments for the East went by the Vicksburg & Shreveport Road and its connection east of there.

Q. But it did not go to New Orleans?

A. I don't know about that. I can't tell what became of the cotton after I sold it. I was not aware of what direction the shipments took.

Q. What day was it that these rates were put up by the Texas & Pacific Railway?

A. It was about the first of the month, I think; the first of April.

Q. Were they put up at the same time by the Vicksburg & Shreveport Road?

A. Yes sir; I think they were all posted at the same time.

INTER S.

Q. On the same day?

A. About the same time. I am not aware of the exact time.

Q. When they did that was the steamboat rate affected at all?

A. It affected the rate from St. Louis to Vicksburg.

Q. How?

A. By an advance. On the line the advance I have been told was about 15 to 20 per cent, and I know it was to Vicksburg.

Q. When your railroads went up in their charges the steamboats went up from 15 to 20 per cent?

A. At some points they went up a hundred per cent.

Q. But generally they went up 15 to 20 per cent?

A. At Vicksburg I have been told it was 15 to 20 per cent.

By **Commissioner Walker**:

Q. What route does that business take to New Orleans that goes by way of Vicksburg?

A. I think when it reaches Vicksburg it goes by the Mississippi Valley Road.

Q. Is that the Louisville, New Orleans & Texas?

A. Yes sir.

Q. It does not go east to the Queen & Crescent line?

A. A great deal of it does go that way. The cotton takes that direction east. It goes by way of Meridian and through by Chattanooga to Cincinnati.

Q. But not to New Orleans?

A. In going to New Orleans it takes the Mississippi Valley; and at Vicksburg it takes the V. S. & P.

Q. What did you say the passenger tariff was from Shreveport to New Orleans by the Texas Pacific?

A. \$11.50.

Q. And you say the line from Shreveport to New Orleans by Vicksburg claim they cannot make that tariff?

A. They cannot make that tariff? Their rate is \$14.10. That is what they are compelled to charge, they say.

By **Commissioner Schoonmaker**:

Q. Do I understand you to say the cotton at Shreveport is all sold to agents of foreign purchasers and mill men?

A. Yes sir; almost exclusively.

Q. What is the average price per bale?

A. It varies by the weight. The price we get per pound when the cotton is sold by the pound—it is worth today about nine and one-half cents. It varies according to the season. It brings from \$45 to \$48 per bale.

By **Commissioner Walker**:

Q. You spoke of boats running from Cincinnati to Shreveport. What do they carry?

A. We have not had those boats for awhile. Since the building of the road the boats can hardly come in there and compete with them from Cincinnati, though we have had boats from Cincinnati direct to Shreveport.

Q. Not this year?

A. Not this year; not within the last two or three or four years.

By **Commissioner Schoonmaker**:

Q. You spoke of flour. What will a barrel of flour sell for at Shreveport?

A. Before the present law took effect a barrel of flour of ordinary grade sold for about \$4.75.

Q. What difference, if any, is there now?

A. The same flour is worth \$5.25 today.

Q. There is half a dollar's difference?

A. Yes sir.

Q. What would the same barrel of flour sell for thirty, forty or fifty miles from Shreveport?

A. You would simply have to add the freight.

Q. The local rate?

A. The local rate and the merchant's profit. It would probably be seventy-five cents on an average to our distributing points.

By the **Chairman**:

Q. You say the business of Shreveport is largely affected by the long and short haul clause?

A. Yes sir.

Q. Is it affected any differently from what the business of the towns is from which Shreveport receives its supplies or transmits its products; St. Louis, for instance?

A. I couldn't answer that distinctly.

Q. What would benefit Shreveport in respect to the supplies received from St. Louis would benefit St. Louis also, would it not?

A. Most assuredly; yes sir.

Q. And the same as to Kansas City?

A. The same as to Kansas City.

Q. And the same as to any city to which the cotton sent from Shreveport should be sent?

A. Yes sir.

Q. In other words, these towns are affected in the same way that Shreveport is by this long and short haul clause?

A. Yes sir. If you will examine our peculiar situation, in the corner of three States, you will see very easily how it is.

Q. In respect to all these cities, which are considerable centers of traffic, the effect upon their business is the same, is it not?

A. Most assuredly it is. Take all Kansas points where we draw our grain from, and the Missouri River points, and St. Louis and all the points where we draw our provisions from.

Q. That would be the same as to all the points where there was competition between water and rail?

A. Yes sir.

Q. Would it be the same also where there was sharp competition between the rail lines?

A. Yes sir; it would be the same thing.

Q. Did I understand you correctly that the business by water has diminished since the completion of the last railroad to Shreveport?

A. Oh yes sir.

By **Commissioner Schoonmaker**:

Q. Your business is groceries?

A. Exclusively groceries. I am a wholesale grocery merchant and cotton buyer.

Q. From what point do you procure your supplies?

A. From St. Louis, Kansas City, New York, Philadelphia, Baltimore, and from the entire United States. We are just as much independent of the market as anyone. Our country is an agricultural country. It produces nothing but cotton. Our provisions all come from a long haul. Our sales are exclusively cotton, which

is long haul stuff. Therefore, we are peculiarly affected by it.

Q. All your business, both that received, and that sent out, is long haul business?

A. It is all long haul business.

By **Mr. Blanchard**:

Q. With reference to the point suggested by Judge Cooley as to the trade of Shreveport with St. Louis and Kansas City; is it not a fact that Shreveport is the consuming point; that is to say, we consume everything we bring from St. Louis and Kansas City, and that they are the producing points?

A. We are the distributing point and consuming point.

Q. And they are producing points?

A. Yes sir. We have the largest distributing point west of the Mississippi River.

James Crangle appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Blanchard**:

Q. You live at Shreveport?

A. Yes sir.

Q. And are in business there?

A. Yes sir.

Q. What business?

A. Brokerage.

Q. Western produce?

A. Yes sir.

Q. What is the gross volume of Shreveport's business with reference to western produce, speaking by the year?

A. You mean taking the leading articles separately?

The **Chairman**. That is hardly worth while.

A. Generally speaking; western produce.

Q. What do you mean by that? Do you mean flour and meal?

A. Flour, meal, pork and bacon. The aggregate amount received there of meal, I should say, was about—

The **Chairman**. You need not give the particulars. State generally.

Q. How many car loads?

A. About 50,000 barrels of meal. The car loads vary. I can't estimate it by them; about 50,000 barrels of flour. Of bacon and all sorts of meat it would be between four and five hundred car loads per year. Of grain the amount will vary. It runs from one hundred to two hundred cars per month. It depends greatly upon the crops that are made in the surrounding country.

Q. With reference to Shreveport's being a point of distribution: I will ask you if it is not the second or third largest distributing point west of the Mississippi River?

A. I think it is about the second.

Q. I wish you would explain the operations of the fourth section of this Act upon the transportation of Shreveport. What has been its effect and how?

A. Its effect has been to shut us out from certain territories that we have been getting our supplies from heretofore.

Q. Name those territories.

A. They would be all points on the M. K. & T., or on the Missouri Pacific system of roads. I don't suppose it is necessary to name the points.

Q. I will ask you to name the principal points?

A. Kansas City and St. Louis, by rail, so far as the Iron Mountain Road is concerned, and its connections, and the interior points in Kansas and Missouri and also the river points.

Q. Shreveport has heretofore been getting cheap through rates on the long haul on those articles?

A. Yes sir.

Q. Those rates have been increased about how much since this law went into effect?

A. They increased on those articles I have mentioned, with the exception of grain, about 100 per cent.

Q. Would the rigid enforcement of that section result in serious injury to the town and that section of the country of which Shreveport is the distributing center?

A. Yes sir; it would shut it out entirely from certain sections.

Q. Do you believe the city would decline if that section is enforced?

A. It would.

By *Commissioner Morrison*:

Q. Do you mean by the enforcement of this Act the increased cost of carrying from these through points?

A. It has become so.

Q. Do you mean the rates have been increased?

A. Yes sir.

Q. I suppose you know there is nothing in the law increasing the rates, do you not?

A. Yes sir; I understand that.

Q. Does it cost any more to ship from St. Louis and Kansas City and these through points down to you, than it did before the law was passed?

A. Well, as I understand the law, it is this: That they cannot make a rate there unless all the other rates are made in proportion. That is a matter for the railroads to answer rather than me in that way. They claim this, as I understand: that they cannot reduce all their rates so as to meet the competition that they have by river and otherwise at Shreveport. For instance, the Missouri Pacific Railroad and the Texas & Pacific has not brought a single car of western produce of any kind to Shreveport since this law went into effect. They cannot do it now against the Mississippi River and the V. S. & P. Road; so that we are practically shut out over that route from reaching our sources of supply.

Q. When you say "the effect" you mean that result has followed it?

A. Yes sir.

Q. You heard the gentleman say here that one of the results was that the freight had also been increased on the Mississippi River from St. Louis to Vicksburg?

A. It was; yes sir.

Q. How did that come about?

A. Simply because the competition of the railroad they thought was killed and therefore they could raise their rates and derive greater revenue from the freight.

Q. Then it came of their own action. The Interstate Commerce Bill had nothing to do with the increase?

A. Indirectly it had; yes sir; because it prohibited the railroads from meeting the compe-

tion that they had met by river, and allowed the river to meet rates just enough below to bring the freight in.

Q. What do you mean by prohibiting? The law does not say the roads shall not carry freight for any less than they did before?

A. No; but its effect, whether intended or not, has been this: that it has raised all the low rates and it has not decreased a single high rate on any of the roads.

Q. You mean that after its passage the railroad people raised the rates?

A. The through rates; yes sir; while they did not change their locals.

Q. They raised the through rates without lowering the locals?

A. Yes sir.

By *Commissioner Bragg*:

Q. You have said that the effect of the Interstate Commerce Law had been to increase the freights, as I understood you, upon all other articles except grain?

A. No; 100 per cent on the others. I gave it on the others because 100 per cent about covers those, while grain is not so much.

Q. About what is it on grain?

A. It is about 25 to 80 per cent.

Isaiah Hardy appeared before the Commission, and having been duly sworn was examined as follows:

By *Mr. Blanchard*:

Q. What position do you now fill?

A. The position of assistant general freight and passenger agent of the Vicksburg, Shreveport & Pacific, and the Vicksburg & Meridian Railroad Companies.

Q. How long have you held that position?

A. Some five years.

Q. Are you familiar with the freight rates to and from Shreveport?

A. Yes sir.

Q. What was the effect of the going into effect of the Interstate Commerce Act upon those freight rates?

A. The effect was a very material advance in our freight rates from all points into Shreveport.

Q. What was the effect of the going into effect of the Interstate Commerce Act upon the transportation of freight from St. Louis south by the St. Louis & New Orleans Anchor Line of Steamboats?

A. There was quite an advance in rates from St. Louis to Memphis and river points south.

Q. How much?

A. From St. Louis to Memphis on some articles as much as 100 per cent.

Q. And from St. Louis to Vicksburg?

A. About 15 per cent on the same line of goods.

Q. Was that advance in the rates of freight on that line of steamers made immediately upon the going into effect of this law?

A. On the same day.

Q. The 5th of April?

A. Yes sir.

By the *Chairman*:

Q. Was it before the railroads put up their rates?

A. The rail tariffs had been adjusted, and were prepared to be in effect on the 5th of April.

Q. And this followed the posting of railroad rates, which were largely in advance of what they had been before?

A. Yes sir.

By **Mr. Blanchard**:

Q. It is a fact, is it not, that the Commission suspended temporarily the operations of the fourth section upon the lines of railroad included within the Southern Railway & Steamship Association?

A. Yes sir.

Q. When that suspending order went into effect what did the Anchor Line of Steamers do?

A. They reduced the rates to the figures that were in effect prior to the 5th of April.

Q. They reduced them immediately?

A. Yes sir.

Q. What is the distance from Vicksburg to Shreveport by rail?

A. It is 170 miles from Delta, right opposite Vicksburg, to Shreveport.

Q. Then the Mississippi River at Vicksburg would be a competing line to Shreveport, would it not?

A. It would be a competing line against our line by way of New Orleans and Red River.

Q. And against the Texas & Pacific Line?

A. Yes sir.

By **the Chairman**:

Q. When the railroads obtained the order of suspension they put down their long haul rates, did they not?

A. To the same figures that were in effect.

Q. And the steamboats put down their figures, following the railroads, just as they followed them when the railroads went up?

A. Yes sir.

By **Commissioner Bragg**:

Q. When the railroads raised their rates at competing points after the Interstate Commerce Law went into effect, did they lower their rates at local points?

A. To some extent, yes sir; not very materially. They did not lower them excepting where the rates that they desired to operate at the junction points forced a reduction to comply with the terms of the law.

By **Mr. Blanchard**:

Q. Has the fourth section been temporarily suspended on the V. S. & P.?

A. Yes sir.

Q. Has it been on the Texas & Pacific?

A. Not that I am aware of.

By **Commissioner Walker**:

Q. Have you been in the habit of charging less from Vicksburg to Shreveport than from Vicksburg to other points on your line between Shreveport to Vicksburg?

A. Yes sir.

Q. How much did you charge for flour from Vicksburg to Shreveport?

A. I couldn't tell you exactly unless I had the rate sheets.

Q. I am not talking about the joint tariff. I am talking about your local tariff?

A. I think the rates to Shreveport were on an average about 50 per cent less than they were to local stations intermediate.

Mr. Sheldon. Some time since I filed an application for a suspension of the fourth section as to business from New Orleans to the Missouri River. I have received a letter in reply,

signed by **Mr. Commissioner Walker**, saying that the matter would be taken under hearing. Allow me to inquire now as to when it will be convenient for the Commission to take it up?

The Chairman. Now; at this time.

Mr. Sheldon. I presume the Commission has the petition here. I have a transcript.

The Chairman. Yes sir; we have it here. You may proceed at once.

The Chairman. In order to avoid any misapprehension, I will say this: we will receive evidence in regard to any of these propositions separately, or will receive it all together. When you have a witness who will speak to several petitions, you may examine him fully as to all. It will save a good deal of repetition, probably.

W. W. Finley, who had been previously sworn and examined, was recalled and further examined as follows

By **Mr. Sheldon**:

Q. Will you please state what lines of transportation there are from New Orleans to Kansas City, Atchison, Leavenworth, and adjacent points in the State of Kansas and St. Joseph, in the State of Missouri, to Omaha, in the State of Nebraska, and Council Bluffs, in the State of Iowa, and points adjacent thereto, or those points which are considered in traffic circles as Missouri River points?

A. The rail lines that have immediately competed for that business from New Orleans are the Texas & Pacific Railway, the Illinois Central Railroad, and the L. N. O. & T. Railway. Neither of these lines run directly to that territory, but are dependent upon their various connections to get there. There are also water and rail routes to the same territory, through Memphis and through St. Louis, by boats to those points, and rail thence.

Q. You may state to the Commission over what lines the Texas & Pacific reaches those points?

A. The Texas & Pacific Railway, in that business, connects with the Missouri Pacific system; with the Missouri, Kansas & Texas road of the Missouri Pacific system, connecting with that line at Mineola, Texas.

Q. State if the Missouri, Kansas & Texas Railroad reaches Kansas City directly?

A. They do not. They reach Kansas City over the Missouri Pacific main stem.

Q. How do they reach the places northward?

A. The Missouri Pacific Railroad extends to Council Bluffs, which they reach by crossing the Missouri River, from Omaha, on the bridge.

Q. State to the Commission through what States and Territories the transportation lines by rail pass in reaching those Missouri River points?

A. They pass through Louisiana, Texas, Indian Territory, Arkansas, Missouri, Kansas, Nebraska, and into Iowa to get to Council Bluffs.

Q. I wish you would state to the Commission the extent of business between New Orleans and the Missouri River points during the months of October, November and December last, on the line of the Texas & Pacific, including return freights?

A. The business from New Orleans to that

Territory is very large in the peculiar products of Louisiana, sugar, rice and molasses. The Texas & Pacific Railroad carried in the months of October, November and December to that territory about 250 car loads—I am mistaken about that; that number includes the freight which has passed through New Orleans and over the Texas & Pacific Railroad, imported from abroad, such as tin, plate, earthen ware and Liverpool salt. The amount of business south bound from Kansas City has not been what we think we can develop it to, because we have been somewhat restricted, owing to lack of facilities for handling the goods.

Q. You may state what the character of return freight is from those points to New Orleans?

A. It is western produce.

Q. Name the articles?

A. Bacon, principally, and grain.

Q. You may state to the Commission whether the road, as a rule, gets return freight when it carries freight into that territory?

A. Yes sir; as a rule it gets return freight.

Q. So it is carried both ways?

A. Yes sir; there is a large field for return freight.

Q. State to the Commission the extent and character of the business between New Orleans and Missouri River points, particularly in Texas?

A. Texas, like Shreveport, draws a great deal of western produce from that territory, particularly during the seasons like the last in Texas, where they have had a severe drought, and been unable to raise anything, in any large degree, at home. The same causes which would prevent our engaging in business from Kansas City to New Orleans, exists as in the case of Shreveport. It would force a reduction in our intermediate business to a larger percent than we would have to make, even if engaged in Shreveport traffic.

Q. How does the volume of business from New Orleans to Texas points compare with that from New Orleans to Missouri River points?

A. From a rough estimate, I should say it is five to one in favor of Texas.

Q. Can the Texas & Pacific afford to sacrifice its Texas revenue?

A. No sir.

Q. You may state what has happened in relation to the business to and from Missouri River points?

A. The effect has been a total suspension, so far as the Texas & Pacific Railway is concerned.

Q. Why has it suspended business?

A. From the fact that it was absolutely necessary that we should preserve our intermediate business.

Q. What has been the action of competing lines in that connection?

A. Competing lines have engaged in the traffic between Kansas City and New Orleans.

Q. State how they could do it while we could not?

A. My understanding is that one of the lines, a competitor of ours, running between New Orleans and Memphis—the Mississippi Valley route—found that the largest percentage of its business was through business. Its line parallels the Mississippi River. Its local rates were

consequently low, and they found it to their advantage to reduce the intermediate territory sufficiently to admit of their engaging in Missouri River traffic. Since then, it is my understanding that those roads are engaging in this traffic under a suspension by the Commission of the fourth section.

Q. That is to say, they are engaging in the traffic because the law has been suspended?

A. Yes sir.

Q. Will you state to the Commission how the line of the Texas & Pacific and its connecting lines to Missouri River points compares in length with other lines?

A. It is somewhat longer.

Q. How much?

A. About 200 miles.

Q. What is the character of the track, so far as grades and bridges are concerned?

A. They are heavier, and it is more costly to operate.

Q. How much business is there in the Indian Territory this side of the Missouri River?

A. The local business in the Indian Territory does not amount to much.

Q. But the local business in Texas is very large?

A. Yes sir.

Q. Can you estimate to what extent there would be a loss to the revenue of the Texas & Pacific Railway, if it should sacrifice its local rates in order to move the through business to the Missouri River points?

A. It couldn't pay its operating expenses if it did.

L. Lipman, President of the First National Bank of Yazoo City, appeared before the Commission and was duly sworn.

The **Chairman**. You may proceed to make your statement in your own way.

The **Witness**. I wish to state, in accordance with the petition which I have had the honor to present to you, that article four of the Interstate Commerce Bill deprives us of the benefits arising from the competition between the railroad and the river. Since the new tariff of the railroad has gone into effect, we have virtually lost all communication of freight with the interior or from other States. That is really for the present the effect of this Bill and the rates that have been established since under it. In addition to this petition I have a comparative schedule of rates attached thereto for your kind consideration.

By **Commissioner Bragg**:

Q. Yazoo City is situated on the Yazoo River, is it not?

A. Yes sir.

Q. How far from the Mississippi River?

A. About 100 miles.

Q. Is the Yazoo River navigable all the year to Yazoo City?

A. It is.

Q. By boat?

A. Yes sir.

Q. What is the competition now at Yazoo City between rail and boat?

A. The difference at present is in many instances about 8 to 10 per cent in favor of the river.

Q. You mean the river charges about that

much lower than the boats, or gets that much more of the business?

A. No sir; the river charges at present probably from 8 to 10 per cent less than the railroad to many points.

Q. What effect does that have upon the railroad transportation?

A. The railroad heretofore on account of its rapid transportation probably has secured from 80 to 85 per cent of the traffic from and to Yazoo City.

Q. About what amount of business do you do at Yazoo City?

A. I should estimate we do a business aggregating about five or six million dollars.

Q. What is your population?

A. Aggregating thirty-five or thirty-eight hundred.

Q. About what amount of cotton does Yazoo City ship?

A. About 80,000 bales.

Q. Any other products besides cotton?

A. None shipped from there.

Q. Do you do much business from the Northwest in the way of meat and grain?

A. We do. We are excluded for the present from doing business with Chicago or Kansas City, our former places of supply for meat and grain. The rates have advanced as much as 200 per cent or about that. It is stated in the petition.

J. C. Haskell appeared before the Commission and having been duly sworn, said:

Mr. Chairman and Gentleman: I was requested by the agent of the Illinois Central Railroad, to appear here in behalf of the American Salt Company and present their petition in support of the request of that road that they be relieved from the action of the fourth clause of the Bill regulating commerce in so far as the hauling of salt produced by the American Salt Company, and shipped from their mines to Chicago is concerned.

(The witness then submitted a statement in writing, after which he proceeded).

In support of the statement which I have made, with regard to the quality of the salt, I simply beg leave to submit a sample of our product. (Presents sample).

By **Commissioner Walker**:

Q. Where is your establishment?

A. New Iberia, Parish of Iberia, State of Louisiana.

Q. How far from New Orleans?

A. One hundred and twenty-five miles from New Orleans.

By **Commissioner Schoonmaker**:

Q. What is the peculiarity of your salt?

A. Simply, it is a rock salt which can be crushed and is suitable for heading mess pork. It comes in competition with the Turk's Island and Mediterranean salt. No other salt of that kind is produced in the United States. It is the only rock salt mine of the kind operated in the United States.

Q. Are there not salt mines in western New York?

A. There is one that is partially open and from which I got a sample within the last few days. It is not the same quality as this salt, and is not suitable for the same purposes, as

stated to me by Mr. Armour, Washington Butcher and other prominent packers at Chicago, owing to the fact of there being foreign substances mixed through the salt.

By **Commissioner Morrison**:

Q. At what price do you sell your salt?

A. \$2.25 f. o. b. on the cars.

Q. For how much?

A. For a ton sir.

Q. How much would a bushel be?

A. I don't know exactly. We always deal in tons. We always sell large quantities. Divide 40 into 225 and it will give you about the price.

By the **Chairman**:

Q. At what points does your salt come into competition with foreign salt?

A. At Chicago. We ship exclusively this grade and only to the large packers of Chicago. We don't pretend to compete with any other grade of salt. We are only able to supply the Chicago packers because they have to get their other supplies from Europe.

By **Commissioner Morrison**:

Q. It would cost about five and a half cents a bushel?

A. About that sir.

Q. Do you know the relative cost of their salt?

A. They have to take it to New York, tariff as their basis, via rail, but what they can do by the lakes I don't know. I have a statement from Jay Martin, who is the agent of the Michigan Salt Association, that they can reach Chicago with foreign salt through the lakes and sell at an even price with us. The packers, though, give the preference to our salt over foreign salt, believing it to be a superior quality.

By **Commissioner Walker**:

Q. How do you ship?

A. In bulk. The cars of the Illinois Central Railroad are backed into the mine and loaded there, and bulk is not broken until they are delivered at the stock yards at Chicago.

H. C. Waite of the State of Minnesota, temporarily in New Orleans, appeared before the Commission and was duly sworn.

The **Chairman**: Is your statement a statement of facts?

The **Witness**. Partially facts and partially argument.

The **Chairman**. If it is a statement of argument you had better file it with the clerk. We are simply taking evidence now.

The **Witness**. It is partially argumentative, but it is very short.

The **Chairman**. You may go on. (After the witness had read a part of his paper). As I understand your paper, it is an argument against the law?

The **Witness**. Yes sir.

The **Chairman**. We have nothing to do with that. The propriety and justice of the law has been settled. If you have any facts to show there are special and exceptional reasons why an order should be made, exempting any of these petitioners, or upon another line from the effect of this law generally, which we take to be just and proper, you may present those facts, and we will be glad to have them; but the argument is entirely out of place before us.

quantities as we do. In nine cases out of ten the places tributary to us wouldn't be able to buy in carload quantities as we do to get the better rate. The margin in selling the goods is very low indeed.

Q. If the rates were reduced to them, it would not hurt them, would it?

A. If they were buying the same quantities, I presume it would not hurt them at all.

By **Commissioner Bragg**:

Q. What competitive lines have you at Jackson?

A. The Illinois Central Railroad crosses us north and south, and Queen & Crescent crosses us east and west. We have a local railroad running from Natchez, Mississippi, to Jackson. We have also a local road under the auspices of the Illinois Central Road that runs from our town to the Yazoo delta.

Q. What road is that?

A. The Yazoo Valley Road.

Q. Then you have a road from Jackson to Vicksburg?

A. That is the Vicksburg & Meridian Road. It crosses us east and west.

Q. Is the Pearl River navigable at all at Jackson?

A. No sir. Some effort has been made to have it made so.

Q. They give you competitive rates at Jackson?

A. Yes sir.

Q. How does your rate compare with the Meridian rate?

A. I don't know the Meridian rate, but the Meridian rate is less than our rate.

Q. Do you know about how much?

A. No sir, I do not; but a gentleman from our town whose business it is can give you exactly that.

Q. How does your rate compare with the Vicksburg rate?

A. The Vicksburg rate is very much less than ours.

Q. You then have not the same low through rate that Vicksburg and Meridian have, but still you have a through rate that is allowed you that is less than that of other local points along the road. That I understand to be your situation?

A. Yes sir.

Q. What is the population of Jackson?

A. About seven to nine thousand; perhaps nine thousand.

Q. Have you any factories there?

A. Our cotton mills have been destroyed. We haven't had any since.

Q. Have you any other industries there?

A. We have the largest compress perhaps that is anywhere. There is no larger. We have cotton seed oil mills, and then we have two plough factories.

Q. Do they do any considerable business?

A. Oh, yes sir; they supply most of the ploughs that are sold in our country, with the exception of what Avery, from Louisville, sells.

By **Mr. Stahlman**:

Q. You stated that freights from the West going to Goodman, passed through Goodman to Jackson, and were then returned. Is that true?

A. That may be true with reference to the Illinois Central Railroad.

Q. Is it not true that the rate to Goodman is based on Jackson, and freight coming from the West to Goodman would stop at Goodman?

A. I think not sir. I don't know.

William Oliver, Secretary, Treasurer and General Manager of the Mississippi Mills, Wesson, Mississippi, appeared before the Commission and said:

I had the honor to address the Commission at Washington City, on the 11th of April; on the subject that I beg to be heard on this morning, and that is with reference to special rates for our mills; or rather, for permission for the road upon which we are located, the Illinois Central, to grant us special rates, as has been the custom with us since we first established our mills there. I have a statement to make with reference to it.

The **Chairman**. If it is a statement of facts, you may read it.

The **Witness**. (After having read the statement.) This letter has reference to a former letter, a copy of which has been placed with this communication, and also a statement in connection therewith. There may be something about the statement that may need explanation.

Commissioner Schoonmaker. Explain anything you wish.

The **Witness**. This statement, gentlemen, shows that our mills shipped in manufactured goods 1,840,464 pounds of goods manufactured out of cotton and wool. We also manufacture a great many goods in the way of jean pants that we ship from here to New Orleans for their manufacture, and pay the freight on them, and then ship them back to the mills, and they are sold. The sum total is 2,143,454 pounds of goods, and the casing in which they are placed. The average rate of freight on them is about \$12,860 that we pay. We receive in addition to that a large amount of supplies in the way of drugs, etc., from the East. Some come over the railroads, but the bulk of them come by the Morgan Line and up to the mills by the Illinois Central Railroad. We receive in that way 520,859 pounds. The freight on that averages from sixty to seventy-five cents per hundred. The freight on our goods is sixty. The total freight amounts to some \$25,000, and that embraces also 520,859 pounds of wool we pay the freight on, getting it from Texas, California and other points. The sum total of our freights paid out under the special arrangement we have with the road, and have had since we first went into operation, is \$25,000. When this Interstate Law went into effect on the 5th of April, and up to date, the rates of freight were increased upon us from 100 to 150 per cent. For instance, we had a rate of freight to Chicago of fifty-five cents, and it was increased to \$1.57; to St. Louis fifty-four cents, and it was increased to \$1.45. Nashville and Louisville and all the other points are in the same proportion.

By **Commissioner Bragg**:

Q. Fifty-five cents per hundred pounds?

A. Yes sir. Our special rate to Chicago is fifty-five, and the reason we have to get those

rates is this: We are manufacturing goods in competition with other manufacturers of the United States. We ship our goods all the way from New York to San Francisco. About the first of April we shipped two car loads of sewing twine to San Francisco. We make a great deal of it; have machinery especially for it.

By **Commissioner Schoonmaker**:

Q. What do you manufacture generally?

A. The work of our manufactory is fine jeans, gingham plaids, checks, cotton, cotton edging, sheeting, etc. It is a cotton and woolen mill combined. We have rising a million of dollars invested there; and I can tell you if we have got to pay the rates it seems to me we would have to pay under the operation of this law, I don't see but we would have to move our enterprise. We have built up a town there of some 8,500 people. We work 800 hands. We have built up quite a large town in the interior. The mill supports the whole thing, and the country is built up by it. That is our condition. I was handed some other papers here from lumber men and the like. (Submits papers to Commission.) If there is any question you would like to ask me, I will be glad to answer.

By **Commissioner Bragg**:

Q. The railroads give you special rates on your manufactured goods and on the materials you use in manufacturing them?

A. Yes sir; that was the arrangement made with them when we first went there.

Q. Those special rates are a good deal lower than the general rates of freight, are they not?

A. Yes sir.

Q. On similar goods?

A. On similar goods; yes sir.

Q. Do you know whether it is true as a matter of fact that the railroads of the United States pursue the same course in regard to manufacturers in the Eastern States, the Northern States, and the Western States that they pursue towards you in giving special rates?

A. That is my understanding; that these rates are given us to enable us to compete with our competitors from the East, West, and North.

Q. And because the railroads in those States give special rates there. Is that true?

A. I do not know whether it is true or not. I suppose it is true.

Q. I ask what you know about it?

A. I do not know. I can say this, in explanation, and perhaps it will lead you to understand what I know about it. Here is Columbus, Georgia, for instance. The Eagle and Phoenix are competitors of ours. They will have a rate to Cincinnati, or a rate to St. Louis or any other point. This road will give us the same rate. Wherever they have got rates they will give us the same rate. They give us the same rate to Columbus, Georgia, to Atlanta, to Augusta, to Macon, Savannah and Charleston, and we sell goods to all those places. We have rates going through to those points. But for that we couldn't compete with our competitors at those points. At Louisville, for instance, we sell a great many goods in the same way, and St. Louis and Chicago. Manufactured goods are sold on a very close margin.

A. W. Houston, Attorney for the San An-

INTER 8.

tonio & Aransas Pass Railway, appeared before the Commission and presented a petition on behalf of that railway, asking for a suspension of the fourth section of the Act, and said:

That petition is verified by the treasurer and traffic manager of the railroad company, as is also the exhibit of freight rates attached. The exhibit of freight rates attached shows the comparative rate between water and rail. The rates between New York and Boston and Corpus Christi by water on 1st, 2d, 3d, and 4th class freight are \$1.26, \$1.11, \$1.01, and 86 cents. By rail they are \$1.50, \$1.35, \$1.22, and \$1.09; showing the difference between the rates now by rail and the rates at present established by water. The water rates the railroad company must meet, in order to compete for freights to and from Corpus Christi and those points to which Corpus Christi has water routes. Take the item of wool from Corpus Christi to New York. There is a very large shipment of wool at this particular season of the year. It is just the clipping season, when the shipments of wool are made. They will all be made inside of the next ninety days for the wool season. The rate by water is seventy-five cents from Corpus Christi to the eastern markets. The rate by rail is \$1.45. In order to meet that water rate the wool will have to be permitted to come down to at most seventy-five cents. It is the same way with all other freights.

By **Commissioner Walker**:

Q. When it goes by water you bring it down to Corpus Christi from the interior?

A. Corpus Christi is a local market for wool. The wool is brought in there by the wool grower and it is marketed there to the dealer or shipper; and when they get ready to ship it to the competitive markets they ship it by water of course, as long as they can get it for about half rates; and the railroad company cannot compete for that freight for the reason that the line only extends from San Antonio to Corpus Christi, and being really only a local road and having no through connections except over these other roads, and the rates for its through traffic being more or less dependent upon the rates which the other roads establish to San Antonio, they will establish a rate to San Antonio, and this road being only tributary to them in a measure must maintain that rate. Under the enforcement of section four they can't go below. If they did, they would be charging more for a short haul than for a long. I will state also that the petition is accompanied by an exhibit signed by all the shippers, merchants and dealers in Corpus Christi.

Q. You want to carry it for less from Corpus Christi to New York than they do from San Antonio to New York?

A. We don't ship from San Antonio direct to New York, but that is the idea. We want to charge less from Corpus Christi to New York than we charge from an intermediate point to New York. We want to charge less for the long haul than for the shorter haul, for the reason that at the long haul we meet with this water competition. I will state to the Commission that I have the traffic manager of the San Antonio & Aransas Pass

Road present. It is a new road and a very small one. If the Commission would wish to cross examine him upon any of the statements made in that petition or the exhibits attached, he is present and will testify.

By the **Chairman**: It is for you to say whether you want to examine him or not. I don't know as we care to cross examine him.

John J. Gragard appeared before the Commission, was duly sworn and presented a memorial from the Chamber of Commerce of New Orleans.

By the **Chairman**:

Q. Do you wish to make any statement in addition?

A. Nothing; only to say I feel we have quite an opposition by railroad interests, while the people are not represented here. They have but little to say. They leave this matter in your hands for justice. The people, in my judgment, are not represented. From my experience, you have not heard the side of the the people, but the railroads and those who are tickled by railroad interests are very well represented here. The people are not.

Q. Are there any persons here present or whose attendance you can procure this afternoon?

A. There are representatives here from other bodies that will bring some evidence.

Q. If you will hand up any names before our adjournment, or on our coming in in the evening, we will call them.

A. I only wish to say I feel on oath that the railroad interests and people who are especially favored are well represented here, but the people are not; and you being appointed by a President who knows no South, no East, no North, no West, we feel sure you will truly consider the interests of the people, and we feel that their interests are for the maintenance of that clause. We may not be favored. We have no doubt we will be—the railroads in order to make the people dissatisfied and force us into measures, may adopt very heavy tariff rates, but we are willing to submit to it and wait the time.

By **Mr. Stahlman**:

Q. Is it possible to get the people in here before the adjournment of the Commission?

A. They are not enough interested. The people that have special interests are the railroads and people who are especially favored by the suspension of the clause. The people, as a rule, are poor, and they are not sharpers or intriguers. They are expecting the honorable Commission appointed will carry out their interests and will see to it without having an array of influence against it. They have not money and influence to carry their point and bribe people to favor them.

Q. Are all the people who have been discriminated against so poor they cannot come here?

A. No sir; they are not—

The **Chairman**. No matter about that. I repeat what I said. You may hand in any names, and we will call them.

Ashton Phelps appeared before the Commission and having been duly sworn testified as follows:

I represent a Committee of the New Orleans Cotton Exchange. We have had this question under consideration for some time. I will say that our endeavor has been to present the latter as we view it in the fewest number of words. We have understood from the rulings of the Commission that it was their intention to consider only specific cases as presented to them, involving the construction of this law. We therefore lay before you this petition which, as we conceive does present a specific case; but we wish it understood that we do not rest our case entirely here. When we have had the ruling of the Commission on this case which we now present to you we shall take further steps to thoroughly investigate the question and lay the facts before you either in other cities or at Washington. Our petition reads as follows: (Mr. Phelps then read the petition.)

The **Chairman**. Do you wish to make any further statement in addition to this?

The **Witness**. No; I have none to make.

Mr. Stahlman. I would like to ask if it is proper to develop, as far as we may, the reason why the cotton is not shipped to New Orleans locally, and the reason why it would not come.

The **Chairman**. You may ask any question you desire to ask.

By **Mr. Stahlman**:

Q. Memphis is a cotton market, is it not?

A. Yes sir.

Q. A pretty large interior market?

A. Yes sir; it is.

Q. A buyer buying cotton at Memphis would entail the same expense upon himself to reship it to New Orleans locally that he would entail if he shipped from Memphis to export it, would he not?

The **Witness**. What do you mean by the same expense?

Mr. Stahlman. I mean the expense accruing in the purchase and in the shipment of that cotton outside of the rates of transportation at Memphis would be as great in case the shipment was made to New Orleans proper, as if made via New Orleans for export?

A. I do not grasp your point at all. I do not understand the point of your question.

Q. I will try to make myself clear. A man buying a thousand bales of cotton at Memphis would incur the same expense in the purchase in the weighing, in the handling and in the shipping of that cotton at Memphis, although he shipped it to New Orleans—

A. I understand what you mean. You mean the cost of classifying and marketing that cotton would be the same in Memphis that it is here.

Q. No; I do not mean that. I mean that it would be the same whether the purchase would be shipped for export, or be shipped locally to New Orleans?

A. Certainly.

Q. It would be the same?

A. Yes sir.

Q. I understood you to say that the difference between the rates from Memphis through New Orleans for export, and Memphis to New Orleans locally, and thence for export from New Orleans, was sixty-five cents a bale?

A. Yes sir.

Q. I would like to ask you what expense the shipper or buyer at Memphis would have to incur locally at New Orleans if he shipped locally; or in other words what expense the cotton would have to incur in the shipment from Memphis to New Orleans to be re-handled here, and re-sold and re-shipped for export over and above the expense incurred on a direct shipment.

A. I do not perceive that that has any bearing on this case. His outside expenses have nothing to do with it. I make the point that a different charge is made for precisely the same service, so far as the railroad is concerned. What the outside men charge is something that does not concern the railroad rate of freight. That has nothing to do with it.

Q. I am trying to develop the fact that it would be impossible for the shipper to ship to New Orleans locally if the railroads would carry the cotton for nothing.

A. That is the point that does not concern us at all. All we ask is to be put on a just basis, and if we cannot handle it afterwards it is our fault.

Q. (Handing a paper to witness.) I would like to ask if that is a correct statement embodying the charges incident to warehousing, weighing, sampling, etc., at New Orleans as in vogue in season prior to this and up to a very few days.

A. Correct, so far as a part of the business of the port is concerned, but about half of it is not.

Q. What about the other half?

A. Half of it is handled by outside parties—one third of the cotton handled here is handled outside of this.

Q. But two thirds is handled by this Company?

A. It has been heretofore, but it will be handled on an entirely different tariff next year. However, that does not touch our point at all. We do not ask to have any discriminating rates in our favor, nor do we put before this Commission what it costs to handle cotton after we get it here. If we can't handle it as cheap after we get it here, on a fair deal from the railroads, that is our fault and we expect to lose the business and don't want to keep it.

Q. This then is the correct charge that has been in vogue on cotton prior to this date—upon two thirds of the cotton brought to New Orleans?

A. Yes sir.

Q. I have a paper which has been prepared and put in such shape that the Commission may understand it, giving the charge on a bale of cotton shipped here locally, sold and re-shipped. Is that a correct statement? (Handing a paper to the witness.)

A. It is as I have said, on a part of the commerce of the port. It is not true on the remainder.

Q. Then as I understand it to ship here locally and re-ship the cotton would tax the cotton \$4.10 per bale over and above the charge the Memphis merchant would incur in case he shipped through.

A. That is one statement of the case, but a very incorrect one, permit me to say.

The Chairman. Make any explanations
INTER 8.

in that connection that you may desire to make.

The Witness. That would lead you to suppose the thing was all on one side; but if you will take the case as it concerns the shipper from any local station on the Mississippi Valley Road the statement is very different, because the charges in Memphis would be precisely the same that that man has to pay, or very nearly the same. The point we make is that whether a bale of cotton was sold or resold here or not, if you took it to New Orleans on a local bill of lading and that cotton went through New Orleans and never was stopped here and never was sold here, that would cost sixty-five cents a bale more than precisely the same cotton sent on a through bill of lading.

Mr. Stahlman. The point we make is that if the railroads were to bring the cotton here for nothing it would not come here from Memphis.

The Witness. Not with your discriminating rates of freight.

Q. The rate from Memphis, I understood you to say, on local business, was a dollar a bale to New Orleans?

A. Yes sir.

Q. A discrimination as claimed by you of sixty-five cents a bale?

A. Sixty-five cents on through business.

Q. If shipped to you locally it would cost \$4.10 more to handle the cotton to New Orleans than to ship it through?

A. Yes sir; from Memphis; but suppose it was shipped from one of the local stations. Then your whole case falls to the ground, because we can handle it as cheap as Memphis.

Q. Being discriminated against as you claim sixty-five cents, and having against you here charges of \$4.10, there would still be a tax on a bale of cotton of \$8.45 by shipping here locally, and undertaking to make the market here, and then re-shipping, would there not?

A. No sir.

Q. Deduct sixty-five cents from \$4.10 and what does it leave?

A. That is a one-sided way of putting the case. That has nothing to do with it. The point we make is that this discrimination of sixty-five cents a bale gives a fictitious advantage of sixty-five cents a bale to the price of cotton at Memphis. So far as all market is concerned, if we are put on an equality with other rates of freight and we lose the business, that is our loss and we are willing to stand it.

Mr. Stahlman. I want to say in this connection, and it is a fact which I will establish by the tariff, that the railroads centering at New Orleans bringing cotton as far as 626 miles, are transporting it at less than the charges in New Orleans from the time it reaches here until it reaches the shipboard for export.

The Witness. Where is that from?

Mr. Stahlman. From all points on the line of the Illinois Central, Louisville & Nashville, and Louisville, New Orleans & Texas Railroads. I am not advised as to the Texas Railroads, because, as I understand it, their cases are not being considered here.

The Witness. Will you explain to me what you understand by the charges in New Orleans?

Mr. Stahlman. The figures put on that card.

The Witness. You say on there one dollar a bale commission, I see, for one thing.

Q. If it is sold locally is there not two and a half per cent commission?

A. Are you aware of the fact that a large proportion of cotton sold in New Orleans is not on commission at all?

Q. How is it sold?

A. A great deal of it is sold as low as twenty-five cents a bale commission. It is bought by people here and they get what commission out of it they can.

Q. Is there not among the commission merchants of New Orleans a fixed rate of two and a half per cent commission?

A. No sir; there is not.

Q. Do you not charge two and a half per cent commission on a great deal of the cotton sold here?

A. On a great deal we do, and on a great deal we do not.

Q. Then you discriminate yourselves?

A. A man is free to have his cotton sold by whom he pleases. That is where he is different from a railroad company.

Q. Are you not free to ship from Memphis either by rail or river?

A. Yes sir, but how about the local stations? I am making the plea for the man at the local station who is to pay \$2.25 a bale to get the cotton here over the same line. He is the man whose case I am presenting to you. The actual charges on cotton here so far as the handling of cotton without regard to any outside charge, which is a matter of convention, are one dollar a bale including the compressing and drayage. The total charges for the next season and those which have prevailed on one third of the cotton here this season have been one dollar for handling a bale of cotton including the compressing.

Q. But that statement is correct practically as to the business heretofore?

A. No sir; it is not correct, so far as the great majority of the business is concerned. It is correct so far as a certain amount of fixed charges is concerned. When you come to put the commission in there it is not a correct statement, because a large amount of the cotton sold here pays a very small commission.

Q. You say the whole charge to be incurred at New Orleans hereafter is only one dollar per bale?

A. I do.

Q. What is your compress rate?

A. It will be fifty cents. That is what our business has paid this year.

Q. What is your cartage rate?

A. That is included in the rate of thirty-five cents storage.

Q. Is that to and from the compress?

A. No sir; one way, thirty-five cents.

Q. And drayage fifteen cents?

A. To the ship; yes sir.

Q. What is it for, carrying into the compress?

A. That is included.

Q. Let us understand it. There are two cartages here on cotton, are there not?

A. Yes sir.

Q. One into the compress and the other out?

A. Yes sir.

Q. Do you mean to say the cartage in and out and the compressing is all covered by fifty cents?

A. I say it is all covered by a dollar.

Q. What is the rate of insurance?

A. It depends upon how long the cotton is in the press.

Q. Say about a month?

A. One eighth of one per cent.

Q. How much is that?

A. That is about five cents a bale.

Q. What is your commission?

A. That depends altogether on the nature of the transaction. Some cotton here pays a dollar a bale commission and other business don't pay twenty-five cents. It depends altogether on the nature of the business. Some business is worth a dollar a bale to handle.

Q. Do you charge anything for sampling?

A. That is all included in the thirty-five cents.

Q. Do you charge anything for weighing?

A. Yes sir, we charge fifteen cents. Our total charge is fifty cents. It will be fifty cents. I should have put in there fifteen cents a bale for weighing and sampling.

Q. Your rate is now fifty cents?

A. Yes sir.

Q. And that includes cartage two ways?

A. No sir, not at all. I say the rate is thirty-five cents for the factor's charge, and that includes drayage from the railroad to the press, and all the handling in the press. That is thirty-five cents. I say thirty-five cents covers the storage of the cotton and the drayage from the railroad or the river to the press.

Q. I desire to refresh your memory. I have here a statement that contains the rates to go into effect after this year. It says: The figures as compared with the ruling tariff for the past winter are as follows: Storage, old tariff, forty cents; new tariff, thirty-five cents. That is a reduction of five cents. Drayage, old tariff, twenty-five cents; new tariff, fifteen cents. That is a reduction of ten cents. Compressing, old tariff, sixty-five cents; new tariff, fifty cents. That is a reduction of fifteen cents more on that item and a total reduction of thirty cents. Additional storage for uncompressed cotton, old tariff, twenty-five cents; new tariff, fifteen cents. That is ten cents more. Rejections, old tariff, twenty cents; new tariff, fifteen cents. Small numbers for speculation, old tariff, twenty-five cents; new tariff, twenty cents. Five cents less, making a reduction on the old rates of about seventy-five cents a bale; and yet you say the entire charge will be only one dollar a bale?

A. You are going on something that I understand perfectly, technically, and you do not. That would be very true if your bale of cotton went through all the transformations that are indicated in that tariff, but they do not.

Q. Is it not true that a bale of cotton handled in New Orleans and sold in New Orleans goes through those transformations of storage and drayage at the compressing?

A. Yes sir; those transformations it goes through, but all the remainder it don't, save in

exceptional cases, special business and special rates charged for it. That charge for small numbers is made to the men that own the cotton. It is not made to the men who sell it. It is made to the new owner for separate services.

Mr. Stahlman. I confess I am not quite familiar with this business.

The Witness. I am perfectly familiar with this business, whatever I may be with others.

Q. But the charge, as you admitted, was \$4.10?

A. No sir, I never admitted it.

Q. On two thirds of the business?

A. No sir, I did not.

Q. That was my understanding.

A. I said it varied with the circumstances. There is a great deal of cotton sold here that don't pay at all.

Q. In what other respect is that an error?

A. You have got a dollar a bale. That is one thing. Brokerage, classifying, re-weighing and inspection—there is not one bale of cotton out of ten that pays brokerage. The buyers buy their own cotton. The compressing is too high. That is the same charge on cotton that comes from Memphis or anywhere else. Wherever it comes they collect it anywhere. That is charged to the ship.

Q. I would like to ask you to file with the Commission a statement of the expense incurred in handling cotton prior to this year, and a statement of the expense of handling cotton under the new agreement hereafter?

A. I will do that.

Q. I would be glad to have that statement in here this evening.

A. I can give it to you right now.

Q. You can take your time.

A. I don't need any time; I can give it to you just now. Do you want the dearest rate that was paid here last year, or the lowest?

Q. If you discriminated you had better give us both.

A. We did not discriminate, but business is very apt to be done in different ways. Some people have more enterprise about them and get their business done cheaper. The rate of the cotton compress association for storing cotton sixty days was fifty cents. The lower rate was forty cents. There was drayage to the ship. The highest rate was twenty-five cents and the lowest was fifteen cents. For compressing, the highest rate was sixty-five cents and the lowest rate was fifty cents.

Q. Was there any insurance?

A. One eighth of one per cent. This is the same in all cases.

Q. What is that on a bale of cotton—five cents?

A. Yes sir.

Q. That is the highest? That is what you charge the planters?

A. It is all the same. They all charge the same. That is what we pay and what we charge.

Q. Are you a cotton factor?

A. I am. I know exactly what I am talking about.

Q. Do you charge nothing for sampling?

A. We charged last year about fifteen cents a bale.

INTER 8.

Q. Was that the highest?

A. About the same all through.

Q. What for weighing?

A. That includes the weighing.

Q. Weighing and sampling?

A. Yes sir.

Q. You weigh cotton but once here?

A. That is all.

Q. Does classifying come in too under that head?

A. That is a charge the buyer pays.

Q. It is a tax on the cotton, is it not?

A. Yes sir; it is in Memphis just the same as it is here.

Q. We are discussing New Orleans. That is ten cents, is it not?

A. Yes sir.

Q. Is there a brokerage?

A. Very rarely. Most men buy their own cotton.

Q. Now the commissions. What are they?

A. The commissions are with the character of the business.

Q. Give us the highest.

A. The highest is $3\frac{1}{2}$ per cent.

Q. That is a dollar a bale on an average?

A. About that; yes sir.

Q. And the lowest?

A. I would hate to undertake to say that, because I don't know.

Q. Do you make any discriminations yourself? I won't use the offensive term "discrimination," but do you make any differences?

A. In only one or two cases, as I will explain to you. In cases of large crops, requiring no advances at all, where they come to us without any advances, we sell them at half commission. The work is very much less and there is no risk about it.

Q. When a man wants advances do you advance the money without any interest?

A. No sir; I do not suppose we do.

Q. You charge him interest?

A. Of course we do. We have to pay it when we borrow it.

Q. You charge him what your money is worth?

A. We don't charge him very high rates.

Q. What do you charge him?

A. Eight per cent per annum.

Q. Never more?

A. No sir.

Q. What are the stevedore charges on a bale of cotton?

A. About fifty cents a bale. It is done, I believe, as low as forty-five cents.

Q. What responsibility does the stevedore assume and what duty or labor does he perform?

A. He employs the screw men who put the cotton on the ship, and the longshore men who roll the cotton on board the ship. He counts the ship off and is supposed to know how to load her so as to get the greatest amount of cotton into her for her capacity. He does that for round price and he superintends the work.

Q. Now I want to ask you if you think a railroad that will carry cotton to New Orleans locally at a dollar a bale for over 400 miles is discriminating against it, when right under your own eyes you charge fifty to fifty-five cents for putting it from the side of the ship into the ship, per bale?

A. Have you ever seen that work done, and do you know the nature of the work?

Q. I ask you the question assuming it is very hard work and very difficult work. Do you think a railroad that brings cotton locally to New Orleans for one dollar a bale is discriminating?

A. I say that road is discriminating when they bring the cotton over the same road for the same haul for sixty-five cents a bale, no matter what the charges are.

Mr. Morrison. These roads ask that this law in its operation be suspended, and that the old order of things may be continued as to rates. Mr. Phelps insists that the law should be enforced so that the old order may not continue to exist, because he claims that you charge twelve cents more for bringing cotton to New Orleans if it stops there than you do if it goes through. Now you are justifying that as a philanthropist by saying that the man for whom you may carry it is to escape these local charges. Is that what you are trying to establish?

Mr. Stahlman. The point we are trying to establish is not so much that as the fact that if we brought the cotton here for nothing it would not enable the City of New Orleans to handle it locally.

Mr. Morrison. I do not see what that has to do with suspending this law.

Mr. Stahlman. The gentleman undertakes to bring into his computation the charge of discrimination.

Mr. Morrison. That is that you charge him twelve cents more for bringing a bale here than you do if it goes through. Now you are justifying that by saying that it would cost not you but the owner of the cotton something if you unloaded it here, and to save that something you will forego higher rates and carry it on.

The Witness. Will you allow me to make one remark in passing?

Commissioner Bragg. I understand Mr. Stahlman to mean that is the reason why the cotton is shipped for export here without stopping here.

Mr. Stahlman. That is the point exactly.

Commissioner Bragg. It is done to avoid these charges.

Commissioner Morrison. And he wants to help them by saving them an additional twelve cents. They themselves save \$3.10 or more by not stopping, and you want to give them twelve cents more to encourage them not to stop.

Mr. Stahlman. Those are not the figures. The gentleman made the statement that the rate on cotton from Memphis to New Orleans was \$1 a bale, and yet a man was permitted to ship from Memphis through New Orleans on a through bill of lading at a less rate than the New Orleans merchant would get if it stopped here by sixty-five cents a bale. The facts of that statement the railroads will undertake to rebut, I assume. I assume that the railroads are not carrying cotton from Memphis to New Orleans at thirty-five cents a bale, which would be implied by the gentleman's statement. That is what they would have to do in order to make a discrimination.

The Witness. How is that implied? The local rate is \$1 a bale?

A. Yes sir.

Q. The discrimination of which you complain is sixty-five cents a bale. If the railroads are guilty of the discrimination they are obliged to carry cotton from Memphis to New Orleans for thirty-five cents in order to produce that discrimination.

A. Not at all. I don't claim anything of the kind. The petition does not state it. Permit me, before we pass from this topic, to say that Mr. Stahlman's presentation of the charges at this port,—while I haven't the faintest idea that he does not believe them perfectly correct, still I protest here in the name of the Cotton Exchange that they do not do the port justice in this: That while he sets down the charges which are put on a bale of cotton at this port, including the compressing and the putting of that cotton on board ship, he fails to state to you that the bale of cotton that goes through here without stopping pays all those outward charges so far as compressing and putting on board are concerned, but that is not the point we are making here. The point we make to you is why this railroad should carry the bale of cotton from Memphis to New Orleans for sixty-five cents a bale, and say to the man at a way station 124 miles south of Memphis, "If you want to ship a bale of cotton or over that road in the same direction you must pay for the services \$2.25 a bale."

Q. Does the railroad of which you are now complaining charge any more relatively from local stations than it charges from Memphis?

A. Yes sir.

Q. Are you prepared to sustain that statement?

A. That would not come within the provisions of this bill, anyhow, because it is not a haul in the same direction and the same service.

Q. You charge a discrimination against me?

A. I do, because it is a haul in the same direction as far as this matter of local stations between Memphis and New Orleans is concerned there is no discrimination.

A. There is at some of the stations, because there are stations where you can ship a bale of cotton to Memphis under the tariff and haul it back again for less than you can ship it to the point direct.

Q. You want the railroads to so adjust their rates that the business from Memphis shall pay tribute to the commission merchant to New Orleans?

A. No, sir, I do not ask anything of the sort. I simply ask that we be put on the same basis, be given the same rate of freight, and put on an equality, and then let our business take care of itself. If we can't take care of it, it must go.

Q. The rates from Memphis are not controlled always by New Orleans. There are numbers of lines. There are lines by Newport News and Boston. According to your own statement, lopping off everything, a local shipment of cotton would pay \$2.70 a bale to be sold and re-handled here over and above what an export bale would cost?

A. No sir; I do not accept any such statement. I do not admit it for a moment.

Q. I would like to ask how you would get rid of the charge if the cotton was shipped locally to New Orleans assuming the railroads made the same rates from Memphis to Liver-

pool—charged those same rates from Memphis to Liverpool added to the rates from New Orleans to Liverpool as the through rate would make. How would it be possible to avoid that charge?

A. We will take care of ourselves. If we lose the business on the local charges here, that is our own business. We don't ask you to help us handle it after we get it here. We only ask for equitable rates which will give us in the open field the same chance; and then if we can't bring it here, we do not ask to have the trade controlled for us by discrimination.

At this point, 2 P. M., the Commission took a recess until 4 P. M., and then re-assembled.

The Witness. On thinking over the question since the adjournment of the Commission, I have thought it would be a simple way to get at the matter of the relative charges, if we took a bale of cotton from one of these way stations and let it go, on the first supposition, to Memphis and then come through here on the sixty-five cent rate; and then take the supposition that it was shipped directly here from that point and was handled here in New Orleans. With the permission of the Commission I will take the charges of that supposition. Let us suppose the bale of cotton gets to Memphis. Since the adjournment of the Commission I have taken the pains to get a statement of the charges at Memphis. Let us take them *seriatim*.

The Chairman. Are you supposing it goes from any designated station?

The Witness. Any station on this line and is handled at Memphis. Let us suppose first it starts this side of Memphis and goes into Memphis, irrespective of the rate of freight, and is handled there. Take first the storage, thirty-five cents a bale in Memphis. It is forty cents a bale here. The weighing I do not know the exact figures of, but the total charge for handling that bale of cotton in Memphis on the factor's account of sale is fifty cents. Our charge under the new tariff is the same. In Memphis cotton is stored in warehouses by the factors and is sent from there to the compress to be compressed. For that there is a charge made of twelve and a half cents per hundred pounds. We have no such charge as that, but we have a charge for drayage from the compress to the ship, fifteen cents a bale, which substantially offsets that charge. The charge for compress in Memphis is fifteen cents a hundred pounds, which on a bale of 500 pounds of cotton makes seventy-five cents. The charge here is fifty cents a bale for that same bale of cotton. We have taken that bale of cotton to Memphis and had it handled there and we have brought it here and handled it here, so far as the city is concerned. The cotton has got to be put on shipboard, and the charges for putting that balance of cotton on shipboard when it goes through New Orleans on the sixty-five cent rate are precisely the same as for putting that bale of cotton on shipboard when it is handled here. Both bales of cotton whether hauled in Memphis or in New Orleans, pay those charges of compressing and putting that bale of cotton aboard ship in every case.

INTER 8.

So when you figure out the mere question of charges, I think you will find that they vary very little in case of either place. So there is no extra charge of \$3.10 a bale for handling cotton here as compared with Memphis or any other port in the United States. That can be figured out only by taking the charges for putting cotton on board ship in New Orleans, and supposing the same bale of cotton handled in New Orleans afterwards with no such charges, which is an entirely unfounded assumption. That bale of cotton pays those charges in both cases. The Memphis factor charges precisely the same commission for selling that bale of cotton as in New Orleans. With him, as with the New Orleans factor, in certain cases it is a matter of convention and agreement. I make that statement, Mr. President, in order that it might not go on record with the tacit admission of the New Orleans Cotton Exchange that there exists any such disparity as that. I know the whole state of the case, and I know just as well as I know I am standing here that no such facts exist.

By Mr. E. B. Kruttschnitt:

Q. I understand that the complaint made by the New Orleans Cotton Exchange is that where cotton is shipped from Memphis and stops in New Orleans the price charged for the carriage is one dollar per bale, while for that same cotton shipped from Memphis via New Orleans to points in the Eastern or Northern States, taking the sea route from New Orleans, the charge which the railroads make, or the proportional share which the railroad companies get of that freight is only sixty-five cents per bale?

A. Between sixty and sixty-five. That is a part of the charge, only one branch of it.

Q. You state here in your petition that the rate of freight from Memphis to New York, via Louisville, New Orleans & Texas Railroad is thirty-two cents per hundred pounds. Where did you get those figures?

A. I got them from carriers who are in business.

Q. You mean that no cotton, as I understand it, is shipped directly from Memphis to New York. It is shipped from Memphis to spinning points in New England, via New York, is it not?

A. It makes no difference. I think it very likely cotton is shipped that way. I cannot answer on any such case as that.

Q. And this is the share which the L. N. O. & T. R. R. gets of that through rate to Fall River and other spinning points?

A. Yes.

Q. You have been a cotton factor in this city for a number of years?

A. Yes sir.

Q. Your house has done a large business?

A. Yes sir.

Q. You have received cotton from pretty much all points tributary to this point, have you not?

A. Yes sir.

Q. You are familiar with the rates of freight charged on different routes?

A. Pretty familiar with them.

Q. I would ask you whether the rate of \$2.25 to which you referred, from Shaw's Station to New Orleans, is an unreasonable

rate of freight when compared with the charges made by other carriers for the same number of miles of carriage?

A. Do you want a full answer to that question?

Q. I would like a categorical answer first, and then you may make any explanations you desire?

A. I think it is not, but I think the local charges of all the roads have been very high as compared with their through charges.

Q. That was not the question. I ask you whether it is a reasonable rate when compared with the charges made by other roads for the same number of miles of carriage into the city?

A. I do.

Q. It is reasonable when so compared?

A. Yes, sir.

Q. I will ask you whether or not it is an advantage to the commerce of New Orleans to receive this cotton which comes from Memphis, and upon which a rate of sixty-five cents per bale is charged, that is to say this cotton in transit for New England points.

A. In what way do you put that question? In the aggregate or for particular individuals?

Q. Would it be an advantage or a disadvantage to this city to have that trade cut off entirely?

A. It would be rather an advantage on the present basis.

Q. And to have cotton go across the country?

A. That is a different question. I don't answer it that way.

Q. I ask you if that cotton should not come here at all, would it be an advantage or a disadvantage?

A. It probably would be a disadvantage in a certain sense. It would not make very much difference one way or the other. It might be to some individuals.

Q. If I told you the railroad company were compelled to choose between lowering the rate from Shaw's Station to the Memphis rate, or raising the Memphis rate to the Shaw's Station rate, I will ask you whether it would not be a disadvantage to the commerce of New Orleans if they did the latter?

A. It would not.

Q. It would not be a disadvantage to cut off the Memphis cotton from New Orleans?

A. Not in the shape it comes here now.

Q. You do not consider it any advantage that this hundred and odd thousand bales of cotton should come to this port via the Illinois Central and via the Valley route?

A. No sir; not at the present rate, which practically makes Memphis a seaport.

Q. How do you mean?

A. I mean to say that their rates are within seven cents a hundred of ours to these points.

Q. But does not that cotton in passing through New Orleans give certain advantages to this port?

A. It gives certain advantages, but they are mere counterbalancing disadvantages.

Q. What are the disadvantages?

A. It helps to make Memphis artificially a better cotton market relatively than she should be. A bale of cotton at Memphis is practically placed in the same position as a bale of cotton at New Orleans on the seaboard.

Q. Would not Memphis retain the same advantage if the rates from Memphis to New Orleans were raised to the Shaw's Station rates?

A. If those were maintained; yes sir.

Q. Under those circumstances, would it be an advantage to have low rates from Memphis to New Orleans, or a disadvantage?

A. I do not understand you.

Q. If New Orleans is to elect between having the cotton go across the country from Memphis to the New England spinners, or come to the South at this reduced rate, which would be the greater advantage to this port?

A. It would not make very much difference either one way or the other.

Q. Whatever difference it made would be, however, in favor of New Orleans?

A. The thing then, so far as New Orleans is concerned, becomes almost a banking transaction.

Q. There are some other port charges also?

A. There are some port charges, but it more than overbalances so far as the great majority of the community are concerned.

Q. Are there any charges made by the Cotton Exchange against this railroad company in reference to its rates of freight in addition to this?

A. None whatever; and I want simply to take this occasion to say that the Cotton Exchange has not singled out this road alone in this matter from any idea that they alone were making these discriminations, but because we consider this case involves principles that are fundamental and on which we wish to have a decision, so that when we get that we will know where we stand.

Q. The points from which these lower rates are charged by the L. N. O. & T. R. R. are all competitive points, are they not?

A. Yes sir.

Q. Vicksburg, Huntington and Memphis?

A. Yes sir.

Q. You also know that if the rates from these points were raised to the same rates charged from contiguous noncompetitive points, none of that cotton would come to New Orleans.

The Chairman. Do you mean the same rates that prevail now?

Mr. Kruttschnitt. What the rates would be if equalized.

The Witness. We have not in our petition claimed a mileage rate. We have not claimed that the Memphis rate should be equalized with the local rate. We claim relatively reasonable charges.

Q. You claim that no less should be charged from Memphis than from any point this side of it?

A. That is the point which we submit to the Commission, who are experts. We claim relatively reasonable rates from these noncompetitive points. We do not claim that every rate of freight on that railroad should be made precisely the same. We ask the Commission to take the testimony in this case and in other cases of the same kind as they come before them, as to what are reasonable rates of freight for the service from through and from local points.

Q. But if this tariff were re-arranged in such

manner as to give rates from those competitive points approximately the same as from contiguous noncompetitive points, would it not be a great disadvantage to the commerce of New Orleans?

A. If it were applied to the eastern roads out of Memphis it would make no difference, because it would raise through rates of freight to the eastern seaboard.

Q. But if the rates by the eastern roads were so much lower in proportion as to enable them to govern the freight, it would be a disadvantage to the commerce of New Orleans?

A. It would be if they remained so; but if the Commission rule that they ought to equalize their rates, those cheap through rates from Memphis would not last very long.

Q. In other words, it would be a disadvantage to New Orleans if the freight rates from those competitive points by other routes to the sea were so arranged that New Orleans would not get the trade. It would be a great disadvantage to her, would it not?

A. It would depend on the circumstances entirely.

Q. What do you mean by that?

A. I mean if we were cut off altogether from receiving any cotton along that line of road, it probably would be a disadvantage.

Q. If you were cut off from receiving any cotton from those competitive points it would be a disadvantage?

A. We don't think any such construction of the law would cut us off.

Q. Any tariff which would cut you off would be a great disadvantage to this port, would it not?

A. I cannot conceive very well of any tariff that would.

Q. If it did, it would be a great disadvantage, would it not?

A. I don't see the use of answering that question, so long as the Mississippi River don't go dry, because we can get the cotton that way in any event.

Q. Do you not know that rates by river were raised very much as soon as the Interstate Commerce Law went into effect?

A. I should not be at all surprised, because I think the railroads have been driving the boats out of competition at these competitive points, because they have had a recourse the boats have not had—charging more at noncompetitive points.

Q. They have driven them out by low rates of freight?

A. Yes.

Q. Do you not know the rates of freight by the river lines have been very much increased from those competitive points since the 5th of April?

A. Yes sir; very likely. It is very natural that they should be.

Q. Don't you know they were?

A. Yes sir.

Q. Don't you know they were put back when the clause was temporarily suspended?

A. Certainly. It gives the railroad the power to compete at these points, but the man in the interior does not get the benefit. It is simply restoring the old state of things.

Q. Do you consider it an injury to the commerce of New Orleans that the railroads should

bring the cotton here from Memphis rather than the river?

A. I do not see it makes any difference provided they bring it on relatively the same terms. It is an injury when it is brought here now to us as a market.

Q. Do you know whether it is the custom of the river lines to charge less from competitive points than from noncompetitive points?

A. It may be in some cases. I think as a general rule, they have a tariff. Sometimes they take less; but still any man can run a steamboat on a river.

Q. Do you not know as a matter of fact that their custom is to charge more from noncompetitive points than from competitive points?

The Witness. What kind of competitive points do you mean; railroad competitive points?

Mr. Kruttschnitt. Yes sir.

A. They necessarily have to charge less for the railroad competitive points, because the railroad can make any rate there to drive the steamboat out.

Q. How is it from river competitive points where there is no railroad?

A. Those rates of freight are adjusted by competition between the different steamboats. But the man at the local station on this line has not that kind of competition. He is in a different fix from the man at the landing of the river.

Q. The man at the point on the river where there is no competitive line has not any of the advantages of the competition?

A. There always can be competition on the river.

Q. But there is not always?

A. In nine cases out of ten there is.

By Commissioner Bragg:

Q. Do you remember about what the total receipts of cotton were at the Port of New Orleans last summer?

A. About 2,000,000 bales; 1,900,000.

Q. How does this season compare with last?

A. I could not give you the statistics, but I can get them.

Q. Can you tell us about what proportion of the cotton goes through this port on through bills of lading for foreign points, without stopping here?

A. Last year there was about 1,100,000 bales of cotton handled here actually in compressing, and the remainder went through. This year the proportion has been just about the reverse. It has been about 1,100,000 that went through, and about 900,000 actually handled here.

Q. Do you know what were the receipts of the Port of Galveston last year.

A. No sir, I do not. I do not follow those things exactly. Some of our men here are statisticians, and they can give you that information in a nutshell.

Sidney Bernhimer appeared before the Commission and was duly sworn.

The Chairman. You may make your statement.

The Witness. I sent you my documents from Port Gibson City. I suppose you have them filed with your other papers; and also a reply in reference to the statements made by

Mr. Cumings at Washington, in reference to the rate changed from Port Gibson, Mississippi. He made the statement at Washington that the rates are now a dollar less than they were in former years over our old route, which I proved was mistaken.

By the Chairman:

Q. What old route?

A. We used to have a route for shipping our cotton over the Grand Gulf & Port Gibson road, but the L. N. O. & T. road bought them out and tore it up, and now we are compelled to ship cotton over that road at a rate two hundred per cent higher than to Vicksburg. The printed tariff to Vicksburg is seventy-five cents a bale and the Port Gibson rate is \$1.75. Vincent & Haines told me they had shipped at fifty cents a bale. Our rate is \$1.75. There is the same discrimination made on molasses and sugar, and we claim it is an unjust discrimination. We can't sell goods in Port Gibson as they can in Vicksburg on that account; and the trade that ought to go to Port Gibson goes to Vicksburg. I claim if the railroad company can carry cotton for seventy-five cents from Vicksburg to New Orleans, or fifty cents, they certainly can carry from Port Gibson for less than \$1.75. We do not expect it to be hauled as cheap as Vicksburg, but we do expect it at a lower rate than \$1.75. Even taking their printed tariff, the rate is entirely too high. We are perfectly willing and expect to pay more, but not such a difference as that. We have cotton now lying at Port Gibson waiting for the action of the Commission, which amounts to a considerable sum. \$1.75 is too much to charge. We are nearer New Orleans than Vicksburg, and still we are paying \$1.75 while Vicksburg's printed tariff is seventy-five cents. On the old route the cotton was handled four times, and this way it is only handled twice; but we are made to pay the same, if not more than it was in former years. We used to get cotton through by the Grand Gulf & Port Gibson route for \$1.64.

By Commissioner Schoonmaker:

Q. Are you in business at Port Gibson?

A. Yes sir; I have been in business there a good many years. We have even applied for thousand bale rates to the L. N. O. & T. Road and got no response. We are on a direct line; no change of cars; no transfer; no nothing. We claim that the rates charged are too heavy in comparison to the rate at Vicksburg.

Q. What is the rate from Port Gibson to Vicksburg?

A. \$1. From Port Gibson to New Orleans, 204 miles, they charge us \$1.75, while from Port Gibson to Vicksburg, only twenty-nine miles, they charge us \$1. They have got us tied, and we can't help it. Under the construction of the law we think the Commission has a right to make a change.

By Commissioner Walker:

Q. As I understand you, you think there should be some discrimination in favor of competitive points?

A. Yes sir; we expect that; but not such a great difference. We don't expect to receive freight at the same price Vicksburg does, because it is a competitive point and has the river in front of it; but we do expect the difference not to be as great as it now is, certainly.

By the Chairman:

Q. What is the distance from Port Gibson to Vicksburg?

A. Twenty-nine miles.

Q. And what is the rate?

A. \$1. The distance to New Orleans is 204 miles, and the rate is \$1.75.

By Commissioner Walker:

Q. How is it about Baton Rouge?

A. I think it is either 50, 60 or 75. I am not well posted on that line.

By the Chairman:

Q. What should you think would be a fair difference to make in favor of Vicksburg and against you?

A. Twenty-five cents a bale as between us and Vicksburg. We can't handle cotton to advantage in certain parts of our county because it goes to Vicksburg. I am told they get molasses at forty cents a barrel. We pay \$1.85. That is discrimination in favor of Vicksburg.

Q. And a difference of 25 cents against you, you would think, would fully overcome all the disadvantages and expense of the service?

A. Yes sir; but \$1.75 we claim is entirely too heavy. It is against all reason.

Hon. N. D. Wallace appeared before the Commission and was duly sworn.

The Witness. Mr. Chairman, I desire to present here a petition which will express the sentiments held upon this question by four of the largest mercantile exchanges in the city, containing, I might say, next to the Cotton Exchange, all of the business element of the city—the New Orleans Produce Exchange, the Sugar Exchange, the Mechanics' & Lumber Dealers' Exchange and the Merchants' & Manufacturers' Association. The petition treats of the subject in general form, but we have also witnesses to be examined who will testify to their knowledge of the trade and their ideas about it—merchants in the city. I am sorry to say that under some erroneous impression that got about, the idea exists in the minds of many that tomorrow you would be here and the testimony against the suspension of this clause would be taken up then. A number of the best posted merchants who intended to appear before you, I am told, will be unable to appear to-night, owing to that misapprehension. Therefore, if it should be necessary, I would ask that they be allowed to give you such views as they may have concerning that branch of the business. (Mr. Wallace then read the petition above referred to.)

This paper contains the unanimous sentiment of the business interests represented in the different exchanges, and this action of their sub-committee, or committee appointed for this purpose, has been received and indorsed and improved by each board of directors of the various exchanges; giving you, I think, a very strong insight into the opinions of the business community of this city. So far as I have heard the testimony today, I think, I do not remember, but one witness representing the mercantile department of the city who has taken exceptions to the opinions expressed in this petition, and that was a representative of a particular local trade of his own which would naturally have been influenced, but

which was not expressive of the general trade of New Orleans. The general opinion in this city is that the law should be enforced; that the necessity for the clause was seen on the passage of the Bill. With all due respect to the Commission we ask that you will at least give this provision a test and see its workings, see its effect, beneficial or otherwise, upon commerce. In making their petition they do so with all respect, but they particularly urge it with a view to the fact that that in a very short time after the time allowed for the suspension, if another period were allowed to the road in this section, it would run up into our new crop year, the period when we are marketing our product; and then if tested, any ill effect it might have on trade would be felt much more seriously than it would be at this season of the year. The general opinion, I think, has been that that was intended by Congress as a safety-valve in case of any serious results to the commerce of the country; and the idea of this community is that it should be tested, at least given a fair trial; and then if it does not work properly you can utilize the power given to suspend it.

William Campbell appeared before the Commission, and having been duly sworn, testified as follows:

The Witness. The first case we would state is this: A rate of freight exists from New York to Memphis by the Morgan Line and Mississippi Valley Road to that point on first class freight of sixty-five cents; and that same rate exists from New Orleans to Memphis. We have here freight from Boston to Brookhaven, first class sixty cents.

By Commissioner Walker:

Q. Where is Brookhaven?

A. On the Illinois Central Railroad, between here and Jackson, Miss. We have from New Orleans to that same point, on that same class of goods, over that same line, a rate of seventy cents. I cite those as two cases. Here is a bill of lading (producing it) of the Southern Pacific Railroad, from New York to Brookhaven, Miss., and the various classifications are defined as follows: Second class, forty-five cents, fourth class thirty-five cents, sixth class twenty-five cents. The Illinois Central Railroad printed tariff, bearing date April 23, tells us that that fourth class rate of freight from this city to that point is thirty-eight cents, making a difference on its face of three cents in favor of New York as against New Orleans. These are facts about as near as we can get at them. I have here a bill of lading from New York via the Virginia, East Tennessee & Georgia Air Line. It classes sugar as sixth class at forty-five cents from New York to Norfolk, and over the tier of railroads down to Jackson, Miss. We have a rate by the Jackson Railroad from here to that point of forty-five cents, showing that they haul that freight from New York to Norfolk and through the East Tennessee, Virginia & Georgia Air Line down to Jackson, Miss., for twenty cents. I have here a bill of lading from Louisville, Ky. It carries with it plow irons. The rate of freight from that point to Jackson, Miss. is fifty-three cents. By the Illinois Central Railroad tariff here the rate of freight to that point on the

INTER 8.

same class of goods is seventy-two cents, making a difference between fifty-three and seventy-two cents in favor of Louisville. I have here another bill of lading from New York to the same point which carries sundry articles; but I desire to point out but one.

By the Chairman:

Q. What do you mean by the same point?

A. From New York to Jackson, Miss., sardines on that bill of lading from New York were carried at eighty cents. From New Orleans to Jackson that same class of goods under the classification here by the tariff have a rate of eighty-five cents. I have a freight here from New York to Orange, Tex., going through this port. The rate of freight from New York to Orange, Tex., on fourth class goods is fifty cents. The rate of freight from here to that point is thirty-five cents, which would indicate that they carried that freight from here to Orange, Tex., for fifteen cents, while we have to pay thirty-five. That was given under the signature of a general freight agent in New York. I have a bill of lading here from St. Louis to Jackson, Miss., on flour, a rate of seventy-six cents per barrel. The same class of goods from here to that point, Jackson, Miss., cost seventy-six cents barrel. I believe that is all the statement I have to make. There are others representing other exchanges who have facts similar to mine.

By Mr. Stahlman:

Q. Will you please read the dates of the bills of lading you have produced?

A. The one I last read from St. Louis bears date March 28. The rates of freight I read from New York to various points in Texas, I singled out to establish what they are—all in that neighborhood. The date is April 18. The bills of Thurber, Whyland & Co. of New York are the 28d and 21st of March, and the bill from Louisville bears the date of March 28—all of a very recent date.

Q. What is the date of the tariff?

A. April 23, by which we made the comparison.

Q. Do you understand that to be the tariff issued since relief was granted, or assuming that there would be no relief?

A. We took the tariff as we found it, without regard to what its effect would be or may be.

Q. You are not making any comparison between any rates prior to that date?

A. We operate on the tariff. That is our only guide.

Q. The tariff from New Orleans to these points is dated April 23, and the shipments were made some time prior. The nearest shipment is about some two weeks before and some of them run back thirty and forty days.

A. We have them reaching from April 18, to March 21.

Q. I suppose you are aware of the fact that tariffs do change and they have been changing quite often as circumstance would arise to render it necessary?

A. We merely take these facts to show if it was permanent, what we might expect.

Q. Was it not customary to change the rates even before suspension?

The Chairman. Do you mean during the last month? These are during the last month.

itness. There are some April 23, March 21.

shlman. The latest is April 23, hers are all before the suspension.

Cummings:

sh to ask if I understood you cor-
aying that the L. N. O. & T. railroad
tion with Morgan's line of steamers
sixty-five cents on cotton from Mem-
ew York?

sr; I had no reference to cotton. I
you the exact article I had reference
first class goods as classified. From
k through New Orleans to Mem-
class freight is carried at sixty-five
l from New Orleans to that same
same class of goods is carried at
cents. They ask the same rate.

e you the bill of lading showing

ve not.

e you a tariff showing that?

sr; I can verify it by your general
ent or anybody from the Mississippi
it is here.

shlman. I believe there is nothing
plicating the line I represent.

itness. Nothing in the world.

Chairman:

ission that the rate of freight from
c was sixty-five cents and that the
mphs was the same?

r statement with regard to the rate
v Orleans to Memphis was correct.
ement as regard the New York
bly has been correct in the past; in
ach lower rate has been had in the
sixty-five cents from New York to
a much lower rate.

Q. How long has it been since that rate was
lowered?

A. Within two months.

Q. Does the rate of sixty-five cents from
New York to Memphis exist now?

A. It does not.

Q. When did you change it?

A. It was changed in New York about three
or four days ago I believe. I have not the ex-
act dates.

Q. Has this community received official no-
tice of the change?

A. I do not know sir. I did not give it.

Q. Is there any means of finding out when
there has been any change?

A. There is no regular way to find out at
present.

By the Chairman:

Q. Are the rates posted?

A. No sir; it is a through rate. The Com-
mission has not said it should be posted as yet.

Q. You have not posted the rates at all?

A. No sir.

Q. You have not given any public informa-
tion on the subject in any way?

A. No sir. I fact I haven't the making of
the rates myself.

Q. What are the rates?

A. Eighty-two cents.

Q. From New York to Memphis by way of
New Orleans?

A. Yes sir.

By Mr. Campbell:

Q. Did you not tell me on Friday or Satur-
day that the rate of freight from New York to
Memphis was sixty-five cents on that class of
goods?

A. I did sir.

E. L. Ranlett appeared before the Com-
mission and, having been duly sworn, was ex-
amined as follows:

By Mr. Wallace:

Q. I believe you live in this city?

A. Yes sir.

Q. Are you engaged in business here?

A. I am engaged in the manufacturing in-
terest.

Q. Have you been here for some years?

A. Yes sir.

Q. You have had a good deal of experience
in the course of your business career on rates
of freight from various points competing
with other cities?

A. Yes sir.

Q. Heavy as well as other goods?

A. Yes sir.

Q. Will you be kind enough to make to the
Commission the statement you desire to make?

A. On short notice without any preparation.

—Mr. Wallace invited me here to demonstrate
if possible, that New Orleans was entitled to
the full benefit of the Interstate Commerce Bill
with regard to the long haul clause. That is
about the only subject I interest myself in, be-
cause our goods need a long haul to get them
to market. On all questions of that kind New
Orleans up to this time has been at a serious
disadvantage. We are a port invaded by
steamers from the east, with low rates of
freight naturally; and in order to compete

with the lowest competition produced by them, the railroads from the east are forced in their through rates to competitive points beyond, to recognize that competitive rate. For instance, the railroad rate from New York to any point in Texas is bound to take cognizance of the fact that the water rate from New Orleans, which is three quarters of the distance, is only, on an average, about twenty-five cents per hundred pounds on car loads, Class A. Adding to that the local rate by rail would put Texas down in competition with New Orleans, almost. Therefore we are very anxious for the long haul clause to be enforced against those roads. It is because our natural advantages determine the question of our rights and because it is necessary that we should have those advantages that we want the long haul clause. I have only two papers to put before you as documents. The rate from New York to Chicago direct, which is about the same distance as from New Orleans, is thirty-five cents a hundred pounds by rail on car loads, Class A. The Illinois Central Railroad under date of April 16 classifies carloads Class A at forty-nine cents. On an article that New Orleans has distinct supremacy of in the commercial world, importing it at a less cost from a foreign country manufacturing it with American labor at the same cost, bringing it to New Orleans at a low cost and a shorter time, we are unable to distribute it at anything like an equitable rate to markets which legitimately belong to us, by these railroad discriminations. This is a long haul. It is over a thousand miles. Subsequent to the enforcement of the Interstate Commerce Bill, and outside of the territory in which the long haul clause was suspended, there is a distinct violation of the law. I believe of the 80,000,000 pounds of Mexican hemp imported into the Union annually the manufacture of over 40,000,000, of it in the City of New Orleans would be absolutely imperative under any equal distribution of the rights of this section under the Bill, because it would be impossible to compete with the City of New Orleans were that Bill enforced. This is true of almost all manufacturing enterprises in our State. The manufacture of shot, which we import largely from the west on lines of road centering and converging in New Orleans—the distribution of that article has been seriously hampered in the immediate past by the operation of competitive rates produced by a suspension of this clause. I have been all my life engaged in making freight rates; and New Orleans, while entitled to the greatest consideration, is, as you gentlemen will certainly determine if you have the time, under a ban of discrimination wide spread and general. The merchants here find at the moment they are about to consummate a trade they are confronted with the rate of delivery; not the rate of freight but the rate of delivery on the goods at a point much nearer by thousands of miles sometimes to them than any other point, the competitive point particularly; and the trade is canceled because they cannot make the rate. We have a port equal to any port in the Union, unquestionably. If you have time to investigate that you will see it, if you do not know it already by history. There is nothing

ENTER 8.

can prevent our commercial supremacy but discrimination on freight rates; nothing; and that you will find.

Q. Is it not true that St. Louis houses ship the article of shot into Texas under the guise of willow and wooden ware?

A. It is true.

Q. Is it not a fact that that is contrary to the regulations of those roads?

A. It is.

Q. Is it not known by some of the roads in Texas that that has been done and they have failed to interfere with it and stop it?

A. It is.

Q. Is not this seriously injurious to the shot trade of this city?

A. Yes sir.

Q. Has it not interfered with the shot business of the city already?

A. Yes sir.

By Mr. Stahlman:

Q. I would like to ask you to specify what the rates are from New Orleans to Chicago on hemp, and New York to Chicago.

The Witness. On the manufactured article?

Mr. Stahlman. Yes sir.

A. Thirty-five cents a hundred by rail, twenty-seven cents a hundred by canal and steam, and twenty cents by the Lakes.

Q. What is the rate from New Orleans?

A. Forty-nine cents.

Q. What is the distance from New York to Chicago by rail?

A. It is fractionally the same as from New Orleans—it is within 100 miles; it is within 50 miles.

Q. The distance from New Orleans to Chicago is what?

A. Within 50 miles of the same as it is from New York to Chicago.

Q. Are you not mistaken about that?

A. I don't know whether I am or not. I don't believe I am mistaken.

Q. There is at least 150 miles difference?

A. That would not make 40 per cent. difference in the rate. That would only be 15 per cent; and this is a difference of 40 per cent in the rate; and besides, it is a long haul, and the rate is calculated in that case in favor of the short haul.

Q. With reference to the shot rate—I am not here as a defender of the Texas & Pacific Railroad, but I want to get some information. Are you yourself familiar with the shot rate just referred to?

A. Yes sir.

Q. Do you not know that the transaction referred to was a swindle upon the part of the shipper at St. Louis and was promptly investigated by the railroads at considerable expense and has been stopped?

A. I will answer the question. The swindle referred to has been perennial for fifteen years. I have been in the shot business for from fifteen to seventeen years in New Orleans, and from that day to this it has been going on and is a thing of every day occurrence until it was alleged to have been stopped. You say it is stopped. That is my first information of it. I am glad to hear it.

Q. I want to ask you if the shot manufacturing industry of this city has always

a position to sell shot with freedom. Have you been making shot all the time and undertaking to compete?

A. We were not discussing the question of one particular tower, but an industry which has been going on for fifteen years. I don't suppose you are interested in the particular welfare of one institution, but the trade. The trade has suffered, under my personal knowledge, about fifteen years by discrimination. This is as well known to the gentlemen around me as A B C. That thing has been known to them and I will do them the justice to say that on this end they have turned Heaven and earth to stop it. They have employed special detectives and others, and the first intimation I have heard it was finally stopped was right at this moment today; because within sixty days it has been done.

Q. Were you and Colonel Wallace engaged in the same institution?

A. Yes sir.

Q. Have you ever had any combination with any shot manufacturers of other section for the purpose of pooling your business, under which you agreed to remain silent, lay quiet and do nothing?

A. We leased our tower, if that is what you mean.

By **Mr. Wallace:**

Q. Is it not true that your business has been largely in shot coming here on consignment and that you desire to enter into the Texas trade not as a leased tower, but in your business?

A. That is right. I am not representing any particular corporation, but the trade of New Orleans.

Mr. Stahlman. The fact still remains that you leased your tower.

W. W. Finley who had been previously sworn and examined again appeared before the Commission and said:

In connection with what was stated about the shot business and shot being shipped as wooden ware, as one of the Texas roads, one of the roads that makes the delivery into Texas, I would like to state that the Texas roads have organized an inspection bureau and have at the principal points in Texas inspectors for the purpose of inspecting every car load of freight and seeing it is properly classified and charged for.

Hugh McCloskey appeared before the Commission and having been first duly sworn was examined as follows:

By **Mr. Wallace:**

Q. You are a resident of New Orleans?

A. Yes, sir.

Q. What business are you in?

A. Commission merchant and dealer in general produce.

Q. You do a good deal of business in the West?

A. Yes, sir; principally in the West.

Q. You are President, I believe, of one of the Exchanges here?

A. President of the Produce Exchange.

Q. Have you had any experience in shipping

here since the Interstate Commerce Law went into effect?

A. I have had my attention drawn to certain rates that were given after the law went into effect.

Q. Will you be kind enough to state to the Commission what your experience has been?

A. On the 6th of April my attention was drawn by the firm of Smith Brothers & Co., after which I verified it by a representative of the Illinois Central Railroad, that the rate of freight from here to Chicago on that date was \$1.07 a hundred. I have the bills of lading to prove that the rate from Chicago over that route to New Orleans on the same date was thirty cents a hundred.

By **Commissioner Schoonmaker:**

Q. What was the classification?

A. Fourth class.

By **Mr. Wallace:**

Q. Is it not true that the thirty cent rate was given to a very large, enterprising and wealthy firm in Chicago?

A. Several firms.

Q. They were pretty large, were they not?

A. Yes sir; Armour & Co., and the Anglo-American Packing Company, two of the largest concerns in Chicago, were given a rate on that basis.

By **Mr. Stahlman:**

Q. The rate from Chicago to New Orleans was thirty cents?

A. Yes sir.

Q. And the rate from New Orleans to Chicago was how much?

A. The same day. \$1.07.

Q. On what class?

A. The same class; fourth class.

Q. Is bacon in the fourth class?

A. I think so; yes sir.

Q. Are you not mistaken?

A. That is my impression.

Q. Is it not a special class, Class B?

A. My impression is that bacon comes under that class.

Q. Would you expect to send bacon from New Orleans to Chicago?

A. No sir; but we would expect to send bacon to intermediate points between here and Chicago. The local rate to intermediate points were so high that under the law as it passed Congress the railroad in order to keep up its local rates between here and that point, was compelled to advance the rate to Chicago to correspond to the law, as I understand it.

Q. Your idea is that you ought to be able to bring meat from Chicago here, and then ship it back three or four hundred miles in competition with Chicago?

A. We are not alone. While we represent several large Chicago packers, we also represent a large St. Louis packer from whom we can get freight by river, if necessary.

Q. If the law were enforced and the rates made the same to all intermediate points as to New Orleans, do you think you would be able to bring it down here and then ship it back?

A. It might be brought down at certain times when the fluctuations of the market would justify us in doing it.

Edwin Belknap of New Orleans, Louisi-

and appeared, before the Commission, was duly sworn and said:

I wish to offer in evidence a bill of lading from New York by Savannah to Tallahassee, Florida. The round charge is \$1.36 first class, whereas the rate from New Orleans is \$1.29. I leave this as a specimen of the discrimination against this city in competition with New York. At the same time I submit the tariffs of the Illinois Central Railroad to certain points in Alabama and Georgia, from this city as compared with those from New York, wherein I find that the greatest case of discrimination is at Eufala.

By the **Chairman**:

Q. What is the date of that?

A. April 25. The rate on first class freight is \$1.15, and from New York it is \$1.14. The distance from New Orleans is about 400 miles, and from New York about 1,000. I have in connection with this, a gentleman who is largely interested in business, and who can give you further information.

Mr. Stahlman. I don't understand the gentleman to have made any complaint against the Louisville & Nashville.

The **Witness.** Yes sir. I said the Illinois Central. I should have said the Louisville & Nashville. The principal case is from here to Eufala, where the rate is \$1.15 from New Orleans and from New York \$1.14 on the same class, first class.

Mr. Stahlman. Is the gentleman aware that Eufala is not on the Louisville & Nashville Road, and that that road has no control over the rates from New York to Eufala?

The **Witness.** No sir; I was not aware of that. I supposed it was part of the same system.

Mr. Stahlman. The Louisville & Nashville has no control over those rates, and cannot make any rate from New Orleans to Eufala except such as the connecting roads see fit to allow.

John W. Bryant appeared before the Commission, and after having been duly sworn, said:

Mr. Chairman. I appear only as the representative of the National Board of Steam Navigation, which is an association of steamboat owners or steam vessel owners rather, in the Mississippi Valley and in the Northwest and the East. The object of the association, is to promote the interests of steam vessel owners, and to protect them from exactions and discriminations, both local and legislative. Taking advantage of the invitation that had been extended by the Commission, the Board had a meeting in New York on the 26th of April, and prepared a protest with some resolutions against the suspension of the fourth section of the Interstate Commerce Act, and they have commissioned me to read the protest.

The witness then read the protest.

Ashton Phelps who had been previously sworn and examined, again appeared before the Commission and said:

I wish to make a couple of corrections. I desire to be as thoroughly correct, in my statement.

You will find that in the petition of the Cotton Exchange, the cost of transfer from the railroad to the steamship here is put at \$5 per car. I have since had information it is only \$2 per car. Nevertheless we were careful as we had not exact information on that point not to let that charge figure at all in the 65 cent rate. It has nothing to do with it. Another correction I wish to make in a statement I made a little while ago. I stated that the charge for compressing in Memphis was fifteen cents per hundred pounds. I have been informed that the rate has been changed within the last sixty or ninety days to 12½ cents per one hundred pounds. If the Commission will permit me one more remark, which I forgot to make in the course of my testimony, I will say that in any competition between the railroads and the steamboats, the railroads will always have the insurance from Memphis to New Orleans in their favor to make the rate.

M. L. Scovell appeared before the Commission and, having been duly sworn, was examined as follows

By **Mr. Wallace**:

Q. Where do you reside?

A. In Shreveport.

Q. How long have you lived there?

A. About twenty years.

Q. What is your occupation?

A. I am now general freight agent of the Red River and Coast Line Steamboat Company.

Q. Your occupation has given you an intimate acquaintance with all the business details there, has it not?

A. It has sir.

Q. You heard it stated this morning that there had been an advance in steamboat rates. Do you remember what it was?

A. I heard the assertion made this morning that rates had advanced from sixty cents a barrel from St. Louis on flour to \$1.10 to Shreveport.

Q. The rates by river?

A. The rates by river did not advance. Our rates prior to the time the Interstate Commerce Bill went into effect, was fifty cents a barrel on flour from St. Louis to Shreveport. They are still fifty-five cents a barrel.

Q. You heard it stated today by witnesses for suspension at Shreveport, that the result of the advanced rates was almost a total suppression of business. Have you, during your daily intercourse with the business men of Shreveport, noticed such an effect?

A. I did not notice any such effect. The business seemed to be going on about the same way since the Interstate Commerce Bill went into effect as before. There was some little delay in getting goods on account of the river route being longer than the way they have been getting them direct by rail before, but I didn't see any suspension of business. Everything moved about the same.

Q. If section four were enforced, how would it affect the competition at Shreveport; would it continue as it had done before?

A. I think the competition would be about the same. The Texas & Pacific Road is en-

the stage of water during that week or the week following?

A. No. I think the Commission understand me, and you ought to, too.

Mr. Stahlman. I have before me a paper showing the rates from Memphis to New Orleans by your line, 775 miles, on first class, thirty-five cents.

Commissioner Walker. What is the date?

Mr. Stahlman. This paper was prepared last August. I am having it verified now. The rate from Memphis to Columbia, Arkansas, 216 miles, was fifty cents; that is, the rate for 775 miles was thirty-five cents, and the rate for 216 miles was fifty cents. For second class freight the rate for 775 miles was thirty-two cents, and for 216 miles forty cents. On third class freight the rate for 775 miles was twenty-six cents; for 216 miles thirty-five cents. For fourth class freight the rate for 775 miles was nineteen cents, and for 216 miles thirty cents. In other words, that is the water rate from Memphis to Columbia, Arkansas, as against the rate from Memphis to New Orleans. That is about the line of rates that they carry to intermediate landings.

The Witness. Those rates I never heard of before. They belong, as I told you before, to the New Orleans Anchor Line. They don't stop at Vicksburg, and I am not familiar with those rates.

A. M. Halliday appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Wallace:**

Q. What is your business?

A. Steamboating.

Q. You are on the river now, are you?

A. Yes sir.

Q. What is your boat?

A. The Paris C. Brown.

Q. Does she belong to a line of steamers?

A. She belongs to the Cincinnati & New Orleans Transportation Company; the Southern Transportation Company.

Q. You run on the Ohio River?

A. Yes sir; between New Orleans and Cincinnati.

Q. And you have been in the business a long time?

A. Yes sir; I guess about twenty years.

Q. Have you raised your rates at all since the Interstate Commerce Bill went into effect?

A. No sir; it has not affected our rates at all.

Q. You have not had a high water rate or any other rate than what existed before?

A. We have had a very low rate; no high rate; our rates are very low.

By **Mr. Stahlman:**

Q. From what points on the Ohio River do you run?

A. All points on the Ohio River from Cincinnati here.

Q. The rail lines have not advanced their rates from Cincinnati to New Orleans, have they?

A. I believe they advanced them for a few days.

Q. You believe it?

A. Yes sir. I would like to state that I be-

long to a line of steamboats that eight years ago had nineteen boats. Today they have six. They ran three boats out of here a week. Now they run one in five days. The competition of points struck by the railroads has become so great that they have very nearly driven us off the river; and if that isn't discriminating against one class of men I don't know what is.

The Chairman. It has been stated that there were some agricultural organizations to be heard. I would inquire if there is any representative of such an organization here? (No response.) Is there anyone present who desires to be sworn, or to call anyone else as a witness?

Mr. James A. Renshawe. I desire to ask on behalf of the New Orleans Cotton Exchange whether or not the railroads, which are all represented here, will be allowed to present any evidence in rebuttal of the specific charges that have been presented by the New Orleans Cotton Exchange, at any other sitting or any other date than this? Not, being lawyers we are not familiar with these points.

The Chairman. Let me inquire now if any of these petitioners desire to offer evidence in rebuttal of any evidence presented here in opposition to their petitions?

Mr. Cummins. Yes sir.

The Chairman. Are you prepared to put it in now?

Mr. Cummins. No sir; not on the part of the Louisville, New Orleans & Texas Railroad Company, as I stated to the Commission this forenoon.

The Chairman. What is the nature of the evidence you wish to produce?

Mr. Cummins. That our discriminative rates, so termed, as between Memphis and New Orleans and Port Gibson, Vicksburg and New Orleans, are justified by the quantities hauled between these places, by the lower amount of expense in hauling the larger quantities rather than the smaller; and that the discrimination is not an arbitrary one upon our part, but necessitated by the competition we meet at these competitive points. We have pretty full evidence upon those points, but, as I stated before, we are not prepared to present it here, supposing we would be given the opportunity of presenting it at Memphis. Our headquarters are there, and that is where our records are all kept.

The Chairman. I do not understand that to be in rebuttal of anything that has been brought forward here today on behalf of the Cotton Exchange.

Mr. Cummins. It will be at least explanatory.

The Chairman. You are to bring forward certain facts and seek to draw certain conclusions from them, but the facts are not antagonistic to those that have been brought forward here today.

Mr. Cummins. I do not think we will dispute the facts as stated by the Cotton Exchange, or by the gentleman from Port Gibson. I think the facts are all correctly stated, unless it might be as to some questions of rebates.

The Chairman. If you desire to disprove

the facts that have been brought forward here today, it would be proper to do it now and here.

Mr. Cummins. I appreciate that.

Mr. Stahlman. I desire to file the cotton tariff of the Louisville & Nashville Railroad, and of the Illinois Central—its tariff at the present time and one which has been in effect for some time; and I propose to illustrate by that that there is no discrimination against the City of New Orleans on cotton.

The Chairman. Are these the tariffs that are published?

Mr. Stahlman. Yes sir; and posted.

The Chairman. So that these gentlemen have had an opportunity to know what they are?

Mr. Stahlman. Yes sir; they can get them by going to the office of the company.

Mr. Renshawe. Should they not have been filed this morning?

Mr. Phelps. We have had them. But does the Illinois Central Railroad still maintain the same rate out of Memphis as they maintained before this clause was brought into effect? They have brought about 60,000 bales of cotton out of Memphis. If they do, we make the same point against them that we made against the Louisville, New Orleans & Texas Railroad: that their local rates are unduly high compared with their Memphis rate. If that rate is a reasonable one for the transportation, the other rate is too high.

Mr. Stahlman. The Memphis tariff is not included, but from other points it is.

The Chairman. Can you state what the tariff is?

Mr. Stahlman. I cannot. The Mississippi Valley Road will furnish that evidence at Memphis, I believe.

Mr. Renshawe. The Memphis rate has no particular bearing on this point.

Mr. Phelps. I made that remark because we presented no case here on behalf of the Cotton Exchange against the Illinois Central Road, for the reason that I was given to understand that they had withdrawn that Memphis rate. I may have misunderstood Mr. Murray, but if that rate is still in force, we make the same point against the Illinois Central Road that we made against the Louisville, New Orleans & Texas. If the through rate is reasonable, the local tariff is exorbitantly high.

Mr. Stahlman. I desire, also, to file certain accounts of steamer and port charges in the City of New Orleans relating to the cotton business, which, in our judgment, have had a great deal to do with crippling the cotton business of New Orleans.

The Chairman. Let them be exhibited to the gentlemen on the other side, so that they may have an opportunity to examine them.

Mr. Wallace. I suggest that, as our evidence has been presented under oath, Mr. Stahlman or some one should be sworn.

The Chairman. He has been sworn, and whatever he states we take to be under oath.

Mr. Stahlman. I want to state under oath that those figures were furnished me as identical copies of the books of the institution, by the gentleman whose name is at the head of the paper. I believe them to be just as they

stand—from a responsible gentleman. If it is necessary to have them brought in here and witnessed, I will have them brought. I desire, also, to submit this (exhibiting paper) as an additional statement, coming from a prominent citizen of the City of New Orleans, of the charges on cotton at New Orleans, fixing the charges incident to the movement of the business at New Orleans at \$4 per bale on local shipments.

The Chairman. That is not an actual transaction.

Mr. Stahlman. Yes sir; figured on a bale of cotton from Shreveport to New Orleans.

The Chairman. Who is the man?

Mr. Stahlman. Mr. R. Spillings.

The Chairman. If it does not represent an actual transaction to your knowledge, he had better come in.

Mr. Stahlman. He is not in the city. He is probably four or five miles out, but I will try to get him this evening if I can. It verifies the statement I presented this morning.

Mr. Phelps. I do not desire to present any statement on this question. I repeat what I said in my evidence, that it is not germane to this question. I would like to ask if the Illinois Central tariff bears date April 23?

The Chairman. It bears date May 2.

Mr. Phelps. This tariff bears date subsequent to the tariff I hold in my hand, but it does not alter the facts so far as I can gather from a glance at those rates. They are the same as in my tariff. My tariff bears date April 23.

Mr. Stahlman. Now I want to say, on behalf of the Louisville & Nashville Railroad, that is largely interested in the traffic to and from river cities West and South, that we shall undertake to introduce at Memphis, Tennessee—and I make this statement with a view of giving our river friends notice—full testimony covering the river and rail business, and the relations one to the other; what the railroads have done, and what the rivers have done. I want them to know that that is what we propose doing at Memphis, so that they may be prepared to meet us.

Mr. Sheldon. Mr. Chairman, I wish to say that I have prepared an argument in reference to the Texas & Pacific matters, and, with the leave of your honorable Commission, I would like to submit it in print.

The Chairman. We shall be glad to receive it. We will receive arguments in that form, not only on behalf of the railroad companies, but also from parties who oppose their applications. The arguments may be handed in at any time before we finally dispose of the matter.

Mr. Houston. I would like to call the attention of the Commission to what I believe is a distinction between an application made in the petition which I had the honor to present today, and the contest carried on here between the merchants and citizens of New Orleans and the railroad companies running into New Orleans. The distinction I make is this: That our road, the San Antonio & Aransas Pass Railroad, as is shown by the certified map attached to the petition, is but a very small corporation cut off on one side by these long interstate lines and systems of railroad, and on

the other side hemmed in by these water routes with which we have to compete; and I wish to say also to the Commission, and it may be understood as said under oath, for I can prove the fact, that there is at present a large amount of freight, especially wool freight, which is now waiting to be moved and which parties are holding in Corpus Christi, awaiting the action of the Commission upon this petition, with the hope that our rail routes will have an opportunity of competing with the water route. If the Commission could give consideration to that petition, and allow at least a temporary suspension of section four, as I believe the Commission has done in the case of the Transcontinental Lines, with reference to wool particularly, it would be a great relief to the petitioners and would give the Commission an opportunity to pass finally upon the question after a fuller and more perfect hearing. I would be glad to have the matter acted on as soon as the Commission can do so conveniently.

The Chairman. Parties I suppose all understand that we have a meeting on Wednesday of this week at Memphis and at that place we will take up further evidence for and against these several applications. I will say in respect to those organizations that it was stated were not prepared to submit evidence here, or any other organizations that wish to do so, that they may submit documentary evidence either at Memphis or at Washington. Parties who propose to submit arguments in print will understand that those arguments should be forwarded as speedily as possible, and they may be sent to Washington also.

Mr. Stahlman. One of our officers is here—I neglected to call him on the stand—for the purpose of presenting a petition and a letter that was sent to him from Pensacola.

The Chairman. If it bears upon the petitions that are now before us, it can be handed to our secretary, who will take charge of it.

Mr. Cummins. I desire to rebut the statements made by the Port Gibson gentleman with regard to rates. The witness by whom I expect to do that is an old Port Gibson resident who is in Memphis, a gentleman who has been living there for twenty-five years.

The Chairman. He is not here now?

Mr. Cummins. No sir. He had charge for a long number of years of the little railroad that ran from Port Gibson to the river, which the witness on the stand spoke of this morning. I cannot do it here.

The Chairman. Do you desire anything more than the passing in of these memorials, Mr. Stahlman?

Mr. Stahlman. No sir.

The Chairman. You understand the statements set forth in them to be true?

Mr. Welch. I understand Mr. Gonzales wrote that letter to me. I know his signature well, and I know those are the views expressed by him as a very prominent and intelligent merchant at the City of Pensacola. I have also a petition signed by Mr. McCormick, who is one of the principal owners of large mills at Muscogee in Florida, whose signature I am also familiar with.

Mr. Stahlman. It is a local point on the line of our road.

The Chairman. I think now the Commission is prepared to close the sessions at this place, and they are therefore declared closed.

PROCEEDINGS AT MEMPHIS.

Names of Witnesses, in Order of Examination, etc.

George R. Knox, Gen. Freight Agt. Nash. Chat. & St. L. R. R.

T. G. Ryman, Manager Steamboat Lines.

J. J. McCann, Merchant Miller, Nashville, Tenn.

H. H. Butteroff, Manufacturer of Stoves, Mantels etc., Nashville.

W. Morrow, Wagon Manufacturer, Nashville, Tenn.

J. H. Wilkes, Grain and Hay, Nashville, Tenn.

J. H. Fall, Hardware.

J. F. Wheelless, Manufacturer, Murfreesboro, Tenn.

Chas. O. Thomas, Merchant Miller, Murfreesboro, Tenn.

J. W. Thomas, Pres. Nash. Chat. & St. L. R. R.

E. B. Stahlman, L. & N. R. R. (re-called.)

W. R. French, Wool Manufacturer, Tullahoma, Tenn.

Leonard Parkes, Wool, Nashville, Tenn.

D. S. Williams, Lumber and Wooden Ware, Nashville, Tenn.

G. S. Kinney, Wholesale Liquor Dealer, Nashville, Tenn.

B. Frank Lester, Live Stock, Nashville, Tenn.

O. H. Hight, Secretary Merchants Exchange, Nashville, Tenn.

J. B. Briggs, Tobacco, Russellville, Ky.

H. A. McLemore, Grain, Columbia, Tenn.

J. W. Rosamon, Fruit and Vegetables, Gadsden, Tenn.

W. R. Craig, Grain and Produce, Pulaski, Tenn.

E. P. Gracey, Grain, Clarksville, Tenn.

D. M. Kennedy, Board of Trade, Clarksville, Tenn.

J. A. McGregor, Manufacturer, Erin, Tenn.

William Buquo, Lime, Erin, Tenn.

M. H. Clark, Tobacco, Clarksville, Tenn.

H. D. McHenry, Coal, Hartford, Ky.

J. W. Moores, Coal, Southwest Kentucky.

F. W. Cook, Brewer, Evansville, Ind.

George P. Heilman, Miller, Evansville, Ind.

W. W. Shelby, Miller and Tobacco, Henderson, Ky.

U. W. Armstrong, Furniture, Evansville, Ind.

B. F. Mitchell, Gen. Freight Agt. W. Div. Newport News & Miss. Val. R. R.

Logan H. Roots, Banker, Little Rock, Ark.

C. F. Penzel, Wholesale Groceries, Little Rock, Ark.

D. Miller, Gen. Freight Agt. Memphis & Little Rock R. R.

H. M. Cooper, Cooperage, Little Rock, Ark.

J. T. Pettitt, Produce and Cotton Exchanges, Memphis, Tenn.

R. F. Patterson, Cotton, Memphis, Tenn.

W. W. Schoolfield, Wholesale Grocer and Cotton, Memphis.

Peter McIntire, Sugar, Memphis, Tenn.
John L. Wellford, Chickasaw Cooperage Company.

J. A. Godwin, Dry Goods, Memphis.
Harlow Dow, Coal Oil, Memphis.
A. H. Moses, Iron, Sheffield, Ala.
John Atherton, Distiller, Louisville, Ky.
George Gaulbert, Merchant, Louisville, Ky.
Frank Hartwell, Grain, Louisville, Ky.
Horace Pashaw, Flour, Louisville, Ky.
S. Zorn, Grain, Louisville, Ky.
Chas. Ballard, Flour and Cornmeal, Louisville, Ky.
Joseph LeCompte, Merchant Miller, Lexington, Ky.

George W. Decker, Newport, Arkansas.
A. K. Ward, Memphis Fertilizer Company.
Virgil Powers, Gen. Com. Southern R. R. & S. S. A.

G. W. McGinnis, Port Hudson & Grand Gulf R. R.

Chas. W. Drown, Secretary Steamboat Association.

MEMPHIS, TENN., May 4, 1887.

THE COMMISSION met at 10 A. M. in the room of the United States Court, all the members being present.

The **Chairman**. Gentlemen, the occasion of the visit of the Commission appointed under the Act to Regulate Commerce is probably understood by you all, so that any extended remarks by way of explanation would be entirely unnecessary. It is doubtless known to you that while that law lays down a certain, definite rule for railway charges for the transportation of persons and property, it contemplates the possibility that there may be exceptional cases requiring a suspension of that rule; and it confers upon the Commission the power to investigate the supposed special cases and to determine upon them. Certain railroad companies have made application for the exercise of the authority of the Commission in that regard, under that provision of the law. In order to determine upon the propriety and the wisdom of exercising its authority, the Commission is under the necessity of inquiring into the facts; and it has thought that those facts might be most conveniently gathered at certain central points in the territory covered by the operations of those railroad companies. The City of Memphis has been selected as one of those central points. We are here, therefore, to-day, for the purpose of gathering facts which may bear upon the wisdom and the propriety of granting the suspensions that have been prayed for by these railroad companies. We expect those facts to be brought forward by the railroad companies in support of their applications. At the same time we recognize that the general public has quite as much interest in the questions involved as have the railroad companies themselves; and therefore we are here to receive evidence from municipal bodies, from commercial bodies, even from private citizens, that may be offered in support of the applications; and we are equally here to receive the evidence of other bodies or of other citizens that may be offered in rebuttal of that which tends to the support of the applications. In other

INTER 8.

words, we want all the facts, from whatever source they may come; and are as ready to receive them from any private individual as we are from any public or corporate body.

A word more in regard to the order of proceeding. It has seemed to us that it would be convenient, that it would tend to expedite the proceedings and bring out an orderly presentation of the facts, if we receive first the evidence that might be offered in support of the applications made to us and, immediately upon concluding that, to then take up the evidence that should be offered in opposition. So we will receive first the evidence that may be offered in support of the applications, and then that which may be presented in opposition. It will conduce to order and expedition if the names of witnesses are handed to us in advance. While we do not absolutely require that, yet we shall expect the names of the witnesses proposed to be examined, or the names of persons who desire to come forward and give evidence, to be handed to us between this hour and the hour when we propose to meet this afternoon, which will be 4 o'clock.

With these brief remarks we are ready to proceed with the taking of evidence. We propose to do so promptly; to proceed without delay and continue the morning session until 2 o'clock, taking then our recess for dinner.

I hold in my hand and will now give to the Secretary a statement from residents and business men of the City of Baton Rouge, stating certain facts which they think tend to support the petitions which have been presented, and concluding with a request for the granting of those petitions.

Mr. J. W. Thomas (President Nashville, Chattanooga & St. Louis Railway.) Mr. Chairman, if it meets with the approval of the Commission we would be pleased to present the evidence of the Nashville, Chattanooga & St. Louis Railway first. It is true we represent a comparatively short line, but we were the pioneer road of the State of Tennessee, and as such I think probably it would be well for us to lead in this investigation. While we represent but 600 miles of railroad, we represent more than one eighth the mileage of the State of Tennessee, and we think one quarter of the commercial interests of the State.

George R. Knox appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Thomas**:

R. Where do you reside?

A. Nashville, Tennessee.

Q. What is your occupation?

A. General freight agent of the Nashville, Chattanooga & St. Louis Railway.

Q. How long have you been connected with that road?

A. About twenty-five years.

Q. Are you familiar with the principles of making local and through rates upon that road?

A. I am.

Q. Do you know the charter rate of the road?

A. Yes sir.

Q. What is it?

A. For heavy freights thirty-five cents per

hundred pounds per hundred miles; for light freight, ten cents per cubic foot.

Q. Is that the limit on heavy freight on the line between Hickman and Chattanooga?

A. In no case do we charge up to the charter rate.

Q. How much per ton per mile is the rate on heavy freight?

A. Seven cents per ton per mile.

Q. What is the rate on coal from points outside of Tennessee to Nashville?

A. There is a summer rate and a winter rate.

Q. About what does it average per ton per mile?

A. About six mills per ton per mile, as well as I remember.

Q. What is the rate on grain and agricultural products?

A. On grain and flour fourteen cents per hundred pounds from stations south of Nashville on the main line is the minimum rate.

Q. What is the rate from New York to Nashville?

A. On first class, ninety-seven cents per hundred pounds.

Q. What is the rate from New York to Chattanooga on first class?

A. \$1.14.

Q. Who makes the rate, and how is it made from New York to Chattanooga?

A. It is made by the rate committee of the Southern Railway & Steamship Association, representing the various lines reaching Chattanooga by the different routes.

Q. Have Nashville and Chattanooga any voice in the making of the rate from New York to Chattanooga?

A. Practically none. As a member of the rate committee I would have a vote on the question, but we do not do a very large share of the business, and therefore have no controlling voice in establishing that rate.

Q. You say the rate to Chattanooga from New York on first class is \$1.14, and to Nashville it is ninety-seven cents?

A. Yes sir.

Q. Suppose Nashville were not a competitive point and had no other means of transportation, and the freight from New York came through Chattanooga; what would probably be the rate from New York to Nashville via Chattanooga?

A. The line from Chattanooga to Nashville would probably charge about the same rate per mile as charged by the lines from New York to Chattanooga. That would make the rate probably somewhere between \$1.40 and \$1.50. I couldn't tell without stopping to figure it out.

Q. You make your rate from New York to Nashville for what reason?

A. The trunk line rates to Cincinnati, Evansville, Cairo and Paducah, added to the current river rates from those points, would make a very much lower rate than \$1.40 or \$1.50.

Q. What is the rate from New York to Murfreesboro, twenty miles south of Nashville?

A. The rate on first class from New York to Murfreesboro is \$1.22.

Q. What would the rate to Murfreesboro be

if there was no competition at Nashville coming through Chattanooga or Nashville?

A. It would then be based on Chattanooga, with the local from Chattanooga added—\$1.64.

Q. What, then, is the reason for a lower rate at Nashville than at Chattanooga?

A. River competition.

Q. What is the rate from Nashville to Atlanta on grain?

A. Twenty cents per hundred pounds.

Q. What is the rate from Nashville to Augusta on grain?

A. Twenty-two cents.

Q. What is the rate from Nashville to Charleston, Savannah and other coast points on grain?

A. Nineteen cents per hundred pounds.

Q. What is the cause of that difference of twenty-two cents to Augusta and nineteen cents to Charleston or Savannah, over 100 miles further?

A. Competition by ocean, the western grain coming in via Baltimore and other northern and eastern ports, by steamships and sailing vessels which fix the price at the coast. If we were to make a rate from Nashville to Charleston and other coast cities in line with the rate to Atlanta and Augusta we would exclude our Tennessee products entirely from reaching those points.

Q. Do you know of any instances where under substantially similar circumstances and conditions there would be a difference in rates for equal distances and like kinds of property?

A. I do not.

By **Mr. Stahlman:**

Q. What is the nature of the competition between Cincinnati and New Orleans?

A. It is river competition.

Q. Is it not rail competition too?

A. It is river and rail both, but I presume the main competition is water competition.

Q. Does that same competition apply to business between Cincinnati and Mobile?

A. Yes sir. There is a water line from New Orleans to Mobile. It would not be perhaps quite so strong as at New Orleans, but still it applies with a great deal of force.

Q. What affects the rate practically between Louisville and Montgomery?

A. There are several points kept in view in fixing the rates to Montgomery, but the main one is the rate to New Orleans and Mobile by water with a water rate from those points to Montgomery.

Q. And the same applies to Selma?

A. Yes sir; perhaps fully as strongly as to Montgomery, perhaps a little more so; as Selma is nearer Mobile by water.

Q. Does the same competition that controls the rates between Louisville and Mobile affect the rates between Louisville and Pensacola?

A. Yes sir.

Q. What affects the rates from St. Louis, Cincinnati and Louisville to Pensacola, Mobile, New Orleans, Montgomery and Selma affects the rates from Evansville and St. Louis also?

A. Yes sir; as much and perhaps a little more so from Evansville and particularly from St. Louis, as I think there are more boats from St. Louis and Louisville to New Orleans.

Q. Does not the river competition in connection with the short rail haul through Vicksburg have a bearing?

A. That is one of the factors; yes sir. As I stated, there are several. That is another very strong one.

Q. Are not the rates between Clarkesville and New Orleans affected practically in the same way?

A. They are.

Q. And Mobile?

A. Yes sir.

Q. And Montgomery and Selma and Pensacola?

A. All go together.

Q. The rates between Louisville, Cincinnati and Memphis are regulated by water competition?

A. Oh, yes sir.

Q. And Clarkesville the same way?

A. Yes sir.

Q. And St. Louis?

A. Yes sir.

Q. And Evansville?

A. Yes sir.

Q. Is there competition between Cincinnati and Nashville by water?

A. Yes sir; no direct boats now, but I understand the Cincinnati freight comes almost daily and is re-shipped at Paducah on Cumberland River boats which make some four or five trips per week.

Q. There is a regular line of packets on the Cumberland River?

A. Two lines now.

Q. Suppose the railroads should advance their rates between Cincinnati, Louisville and Nashville, is it not your opinion that a boat line would be established, or that the boats would carry the traffic?

A. Yes sir, I think so. In confirmation of that opinion I understood in Nashville only yesterday or the day before, that one of the gentlemen interested in the boats above Nashville was contemplating putting on a large boat between Cincinnati and Nashville direct, if the fourth section is enforced. The rumor is he is getting ready for it.

Q. What influences are at work on the routes from Nashville? Does not the same rule that applies to Louisville, Clarkesville and Cincinnati in fixing the rates to New Orleans and Mobile apply also and fix the rates from Nashville to Mobile and New Orleans?

A. Practically so; yes sir.

Q. And also from Nashville to Montgomery and Selma?

A. Yes sir; there is a relation between the rates from Nashville, Louisville, Evansville and other points that is observed. They all go up together and come down together. They can't be avoided very well.

Q. I believe you stated in your original examination that the rates to the Southern coast if advanced would exclude Nashville and Tennessee products from being shipped to that territory?

A. I think they would be shut out of the coast territory.

By the Chairman:

Q. Did you say you had a charter rate?

A. Yes sir.

Q. What is that charter rate?

A. On light freight ten cents per cubic foot. On heavy freight twenty-five cents per one hundred pounds per hundred miles.

Q. Do you charge what your charter would allow you to charge?

A. On heavy freights we never get anywhere near it. On light freight, possibly on some classes we now make the rate per hundred pounds which, if applied per cubic foot might increase it in some few instances.

Q. But as a general thing the charter rate does not control your action at all?

A. We are very much below it.

Q. So that has very little to do with your charges? You say Tennessee products would be excluded from the Atlantic Coast if the rates were raised. What products do you refer to?

A. Largely grain and the products of grain, and the hog product of Tennessee. Middle Tennessee, particularly, is an agricultural section.

Q. Do you raise grain there to ship to these ports?

A. Oh yes sir; lots of it. Nashville alone handles, I think, some 8,000,000 bushels of corn per annum.

Q. Do you not bring it in very largely from the West and Northwest?

A. It is brought in this way: our local crop comes in—the wheat crop—about the first of July, and our corn crop about the first of November; and of course owing to the character of the crop, the size of it, and to the Southern demand, that lasts a longer or a shorter period, perhaps six or eight months sometimes, and the local crop will supply the trade. Then they piece out for the remainder of the year by drawing on the West.

Q. So that in the aggregate a very large amount of grain and provisions is brought from the West into that region?

A. Yes sir.

Q. Which on the whole does not supply itself with what it consumes?

A. Well sir I think Tennessee raises more grain than she consumes, but they ship it the first half of the year and then draw on the West the latter part of the year.

Q. There is a large region there demanding all those products?

A. Yes sir.

Q. You spoke of what these rates would probably be under different circumstances. The rates are not absolutely determined by the circumstances, are they?

A. Yes sir; I might so state.

Q. Do you mean for all this region?

A. Yes sir.

Q. They are absolutely determined by circumstances?

A. Yes sir. To illustrate: heretofore in constructing rates our base rate would be the rate from Chicago to Baltimore, plus the steamer rate to Charleston. That made a rate from Chicago to Charleston rail and water. Therefore when we were making our all rail rate from Chicago to Charleston, we would perhaps make it five or six cents per hundred pounds higher than the water rate.

Q. You have rate committees that consider these circumstances and determine upon them?

A. Yes sir; representing all the roads.

Q. Do not those rate committees very fre-

quently differ largely in their views as to what these rates should be?

A. Yes sir; on questions of local competition.

Q. So that, after all, the circumstances would be determined upon by the rate committee, I suppose?

A. Well, as a general rule a certain action is laid down by the rate committee. No men on the rate committee would dispute the fact that the rate from Chicago to Charleston is based on the rate to Baltimore plus the steamer rate to Charleston, or the sail rate. They will all admit that.

Q. You think there are certain forces that they have to recognize and cannot avoid?

A. We all recognize them, no matter how we differ on local points.

Q. There are competitive forces between water and rail that you are under the necessity of recognizing?

A. Yes sir.

Q. You say that you do not know of rates being different where the circumstances or conditions are the same?

A. I do not; not in our section of country.

Q. When you say that, to what circumstances and conditions do you refer?

A. To the circumstances and conditions of competitive lines, markets and products, you might say.

Q. What you mean by that is nothing more than this: that the competitive forces operate differently at different points, and you are obliged to recognize them?

A. Yes sir; that is about it.

Q. You spoke of the competitive forces between rail and water, and said those established different conditions at different points. Is not that equally true where railroads cross each other and establish competitive points?

A. It is true but not to the same extent.

Q. Why not to the same extent?

A. Frequently we would have a railroad crossing—the roads may cross each other, perhaps out in the woods, and within a few miles of that crossing point we may have a town already established.

Q. But take now a point that has a considerable trade, quite a trade center. Take as an illustration Birmingham or Atlanta. In your opinion do the competitive forces at such points operate just as conclusively as they do at the crossing of rail and water, or the meeting of rail and water?

A. That is a question of the relative forces of competition of a number of railroads centering at a certain point as compared with the competition of water lines. I think really the water line competition is a little more severe than where there is nothing but railroads.

Q. Would that be for any other reason than because water transportation is the cheaper?

A. Well sir there is one trouble with water. To illustrate: there are certain steamship lines between northern and South Atlantic ports. Those steamship lines may have gone into an agreement with the roads by which to some extent the competition for the southern trade would be controlled or regulated; but back of the steamships are numberless sailing vessels who make any agreement with anybody; in fact each ship is owned by its own master.

Q. In this region in which your road oper-

ates do you get out of the reach of water competition at all?

A. No sir. To illustrate, if you will permit, I will remark that within the last two weeks a Nashville party wished to bring five hundred bales of cotton from New Orleans to Nashville for the cotton mills located at Nashville. The lowest rate was \$3 per bale. He brought it by river for \$1.80. It is the same way from St. Louis.

Q. Would the water competition reach points like Atlanta, so as to affect their rates too?

A. Not directly.

Q. But are you obliged to recognize at such points the force of water competition to some extent?

A. Yes sir; indirectly it affects the rate there. For instance: having fixed the rate to Montgomery the competition of markets comes in and regulates Atlanta.

Q. You spoke of the different circumstances and conditions which should justify a suspension of this clause of the statute in the case of your road. That you would apply at the principal competing points upon it, I suppose.

A. Yes sir.

Q. In your opinion are there any important competing points, whether that competition is by rail or by water, in that region reached by your road, or in Georgia, Alabama and Mississippi, if you please, where the circumstances and conditions do not so far differ as to justify the application of the principal on the same ground as it would be justifiable at Nashville for instance or other points on your road.

A. I don't believe I quite catch the meaning of your question.

Q. I want to get your opinion upon this principle—whether it is a principle applicable in all that region, or whether it is confined to a few points like Nashville, Cairo and Memphis?

A. Speaking for our own line at Hickman, the western terminus of our road we have the Mississippi River.

Q. I understand what you say as to your line, but I want to know how generally you think that principle is applicable in this region on other lines at these principal competing points. Let me put it in a different form. Could you name any one important point in the four States of Tennessee, Mississippi, Alabama and Georgia, where the circumstances and conditions are not so different from those which prevail generally as that it would not be admissible to make the case of that point an exception under the law, if there is to be any exception made?

A. If I understand you, could I name any considerable point in either one of those four States where the long and short haul clause could be enforced without injury?

Q. Why it would not be admissible because of the circumstances and conditions to make that point an exception.

A. I cannot now think of any point of that description.

Q. Then, in your view, if this clause is to be suspended, it would be proper to suspend it as to all this region?

A. Yes sir. The commercial relations of the various centers in those States are so interwoven that it seems to me that conclusion would be just.

Q. Is what you say there true of the country generally?

A. I cannot speak so much of the country north of the Ohio River. Their condition is no doubt, different from ours.

Q. Do you think you get out of the reach of water competition anywhere there?

A. Yes sir; I believe from the Ohio River to the lakes, some 800 miles the country is without any water competition to amount to anything to disturb the rates.

Q. Yes; but does not the water competition affect the rates everywhere?

A. Either directly or indirectly I think it does. I think in the entire United States, to a very considerable extent, the water competition does regulate the rail rates.

By *Commissioner Morrison*:

Q. What distance does the freight coming from the East pass over your road from Knoxville to Chattanooga?

A. One hundred and fifty-one miles.

Q. How much less do you say the through rate is to Nashville than to Chattanooga from the East?

A. The rate on first class from New York to Chattanooga is \$1.14; to Nashville, ninety-seven cents. I would like to add right there, however, that the rate to Nashville is based on the trunk line rate to Cincinnati and Evansville, or Cairo, and Nashville is practically a western city rather than a southern city. That is the reason why that is true. In other words, while the route from New York to Nashville through Chattanooga is a short route in miles, in rate making power the route via Cincinnati and Evansville is a shorter route.

Q. What is the difference in the charge over your road from the West, through Nashville to Chattanooga?

A. The rate from the principal western points to Nashville is regulated by the rate via the Cumberland River.

Q. How much do you charge to Nashville?

A. On what class of freight?

Q. The class you have been talking about; grain.

A. The rate from St. Louis and western centers to Nashville on grain, if I remember correctly without referring to my tariff, is fifteen cents. The rate to Chattanooga I will have to refer to my tariff for. That is twenty-four cents.

Q. What lines by water do you come in competition with at Nashville for the eastern freight coming west?

A. The trunk line route from New York to Cincinnati, or to Evansville or Cairo, in connection with the boats running from Evansville and Cairo to Nashville. There are two lines of boats running from Cairo to Evansville and Cairo to Nashville. The rate on first class—I had occasion to investigate it—from Evansville to Nashville by river is fifteen cents per hundred. My recollection is that the trunk line rate on first class at that time from New York to Evansville was eighty-one cents.

INTER S.

The two rates added together made ninety-six cents.

Q. And going either way, then, whether through Knoxville to Nashville, or not, you carry a portion of the through freight?

A. Yes sir. I might say our road between Nashville and Chattanooga is a cross line. The distance from Nashville to Cincinnati is 295 miles and from Chattanooga to Cincinnati is only 336 miles.

Q. Is that proportion of the through freight from the east to Nashville by way of Chattanooga fairly remunerative?

A. We accept the same rate per ton per mile as our southern connections receive on that business; in other words, we prorate with them. We usually have a large number of cars returning from the South empty; and it is in the nature of loading for those return cars.

Q. Please give me an answer first and then you can explain why it is so. I ask you if your proportion of the rate from the East to Nashville by way of Chattanooga is fairly remunerative?

A. Under the present rates I think it is, under all the circumstances. Under different circumstances it would not be.

Q. It is, as things now are?

A. Yes sir.

Q. You have the same tariff you had before the Interstate Commerce Law was passed?

A. I think the rates are about the same.

Q. What is the distance from Chattanooga to Nashville?

A. One hundred and fifty-one miles.

Q. Then you are receiving more at Knoxville. Does it follow that if fairly remunerative to Nashville it would be still more so at the other place?

A. I suppose you mean at Chattanooga. The freight from New York to Chattanooga through by the southern routes does not pass over our road, and I would not feel justified to say what would be remunerative to those roads, for they have to judge for themselves about that.

Q. You cannot answer that?

A. No sir; because our road is not interested in that question.

Q. You don't know anything about rail-roading, or much about it, except so far as pertains to your own road, or your own interests?

A. I might have an opinion, but I would not feel at liberty to state it.

By *Commissioner Bragg*:

Q. I understand that your road extends from Chattanooga to St. Louis?

A. No sir; from Chattanooga to Hickman, Kentucky.

Q. The name of your road is the Nashville, Chattanooga & St. Louis, is it not?

A. Yes sir.

Q. At Hickman you connect with a road which extends to St. Louis?

A. At Union City we have a track arrangement to run to Columbus, Kentucky, and there we connect with the Iron Mountain Road; and at Martin we have a track arrangement by which we run our cars into Cairo, and there connect with the Illinois Central for St. Louis by what is called the Cairo Short Line.

Q. Those are just traffic arrangements made between your company and these other companies and these other companies?

A. Yes sir; with the Mobile & Ohio, you might call it, a track arrangement to run our trains into Columbus. We pay them for the use of their rails.

Q. What is the distance from Hickman to Chattanooga?

A. Three hundred twenty-two miles.

Q. Your road, as I understand you to say, is a local road, is it?

A. No sir. We do a large local business, but we do a large through business.

Q. But your through business is done in connection with other roads?

A. Yes sir; very largely.

Q. You start from the Mississippi River at Hickman, and you go over to Chattanooga, Tennessee. Is it or not true that a large proportion of the freight that you receive that passes over your road, comes from points beyond Hickman, on that end?

A. From points beyond Union City or Hickman; yes sir.

Q. Take the other end, from Chattanooga. Is there much freight that comes from beyond Chattanooga that passes over your road—through freight?

A. A great deal.

Q. That was the reason I spoke of it as a local road, as contradistinguished from a road that has a connection with tide water.

A. Exactly. I didn't catch the meaning of your question.

Q. What is the population of Nashville, Tennessee?

A. At present it is estimated at about 75,000.

Q. What are the chief articles of freight you transport over your road besides grain?

A. The product of grain, in the shape of flour and meal. I presume you would include that under the head of grain. Also hay and meat.

Q. Do you transport much cotton over your road?

A. I was just thinking up the main points. I had not completed the answer yet. We handle considerable cotton. Nashville handles about 50,000 bales of cotton per annum, and besides that we have considerable local cotton. There is a great deal of lumber passing over the road, and a vast quantity of pig-iron, both raw and manufactured, in the shape of water pipe and bar-iron, etc. In fact, I might say, all agricultural products pretty nearly, because Tennessee produces almost everything in that line. Nashville, too, is quite a large manufacturing center now, and we transport vast quantities of all sorts of manufactured goods. There is one of the largest farm wagon factories in the United States, at Nashville, and we haul a great many wagons and all sorts of manufactured goods. I couldn't begin to name them without looking over our tonnage reports.

Q. Do you ever so adjust freight rates as to compel a shipper to ship over one end or the other of your line by any particular route, or do you let the shipper choose his own route?

A. We let the shipper select his own route.

Q. And then make the rates and furnish the cars to enable him to ship his products as he pleases?

A. I say we let him select the route. That is true wherever we have arrangements by which we can warrant the through rate by various routes. Sometimes we may have authority from one line and not from another. We can only give a through bill of lading over the line that has given us the authority. But generally speaking, we give him his choice.

Q. Has it ever happened that after the rate committees make these rates, or agree upon them, they are forced to be changed by competition, before the next meeting of the rate committee?

A. Yes sir; there have been such cases.

Q. Does that happen very often?

A. Not very often. It has happened frequently, however.

Q. What is the competition that compels those changes before the rate committee meets?

A. Water competition is the main cause; in fact, I might say, almost the entire cause. To illustrate: right today I have information from St. Louis, Montgomery, Atlanta, Athens, Augusta and all that country, that corn and flour is today going down the river to Vicksburg, and then taking the short rail line across into all that country at about three and one half to four cents per hundred pounds lower than our tariff rate. We are losing business and have been for the last ten days from that cause.

Q. That is lower than the rate agreed upon by the committee?

A. Yes sir; this line of boats is not in the Association. They do as they please. That is going on today and has been for the last two weeks.

Q. Can you state any reason or principle why competition produced by long lines of contending railroads at a place like Birmingham, Alabama, for instance, coming from far distant eastern and western points is not as actual as it is when produced by water and rail?

A. The only reason I could give you for that is that I think the railroad men usually try to conduct their business in a little more orderly manner, and endeavor to have agreements and to live up to them a little more closely. That is about all the reason I can give.

Q. That is the only thing that prevents it?

A. No. The trouble is here. It is water competition. You may have your arrangements with your steamboat competitors, and fix certain differences between all rail and rail and water rates, and they may live up to their agreement; but back of the steamboats are a lot of sailing vessels that it is impossible to have any understanding with. I have known of one lot of 20,000 bushels of wheat from the West to Port Royal and into Augusta, come by schooner, taken right away from us. It was not the steamships that did it. It was the sailing vessels. You cannot have any understanding with the sailing vessels. There are too many of them. They are too numerous.

Q. The Queen & Crescent line goes into Birmingham from Cincinnati and New Orleans?

A. Yes sir.

Q. The Louisville & Nashville goes into Birmingham from New Orleans and Louisville?

A. Yes sir, and also from Cincinnati through to Louisville.

Q. The Georgia Pacific Railroad goes into Birmingham from Atlanta and the East, does it not?

A. Yes sir.

Q. Do you mean to say, or do we understand you to say, that those lines have any agreement among themselves as to any division of the business at Birmingham that goes over their respective lines?

A. No; I never heard of any agreement at Birmingham. I don't think there has ever been any agreement about the business going out from Birmingham.

Q. Or coming in there either?

A. Under the old—

Q. I am talking about since competitive rates have been allowed; within the last three years; since the opening of the Georgia Pacific Railroad.

A. There may have been some division of business from the East—merchandise coming into Birmingham by the southern lines. I can't state positively as to that, as I am not positively advised. But on the business going out of Birmingham, the pig-iron and iron products, I don't think there ever has been any division.

Q. Do you say there has been any agreement within the last two or three years, since the Georgia Pacific has been opened, as to business coming into Birmingham?

A. From the West—

Q. Or the East either?

A. I can't speak positively, because I do not represent any line going into Birmingham directly. I can't speak of my own knowledge.

Q. What are the physical characteristics of your road between Chattanooga and Nashville; that is to say, is it a road of heavy grades, etc.?

A. Yes sir. We run from Nashville to Cowan, eighty-seven miles, through an agricultural country—a portion of it, however through broken country. For instance, from Normandy to Tullahoma we rise about 500 feet in seven miles, and from Cowan to Chattanooga we run through a mountainous country, with heavy grades and sharp curves.

Q. What are the physical characteristics of your road between Nashville and Hickman?

A. The country there is not so broken. Between Nashville and Johnsonville on the Tennessee River we have some pretty heavy grades. West of Johnsonville, running through West Tennessee, the grades are easy.

Q. How about the bridges and trestles?

A. We cross the Tennessee River twice, once at Johnsonville and once at Bridgeport. We have had a good many pretty high trestles, but we have been filling them up for years and have pretty well gotten through with them.

Q. Have you a profile of your road here?

A. I suppose our president could answer on that point.

Mr. Thomas. No sir; we have no profile here.

Q. Is there any competition between your road and the Louisville & Nashville road at Nashville?

A. Yes sir; pretty sharp.

Q. That is independent of the river competition of the Cumberland River altogether, is it not?

A. Yes sir.

INTER S.

Q. You try to get all you can and they try to get all they can?

A. Yes sir.

Q. Do you suppose there is any difference between your road and their road at Nashville in that respect, and each of the other lines at Birmingham that I questioned you about?

A. I think perhaps you misunderstood me. I admit that rail competition is very sharp; but you asked me to state the difference, as I understood, between rail and water competition. I do not deny but that rail competition is very sharp and very strong.

Q. That is the point I am asking you about?

A. Undoubtedly.

Q. At Atlanta it is the same way, is it not?

A. Yes sir; it is very strong there.

Q. Do you know about how it is at Meridian, Mississippi?

A. No sir; we do not take much business into or out of Meridian. I presume it is strong, but I am not personally advised of it.

T. G. Ryman appeared before the Commission and having been duly sworn was examined as follows:

By Mr. Thomas:

Q. Please state your residence and occupation?

A. I follow steamboating, and manage a couple of lines from Nashville to Evansville, and from Nashville to Cairo.

Q. Do you compete with the Nashville & Chattanooga Road at Cairo for business between Cairo and Nashville?

A. Yes sir.

Q. Do you compete at Evansville for business with the Louisville & Nashville from Evansville to Nashville?

A. Yes sir.

Q. Do you compete with the Louisville & Nashville on business to and business from Nashville and Clarksville?

A. Yes sir.

Q. What is your rate on first class goods from Nashville to Clarksville?

A. Ten cents a hundred.

Q. What is your rate to intermediate points between Nashville and Clarksville?

A. When we have got no opposition on the river our rate is fifteen cents a hundred.

Q. How far is it from Nashville to Clarksville?

A. Sixty miles by water.

By the Chairman:

Q. Do you run elsewhere than on the river in the State of Tennessee?

A. We ply between Evansville and Cairo Illinois, and then we go up the Mississippi sometimes after corn, and go down below Hickman. We go down the Mississippi and up the Mississippi after corn; and we go into the Wabash River after corn, and the Saline River, and sometimes we have went above Evansville; but seldom.

By Mr. Thomas:

Q. I understand you where you have competition by rail you make the rate, and where you have no competition to an intermediate point point for a shorter distance, you charge a higher rate?

A. Yes sir; we charge now for instance to Clarksville, on account of railroad competi-

tion, only ten cents a hundred; and at Ashton, thirty miles below Nashville, we only charge ten cents a hundred on account of the pike and wagon competition; but between Nashville and Clarksville, which is thirty miles below Ashton, we charge fifteen cents, and to Clarksville we charge ten, on account of railroad competition.

Q. That is the principle that governs your business?

A. Yes sir.

By the **Chairman**:

Q. Do you belong to the Southern Railway and Steamship Association?

A. No sir. I have no working arrangement with anybody at all. I used to. I have had contracts with railroads, but for the last year or two I have had none.

Q. Are there other boats plying on the river too?

A. There is now. There is a couple of boats running now.

Q. Do you have understandings with them in regard to rates?

A. No sir; we are fighting one another.

Q. You all work independently?

A. Yes sir.

Q. Then there is competition between you and them at these intermediate points?

A. Yes sir, now. The rate I refer to is not in force now. We have no rate now.

Q. What you have been telling us applied to some former period?

A. It is our regular rate when we have no competition. We have had the competition for the last twelve months.

By **Mr. Stahlman**:

Q. Is it true that even with the competition you now have your rates are sometimes higher to intermediate local landings than to the larger points where the business is larger?

A. Not now. Right now since this fight we have had with those two boats we make a broad ten cent rate up and down from Evansville and from Nashville down and from Paducah up. It is a broad ten cent rate everywhere. That is all we ask. In some instances it went under that.

Q. You have had lines on the river with which you had agreements, have you not; and when you make such agreements you generally embody the plan of charging more for the smaller landings?

A. Oh yes sir; when we can get our rate and we have got no competition we make a difference at the rail points of about five cents a hundred; in some instances more.

Q. If you had competition and were working under agreement you would do practically the same thing, would you not?

A. Oh yes sir; we have to do that to get the business at all. Our passage rate and everything is affected. Wherever a railroad point is we make it less, and I suppose the rail does the same.

Q. Will you please state to the Commission, if you know, the difference between the cost of transporting by rail and by water?

A. I have never studied it particularly, but I know the water can beat the rail materially for the same distance or even a longer distance. For instance, from Cincinnati to Nashville we are at present handling a great deal of goods,

steamboat load after load of dry goods, boots and shoes—I don't know about boots and shoes, but we are working all sorts of hardware and merchandise generally from Cincinnati to Nashville at about fifteen to eighteen cents a hundred, I believe. We only get a part of that. There is a division. The Memphis & Cincinnati boats bring it down to Paducah and Evansville and we take it to Nashville. We generally get it at any price we can.

The **Chairman**. Do you mean the rates prevailing and that are accepted, or do you expect the witness to go into an estimate of the elements that make up the cost of transportation?

Mr. Stahlman. My object was to ascertain the cost of transportation by river, if the captain is sufficiently familiar with it. We propose later on to develop the cost of the transportation by rail.

The **Witness**. By river from Cincinnati to Nashville, if you will study the geography of it you will see it is V shaped. It is twice as far from Cincinnati to Nashville by water as it is by rail; yet we can carry freights at eighteen cents a hundred; heavy freights, for each boat to get something out of it.

Q. What is the capacity of your boat, in tons, running between Evansville and Nashville?

A. Three hundred and fifty tons.

Q. How long does it take you to make the trip?

A. We make a trip a week. We go one way in three days from here.

Q. The running time from Evansville to Nashville is three days?

A. About that, according to the business we do. We make a trip a week; that is the time. Sometimes we have a day in each port.

Q. What does it cost you to make that round trip?

A. We make those trips for about \$700 a week with those boats.

Q. And the tonnage you carry is about what?

A. Three hundred and fifty tons. Then we have a passenger receipt and a freight receipt both ways and we have a local business. We get fuel cheap on the Ohio River and we run our boats very cheap.

Q. What is the cost of one of those boats running between Evansville and Nashville?

A. About \$18,000.

By **Mr. E. D. Baxter**:

Q. What is your insurance?

A. I don't insure. I ought to.

Q. What is it when you do insure?

A. Seven per cent.

By **Mr. Stahlman**:

Q. That expense of \$700 a week includes the wages of your men, etc.?

A. Stores, labor, wages and expenses.

Q. All the expenses incident to the trip?

A. Yes sir. Aside from that we have a light shore expense, which would probably swell the sum up to \$10 a day more all told.

By **Mr. E. D. Baxter**:

Q. I understand your expenses then would be \$110 a day?

A. I suppose it would be that at a guess; yes sir. It might not quite be that. Probably it would be.

Q. That includes the cost of your officers, and hands and fuel?

A. Yes sir; superintendence and everything.

Q. The tonnage of your boats I understand to be about 350 tons?

A. Yes sir.

Q. In a good season when you are running full, with a good through business and a good local business, how many tons of freight would you handle on a trip from Evansville to Nashville and back?

A. We don't get our full capacity all the time. When we get our full capacity probably we would handle seven or eight hundred tons; but we don't get that half the time.

The **Chairman**. Is it worth while to go into the particulars?

Mr. Baxter. I did not propose to do it with more than one witness. I want to get as definitely as possible the cost of steamboat transportation; and I understood the captain was familiar with it.

The **Witness**. He wants to see how much it would take to clean us out, I reckon.

Q. I am requested to ask what proportion of that expense is attached to the cabin, and what to the hold?

A. Our store bill is about \$125 to \$140 a week. It costs about \$150 a month to run the cabin, for labor, cooks, etc. I would have to get the book to tell you exactly.

Q. What do your passenger receipts average?

A. About \$100.

Q. For each trip?

A. Yes sir; hardly that. They would average about that.

John J. McCann, appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Thomas**:

Q. Please state your residence and occupation?

A. My residence is Nashville, Tennessee, and my occupation, merchant miller.

Q. What is about the milling capacity in barrels per day of the mills located at Nashville?

A. About 1800 barrels.

Q. Is all of that consumed in the vicinity of Nashville?

A. About one fifth of it is consumed in the vicinity of Nashville.

Q. What are the principal markets where you dispose of this product?

A. Georgia, Alabama, North and South Carolina, Florida, and occasionally some in Mississippi and Virginia.

Q. What would be the effect on your enterprise of the same rate per ton per mile?

A. The effect would be to localize our business.

Q. Suppose the rate to all coast points, or points depending upon the coast, was as high as Atlanta. What would be the effect then?

A. The effect would be that our trade would not extend beyond Atlanta.

Q. Then for the success of the milling enterprise in Nashville you would have to compete with other markets?

A. Yes sir.

Q. And have rates that allowed you to do so?

A. Yes sir.

By **Mr. Stahlman**:

Q. Is it not true that after the product of grain is exhausted in Tennessee you go to distant markets in the West and buy wheat?

A. Yes sir; there is not a season that we don't have that to do; and some seasons we have to wholly depend upon the West.

H. H. Buttorff appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Thomas**:

Q. What business are you engaged in and in what locality?

A. I am located at Nashville, and am engaged in the manufacture of stoves, mantels, grates and tin ware.

Q. About how many car loads of raw material and product do you receive and ship at Nashville?

A. We receive about 1,000 car loads a year of raw material. Our shipment after it is manufactured, amounts in car load lots to about 800.

Q. How many States in the Union do you think you send your products to?

A. To all the Southern States without exception and to California, Missouri and Illinois.

Q. Has it or has it not been the policy of the railroads at Nashville, and their connections to give you such rates as would enable you to compete with similar manufacturers located at other points?

A. It has been the policy of the roads to give us rates on material so that we could compete in the manufacture of our goods, and they have placed us in fair competition with every part of the country, so far as I know.

Q. Did you ever have any contract with the United States Government to furnish it with supplies?

A. Yes sir; we have had a contract with the United States Government for the past three years.

Q. Have you or have you not been solicited recently to make a bid for further contracts with the government?

A. Yes sir.

Q. Have you been able to make the bid; and if not, why not?

A. No sir; we have declined. We couldn't get a rate. We are compelled to deliver at Omaha, Kansas City, Chicago, St. Louis, New York and Philadelphia; and we were unable to get any rate at all, and therefore declined to bid this year.

Q. Is it or is it not essential to the welfare of your enterprise that you have competitive rates all over the country?

A. I think so most unquestionably.

Q. Do you think you would prosper with a like rate per ton per mile?

A. No sir.

Q. Do you think you would prosper if you were always confined to the shorter line to reach a market—if the longer line could not take your business?

A. No sir; I don't think we would.

Q. From where do you get your coke that you make these stoves with?

A. From West Virginia.

Q. About how far is that from Nashville?

A. I haven't the slightest idea.

Q. Is it over a hundred miles?

A. Oh, yes sir; I suppose so. I know it comes through Chattanooga, but how far it is beyond Chattanooga, I have no idea.

Q. Do you know how far it is from Nashville to Chattanooga?

A. It is 151 miles.

Q. How far is it from Chattanooga to Bristol?

A. I don't know.

Q. It is beyond Bristol, in Virginia, is it not?

A. It is in Virginia; yes sir; Pocahontas, Virginia.

By **Mr. Stahman**:

Q. You say the roads have given you competitive rates to enable you to fairly well compete with other manufacturers?

A. Yes sir; we have had no complaints of any kind.

Q. You do not mean by that to say that you had any advantage over anybody else, do you?

A. I don't know that we have sir. I don't know what anybody else has had.

Q. I mean anybody else from any other point.

A. I know we have had to pay sometimes five cents where we came in competition with St. Louis.

Q. You have had to pay the five cents yourself?

A. Yes sir; in order to meet St. Louis; that is, for Texas points particularly.

Q. Your distance from Texas points is about the same as from St. Louis, is it not?

A. I really don't know anything about geography; I know where points are located.

Q. You have been obliged to pay five cents in order to equalize your rates from St. Louis to Texas points?

A. Yes sir.

Mr. Baxter. I have not had the opportunity of being before the Commission at any of the other points. I represent the Louisville & Nashville Railroad. We cross the Chattanooga Road at Nashville. I understand the testimony that is now being taken on behalf of the Nashville & Chattanooga Railroad, which I see is being taken down by the stenographer, may be used by the Louisville & Nashville Railroad without any further re-taking of the testimony.

By the **Chairman**:

Q. Are the concessions made to you in rates at Nashville what you understand to be made to every business man in Nashville?

A. I don't know. I confine myself strictly to my own business.

Q. Your testimony concerns your own business?

A. Yes sir.

Q. You think you ought to have special rates, or else you cannot make your business profitable?

A. I don't know whether these are concessions to me specially or not. I know when I go to the railroad and say I must have a certain rate in order to meet competition to certain points, I generally get what I ask for, if it is reasonable.

Q. You said you could not get rates so as to make a bid for government work?

A. I couldn't get any rate at all.

Q. Other bidders, I suppose, were in the same predicament also, were they not?

A. Our principal competitor has been—

Q. I ask you just that question: whether you were under any disability that anybody else was not under; you could not get rates, although other bidders could?

A. If you will allow me to explain: Quincy, Illinois, has been our principal competitor, and they are so much nearer the distributive points than we are that I don't know what they can do. I suppose probably they might get rates, being located as they are. We couldn't.

Q. You don't know as to that?

A. No sir; I don't know.

By **Commissioner Bragg**:

Q. About what amount of capital have you invested in that business?

A. We have \$400,000 capital, besides a surplus of \$78,000.

Q. How long have you been engaged in that business at Nashville?

A. We commenced as a corporation in July, 1881.

W. Morrow appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Thomas**:

Q. Will you please state where you reside and in what business you are principally engaged?

A. Principally in the wagon manufacturing business.

Q. About how many wagons do you manufacture per annum?

A. About 16,000.

Q. To what principal points are they shipped and sold?

A. In the Southern States, though we have a trade in Illinois, Indiana, Kansas, Nebraska, Iowa and Minnesota. Within the last few years only we have been going into those Northwestern States.

Q. Is it or is it not essential to your enterprise that you should have competitive rates to all the principal markets of the country?

A. Yes sir; it is.

Q. Do you usually receive those rates from the railroads on application?

A. Yes sir; we have never had any complaint to make on that score.

Q. Suppose the rate of freight was advanced to \$10 per wagon. Could you lose that much out of your business on each wagon?

A. We could not.

Q. Who would have it to pay?

A. The man who buys the wagon.

Q. So low rates not only benefit you, but the purchasers of the wagons, you think?

A. They benefit the purchaser more than they do us. We wouldn't know what to do with \$10 profit on a wagon. We don't get anything like that.

Q. Are you interested largely in the marble quarries of East Tennessee?

A. Yes sir.

Q. Is that marble quarried and used in Tennessee principally?

A. Scarcely any of it.

Q. To what points is it principally sent?

A. Philadelphia, New York and northern

points. We have to rely continually upon the favor of the rates there to come in competition with the Vermont marble.

Q. You have to meet the competition of other marble quarries, wherever located?

A. Yes sir.

Q. And you have to have low rates to do so?

A. Yes sir.

Q. Have the Nashville & Chattanooga Railroad or the Louisville & Nashville Road which you ship over going south, withdrawn any rates on your wagons at points south of Nashville?

A. No; everything is just as it was. We are shipping under the same rates.

Q. Have the rates been withdrawn north of the Ohio River?

A. No. We have had some little trouble at some points in getting all the rates we wanted; but recently we are having no trouble with points north.

Q. What would be the effect on your business of an uncertainty or doubt about the stability of rates?

A. It has operated within the last thirty or sixty days to our injury. People have been uncertain about rates, in ordering. We receive orders in our business for shipments in August, September and October, away ahead, from customers who send in their orders to be filled later along in the season. Of course it has interrupted everything of that sort. People write us they don't know what to do, and it puts our business very much at an uncertainty.

Q. How long have you been in this business?

A. About twelve or fifteen years.

Q. Have you ever been seriously embarrassed by the want of securing competitive rates?

A. I never have. We have never gone to the railroad authorities in our lives with any just cause of complaint that we have not been met in a spirit of perfect frankness and candor and had matters adjusted. We have not always got what we wanted, but I expect maybe we were not always entitled to what we asked for. We have no complaint to make on that score.

Q. Do you or do you not think the life of your business is low competitive rates?

A. We think so. Our outgoing shipments amount to about 600 cars of finished goods a year; and the incoming shipments I suppose 900 or 1,000, and fuel and material say 1,500 car loads a year. There is a rolling mill there in connection with our wagon factory.

By the Chairman:

Q. What do you mean by competitive rates?

A. There are other wagon factories in the United States that are shipping into our territory, and we are going into theirs. We seek to equalize the rates through the railroad points north and south, so that we will be upon a perfect equality, so far as possible. We ship very little by river. There is no point we reach by river scarcely at all. We have very few customers on the river.

Q. What you mean by competitive rates is rates that correspond to those given to your competitors?

A. Yes sir. The rates we are chiefly interested in are the rates affecting our competitors. We are in a specialty and we look to nothing else.

Q. If I understand your statement, you want

only what is fair. If the rates given to your competitors over the railroads are also given to you that is all you ask?

A. Yes sir. We are very much interested in low rates because the lower the rate the cheaper we get the wagons into the market and the more purchasers we have.

Q. What I was endeavoring to get at was the meaning of the term as you use it. As I understand it now you mean the same rates given to your competitors?

A. I don't know what the legal construction—

Q. I am asking for your construction. I want to get at what you mean. You say you have had no difficulty in getting rates north of the Ohio?

A. We have had some trouble. We have had more trouble—

C. You are having none now?

A. We are getting rates now within the last week or two.

Q. Such rates, as I understand you, as are fair enough?

A. Yes sir; we are making no complaint at all.

Q. North of the Ohio do you understand that the railroads are charging more for the short haul than for the long haul in any case?

A. For awhile we could get no rates at all, but they are restoring the rates to certain points—pretty much the same rate we had before.

Q. I want you to answer the question I ask you. You say you are now getting rates. Do you understand the railroads there are doing what they are in this region—charging more for a short haul than they do for a long haul?

A. I don't understand they are charging us more.

Q. And yet you have no difficulty in respect to the rates up there?

A. We have not had for two or three weeks. Up to that time we did have trouble and had to suspend shipments. For two weeks now we have had no trouble.

By Commissioner Walker:

Q. Do you send your goods to Chicago?

A. No sir. We send some through Chicago to the Northwest, to Dakota, etc. We are shipping wagons to Minneapolis.

Q. Are there wagon makers in Illinois?

A. Yes sir.

Q. That compete with you?

A. Yes sir.

Q. Then when you speak about a competitive rate to Dakota, you mean a rate that will enable you at Nashville to compete with Illinois, do you?

A. Yes sir; we have to meet a part of that rate. The railroads don't put us on a perfect equality with those people, and we have to cut our profits to get there.

Q. When you find that you have got to get your wagons to some distant point to compete with other builders who are nearer, you go to the railroad and tell them and they make you a special rate?

A. They generally make such concessions as they can. They don't put us upon terms of perfect equality, because that is hardly fair.

Q. But they treat you pretty liberally?

A. Yes sir.

INTER S.

Q. Considering you are a large shipper and handle a great many cars both ways?

A. Yes sir. We have never had any complaint of unfair treatment to make against the railroads.

Q. Are there any other wagon makers in Nashville?

A. No; none to make any heavy shipments.

By **Mr. Stahlman**:

Q. Are the railroads any more liberal in making rates for you westward than they are in making rates from the West to Nashville so that the western wagon can compete with you in the South.

A. I don't think they show any unfairness towards us or against us. We are perfectly satisfied with our treatment.

The **Chairman**. Mr. Stahlman asked how they treat others.

The **Witness**. I don't know how they treat others.

Q. What I desire to elicit is if it is true that you do come in competition right at home with wagons from Illinois, and throughout the entire South?

A. Yes, sir; they get into Nashville and are selling their wagons in competition with us at prices I presume that pay them a profit, just as we are selling wagons in their territory.

By **Commissioner Schoonmaker**:

Q. You say you presume so. Is it a fact?

A. Yes sir; of course they are selling wagons and I take it for granted they are not selling them unless they are making some money. We generally get out of a territory where we are not making money.

By **Mr. Stahlman**:

Q. They are selling wagons right in Nashville against you, are they not?

A. Yes sir.

Q. And in Texas?

A. Everywhere, in all the Southern States. Our trade is principally in the Southern States. We are running in competition with the Louisville wagon factory, and various factories all through the country.

Q. In other words, the ordinary adjustment of rates has enabled manufacturers located at different points to compete with each other at different points?

A. Yes sir; that is the way I understand it.

By **Commissioner Walker**:

Q. You say you do not know what rates these other men are getting?

A. No sir.

Q. And you do not tell them what rates you have been getting?

A. No sir.

Q. Each man does the best he can in his trade with the railroad company, and sells his wagons for what he can get?

A. Yes sir; and where we can't get a rate that is satisfactory, we expect to cut our profits and to go into territory where we can make more money.

By **the Chairman**:

Q. Have the rates granted to you been uniform for the last year or two?

A. Yes sir; I don't think there has been any change; very little change if any at all.

Q. They have been uniform to different parts of the country?

A. Yes sir; any change of rates for the last four or five years has been very seldom.

By **Mr. Stahlman**:

Q. By uniform, you do not mean to say they have been practically the same to all points?

A. No sir; but I mean there have been no large changes—nothing amounting to a considerable sum.

By **Commissioner Morrison**:

Q. The rates have been practically the same to the same places?

A. Yes sir.

By **Mr. Stahlman**:

Q. There are persons dealing in wagons at Nashville, who buy their wagons from Studebaker, and there are agents for Studebaker and other manufacturers in Illinois?

A. Oh yes sir; I believe every wagon factory in the United States, or in the Northwest, is represented at Nashville by some firm or other.

Q. Do you, or do you not, mean to say that you have any special advantages given you or rates furnished you, that would not be given to anybody else that wanted to ship wagons from Nashville?

The **Chairman**. He has said expressly he did not know.

A. I do not know of any such discriminations, either for or against us.

Q. Are not your rates open?

A. They are at the railroad office, I presume.

Q. They are on the bills of lading?

A. Yes sir.

Q. There is nothing in the form of rebates or drawbacks?

A. We have never received a rebate that I know of. I don't think we have ever done that sort of business. Our bills of lading are filled out and the rate goes to the shipper. It is not a matter of secrecy at all.

By **Commissioner Bragg**:

Q. Do these men who sell wagons from Illinois and other places down there about Nashville, sell their wagons as cheap as you can sell yours?

A. There is very little difference sir.

Q. Right at Nashville?

A. Our wagons generally are sold at about two to five dollars cheaper than anybody else's wagons. There is very little difference. In Nashville, I suppose you can buy any other wagon just about as cheap as ours; but there is about that difference in the price list in our favor, in wholesale lots.

Q. Do you mean that that applies generally, no matter where you sell them?

A. Yes sir. There is a difference in price lists and discounts in our favor, of from two to five dollars.

Q. Is it equally true that in other parts of Tennessee they handle their wagons about as cheap as you do yours?

A. I don't see that there is any difference, scarcely, except may be to that extent. In Nashville the price is about the same. I don't think there is anything in the claim, but I don't hesitate to state it—we run by convict labor, and there are other factories in the United States that use convict labor also, in making wagons. Those who do not, put themselves upon high ground and say free labor makes a

better wagon than convict labor. There is nothing in that claim, but they ask just a little more for their wagons.

By **Commissioner Schoenmaker**:

Q. How many convicts have you at work?

A. We have only about 450 engaged in the wagon business. There are about 1300 in all, but they are mining and in outside operations.

J. H. Wilkes appeared before the Commission and, having been duly sworn, was examined as follows:

By **Mr. Thomas**:

Q. What is your business?

A. The grain and hay business.

Q. At what point?

A. Nashville.

Q. Where are the principal markets to which you ship your grain and hay?

A. North Carolina, South Carolina, Georgia, Alabama and Florida.

Q. When you ship to Georgia, South Carolina and Florida, do you find the same products from other points that you have to compete with?

A. Yes sir; we find products at all points where we ship to; products coming from other markets, but more especially the competition is sharp at the coast points and points near the coast.

Q. Has it, or has it not been the usage of the railroads to allow you rates by which you could compete with these other markets?

A. Yes sir; we have always had competitive rates in order that we could reach these sea coast points on equal terms with other rates and other lines.

Q. Suppose there was a uniform rate per mile; would your traffic be increased or decreased?

Commissioner Walker. Why do you ask that question? Is there any such thing in the Bill?

Mr. Thomas. Yes sir, unquestionably. If our rate to Atlanta or Augusta is twenty-two cents we must charge twenty-two cents or more to Charleston, Savannah or Jacksonville.

Commissioner Walker. What has that to do with a uniform rate per mile?

Mr. Thomas. That is in response to a somewhat popular demand. It is not in the law, but that is what some people want.

Commissioner Walker. You have asked the same question two or three times. It seems to me immaterial.

Q. Could you reach coast points at the same rate given to Augusta?

A. We could not. It takes a lower rate to reach the sea coast than it does the interior points. Sometimes we are cut out of interior points by grain being brought by the steamship lines carried from the west to Baltimore by rail and then by steamship lines to the coast point such as Beaufort, Port Royal, Charleston and Savannah.

Q. Is it or is it not true that the rate at Augusta is affected by this same ocean competition?

A. Yes sir; we have been driven out of Augusta repeatedly by a reduction in the rate of the steamship line working from Baltimore and other eastern points.

INTER 8.

Q. Can or can you not give any approximate estimate of the grain business at Nashville?

A. My estimate would be rather vague. I would suppose Nashville handled two and a half to three million bushels of corn yearly. I don't know how much wheat.

Q. As a general rule you have been granted rates in your business to enable you to reach competitive markets?

A. Yes sir.

By **Mr. Stahlman**:

Q. Have you known any rates made from Nashville within the last week or two other than those made by the lines out of Nashville, that have prevented you from selling grain at the prevailing rates in any of the southern markets?

A. Our grain is nearly all sold through the southern markets through brokers, and I was advised yesterday by a broker, that St. Louis had sold grain in Selma on the day before at a price two cents below what we could possibly sell it at on the present rate of freight, and that that grain was coming from St. Louis down the Mississippi, across to Mobile and up the Alabama River, making it a water route through the entire distance. That price was two cents a bushel below what we could possibly sell at upon our rate of nineteen cents per hundred.

Q. You do not mean to say that the railroads out of Nashville while they have given you rates which enable you to meet the rates at competing markets, at any time have made you rates so as to give you an exclusive privilege, or build up your market to the detriment of any other competing market?

A. No sir; I have never considered that we were especially favored. We have always been upon the same basis as other competing markets, and have never, so far as I know, had any special privileges or advantages.

Q. In other words, your idea is that you have not made any more money on the volume of business you have done than your competitors have done?

A. That is so.

Q. And you have been working on a close margin?

A. Yes sir.

Q. In shipping business competing for the trade of Mobile and Pensacola, would lower rates be necessary than are in vogue to Birmingham, Selma or Montgomery?

A. Yes sir; they would be necessary because we have the river competition. We draw our largest supplies of corn from the Ohio River and its tributaries. With open water routes to New Orleans and other points, it is necessary for us to have low rates to Pensacola, Mobile and New Orleans in order to compete with the boats running on the Ohio River.

Q. Let me ask you if in getting these low rates to coast points and to Pensacola and to Mobile you are enabled to make any larger profits on your shipments to those points than you make on your shipments to the interior?

A. No sir; our profits as a rule are less at the sea coast points than they are at the interior points.

J. H. Fall appeared before the Commission,

and having been duly sworn was examined as follows:

By Mr. Thomas:

Q. Please state in what business you are engaged and at what point?

A. I am in the jobbing hardware business at Nashville; the firm of Gray, Fall & Co.

Q. In what States is your trade generally found?

A. Principally in all of the Southern States, Alabama, Georgia, Florida, South Carolina and Mississippi.

Q. Have you or have you not what you consider reasonable rates to competitive points—where you have to come in contact with other markets?

A. Yes sir; we have always had them.

Q. Do, or do you not know whether you have had any special rates for your firm that have not been granted to other firms in the same business, at Nashville?

A. No sir; I do not. We have never had it that I know of.

Q. What would be the effect on your business if you were not allowed to compete with Evansville and other points that have the same line of traffic that you have?

A. Well sir; I think if the clause was enforced, it would have the effect to circumscribe our business, take our men off the road and localize it. In other words, we could not develop our full capacity with the machinery and capital we have in our business.

Q. Are, or are you not interested in any factory in Tennessee?

A. I am personally interested in the Laurel Mills Manufacturing Company at Strathmore, Tennessee.

Q. State what the custom is with reference to the product of this factory; whether you sell it in advance, or how.

A. We have sold our entire production two years in advance in New York, and that sale was based on the present rates of freight, and on the price of New York cotton. Since this law has been agitated and the rates north have been withdrawn, we are now shipping south and by coast to New York at a rate of fifty-nine cents a hundred. By rail it is seventy-six cents a hundred. If these rates were increased on us, it would as a matter of course curtail our profits very materially; in fact I should not think we would realize anything out of the trade.

Q. Have, or have you not had a contract with the United States Government for furnishing supplies?

A. Yes sir; we have the contract for it now for this fiscal year ending June 30.

Q. Have you been solicited to renew your bid for that business?

A. We have.

Q. If you have not done so, why have you not?

A. One of the reasons was that we did not know exactly what the rates would be. The government require us to deliver all our goods at Sioux City, Omaha, Chicago, New York and one or two other places; and not knowing what the rates would be, it was a large factor in preventing us; or rather, we were very much disinclined to bid on that account, because our margins are very short, and if the rates were

increased on us, we preferred not to bid at all, and didn't do so.

By Mr. Stahlman:

Q. At some distant points in the South the rates are less than they are to intermediate points. If those rates were lifted, so to speak, by advancing the rates to the distant points, would or would not that hurt your business?

A. Very seriously; yes sir. In fact, we have been very much disturbed about it. If you will permit me I may simply state that in a private way we were so much exercised that we consulted some seven or eight of the leading jobbers at Nashville, and they all have the same sentiment on the subject. We are very much disturbed in regard to the fourth clause, because they all do a large southern business.

Q. You feel you could not stand any advance in rates to the distant southern points?

A. Not at all. It would shut us out. Really, the business is narrowed down to the volume, and not so much in the profit. The money is made in our business on the volume we do; and the local trade could not take up what we are able to do. We are compelled to seek distant points.

Q. How many men does your house travel?

A. We travel from ten to twelve.

Q. What are your sales annually?

A. Between \$300,000 and \$400,000.

Q. How many other hardware firms are there in the City of Nashville?

A. I think there are thirteen.

Q. Nashville, from your observation, has a general trade to distant points in all branches of jobbing, has it not?

A. Yes sir.

Q. And they would probably be affected in the same way, would they not?

A. Yes sir; I think so.

Q. Do you not in iron come in competition at certain points in the South with iron coming down the Mississippi River?

A. We do not deal in bar-iron.

Q. How is it with horse-shoes?

A. We deal in horse-shoes.

Q. Are horse-shoes coming from Western New York, where they are made, able to come through the Port of New York and by steamer to the southern coast and up into the interior in competition with you very largely?

A. Very largely indeed; yes sir.

By the Chairman:

Q. You spoke of being shut out from competitive points if the rates were raised upon you. Is that upon the supposition that while the rates are raised upon you they will not be raised upon your competitors?

A. I presume they would be raised upon our competitors.

Q. If they are raised generally how would it affect you injuriously?

A. We would have the principal competition where they could reach these points by water. Our heaviest business is in Atlanta, and even up as high as Atlanta, they come down the coast to Savannah and up to Atlanta at a much lower rate than we could lay it there, provided the rates were raised from Nashville now. As it is, we are competing with them.

By Commissioner Walker:

Q. Won't you explain how it would injure the jobbing trade of Nashville if the rates to

the local points in the Southern States should be reduced. I am not talking about raising the competitive points. I simply inquire whether if the lower rates to the smaller points should be reduced that would injure your hardware trade?

A. I don't think there is much probability of the local rates being reduced, because I don't see how the roads can well stand it.

Q. Just answer the question. What effect would it have if the local rates were reduced?

A. If the local rates were reduced on all the lines in the aggregate to where it is now, it wouldn't injure the trade all; but if it did amount to any more, all those local rates being put together, it would very seriously embarrass our business. This is my opinion.

Q. If the local rates to points in the vicinity of Atlanta, for instance a circle of fifty miles around Atlanta, were reduced so as to make them on par with the rates to Atlanta, it would enable you jobbers to compete with the Atlanta jobbers, would it not?

A. I suppose it would with Atlanta, but Atlanta is not—

Q. That is all I ask. It would be true, would it not, if the same occurred in a radius around any other of the trade centers of the South?

A. Yes sir; I suppose what would be true about Atlanta would be true about any other point where there was no competition.

Q. And it would throw the jobbers of the country generally on a par?

A. Yes sir; and they are that way now.

By Mr. Stahlman:

Q. Suppose the rates from New York, Philadelphia, Boston and Baltimore were made the same to local points as to Atlanta, and the rates to Atlanta were made the same as to Nashville. For example, if the rates on horse-shoes from the point where they are manufactured in New York were made the same to La Grange, Georgia, as it is to Nashville and Atlanta, what would be the effect on the jobbing trade of Nashville and Atlanta in that line?

A. It would have a very serious effect. It would just result in their going to the factory for their horse-shoes and perhaps they would buy ten or twenty kegs where Nashville or Atlanta would buy a thousand kegs.

Q. From what you know of the business and pecuniary condition of the southern roads, is it your opinion that they could afford to put all of their local traffic on the basis of the through rates existing now?

A. No sir; I am sure they could not.

Q. You believe then that those rates to the terminal points would be advanced?

A. Yes sir; necessarily so. If the local rates were advanced they would be compelled to advance the through rates.

John F. Wheless appeared before the Commission and having been duly sworn said:

Mr. Chairman, I am charged with presenting a memorial to the Commission. It is from the manufacturers and merchants of Middle Tennessee, praying for the permanent suspension of the fourth section of the Interstate Commerce Law.

The Chairman. Do you wish to make any statement in connection with it?

LYNN S.

The Witness. I think not, Mr. Chairman.

The Chairman. You understand this statement to represent the facts as they are, do you?

The Witness. Yes sir.

By Mr. Stahlman:

Q. Will you please state to the Commission the business in which you are engaged?

A. I am president of the Empire Furniture Company at Nashville and the Belmont Flouring Mills of Murfreesboro.

Q. Your factory ships a large part of its product to different parts of the South?

A. Yes sir; the business covers from North Carolina to Texas.

Q. The railroads have so adjusted their rate as to enable you to do a fair business?

A. Yes sir.

Q. Your factory is not getting very rich even on the rates you have, is it?

A. No sir.

Q. It is just fairly able to compete with your competitors in the same business?

A. Yes sir.

Q. In Nashville and other markets?

A. Yes sir.

Q. Do you think you could afford any advance in rates to the points furthest from Nashville?

A. No sir.

Q. Do you know something of the pecuniary condition of the southern railroads, particularly the Louisville & Nashville?

A. I have a general knowledge, not a special knowledge.

Q. Do you think the Louisville & Nashville Railroad could afford to adjust its rates to all intermediate points between Nashville and Pensacola or Jacksonville, Florida, or Mobile, Alabama, on the basis of the rates fixed to those points and all intermediate points?

A. I should not think so, sir.

Q. If in your judgment the company should be forced to raise its competitive rates or reduce its noncompetitive rates, what do you think the company would do?

A. From my knowledge of the proportion of through business I should think they would increase the through rates.

Q. And that would not be very good for your business?

A. No sir.

Q. Or anybody else in your line of business?

A. No sir.

Q. As President of the Belmont Mills at Murfreesboro you are aware of the fact that the rates from Murfreesboro to Charleston, Savannah, Port Royal, and other southern ports are less than they are to intermediate points?

A. That is my impression. The manager of the mill is here. I am not as familiar with that as I am with the other matters, though that is my impression and understanding.

Charles O. Thomas appeared before the Commission, and having been duly sworn was examined as follows:

By Mr. Thomas:

Q. In what business are you engaged?

A. Merchant miller.

Q. At what point?
A. Murfreesboro, Tennessee.
Q. How far South of Nashville is Murfreesboro?

A. It is said to be thirty-one miles.

Q. What is the capacity of your mill?

A. 150 barrels.

Q. To what points principally do you ship this flour?

A. To Georgia, and sometimes Alabama and South Carolina.

Q. Do you ship any to the coast points?

A. Yes sir.

Q. Do you know whether the rates to the coast points are higher or lower than to the interior points in Georgia?

A. They are lower.

Q. How do your rates to those points compare with the rates from Nashville?

A. When we are milling wheat in transit they are the same.

Q. I am not speaking of that, but locally.

A. They are about three cents higher.

Q. To what points?

A. About three or four cents higher to the different points.

Q. An average of three or four cents?

A. Yes sir.

Q. Still you are able to make a fair profit on the product of the mill, are you?

A. Generally; yes sir. Sometimes competition is quite close and the profit small.

Q. You are enabled to meet competition at these water points in Georgia and South Carolina?

A. Sometimes; yes sir.

Q. As a general rule?

A. As a general rule. If I am not, I go to the general freight agent and ask for different rates.

Q. You do not know whether you have been favored with any special rate that has been denied other shippers?

A. No sir.

By **Mr. Stahlman**:

Q. As a rule you say your rates from Murfreesboro to coast points being further distant are less than to intermediate points. As a rule, even with a lower rate, are your profits on the coast business as large or larger than on your sales to the interior or intermediate points?

A. They are not as large.

Q. Then while the railroad is making some sacrifice in rates to let you into the coast, you too, make some sacrifice to get in?

A. Yes sir; if we want to sell.

By **the Chairman**:

Q. Do you mean you charge higher prices to the parties at intermediate points than you do to the distant points at which you sell?

A. We have at the coast points flour coming from Baltimore—

Q. I ask just that question. Do you mean that you charge higher prices to parties at intermediate points than to the distant points?

A. It is just owing to the freight. We deliver our flour. The price is a price delivered. If the rates at the coast points were two cents a hundred less than at the interior points, of course we could afford to sell it so.

Q. You say you get less profit there. How do you get less profit there? Do you add more profit to the sales to intermediate parties?

A. I don't know that I understand your question.

Q. I want to know how it is that you get less profit at the coast point than you do at the intermediate points, although your freights are less there?

A. On account of the competition with flour at other points.

Q. Then you charge more to the man on the railroad between your mill and the coast than you do to the man to whom you sell at the coast?

A. Yes sir.

Q. So that it works both ways with him; that is, he pays more freight and he also pays you more profit?

A. At what point?

Q. Any point in the interior between your mill and the coast point. I only want to see if I understand you. If I do, this is the effect: that he pays more freight and also pays you more profit than a man on the coast. I only want to know whether that is so. I ask what the fact is?

A. Yes sir; we get a higher price for our flour at the interior than we do at the coast. Would you like to know the reason?

Q. Give your reason if you care to. I only want to know the fact.

A. The reason is on account of competition. Parties in the West can get through by Baltimore, and come by steamer down to Charleston or Savannah or other points, and be able to sell flour; and if we want to sell flour, of course we have got to compete with them. Those parties can't get into Atlanta or can't get into Augusta, may be. They might not have as strong competition at Augusta as we do at Charleston. We might sell flour at cost at one point and at another point make a profit on it.

Q. You said something about milling in transit. What do you mean by that?

A. A part of the year we have home wheat. The balance of the year, if we want to run our mill, we have to bring our wheat from the West. For instance, say I buy wheat in St. Louis. I bring it through to our mill, and stop it, and mill it, and ship it beyond into Georgia or South Carolina. That enables us to run most all the year. If we didn't have that privilege we couldn't do it.

Q. Everyone has that privilege, I suppose?

A. Oh yes sir, certainly. I have no special privilege to this mill.

Q. What you speak about now is simply buying grain abroad and grinding it. That, of course, could be done by whoever has a mill?

A. Yes sir.

Q. What do you mean by milling in transit?

A. I just stated—by buying wheat in St. Louis, and bring it to our mill and manufacturing it into flour, and then shipping it into Georgia or South Carolina. That is what we term milling in transit. It gives us the opportunity of milling during the year, and then we have a certain rate.

Q. Oh, there is a certain rate about it. What is the rate?

A. Those rates are based on what is called the Ohio River points, I think.

Q. That is, the rate on grain to you?

A. Yes sir.

Q. You receive the grain, and it is delivered to you at a certain rate; I understand that; but I don't think you have yet explained what milling in transit is?

A. What part of it would you like me to explain?

Commissioner Schoonmaker. The whole of it.

Q. I want to know what it means, so that a person who had never heard of it before could understand from your statement what is meant by it.

A. We go on the same basis as a party does in the West. Does that make it plain to you?

The Chairman. No.

Commissioner Morrison. We are worse off now than we were before.

Q. You must know what it is. Tell us what it is?

A. I don't know how I could explain it better than I have.

Q. You have explained that you buy grain and take it to your mill, paying a rate based on the Cairo rate. I can understand that much, but there is something more to it; and if you will tell us what it is, I will be obliged to you.

A. I have got nothing to cover up, sir, as far as that is concerned.

The Chairman. No; but you do not disclose anything.

Mr. J. W. Thomas. Will you allow me the privilege of explaining it?

The Chairman. You may explain it, if you please, if the witness will not; only if you explain it, you will be under oath.

The Witness. I beg your pardon. I had not intended to conceal anything.

J. W. Thomas was duly sworn and said:

You ask what is meant by milling in transit at Nashville or any place. We call it reshipping. It is simply this: if the rate on grain from Evansville to Nashville is ten cents, and the rate on grain from Nashville to Atlanta is twenty cents, that would make a total rate of thirty cents from Evansville to Atlanta, Georgia. Now we allow our mills at Nashville, which you have heard have a capacity of some 2,000 barrels a day, to bring grain from Evansville to Nashville, and they pay ten cents. Then when they grind this grain into flour, they reship it, and we refund them the three cents which makes the same total rate from Evansville to Atlanta as if it were shipped directly from Evansville to Atlanta without stopping at Nashville to be ground. That is all there is in this business.

By the Chairman:

Q. That would apply whether the grain comes from a direction that would naturally pass it through Nashville, or not?

A. It would apply to all grain brought through Nashville, ground and reshipped; both rates combined would be the sum of the single rate from the point of original departure to the point of destination.

By Commissioner Morrison:

Q. From where the wheat grows to the place where the flour is made?

A. From the wheat field to the consumer in the south.

Q. If you take it two or three hundred miles out of the way, in getting it there to enable

INTER 8.

this gentleman to grind it, you charge nothing for that; you charge just the same as you would charge if you had taken it directly to Atlanta?

A. Just the same. It makes no difference. The object of that is very plain. It keeps the mills employed the whole year round, instead of depending on the local crop, which may or may not be good.

Mr. Stahlman. Will you take my testimony on that point?

E. B. Stahlman who had been previously sworn, said:

I think I can make it a little clearer than Mr. Thomas can. I will illustrate it by a point from your own statement. We will say the rate from Detroit to Charleston is thirty cents a hundred by the direct line, and the lines through Nashville are as short as any, practically. The miller at Nashville first grinds up the product of Tennessee. The miller at Murfreesboro is in the same fix. The rate from Detroit to Nashville, we will say, is fifteen cents, and the rate from Nashville to Charleston nineteen cents, making thirty-four cents a hundred in bringing that wheat from Detroit to Nashville, and reshipping from Nashville to Charleston, against a direct rate of thirty cents through Nashville or through Baltimore to Charleston. The miller at Nashville and Murfreesboro is put on the basis of being allowed to go to Detroit and bring that wheat to Nashville for the purpose of keeping his mill going, and keeping his custom in the south during the year, and then reshipping at a rate from Nashville or Murfreesboro to the South, the two rates combined being precisely the same as the rate from the original point of shipment.

The Chairman. That is it. Now Mr. Thomas (Charles O. Thomas) I want you to understand that in what I said no reflection was intended upon you at all. You assumed that we understood this matter. Perhaps we did; but we wanted it brought out in evidence. We wanted it to appear. When you made your reply you were partly assuming that we understood what was in your mind, while in point of fact we wanted to call it out as fully as we have now got it from Mr. Stahlman's statement. That is all. I want you to understand there is no imputation upon you at all.

By the Chairman:

Q. Mr. Stahlman, when this arrangement is made is anything issued as evidence to the miller of what the understanding is?

A. There has been heretofore; yes sir.

Q. Something is issued to him. What is that called generally?

A. It is done in this way: it is a tariff based on business from certain points to certain points.

Q. Is what you issue to him something that passes from hand to hand, and that may be disposed of by him to somebody else?

A. No sir.

Q. It can only be issued to him, and it can only be availed of by him. For example, the miller buys 10,000 bushels of wheat and brings it to his mill and he is expecting to grind that up and transmit it to Charleston, if you please?

A. Yes sir.

Q. When it goes through does it go through as wheat?

A. The flour rates and the wheat rates are practically the same. They are the same from all western points.

Q. But whatever is shipped by the railroad company for him represents wheat, I suppose?

A. It goes in this way—

Q. It represents 10,000 bushels of wheat?

A. Let me make myself a little clearer. In the first place, the miller at Nashville—and it is open to all millers in Nashville, and other points of milling in Tennessee—must first produce his bill of lading and freight bills paid on the wheat from Detroit—the local rates from Detroit to Nashville. I will say there has been a great deal of wheat from Michigan to Nashville put through on that very principle. That has been the custom in the past. He must also show by his bill of lading to what points in the South he ships the product of that wheat. Then the two rates are combined, the rate into Nashville on the wheat, and the rate out of Nashville on the flour; and the difference between the two local rates thus combined is refunded to him.

By *Commissioner Walker*:

Q. When you get the wheat and deliver it to him, do you give anything in writing in the form of a certificate that he has brought so many bushels of wheat from Michigan?

A. No sir; he holds the bill of lading from Michigan as his voucher. That is his certificate that he has brought the wheat, and the freight bills he has paid.

By the *Chairman*:

Q. Is that something that is recognized as transferable?

A. No sir; I don't so understand it at all. It was designed originally to keep the mills going after the product of the State was consumed.

Q. You have not known of any practice of that sort?

A. No sir.

Q. Is this privilege that you give to the millers of Nashville one that is open to all millers in the State of Tennessee?

A. Yes sir; all on the line of our road. I only speak for our road.

Q. Small and large?

A. Yes sir; all those who ship and who receive.

Q. But in this indirect way a rate is made which might vary very considerably from what the rate would be if the grain were transferred directly?

A. Not at all. The rate in the first instance is based on the rate by the most direct route.

Q. I understand; but the indirect route by your own representation may be doubled the distance it would be by the direct route.

A. We are fortunately so situated that the Nashville route is about the shortest route.

Commissioner Morrison. You have the nearest road to everywhere. (Laughter.)

Q. How do you get at it when you want to settle. Do you charge him the rate from Murfreesboro to Charleston less the difference there would be between the sum of the locals and the through, or do you charge him the full rate and then give him a drawback—a rebate?

A. I think before this law went into effect it

has been the custom to let him present his bills at the end of the month and refund to him the difference, and that arrangement has been open to everybody engaged in the milling business. I want to state, and I tried to make it clear and will do it now, that this arrangement is not sought, nor does it in effect give the miller at Nashville any advantage over the man who sees fit to ship direct from the original point of shipment to the ultimate point of consumption, Detroit to Charleston, say, for example.

By *Commissioner Bragg*:

Q. Is that arrangement made or entered into for the purpose of benefiting the miller at Murfreesboro or Nashville, or is it done for the purpose of giving the Louisville & Nashville Railroad Company work in hauling that freight?

A. For both purposes sir. Of course the miller, by having this arrangement made for him, is able to keep his mill going.

Q. There was a time, I suppose, before you got to doing business in this way, when you did not give them that rate?

A. Yes sir.

Q. How did your revenue—I am talking about the railroads now and not the millers—compare then with its amount after you gave the millers this rate?

A. The business has increased, and I will state this: as far back as twelve years ago there were not enough mills in Middle Tennessee to grind the wheat for home consumption. There was not as much wheat grown because there were no mills to grind it. The arrangement, I think, applied to perhaps the first mill of any size that was erected, and the result has been to increase very largely the production of wheat in Tennessee.

Q. That is all right enough; but now the question I further ask is this: How has it affected your business; whether the revenue of your road has increased on that sort of arrangement or not?

A. It has increased. I will explain why.

Q. I want to ask you why.

A. The southern consumer wants the flour. He don't want the wheat. Nine tenths of the consumers of the South want the flour. But for the mills at Nashville, the Detroit wheat would have been ground at some other point and have gone through some other way to the southern coast, and the Tennessee miller would not have existed, and the Louisville & Nashville, and the Nashville & Chattanooga Roads would consequently not have carried the traffic. The tendency has been first, to increase the production of wheat because there is now a legitimate demand for a great deal of wheat, and secondly, the erection of merchant mills in Middle Tennessee, Nashville and other stations; third, the transportation over the Louisville & Nashville Railroad and its connections of the products of the West.

Q. Now, I want to ask you another question. Since that mode of doing business commenced, about what has been the aggregate increase in the demand for wheat at Detroit and other points per annum to carry out this arrangement?

A. At Nashville and Murfreesboro too, so far as our country is concerned, it has been quite large. Much depends upon the nature

of the crop in the sections nearer to Tennessee than Michigan; but last year, for example, there was a short crop in Illinois, as I was informed, or at any rate the prices were high, and the same in Indiana; and the result was that the wheat came largely from Michigan. At certain seasons it comes largely from Illinois. At certain other seasons it comes from the vicinity of Kansas City. Our millers, of course, buy their wheat wherever they can buy it cheapest, and the result has been to bring a large amount of wheat through this section of country from that country that would not come in that form. I suppose it would find an ultimate market.

Q. That has been greatly injurious to Michigan, Illinois and Kansas City, and greatly beneficial to the South, has it?

A. I think it has been very beneficial to Illinois, Missouri and Michigan as well as to the South. I think it has been a joint benefit.

W. R. French appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Thomas**:

Q. Please state what business you are engaged in?

A. I am a woollen manufacturer.

Q. At what point?

A. Tullahoma, Tennessee, half way between Nashville and Chattanooga, on the line of the Nashville & Chattanooga Road.

Q. What is the amount of the product of your mill?

A. Between five and six hundred cases.

Q. Where are your principal markets for these goods?

A. We sell goods in Savannah, Mobile, New Orleans, Cincinnati, St. Louis, New York, and points in Texas and Mississippi.

Q. Where do you get your raw material?

A. We get the greater portion of it from Chicago, St. Louis and Baltimore.

Q. Have you low rates from Chicago, St. Louis and Baltimore to Tullahoma?

A. Yes sir.

Q. Rates you are satisfied with?

A. Perfectly so.

Q. How about the rates on your products?

A. We get reduced rates; low rates.

Q. Do you know whether you get a lower rate to a distant point than you do to an intermediate point, in the aggregate?

A. We do.

Q. Do you make as much on your goods to one point as to another, or less on those you send a long way off?

A. I think the goods we sell in the interior nearer home, we get a little better profit out of than those we ship further off. In other words, we pay a rate into Texas of \$1.35, although we have points in Georgia and Mississippi, perhaps, where the rate would be fifty-five, sixty and seventy-five cents.

Q. They are not in the same direction and not on the same line?

A. They are on the same line, but we get a little better profit out of the goods we sell nearer.

Q. In short, you think you would have to have competitive rates in order to meet other markets?

INTER 8.

A. Yes sir.

By **Mr. Stahlman**:

Q. If you did not have those rates to distant markets, your figures, would be very much reduced?

A. Yes sir; it would cut my profits down.

Q. Are you doing fairly well?

A. Yes sir; a very good business.

Q. Do you understand you have any advantage; that you are particularly favored; that you have any advantage over anybody else similarly situated?

A. No sir.

Leonard Parkes appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Thomas**:

Q. You are located at Nashville?

A. Yes sir.

Q. You are a manufacturer of woollen goods?

A. Yes sir.

Q. About what is the amount of product of your mill?

A. I don't believe I can give you the exact product. It is about 20,000 pieces a year; 18,000 to 20,000.

Q. Where do you principally find market for those goods?

A. Principally at the coast points, New York, Baltimore, Charleston, Savannah, Mobile and New Orleans, outside of my own market at home, Nashville.

Q. Where does the raw material come from?

A. Our wool is now partially grown in our own section. Part we bring from the West.

Q. From your understanding of the law, what do you think would be the effect on your business of the strict enforcement of the fourth section, the long and short haul section?

A. Unless the law operates over the coast line to Philadelphia, and unless it operates down the river from Louisville to two competing points that I have, I will have to shut up shop.

Q. Do you understand the provisions of the law to apply to water transportation, or not?

A. I have not so understood it.

Q. Then it could not operate on that, if it does not apply?

A. No sir. I am unfortunately situated just now, if you will allow a statement. During the pendency of this matter it has become necessary for me to make sales of my goods for the fall delivery. The custom of all the woollen mills in the West is to sell their goods delivered, no matter to what point. In order to keep my trade I have made sales, and I am at the mercy of rates from now on for the balance of the fall delivery.

By **Commissioner Walker**:

Q. You say you sell your goods delivered?

A. Yes sir.

Q. Do you have the same privilege that the millers have of buying your wool, manufacturing it in transit, and shipping it forward?

A. No sir; I work under the published tariff, always.

thought higher rates than there ought to have been; but that was cases where we shipped west. Our particular business could stand that better than other departments, for this reason: we are located right in the center of the producing part of Tennessee where Tennessee whisky is made, and there is no competition outside of the State on those goods.

Q. What effect do you think a rigid construction of this fourth section of the Interstate Law, as you understand it, would have on your business?

A. I think it would reduce the volume of my business considerably sir. To give you an illustration: I have noticed rates in several years past, and up to recently on my desk when enclosing bills of lading I have had bills of lading calling for rates at Athens, Tennessee, a distance of 115 miles, at from thirty-eight to forty cents; to Atlanta about forty-two, according to my recollection, and to Jacksonville, Florida, thirty-eight cents. The reason for the very extremely low rate to Jacksonville, Florida, was in order to give us an opportunity to compete with Boston, Baltimore and New York down the coast, and that did give us the opportunity. Had it not been for the low rates we wouldn't have had that opportunity.

Commissioner Morrison. You don't sell any at Atlanta, do you?

The Witness. That is a private secret. (Laughter.)

By Mr. Stahlman:

Q. In your trade with Memphis do you have competition from St. Louis and Cincinnati?

A. Yes sir.

Q. The competition is very strong between the transportation lines by river and rail to Memphis?

A. Yes sir.

Q. You do not mean to say by stating that you have had favorable rates that you have had any advantage over any other competitors according to your understanding?

A. No sir; not over any other.

Q. You have been on a reasonable basis compared with other markets?

A. Yes sir; that was what I endeavored to get. In getting my rates I always made a statement as to what markets I would have to compete with, and I endeavored to get rates that would give me an opportunity to so compete.

Q. You have the same competition at New Orleans as you have at Memphis, practically?

A. Not to such a great extent. Our business has not been so great at New Orleans.

Q. You have not done so much business there?

A. No sir.

Q. Has it been more difficult to sell at New Orleans than at Memphis?

A. Possibly it has been a little more difficult. They have been using a different grade of whisky there. One reason that I believe a suspension of the long and short haul clause would work well in my business—I will give you a recent occurrence as an illustration: I have been informed in the last month or so that a shipment of 2,400 barrels of whisky was made I believe from Bremen, Germany, around Cape Horn to San Francisco at \$1.24 a barrel. I have a shipment just landing from Bremen

INTER 8.

at Louisville, I believe day before yesterday. At the extreme low rate of water from Europe, unless I get some concession, it would be difficult for myself or any other man engaged in my line of business to compete with whisky that has gone around the Horn at those low rates. The gentlemen can see very readily the rates they will get on the Southern Pacific coming out of San Francisco east for 1000 miles this side of it we couldn't compete with. There is a point we might meet them. We couldn't reach them as we began to approach San Francisco unless we got reasonable rates. In other words, to points between Omaha and Atchison on that line, I suppose the rates would be higher naturally; but if you give us an opportunity to compete with those low rates, you would have to give us a lower rate to San Francisco than you would possibly to those other points.

Q. There is a great deal of whisky made in Middle Tennessee, is there not?

A. Yes sir.

Q. And it consumes a good deal of corn?

A. Yes sir.

Q. They bring the corn largely from the West, don't they?

A. Some of it, when the crop is short in Tennessee. We raise about 62,000,000 bushels of corn in Tennessee; that is, approximately. That is the estimate of it that I have received. In seasons of short crops they bring a good deal from the West.

Q. You do not think the manufacture of whisky in Tennessee has hurt anybody in the western grain producing section?

A. Not at all.

Q. It has helped them?

A. Yes sir; we have got corn from there when our crop was short.

Q. As far as you know, in your business, either in grain or whisky, there has been no special discrimination in favor of Nashville?

A. Nothing special; only the effort has been to place us on an equal footing with other places we had to compete with.

By Commissioner Morrison:

Q. Do I understand you to say you have imported some whisky lately?

A. Yes sir.

Q. How much freight does it cost you to bring it into Tennessee?

A. We are bringing this to Louisville for this reason: Nashville is not a port of entry. It is a port of delivery. I believe the United States laws say in bringing it directly to the port of delivery, the tax has to be paid, and therefore we are bringing it to Louisville and taking it as we need it, paying the tax there.

Q. How much does it cost from Bremen to Louisville?

A. I have not seen the charges on this lot, but if you go back to the period before the Interstate Commerce Bill went into effect, they proposed to bring it for \$2 a barrel.

Q. About how much is that a gallon?

A. It is supposed to be about forty gallons to the barrel. That would be about five cents a gallon. That is a very low rate.

Q. Five cents a gallon for freight?

A. Yes sir. This was proposed to us before the Interstate Commerce Bill took effect. We were advised that possibly the rate might be higher if we didn't order it, but we didn't

der it even then until we needed it, so I don't know what the rate will be. I haven't received the bills. I got a letter day before yesterday saying it had about reached Louisville. I think it will be somewhere about \$2 or \$2.50 a barrel.

Q. That is five cents a gallon?

A. Yes sir; It might be a little more than that.

Q. How much do you pay for the privilege of bringing the whisky into the country?

A. There are custom house duties and some other little charges. It will cost ninety cents a gallon tax.

Q. What is the amount of the tax in New York?

A. No tax there; only storage and warehouse possibly.

Q. Don't you pay a tax for bringing it into the country?

A. Yes sir.

Q. How much?

A. Ninety cents a gallon.

Q. That is the local tax here?

A. Yes sir.

Q. Is there not another tax besides that on whisky?

A. No sir; none that I know of.

Q. Then it must have gone out?

A. It went out; yes sir. It was exported.

Q. It was whisky made in Tennessee?

A. Yes sir; and was exported some two or three years ago.

Q. It was sent abroad and brought back?

A. Yes sir.

Q. You have not paid any tax on it?

A. No sir; not up to this time. We still have some over there.

Q. It is whisky that has been dodging around keeping away from the tax?

A. Yes sir; you wouldn't permit us to hold it here without paying the tax—Congress wouldn't permit us.

Q. Is it the tax you have been dodging?

A. No sir; I didn't export it.

Q. I do not mean you personally?

A. Well, I suppose they couldn't find a market for it.

Q. I supposed it was foreign made whisky. I wanted to see how much advantage Tennessee whisky had and see whether any danger was to be apprehended from whisky across the water?

A. The import duty on foreign made whisky is \$2 a gallon.

Q. Then you would have the advantage of \$2.05?

A. Yes sir.

By **Commissioner Schoonmaker:**

Q. Where did this whisky go; to some foreign country?

A. It was exported from this country to Bremen, Germany. At the time it was due out of bond, the parties exported it to avoid the tax, or possibly to sell it over there. It was offered to my firm and we bought this lot, a part of which is being returned now. So I think, gentlemen, if the law could be so modified as to give us an opportunity to compete with these water rates and let our railroads give us lower rates too, say even out amongst the territories, we would have an opportunity of selling against such lots of whisky as go

around the Horn and go across the Isthmus. Probably there is about 7,000,000 gallons—it is reduced somewhat—remaining in bonded warehouses in Germany, which has been exported, that will be returned in the next two or three years, possibly some of it to San Francisco. We will have to encounter that in competition.

B. Frank Lester appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Thomas:**

Q. What is your business?

A. The live stock trade.

Q. At what point?

A. Nashville.

Q. Can you give any approximate idea of the volume of the stock business at Nashville; the number of car loads handled there?

A. Yes sir; 8,865 car loads went through the stock yard there in the last twelve months.

Q. What is your rate from Nashville to New Orleans?

A. \$65.

Q. What is your rate from Nashville to any intermediate point, say Montgomery?

A. \$76 to Montgomery.

Q. What is the reason of the lower rate to New Orleans than to Montgomery?

A. It is on account of the river and the western cattle. If we don't get a lower rate, we can't ship.

Q. As a general rule, you have competitive rates to the competitive points, do you?

A. Yes sir.

Q. And sometimes a higher rate to intermediate points?

A. Yes sir.

Q. Is your business profitable?

A. Yes sir; It has been.

Q. How will it be, probably, under your construction of the Interstate Commerce Law?

A. If the rates were a little higher, we would have to quit shipping to those points. It would break up our business to those points.

By **Mr. Stahlman:**

Q. You are a large shipper, are you not?

A. Yes sir; our firm shipped 467 cars in twelve months.

Q. And the railroads are not giving you any special privileges in the way of lower rates or rebates than anybody else gets?

A. No sir; not that I know of.

By **the Chairman:**

Q. What do you mean when you speak of your construction of the Interstate Commerce Law?

A. I mean if the rates were any higher to those points of course it would injure our business.

Q. That is what you mean?

A. Yes sir. They give us those rates in order to compete with other points in the west. The cattle can be raised in the West cheaper than we can raise in Middle Tennessee. We have to feed for six months in the year. They have water transportation where we have not.

By **Mr. Stahlman:**

Q. At New Orleans you meet the cattle from Texas?

A. Yes sir. We have a rate to Pensacola of \$65 a car. We furnish the butchers their cattle. They gave us that rate in order that

the butchers might buy their cattle from us at Nashville.

O. H. Hight appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Thomas**:

Q. What position do you hold at Nashville?

A. I am Secretary of the Merchants' Exchange.

Q. Could you give any approximate idea of the business in Nashville of cotton, grain, lumber and such things?

A. Yes sir; I have a synopsis of the statistics of last year.

The **Chairman**. If you have any statement in writing you may simply hand it in.

A. I have three separate statements (submitting them).

Q. From your knowledge of the business of the city generally, is it prosperous or not?

A. I think the city is generally prosperous.

Q. Does it, or does it not have a large distributing trade throughout all the adjacent country?

A. Quite large.

Q. In competition with other markets?

A. Yes sir; in competition with various other markets of the country.

Q. Do you, or do you not consider that competitive rates are very essential to the welfare of Nashville?

A. Absolutely so in every respect.

By **Mr. Stahlman**:

Q. As Secretary of the Exchange, are you familiar with the business of the City of Nashville, coming in contact with business men?

A. Yes sir.

Q. Is it your belief that Nashville has had relatively any better rates than any other city?

A. No sir; I don't think she has. She has had her geographical rates that she was entitled to.

Q. There have been some complaints on the part of some of our friends at Nashville because they did not get rates quite low enough, have there not?

A. Yes sir; there has been considerable complaint in that respect, but not as much in the last year as there was previous to that. The merchants and manufacturers are more satisfied that they are receiving their just dues.

Q. So far as your observation extends, the railroads have tried to do the fair thing by Nashville as compared with other cities?

A. I think so.

Q. And nothing more?

A. Nothing more.

J. B. Briggs appeared before the Commission, and having been duly sworn, said:

I have a petition here from various points throughout the Southern States, which I wish to put in.

By **Mr. Stahlman**:

Q. You reside at Russellville, Ky., I believe?

A. Yes.

Q. You are engaged in the milling business?

A. Yes sir; and banking; also in shipping tobacco to Europe.

INTER 8.

Q. Your country is a pretty good grain country, is it not?

A. Yes sir; it is about the best south of Mason and Dixon's Line.

Q. It is a pretty good tobacco country?

A. Yes sir.

Q. To what point does tobacco from your market go—leaf tobacco?

A. It goes originally from Clarksville, Louisville, New York and London.

Q. Then it is to the interest of your people, is it not, to have a reasonable adjustment of rates from these markets to which you ship?

A. Yes sir, I think so.

Q. The rates of freight being reasonably fair and low would be to the benefit of your people, rather than to have any advance in the rates from the shipping market?

A. Yes sir. I don't think any advance could be made now without very serious detriment to the interests of the country, over the present rates.

Q. As a miller you ship the products of your mill largely to the South?

A. Altogether so. We can't ship north at all. We ship altogether outside of the State of Kentucky.

Q. And you find it necessary to have lower rates to southern coast points than you do to intermediate points, in order to let you into those markets with your flour?

A. Yes sir; that is, to any points that are reached by water. We have to have competitive rates or we can't get to the market at all.

Q. For instance, your rates from Russellville to Charleston ought to be and are now lower than they are to Macon and Atlanta?

A. Yes sir; slightly lower; not very much difference.

Q. Still you don't think even with lower rates to Charleston and Savannah than to Atlanta and Macon your business would stand any advance of rates to those points?

A. I don't understand you.

Q. You do not think the rates from your point to Savannah and Charleston could be advanced without affecting your business?

A. I know they could not, to meet water transportation to those points.

Q. Are you shipping anything to Pensacola?

A. No sir. I shipped there last year. I haven't shipped there this year.

Q. The competition is so strong you can't get in?

A. Yes sir.

Q. Are you shipping anything to Mobile?

A. No sir; I haven't sold a barrel of flour there in two years.

Q. That is due to competition?

A. I presume so. I have a resident broker at all these large cities, and they say they can't get in owing to the competitive rates by water.

Q. But you do manage to sell some to the Atlantic coast points?

A. Our trade is altogether in car load lots of several cars. We don't sell any less than car load lots and consequently all our flour goes out of the State, and our trade has been for the last fifteen years with Charleston, Savannah, Jacksonville, Mobile, Pensacola, New Orleans, Memphis, Augusta, Montgomery, Macon and Atlanta. We don't sell to the smaller towns

at all. We only sell to the larger cities. It has narrowed down now so that my entire sales in the last twelve months have been to three or four points. I have not sold a car load of flour in Memphis in three years where formerly I sold as high as twenty and thirty thousand barrels here a year.

Q. The competition is so strong from other markets?

A. Yes sir. Montgomery was my second point. I have sold as high as thirty thousand barrels there in a year and I haven't sold a barrel of flour there in two years. My agent there says the flour comes around to Mobile and up the river, and that is his reason for not making any sales. I sell now more largely to Macon and Charleston than to any other point. My rate to Macon is eight cents higher than it is to Charleston and Savannah a barrel, and still I sell more flour there than any other point.

Q. I will ask you to state if you think you have been given any special advantages over anybody else engaged in like business?

A. There is another mill in town and they have the same rates I have. It is an open rate.

Q. Are the merchants in your town satisfied with the existing rates?

A. If you can judge by their petition signed by every merchant but one, and I suppose forty or fifty farmers. He said he knew nothing about it and therefore he didn't sign it. I think there are a hundred or more names.

Q. In the vicinity of your town?

A. Yes sir.

Q. And it is an intermediate point?

A. Yes sir.

Q. Your transportation arrangements are purely by the Louisville & Nashville Road, are they not?

A. The Louisville & Nashville and the Owensboro & Nashville, which is a part and parcel of the Louisville & Nashville.

H. A. McLemore appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Stahlman**:

Q. Will you please state to the Commission your place of residence and your business?

A. My place of residence is Columbia, Tennessee. My business is milling, and the grain business.

Q. What is the general business of Columbia; are there manufacturing establishments in your city?

A. Yes sir; we have a cotton mill there; another mill, several big sawmills and a few manufactories there.

Q. Your business consists of what?

A. We grind corn very largely, some five or six hundred thousand bushels a year, and ship grain amounting to somewhere between eight hundred thousand to a million bushels.

Q. Then there is a large lumber interest in your town, too, is there not?

A. Yes sir.

Q. And the products of your cotton factory are quite large, are they not?

A. Yes sir.

Q. The products of your mill go largely to the South, do they not?

A. Yes sir; exclusively to the South.

Q. And the rates on the products of your mill have been reasonable?

A. Yes sir; they have been all that we could ask.

Q. So as to enable you to fairly compete with your neighbors engaged in like business?

A. Yes sir.

Q. Have the roads made you a less rate for distant points than for intermediate points?

A. Yes sir; for coast points.

Q. Could you stand any advance of rates to coast points?

A. We could not, unless the rates were advanced by water.

Q. Do you find it necessary to sell the product of your mill at coast points?

A. We sell very largely there, sir; at least two thirds.

A. And your margin is as close there as it is at intermediate points, notwithstanding the low rates of freight?

A. Yes sir; the competition is greater.

Q. Are you at all familiar with the lumber interests of Columbia?

A. No sir; I know there is a great deal of lumber shipped there.

Q. And it goes a long way?

A. It goes north, I think, altogether, sir. I have heard a mill man there express himself pretty freely—Mr. Brown, a brother-in-law of mine.

Q. Are your merchants generally in Columbia satisfied with the terms they receive at the hands of the road?

A. Yes sir; I have a petition in my pocket now, I think, signed by all the prominent men of Columbia, with the exception of one, and I don't think he gave any reason for not signing it. I have also a petition from Lynneville, the town below us.

Q. Then as I understand it, the road is treating you perfectly well, and there is no discrimination in your favor as against any other point?

A. None that I know of, sir.

Q. And your people are fairly well satisfied?

A. Yes sir; I have heard no complaints. I suppose if they had been dissatisfied they wouldn't have signed that petition. It is signed by all the business men.

J. W. Rosamon appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Stahlman**:

Q. Where do you reside and what is your business?

A. Gadsden, Crockett County, Tennessee. I am engaged in growing and shipping fruits and vegetables.

Q. The business has grown considerably within the last few years, has it not?

A. Yes sir.

Q. The railroads have endeavored to furnish you reasonable facilities?

A. They have furnished us very satisfactory facilities.

Q. And reasonable rates?

A. Yes sir. Mr. Chairman, if you please,

I have a petition and statement written and signed by the officers of the various fruit shipping associations along the L. & N. Road, and also by the West Tennessee Horticultural Society, representing nearly all the shippers in West Tennessee.

By the **Chairman**:

Q. You are a member of some one of those organizations?

A. Yes sir.

Q. And you know the facts to be correctly set forth?

A. Yes sir.

By **Mr. Stahlman**:

Q. Do you think it would be for your interests to apply a rule to your business which would in all cases oblige the railroads to charge as much for the long distance as for the shorter distance?

A. I think it would almost drive us out of business, sir.

Q. There are times when you are obliged to go a long distance with your products?

A. Almost all of our products go to distant markets, northern, eastern and western cities.

Q. And it requires quick work to transact your business?

A. Yes sir.

Q. If the market should be glutted in one direction you would have to transfer it to another?

A. Yes sir.

Q. And the rate of transportation is an important factor in enabling you to transfer your business readily?

A. It is very important.

By the **Chairman**:

Q. Where is your place of business located?

A. Gadsden, 75 miles up the L. & N. Road.

Q. You ship to the North?

A. Yes sir; Boston, New York, Philadelphia, Louisville, Cincinnati, Indianapolis, Chicago and Omaha.

Q. You get lower rates to New York than you do to Indianapolis?

A. No sir.

Q. Do you get lower rates to New York than you do to Louisville?

A. No sir.

Q. What distant points do you get lower rates to than you do to intermediate stations?

A. We get a greatly reduced rate to all those cities.

Q. Perhaps you do not fully understand me. To what distant points do you ship your fruit for a less sum in the aggregate than you do to any intermediate station?

A. All of the points. We have a reduced rate.

Q. Let me ask you again. Do you ship to New York for a less sum in the aggregate than you do to Indianapolis, for instance?

A. Proportionately.

Q. Undoubtedly proportionately, but for a less sum in the aggregate?

A. We pay \$1.86 per hundred pounds to New York, and I think about ninety cents to Indianapolis, if my recollection serves me right.

Q. To what point this side of New York do you pay more than you do to New York?

A. No point sir. We pay less to Pittsburgh that is right on our route and less to Cincinnati than we do to Pittsburgh and New York.

INTER 8.

Q. So that you do not pay less to the distant points than you do to any intermediate point?

A. No sir; we pay less than the local rate would be, added together.

Q. Do you understand there is anything in this new law that prevents your having such rates?

A. I don't know that I am competent to construe the law; but I am satisfied that if we were compelled to pay local rates aggregated, it would amount to a rate that our business wouldn't stand.

By **Mr. Stahlman**:

Q. Take a case like this: you have been shipping to Chicago, and your rate is reasonably satisfactory?

A. Yes sir; we get a rate of seventy-three cents per hundred pounds on highly perishable stuff, which is satisfactory.

Q. Ordinarily the rate to a point beyond is higher than to Chicago?

A. Yes sir.

Q. Might not conditions and circumstances arise which would compel the railroad to give you a rate to a point beyond, less than the rate to Chicago? Is it not true that the rates to Chicago are less than to Indianapolis, although the business passes through Indianapolis; are you familiar with that?

A. I am not thoroughly familiar with that. I don't think the rate is less to Chicago than it is to Indianapolis. I don't think it is. That is not my memory. I think it is a little less to Indianapolis than to Chicago; but in business of that character the great law of supply and demand governs; and other competing points around sometimes fill the market with such a supply as to reduce the price so that it would not be remunerative to ship to that market, and the railroads have in the past given us a graded rate, or a floating rate. Last season the bulk of our products went to Chicago. A number of competing points, Chattanooga and other points growing fruit very largely, pour them into Chicago until the supply reduces the price and it doesn't pay us to ship; and then the railroad offers us a reduction of rates to enable us to market our fruit.

Q. At other points?

A. Yes sir; and also at Chicago. They give us a floating rate to enable us to market our product. We have no complaints to make of the treatment of the railroad.

Q. You are all located at local stations?

A. Yes sir.

Q. And you are you satisfied with what the railroad does?

A. Yes sir. There are some names on that petition, of parties who live at Humboldt, the junction of the M. & O. and some at the crossing of the Illinois Central.

Q. But the bulk of you live at local points?

A. Yes sir.

Mr. Stahlman. I would like to have permission to say right here that Mr. Rosamon perhaps, is not familiar with the fact, but the rates through from Indianapolis to Chicago are less by fifteen cents a hundred than they are to Indianapolis.

The Chairman. That is, they have been heretofore.

Mr. Stahlman. Yes sir; and we would like to have that on the record.

The Witness. I am not familiar with that question. The bulk of our business has been done to Chicago. Then we scatter and go to New York, Boston, Philadelphia, Omaha and Kansas City.

Mr. Stahlman. I would like also—and I consider anything I say as under oath, if necessary.

The Chairman. That will be understood.

Mr. Stahlman. —to say that at times it is necessary when the products gather at some point, and become burdensome to that particular locality, to make lower rates to points beyond, in order to enable these people to continue their shipments. In other words, when one market is glutted we have been reaching beyond to give them another.

Commissioner Morrison. Indianapolis is about half the distance to Chicago, is it not?

Mr. Stahlman. No sir; Chicago through Indianapolis is only 185 miles further from this section than Chicago direct; and the distance from these points to Indianapolis is in the neighborhood of 487 miles.

Commissioner Morrison. It depends on how far south you go.

Mr. Stahlman. I am speaking of the locality which Mr. Rosamon represents.

W. R. Craig appeared before the Commission and, having been duly sworn, was examined as follows:

By **Mr. Stahlman:**

Q. You reside at Pulaski?

A. Pulaski, Tennessee.

Q. The center of a good country?

A. Yes sir.

Q. Agriculture, live stock and lumber?

A. Yes sir; and grain.

Q. You are engaged in the grain business?

A. Yes sir; grain and produce.

Q. You ship the products of Giles County to the South?

A. I do.

Q. Where do you find your largest market for the products of your country?

A. Pensacola is one of my best markets now.

Q. The rates to Pensacola from Pulaski are less than they are from Pulaski to Montgomery, are they not?

A. Yes sir.

Q. And even less than they are to Birmingham, are they not?

A. The same thing.

Q. The rates from Pulaski to Birmingham and Pensacola are alike?

A. The same.

Q. But the Montgomery rates are higher?

A. Yes sir.

Q. Do you meet competition at Pensacola?

A. Yes sir.

Q. You have no competition out of Pulaski?

A. No sir.

Q. No other railroad there?

A. No sir.

Q. And the railroad has fixed these rates in order to enable you to let your people dispose of the products of your country?

A. Yes sir.

Q. In competition with the products of the farmers from other sections?

A. Yes sir.

Q. What other interests are there at Pensacola?

A. Lumber, logs, cattle and cotton.

Q. I will ask you if the rates to Pensacola were advanced, if you think you would continue your shipments to that point?

A. No sir; I would not. It would cut me off very considerably.

Q. Then you would have to confine yourself very largely to the interior markets, would you not?

A. Yes sir; I don't think I could reach Montgomery right well, on account of the water transportation.

Q. What do you know of the situation as to lumber?

A. I was talking to a lumberman and he simply said to me "If the long and short haul clause is carried into effect, it will ruin my business," and so did a log man. We have a log man and a lumber man who do a great deal of business in that line, and they both stated to me that they thought, from what they could see of it, it would ruin their business in the lumber and log business at Pulaski.

Q. They have felt the effects of it somewhat?

A. Yes sir; one of them has felt the effects of it in lumber.

Q. How does your mercantile community at Pulaski feel?

A. I have a petition that ought to express their feelings better than I can do it myself. They are all opposed to it.

Q. The people generally in your town and locality are satisfied with the treatment they have received at the hands of the roads?

A. Well sir, I have heard but very little complaint. Of course you will hear complaints. There are men who will complain at almost anything. But I have never yet seen what I thought was an injustice and explained it to the general freight agent, but what he always fixed it up right and satisfactory.

Q. Yet you are satisfied you never had any benefits that some other man doing the same business couldn't get?

A. No sir.

Q. That is, any special advantages?

A. I never had any special rates that wasn't open to all.

Q. That is the basis upon which the Louisville & Nashville Road does its business through this section?

A. That is the only way I have been able to find out. I have thought that often.

By **Commissioner Morrison:**

Q. How far is it from Pulaski to Birmingham?

A. I forget the distance. It is about 125 miles, I believe, as well as I remember. I don't know. It is somewhere about that.

Q. How far is it from Pulaski to Montgomery?

A. From Pulaski to Montgomery I don't believe I can tell the distance.

Mr. Stahlman. One hundred miles further.

Commissioner Morrison. How far is it to Pensacola?

Mr. Stahlman. One hundred and sixty-five miles further than Montgomery.

Q. I understand they charge you the same

Q. What is it to Birmingham?

A. Twenty-one cents.

Mr. Stahlman. Now I want to say that the rate from Pulaski to Birmingham is practically the maximum of our local rate, being only 100 miles. The rate from Pulaski to Montgomery, being double the distance, is less than our local rate based on the average local rate or the mile local rate in existence.

The Chairman. Do you mean that you do not charge more to the intermediate stations there proportionately than you do to Birmingham?

Mr. Stahlman. I mean on that class of freight. This is the point: that the rate of twenty-one cents from Pulaski to Birmingham is practically the maximum local rate for that distance. The local rate from Pulaski to Montgomery, being twice the distance, would be more than the rate that Mr. Craig is being charged, only twenty-five cents, because of the competition coming by river. The rate from Pulaski to Pensacola is of course regulated by the water competition all the way round. Have I made myself clear?

The Chairman. I don't believe I quite get your idea. You say Birmingham has practically the maximum local rate. I don't understand that.

Mr. Stahlman. I mean this: we wouldn't undertake to charge a rate from Pulaski to Birmingham in excess of the basis of our local rates on that class of traffic. Say the rate per hundred miles on grain on our local tariff is twenty-one cents, and the rate for 200 miles on grain is thirty cents. We have not raised the rate to Birmingham. We have given the Town of Pulaski the benefit of the local rate between Pulaski and Birmingham, but we have

intermediate stations than there is to Birmingham. Of course competition between markets at Birmingham has something to do with it, but I think it is practically the maximum of our local rates for that distance. If there was no competing force at Montgomery, instead of the rate being twenty-five cents to Montgomery it would be thirty cents, and then we would only have to deal with the competing forces at Pensacola.

The Chairman. I wanted to ascertain whether you allowed anything for competitive forces at Birmingham?

Mr. Stahlman. I am not sure as to that.

Commissioner Morrison. Is the place over which you had some controversy, Opelika, on that road?

Mr. Stahlman. No sir.

Commissioner Morrison. What is the next principal town the other side of Montgomery on that road?

Mr. Stahlman. Greenville, I think.

Commissioner Morrison. Do you remember what the rates are at that place?

Mr. Stahlman. I do not. We can furnish the tariff, however.

Commissioner Morrison. I would like to have it, if you please.

By Commissioner Bragg:

Q. You do a milling business?

A. No sir; not a milling business.

Q. What is it?

A. Simply grain and produce.

Q. Wheat and corn?

A. Wheat, corn, peas, dried fruits, apples, pears, etc.

Q. You do not do much business with wheat at Montgomery, do you?

A. I haven't done much for two years, be-

cause we have not had much wheat. It is our wheat market when we have wheat.

Q. Do you know Joseph & Anderson?

A. Yes sir.

Q. They have a flouring mill there?

A. Yes sir.

Q. They do a very large business selling flour all over that country, don't they?

A. Yes sir.

Q. Does the fact that Joseph & Anderson are there, and have their flouring mill there, have anything to do with your business at that point?

A. It is a great help to us in disposing of our wheat. I have sold all the wheat I ever sold to them.

Q. Is there no competition in your business at Montgomery with wheat?

A. I don't know of any, only Columbia and those places on the road. I suppose the West competes with us some.

Q. Do you know that Joseph & Anderson buy a great deal of wheat from Illinois and Kansas and all that country up there?

A. Yes sir; they buy it from some other points, from the West some where, I don't know where.

Q. Do you tell us that you can sell them wheat at 25 cents a hundred in Montgomery cheaper than they can get it from Illinois and Indiana, on a through rate to Montgomery?

A. We have to sell it to them a little cheaper, or as cheap, in order to sell it to them at all. It is the only outlet we have. There is no other point we can ship to, except Birmingham or Montgomery.

Q. How does your wheat selling business compare in the aggregate at Montgomery with Birmingham?

A. We sell more at Montgomery.

Q. Do you not sell five times as much in Montgomery?

A. The mill at Birmingham has only been put up the last two or three years, and we have not had a wheat crop to amount to any thing. This year I sold more at Birmingham than I did at Montgomery, but I didn't sell much at either place. Our wheat wasn't good enough in quality.

Q. And the mill of Joseph & Anderson there has nothing to do with the rate that you get to Montgomery?

A. I don't know sir, whether the mill has any thing to do with the rate or not.

Q. I mean, has the fact that it is there anything to do with the freight?

A. It hasn't had anything to do with it for two years, as far as we are concerned, for we haven't been able to ship there at all.

At this point, 2 P. M., the Commission took a recess for two hours. At 4 P. M. the Commission reassembled, all the members being present.

Mr. W. M. Baxter. I would like to have leave to amend the petition of the Virginia, East Tennessee and Georgia Railroad Company.

The **Chairman.** Make your amendment and submit it.

F. F. Gracey appeared before the Com-

mission and, having been duly sworn, was examined as follows

By **Mr. E. D. Baxter:**

Q. Where do you live?

A. Clarksville, Tennessee.

Q. What is your business?

A. I have a variety. I am principally a grain dealer, wharf proprietor, steamboat agent, railroad agent, etc.

Q. How long have you lived at, or near, Clarksville?

A. Since the war; twenty-two or twenty-three years ago.

Q. Are you familiar with the country between Louisville and Memphis?

A. I cannot say I am entirely.

Q. Have you traveled over it frequently in daylight?

A. Yes sir.

Q. I wish you would state to the Commission whether it is thinly or thickly populated.

A. Compared with some sections of the country, it is thick. I should regard it as a thinly populated country.

Q. Compared with the section north of the Ohio River, how is it?

A. It is thinly populated.

Q. Are the local stations along the line of the road large prosperous cities, or small points?

A. There is a large majority of them very small. There are some two or three pretty fair stations along there.

Q. What are the largest stations between Louisville and Memphis?

A. I should think Clarksville was.

Q. Elizabethtown is the first place of any consequence, is it not?

A. Yes sir.

Q. What is the population of that?

A. I should say it was about 1500.

Q. How far is it from Louisville?

A. About forty miles.

Q. Bowling Green is the next place of any consequence?

A. Yes sir.

Q. How far is it from Elizabethtown to Bowling Green?

A. I can't say exactly. I should think, though, it was about the same distance; about sixty or seventy miles.

Q. Clarksville then is the next point of any consequence, is it not?

A. Russellville is a town of some little importance.

Q. How far is it from Bowling Green to Russellville?

A. About thirty or thirty-five miles.

Q. What is the population of Russellville?

A. I should think 2,000.

Q. What is the next town of any size?

A. There is no other until you reach Clarksville.

Q. What is the distance from Russellville to Clarksville?

A. Thirty or thirty-five miles.

Q. In coming from Louisville to Clarksville, what navigable rivers do you cross?

A. You cross the Green River and the Barren River, two streams of importance.

Q. Where do you cross the Green River?

A. I don't know the name of the place.

Q. Mumfordsville?

A. Yes sir. At Bowling Green you cross the other.

Q. And you cross the Cumberland at Clarksville?

A. Yes sir.

Q. Coming down this way, what is the next town of any consequence?

A. There is none until you arrive at Paris.

Q. What is the population of that place?

A. I really don't know; not to exceed one thousand, I should think.

Q. And the next place?

A. McKenzie, a small station; I don't know the population.

Q. The next is what?

A. Humboldt, and then Brownsville.

Q. What is the population of Brownsville?

A. I guess about 2,000 or 1,500.

Q. Three railroads were originally chartered from Memphis to Louisville, and now form a part of that line?

A. Yes sir.

Q. The old Memphis & Ohio Road?

A. Yes sir; from Paris to Memphis.

Q. And what was the next road?

A. The Memphis & Clarksville, from Guthrie on the Kentucky state line to Paris.

Q. Do you know how those two roads got into the present system of the Louisville & Nashville Road?

A. I don't know anything except just from the general talk. They were finally consolidated after having passed through a receivership.

Q. They both broke down financially, did they not?

A. Yes sir; and went through a receivership and were sold by the State.

Q. And bought in by the Louisville & Nashville Road?

A. Yes sir.

Q. The Louisville & Nashville Road built from Guthrie on to Louisville?

A. Yes sir; but all those things occurred before I was a citizen of the place.

Q. What is the character of the country between here and Paris, and the principal products? When you leave Paris, what are the principal products of the country from there to Guthrie?

A. From Paris to Guthrie it is wheat, corn and tobacco.

Q. Would you call the country between Paris and Clarksville a good agricultural country, or otherwise?

A. No sir; there are spots of very good agricultural land, but generally it is very poor.

Q. What is the distance?

A. I think about seventy-five miles from Paris to Clarksville.

Q. What is the topography of the country from Memphis to Paris; level or hilly?

A. It is undulating. I should not call it a hilly country, but it is rough in places. From Paris to Clarksville it is exceedingly rough.

Q. Does the railroad track between Memphis and Paris cross many streams?

A. Small, unimportant streams.

Q. But they require bridging and trestling?

A. Yes sir.

Q. And expensive superstructures?

A. Yes sir. There is one navigable stream, with a turn table.

Q. Are there not a number of bayous and

sloughs between here and there that have to be trestled and bridged?

A. Yes, sir; although I couldn't enumerate them. I know they are there from passing over them.

Q. What is the topography of the country from Paris to Guthrie?

A. It is very rough except a portion of the distance between Clarksville and Guthrie that is very fair, about ten miles.

Q. There are bridges and trestles?

A. Yes, sir; they cross both the Tennessee and Cumberland.

Q. There are expensive bridges at those two rivers?

A. Yes sir.

Q. What competitive water points are there on that line between Guthrie and Memphis?

A. I know of none except Clarksville and about thirty-five miles of the Cumberland that the road parallels, and then the station on the Tennessee River, and Brownsville on the Big Hatchie.

Q. Do you have steamboats on the Tennessee and Cumberland Rivers?

A. Yes, sir; all the year.

Q. Are they running in connection with, or in competition with the Louisville & Nashville road?

A. They are running in competition with the Louisville & Nashville. I don't know how they are running on the Tennessee River. I am not familiar with that.

Q. How do the rates of freight from Clarksville now compare with what they were before the war, or before the railroad was built? What has been the effect of the building of that line of railroad upon the commercial business of Clarksville so far as railroad or transportation routes are concerned?

A. For twenty years I have probably made every freight rate by river that has gone out of Clarksville, as well as by railroad, and I can state positively on that point. Twenty years ago the rate to New York was \$1.20 a hundred. The railroad then just entered the town, after the war. The road was finished before the war, but never was run until it was occupied by the armies of the opposing forces. The rate to New York was \$1.20. Immediately after the war, the rate from Cincinnati to Clarksville by river on first class goods was sixty-five cents, and on fourth class goods forty-five cents. That was twenty years ago. The river and rail commenced opposing each other and by friction gradually the rates were reduced from time to time as one would contend for the business against the other, until at the present time the rate from Cincinnati on all classes of goods is about twelve cents a hundred.

Q. The rate has been reduced from what point to twelve cents?

A. From sixty-five cents to twelve cents.

Q. How are the rates of the local stations, for instance Paris, Humboldt and other stations off the river, affected by the fall of these competitive rates at Clarksville?

A. Do you mean the rates into Clarksville, or the rates from that point?

Q. For instance a shipper, at an intermediate station; does he, or does he not, if any, and to what extent, get the benefit of the fall in rates?

A. Oh, yes, sir; there has been a fixed difference of about five cents either up or down, as the rates are made. We have never made a rate from Clarksville that Cherry, for instance, was not within five cents of the Clarksville rate.

Q. As the Clarksville rates are cut down by competition, the local stations get the benefit?

A. Yes sir; that has been the case all the time.

Q. That is equally true this side of Clarksville, is it?

A. Yes sir.

Q. Do you know what the earning capacity of that Memphis branch has been; in other words, has it been a profitable or an unprofitable investment to the Louisville & Nashville Railroad?

A. I could not state advisedly on that point, except as to what has been stated to me by the officers in connection with the road from time to time.

Q. You have been more or less connected with the company and have had more or less knowledge of its financial affairs?

A. I have been, as a shipping agent of freight. It has always been understood that the division, as far as I have known, is not a good division, except from our point north; and we only occupy ten or twelve miles of the road.

Q. Have you come here as the representative of a railroad company, or in what capacity?

A. No sir; I am the chairman of a memorial that I intended to have handed to you, from the Board of Trade of Clarksville. Mr. Kennedy had it in his possession.

By *Commissioner Schoonmaker*:

Q. Are you chairman of the Board, or what?

A. Mr. Kennedy is the Chairman of the Board of Trade, but I am the Chairman of the Committee that brought the resolutions.

D. N. Kennedy appeared before the Commission and having been duly sworn said:

Mr. Chairman, I am the bearer simply of a memorial from the Board of Trade of the City of Clarksville which I was requested to present to your honors. I am not an expert in railroad rates. The facts are stated pretty clearly in that memorial as to the position of our commercial men there as regards this long and short haul. I don't know that I can add anything more except that the commercial men of Clarksville are, I think, almost unanimously satisfied with the present status of the long haul and the short haul. We get about justice done us in the long haul, and we think full justice in the short haul, and we would rather stand by the long haul as it stands and the short haul as it stands than to have any change made. I think I express the almost unanimous opinion of our commercial men as well as our farmers, planters and all our interests. We consider they are all one and the same.

By *Commissioner Schoonmaker*:

Q. You had rather bear the ills you have than fly to others?

A. Exactly, particularly unknown ones.

By *Commissioner Morrison*:

Q. If you could have the local rates reduced a little, it would not hurt you, would it?

A. No sir; neither would it hurt us if the long rates were reduced. We would be willing to submit to both; but we take them as they are. We have no complaint to make of our local rates. In saying this I represent the Board of Trade of the City of Clarksville.

By *Mr. Baxter*:

Q. Were you not connected with the old Memphis, Clarksville & Louisville Railroad?

A. Yes sir; For many years years during its building.

Q. That road became insolvent, did it not?

A. Very badly insolvent.

Q. And was sold out and bought in?

A. Yes sir; sold once for twenty-five cents on the dollar; but we didn't get that finally, I think.

Q. Has it ever paid anything like interest upon its cost?

A. I can't speak of that.

J. A. McGregor, appeared before the Commission, and having been duly sworn was examined as follows

By *Mr. Stahlman*:

Q. You reside at Erin, Tennessee?

A. Yes sir.

Q. What is your business?

A. Manufacturer of staves and lumber.

Q. How long have you been in business there?

A. Since last October.

Q. Erin is a local point on the Louisville & Nashville Road, is it not?

A. Yes sir.

Q. You have hopes of doing a fair business at that place?

A. Yes sir; we have a large amount of lumber, there and have invested a large amount of money in a plant there with the expectation of doing a large business, but we are somewhat curtailed now.

Q. In what way?

A. On account of the action of this new law, the fourth section.

Q. Has it affected you at points north of the river where you want to ship?

A. Points north of the L. & N.; yes sir; eastern and northern points.

Q. Your shipments go long distances, do they not?

A. Yes sir; the majority of our products; as for example our rate to Cleveland, Ohio, has been increased about eight cents a hundred pounds. That is more money on a car load of staves or lumber than we expect to make.

Q. That is about \$32 a car?

A. Yes sir. There is no stave or lumber man in the country that is getting that much money on a car load of stuff. As a consequence we have either got to get lower rates or shut up shop.

Q. You pay a higher rate to all those points from the Ohio River; that is, there is a rate fixed based on the rate from the Ohio River as a rule?

A. Yes sir.

Q. So that you do not have any better rates from your station than they have at points north of the Ohio?

A. Not that I know of.

Q. In other words, you pay a higher rate?

A. We pay a higher rate.

Q. Even under the old arrangement?

A. Yes sir.

Q. And the price fixed north of the Ohio River by reason of enforcing the long and short haul practically shuts you out of the market?

A. That is what it amounts to exactly sir.

By the **Chairman**:

Q. Where did you market your wares north of the Ohio River before?

A. Our market in the past has been Cleveland, Pittsburgh, Buffalo, Philadelphia and New York.

Q. Did you find a market this side of Cleveland?

A. We found a limited market this side.

Q. Did you pay higher rates to such points than you were paying to Cleveland?

A. Oh no sir. As for example, what little stuff we market in Louisville we get there for eight cents.

Q. Then how is the enforcement of the new law affecting you?

A. Not on account of the rates below the river. It is above.

Q. How does it affect you? I don't quite understand it?

A. It affects us because our old rates have been increased.

Q. The rates are increased, but has it anything to do with the long and short haul clause?

A. That is what the freight agents of these roads tell us. I know of no other cause.

Q. That is what I wanted to bring out. I wanted to see what the trouble was. I do not understand that you were paying higher rates to points this side of Cleveland than you were to Cleveland?

A. Oh no sir.

Q. Then the change to Cleveland does not seem to be connected with any change of rates this side of Cleveland so far as your business is concerned?

A. No change of rates on the Louisville & Nashville Road.

Q. Or on any other road?

A. Yes sir.

Q. Where?

A. For instance, before this law went into force we got to Cleveland for twenty cents. Eight cents of that went to Louisville, and the balance from Louisville on to Cleveland.

Q. I have asked you to bring out the fact how that was, did you have to pay higher rates to any point this side of Cleveland than you did to Cleveland. I understand you to say you did not. If not, how does it appear to you otherwise than by the statements of these officers that the increase of the rates to Cleveland has anything to do with this clause of the law?

A. I don't exactly understand your proposition.

Q. How were you benefited by the old law, under which the railroads might charge less to a distant point than to a point nearer?

A. It benefited us to the extent that we were enabled to get, as I say, a twenty cent rate through to Cleveland. Now we are not able to get it.

Q. But this side of Cleveland you did not have to pay any higher rate than that?

LESTER S.

A. No sir.

Q. Then what is the connection between the increase of the rate to Cleveland and the clause of the law you refer to? Can you see any necessary connection there?

A. Yes sir; I think I can.

Q. What is it?

A. For instance, as I started to say, the rate to Louisville is eight cents. The balance of twenty cents went to the connecting lines that took that freight on through. Now those connecting lines can't do the work for the money.

Q. How do you know?

A. They say they cannot, and they do not do it, anyhow.

By **Commissioner Schoonmaker**:

Q. State what lines?

A. You can go out of Louisville in that direction by the Ohio, Mississippi and Pennsylvania.

Q. Give the names of the men who gave you that information?

A. The general freight agent of the L. & N. was one. That is our way in this country of getting rates.

Q. Who is he?

A. J. M. Culp. R. W. Geiger was another, the general freight agent of the Pennsylvania Line out of Louisville.

By the **Chairman**:

Q. That is all you know about it; these men told you?

A. Yes sir.

By **Mr. Baxter**:

Q. You get the rates that you are to ship under from Mr. Culp, do you not?

A. Yes sir.

Q. And he is the man that told you about the rates in operation now under which you cannot ship?

A. Yes sir.

By the **Chairman**: I do not question at all what you say about the rates that they charge you now; but what I want to know is what you know of this increase in rates being in any way connected with the enforcement of the new law?

A. All I know about that is what the railroad officials tell me.

William Buquo appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Stahlman**:

Q. You are a resident of Erin?

A. Yes sir.

Q. What kind of business are you engaged in?

A. Manufacturer of lime and staves; that is, slack-barrel material and merchandizing.

Q. To what section of country do you ship the products of your lime-kilns?

A. I believe we ship now into eleven different States, principally south, but we do reach Indiana, Illinois and Kentucky.

Q. What is the daily or monthly product of your kiln?

A. Our output for the two plants—there is competition there—is something like 125,000 barrels a year.

Q. From what markets do you come in competition with lime?

A. Our sharpest competition is on the Ohio River at three particular points, Memphis, Henderson, Kentucky and Louisville; and south at New Orleans, Mobile and Vicksburg. When we ship south we come in competition of course with the lime manufacturers who ship by rail.

Q. The railroads have been in the habit of making you a reasonably fair rate to these points?

A. Yes sir.

Q. In order to enable you to fairly compete?

A. Yes sir. We pay a less rate to Memphis, Louisville and Henderson than we do for shorter points between our place and those three points.

Q. Is not that the case as to New Orleans?

A. I think so; but I do not believe I can give you the data on those shipments.

Q. Will the rates that the railroads have given you enable you to send your lime to Memphis, Henderson, Louisville, New Orleans, Vicksburg and Mobile; and are your rates of transportation on the products of your kilns any less than the transportation rates on the rival kilns with which you compete?

A. No sir: when our competitors get a rate of that kind it is public property in our office. When they apply for a rate and get it we get the benefit of it, and when we apply for a special rate and get it our competitors get the benefit of it.

Q. Your place is a local point on the line of the Louisville & Nashville Road?

A. Yes sir; between Clarksville and Paris.

Q. How do your rates compare with the rates of your competitors from other points? Have you any better rates?

A. Not that I know of. I do not think we have got any better rates.

Q. Could you stand any advance in rates and hold a fair proportion of the trade?

A. No; for this reason: For instance, in shipping lime to Memphis we have got to get the lime here so that it will sell at a certain figure, and we take it, the railroad understands that, because they give us a rate that will justify us, by handling our lime close, to reach this market. If the rate were higher we could not reach it at all, because the lime sold here in competition against us would keep us out. We could not reach it unless the railroad company would help us to meet the competition that we meet here in Memphis.

Q. You say also you are a merchant?

A. Yes sir.

Y. You pay local rates on your merchandise?

A. Yes sir.

Q. And have no special privileges that other merchants in your town cannot avail of?

A. No sir.

Q. Are the rates to and from your town generally satisfactory to your business people?

A. Yes sir. I have a memorial in my pocket from all the merchants, shippers and manufacturers of our town, sworn to. I will hand it to the Chairman.

Q. Are not the rates from Louisville and Cincinnati to Memphis on merchandize less than they are to Erin?

A. Yes sir; we so understand it. I can not speak advisedly on that.

Q. And yet you are satisfied?

A. Yes sir; our people feel if the railroad company wouldn't help our business our town would be damaged. That is just the way our people feel.

Q. You have a manufacturing industry there in the way of staves, barrels and lime that is the life of your town?

A. Yes sir; and it is the biggest town for its size I think in the South.

By *Commissioner Schoonmaker*:

Q. How large is your town?

A. About 1,000 inhabitants.

By *Mr. Stahlman*:

Q. It has grown up within the last few years?

A. Yes sir; based principally on the lime industry; and here recently we have had large lumber manufacturing.

By *Commissioner Schoonmaker*:

Q. Where does the lime come from that competes with you at Memphis?

A. It is brought from various points. It is brought from the Ohio River. The Utica lime above Louisville is our sharpest competitor on the river.

M. H. Clark appeared before the Commission, and having been duly sworn said:

I have a couple of individual petitions, and also a petition from the Clarksville Tobacco Board of Trade.

By *Commissioner Schoonmaker*:

Q. How large is your town?

A. It has a population of about 6,000, sir. We do the largest business for the size of the town of any town in the United States, I understand.

By *Mr. Stahlman*:

Q. It is a large leaf tobacco market?

A. Yes sir; it is the second largest leaf tobacco market in the United States.

Q. How long have you been there?

A. I went there in January, 1855.

Q. Do you buy a large proportion of the crop annually?

A. I am the largest buyer there, sir.

Q. What is the value of the crop of tobacco sold in the market of Clarksville?

A. It was estimated last year at about \$5,000,000. We sold between 35,000 and 40,000 hogsheads.

Q. Is much of the tobacco produced in that section consumed in that section?

A. Our tobacco is entirely export tobacco. There is only about seven to nine hundred hogsheads used in the United States. Every bit of it seeks the seaboard.

Q. Does a good proportion of your tobacco come from local stations into Clarksville to be sold?

A. It all comes from local stations on the Louisville & Nashville Railroad, except a small portion which comes from the Cumberland River, up and down.

Q. Are your local rates into Clarksville reasonable?

A. Yes sir; they are. We have made them so. The Louisville & Nashville Railroad don't make our rates by themselves. Our merchants help to make them.

Q. Your merchants help us to make the rates?

A. Of course they do. You can not make a rate for us alone.

Q. We do not discriminate particularly in your favor, do we?

A. No sir. You try to charge us too much, and we try to have it hauled for less than cost, and we get together. In 1867 the rate of freight from Clarksville to New York was \$1.30. Now we ship all rail at 52 cents, and we ship by river and rail at 49 by one route, and by river and rail another route at 44. That has been the reduction since 1867. From 1855 to 1861 we shipped our crop entirely to New Orleans, but a small portion of it went from New Orleans to New York. There it went by sea. The sea freight varied from nothing to \$15 a hoghead. I have had tobacco carried from New Orleans to New York for nothing, taken as ballast; and I have paid \$15 a hoghead, which is nearly a dollar a hundred from New Orleans to New York.

By *Commissioner Schoonmaker*:

Q. What line do you ship by to New York?

A. We ship by every line. I have shipped tobacco to New York by way of New Orleans. I have shipped it by way of Savannah. I have shipped it by way of Norfolk. I have shipped it by way of Cairo. I have shipped it by way of Evansville, Cincinnati, Louisville, Wheeling, Pittsburgh, and some of it has gone through into Canada and come back to New York in that way. We ship by the cheapest route; and therefore our board petitions that you shall allow us still to have our hands untied to make the best trade and bargain we can. We consider we are able to take care of ourselves, and therefore we do not need government protection. The advantage that we have is that we have a competitive line of transportation which nothing can take from us, which is the Cumberland River, and with that we can always control our through freight rates to the seaboard in every direction.

By *Mr. Stahlman*:

Q. You have no better arrangement for making your shipments, although you are a large shipper, than anybody else at Clarksville?

A. No sir, the rates are made public for all shippers. I was asked the question the other day by a Swiss house for whom we have bought for twenty-eight years, if they saved their shipments and accumulated and got as much as fifty hogheads at a time could I get them a better rate than for three and five hogheads at a time. I explained to them that we sometimes shipped a thousand, fifteen hundred or two thousand hogheads at a time, and the rate was the same for two and three thousand as for one, because the car does not leave Clarksville until it is loaded. It may have one hoghead for me and eleven for somebody else, which fills the car. The rate is the same for one hoghead as for a thousand. We all know what the rate is. It is a public rate. We have different transportation lines of freight and we have our choice. We can ship by the Jellico route by way of Norfolk, or ship part by the other River route which goes by way of Evansville, or all rail and work through the trunk lines.

Q. You always have enough tobacco to load a car at Clarksville?

A. Yes sir.

Q. Or five or ten cars?

INTER 8.

A. Yes sir.

Q. That is not the case with local stations, is it?

A. No sir.

Q. They ship in small quantities, one, two, three, four and five hogheads?

A. Yes sir; necessarily.

H. D. McHenry appeared before the Commission and having been duly sworn was examined as follows:

By *Mr. Cummins*:

Q. Where do you reside?

A. I reside at Hartford, Western Kentucky, near to the line of the Chesapeake, Ohio & Southwestern Railroad.

Q. What is your business?

A. I am engaged in a good many things. I am a lawyer by profession and meddle in politics a little; but I suppose you want to ask me about the coal business.

Q. Yes; I am not wanting any politics now.

A. I am the president of and principal owner in two coal mines in the western coal fields of Kentucky, through which the Chesapeake, Ohio & Southwestern Railroad runs between here and Louisville. Through that same coal field the Louisville & Nashville Railroad has two lines, one to Russellville and Owensboro, and what is called the St. Louis & Nashville Railroad, which runs through that same coal field. I have neither of my mines on the Louisville & Nashville Railroad. I know something of their business, however, as both roads ship to Louisville I believe and certainly to this point at the same rates, the distance being about the same. They bring coal from that coal field here to the City of Memphis.

Q. State the principal places where you find consumption for your coal?

A. I suppose most of it goes to Louisville from that coal field. Memphis has got to be a very large consumer. I have shipped a great deal of coal by the Mobile & Ohio Railroad. I have had the contract for furnishing them all the coal that that road consumes for a great many years, but recently I have lost the contract. I ship to Paducah and to all the points between here and Louisville on both lines of road.

Q. State whether or not you are acquainted with the rates prevailing in the Memphis market for coal prior to the time that the railroad opened up to your mine in that vicinity an opportunity to ship that product into this market, and what change, if any, has been made in the market price of coal by reason of your competition in this market?

A. Of course I never sold any coal in Memphis until our road reached this place, although I had been in the coal business for a good many years shipping to Louisville. I have understood that the rate of coal has been brought down nearly one half. The Louisville & Nashville Company came into Memphis with coal just about the time our road came through, and then she came into the coal business and when we commenced bringing the Kentucky coal here, I think the price was brought down in Memphis nearly one half. I do not mean it came down suddenly to one half, but it stands to-day about one-half of what it did then.

Q. I believe you connect with the Mobile & Ohio Railroad at Rives Station?

A. Oh yes sir.

Q. State whether or not you come into competition with coal along any parts of that road other than where the supply of your coal is derived from?

A. Yes sir; I do that where we cross the Illinois Central Railroad. There is one thing I want to state to the Commission right here: I have been furnishing the Mobile & Ohio Railroad coal for at least twelve years. They consume all the coal on the whole line of road that they bought from me. Recently they have extended their line from Columbus, Kentucky, and bought a line up to St. Louis. They get coal now probably at about the same distance from Rives Station as if they took it from McHenry, one of my mines; and unless our railroad can give me a rate that is a very low rate, at least half of what they have heretofore been charging, I will lose that contract and can't get that contract, because they have got coal on their own road. The superintendent of the road said to me, that mine was a better coal and he preferred to get it if my rate would come down in the rate of transportation to about the figure that it cost them to haul it; that they would then take a large amount of coal from me. That was a few months ago. That matter is in abeyance yet. I don't know the rates of coal to the different points here from my coal mines. I know what it is to Memphis. It is now \$1.40. It has been \$1.60. It will necessarily be within a year from now, I am satisfied, with the competition of some of these Alabama coal fields, one dollar and probably less than a dollar for transportation to the City of Memphis. I suppose this law will not apply to the City of Louisville; but if the same principle applied to Louisville and we are cut off from Louisville and Memphis I consider half of the value of the coal property in our coal field taken from us, financially by reason of the rule.

By the **Chairman**:

Q. Will you tell us something about how that is going to be accomplished; how it can result?

A. There is a coal road, or a railroad, running out to a coal field, that will be completed in about a year.

Q. Where?

A. I don't know the point.

Mr. Cummins. Holly Springs and Tupelo, in the direction of Birmingham.

Q. It is opening some new coal mines?

A. Yes sir; and then we will be cut off from this trade entirely, unless they bring the rates down to a point which will be much lower than they are now.

Q. If I understand you, the Alabama coal field will be open for the Memphis market by the new railroad, much nearer to Memphis than your coal mines are in Kentucky?

A. Yes sir.

Q. And that the same rate per ton per mile of haul will allow them to get into Memphis at a much cheaper rate than you can?

A. Yes sir.

The Chairman. What has this testimony to do with the investigation? Why do you

bring such testimony? Is there anything in the new law that requires the same rate of charge per mile on railroads?

Mr. Cummins. None whatever; but I suppose the underlying question here, well recognized, is that the shortest line to any market makes the rate for that market.

The Chairman. Undoubtedly; but what has that to do with the law?

Mr. Cummins. We are looking to the effect of the law so as to see what we are to come to.

The Chairman. Yes; but I do not see that this testimony has any bearing upon this investigation.

Mr. Cummins. I want to say that the coal fields of Kentucky are supplying the Memphis market and the other markets mentioned, at lower rates than to intermediate stations—

The Chairman. And now the opening of a new line interferes with it?

Mr. Cummins. And will force them to secure still lower rates, or else be shut out. In that way we show the necessity for some intervention by the Commission.

The Chairman. Ask any specific question and let us see what bearing it has.

By **Mr. Cummins**:

Q. Are your mines furnished lower rates to these competitive points, such as the Mobile & Ohio Railroad, than to intermediate places?

A. Yes sir; they furnished me when I furnished the Mobile & Ohio Railroad under that contract, a lower rate than they furnished to some points between the mines and the point of delivery from Rives. Now on that haul that would give me a lower rate than they would give some of the local points between; less for the long haul than they charge for the short.

Q. Was not that the same case with regard to the Memphis coal?

A. Yes sir.

Q. If the Mobile & Ohio rate and the Memphis rate were advanced to the same rate that is charged to the intermediate stations, could you put your coal into those markets?

A. No sir.

Q. Suppose your Kentucky mines are shut off from supplying these competitive markets. What would be the result and effect upon your mining interests?

A. It would cut down our output very seriously; so much so as to make the value of the property less; and the same principle applied to the eastern end of the road would make our property almost valueless.

Q. Would it not also result in a serious impairment of the value of property by throwing out of employment large numbers of laborers now engaged in the industry?

A. That of course it would do. There are about ten or twelve mines on the line of that road and if we furnish these competitive points nothing and are cut off from the competitive points—I am running two local mines, and I can furnish the whole local supply from Louisville to Memphis myself and take a contract to do it.

By the **Chairman**:

Q. What are your rates to Memphis?

A. \$1.40 a ton.

Q. What is the distance?

A. It is about two hundred and seventy miles. The coal field is fifty miles wide and it is narrow along.

Q. What are the highest rates for any station between?

A. I do not know. Very recently I don't know of any point where they charge more than \$1.40 just now. Going east they make a very great difference. Coal is hauled at forty cents a ton from McHenry to the City of Louisville, a distance one hundred and ten or one hundred and fifteen miles, and they charge as much as a dollar between McHenry and Louisville. At Louisville sometimes the price goes up as high as a dollar, and even above that.

Q. Do you understand they are charging you for carrying coal to Louisville for what it costs them?

A. I expect, sir, they carry it for less than it costs them, that is in the summer time, and that trade is very valuable to us. In the summer, when we have got no local orders, it enables us to run our mines, and the railroads, having the cars, I understand, they take it for actually less than the cost of hauling.

Q. If they take it for still less it is all the more to your advantage?

A. Yes sir. When the price goes up in Louisville they raise the price of transportation on us immediately—as the price goes up.

By Mr. Cummins:

Q. Is Beaver Dam a station on the Chesapeake, Ohio & Southwestern Railroad?

A. Yes sir.

Q. I have here a petition signed by persons there. Do you know those persons? (Exhibiting petition to witness.)

A. Yes sir: I know them all. They are merchants and tobacco shippers.

Q. Do those names comprise pretty well the business men of the town?

A. Yes sir; they are pretty good representatives of the business. It is a little village, and that takes about all of them—I believe about all of the commercial men there.

Q. I have here a petition from the Town of Hartford. That is your own town, I believe, four miles off the railroad?

A. Yes sir.

Q. Look at the signatures to that petition and tell us who the men are?

A. They are the largest merchants and tobacco shippers in our town.

Q. I have another one from McHenry. Is that a station upon that line of railroad?

A. Yes sir; that is where my coal mines are.

Q. The petition is signed by the superintendent of the McHenry Coal Company?

A. Yes sir; the superintendent of the company.

Mr. Cummins. I will now present these petitions to the Commission.

By Mr. Stahlman:

Q. I understood you to say the low rates to Louisville benefitted you very much?

A. Yes sir.

Q. Is it not true that you have an arrangement with the railroad whereby you have practically to put your price of coal down to a low figure, and the railroad puts down its transportation to a low figure, fixing a minimum in each case.

A. Yes sir.

INTER S.

Q. And as the price of coal advances in Louisville the railroad freight advances a little and your profits advance a little?

A. Yes sir; we furnish coal to the Louisville market at less than the cost of production, frequently.

By the Chairman:

Q. Do you furnish the coal for less than the cost of production at these intermediate stations between your mines and Louisville?

A. No sir.

Q. You make your profit off of those?

A. We don't ship to those points any coal that amounts to anything except in the fall and winter season. This low priced coal to Louisville is shipped in May, June and July, when there is no coal shipped, scarcely, to the local points along the line of the road, and we are doing nothing.

Q. When you do ship to them you get a pretty good profit, do you not?

A. Yes sir; we get a reasonable profit.

Q. And the railroad does too does it not?

A. They have a reasonable profit, I suppose. We ship the same to those points the whole year round. There is no change in it.

Q. You understand the railroad company carries it for you for less than the cost, sometimes?

A. Sometimes it does.

Q. And at the same time you furnish coal without cost?

A. At less than cost of production. I will state in connection with that, if you will permit me, the price of the coal at the different points between McHenry and Louisville—that coal is furnished at a satisfactory price at all those towns along the line of the road. I have never heard any complaint about the price of coal. It is put upon the track along about nine or ten cents a bushel. I live six miles from my mines and I put coal to those points a hundred miles from McHenry as cheap as I can get it to my own coal house at Hartford. I put it to Louisville much cheaper, and I put it to Memphis as cheap as I can get it in my own coal house at Hartford where I live.

By Mr. Cummins:

Q. Six miles from your mines?

A. Yes sir. I have to haul it in a wagon. We have no railroad. I have been in the coal business ever since our road started, and I have never heard any serious complaint of the people. There are very few manufactories along the line of the road. We are always competing with the coal men and we bring it down tolerably low. Sometimes there is a little boom in coal and we get the advantage of it and put it up; but generally we put it through all the towns at about the same rate, winter and summer.

Q. What was the lowest rate per ton on coal carried at any time to Louisville, when you say it was a loss to the railroad company?

A. Forty cents.

Q. What is the average load per car?

A. They have cars now that take twenty-five tons. I suppose twenty tons is the average. They have some eighteen ton cars.

Q. That would then be \$8 per car of freight charges?

A. Yes sir.

Q. The prices have generally been sagging for some time past, have they not?

A. Yes sir; it does not pay. It pays here less than at any point we ship to.

Q. If you were charged the same rates to Memphis that you are being charged to intermediate points, you could not do any business, could you?

A. We can barely do business now.

Q. Do you ship coal to Nashville?

A. Yes sir.

Q. Do you come in competition there with coal from Tennessee mines?

A. Yes sir; sharp competition.

Q. Very sharp?

A. Yes sir.

Q. There is also some Pittsburgh coal coming into Nashville by river?

A. Yes sir; considerable.

Q. If the railroad was to charge you the same rate into Nashville that it charged to intermediate points, do you think you could compete successfully with Nashville?

A. Oh no sir; we could not at all.

F. W. Cook appeared before the Commission and having been duly sworn said:

Will your honorable body allow me to make a few remarks?

The **Chairman**. Any statement of fact you desire to make, you can make.

The **Witness**. Mr. Chairman and gentlemen of the Commission: We appear before your committee as a committee which represents the business men's association of Evansville, Indiana, and also are the bearers of a petition signed by nearly 1,000 citizens of Evansville. Evansville is a city of about 50,000 inhabitants, the center of a great grain producing country, and her manufacturing industries are very extensive. Her principal traffic is with the South, which has been built up at a great expense to her merchants and manufacturers. The enforcement of the long and short haul clause of the Interstate Bill would destroy all at one stroke. We pray therefore that your honorable body will give our petition your favorable consideration, and permanently suspend the operation of the fourth section of the bill so far as relates to the Louisville & Nashville and southern lines. The principal product of our manufactures go to the sea coast for distribution. We there come in contact with water traffic, and the steamers would naturally destroy all of our trade. Those sea coast cities are our distributing points. We would pray to have postponed the enforcement of that clause.

By the **Chairman**:

Q. What is your business?

A. I am a brewer.

By **Mr. J. B. Rucker**:

Q. To what extent do you brew?

A. About 50,000 barrels a year.

Q. How much do you send away from Evansville, and where does it go?

A. Principally to the South.

Q. What parts of the South?

A. It goes to almost every State in the South.

Q. Name some of the principal points?

A. Pensacola, Jacksonville, Montgomery, New Orleans and Mobile.

Q. Over what route?

INTER S.

A. Over the L. & N.

Q. Have you any other means of transportation for your beer?

A. No.

Q. Why?

A. Because we have no other connection with a road.

Q. Could you not transport your product by water?

A. We couldn't transport our goods by water. They are perishable, and have got to be packed in ice, and we must ship them by rail.

Q. What is the output per year of the brewing interest in Evansville?

A. I suppose about \$700,000 or \$1,000,000. I think the manufacturing interests of the City of Evansville will run up to from seven to ten million dollars.

Q. You speak now of the general manufacturing interests?

A. All. We have ten large furniture factories. We have large milling interests. We have a very extensive hominy and grits mill that send all their manufacture to the sea coast cities. There is the distributing point for their product.

Q. What effect would the application of the law as passed by Congress, so far as the fourth clause is concerned, have upon your business?

A. It would have a very disastrous effect. It would cut us off entirely.

Q. From your southern trade?

A. Yes sir.

By **Mr. Stahlman**:

Q. Do you know anything about the nature or extent of the grain or milling business at Evansville?

A. Mr. Heilman is here, and if you will call him he can give you the particulars. He is one of the committee.

George P. Heilman appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Stahlman**:

Q. You reside at Evansville?

A. I do.

Q. What is the character of the business in which you are engaged?

A. I am engaged in milling.

Q. Shipping flour to the south?

A. No sir; making hominy grits and meal.

Q. Do you ship quite largely to southern coast points?

A. Yes sir; very largely.

Q. And the rates of transportation are lower from Evansville to southern coast points than to interior points?

A. They are.

Q. Can you stand any advance of rates to the coast?

A. I do not think we could stand any material advance. If rates were advanced materially I think it would cut us off from the distribution to coast points because of the fact that our old competitors who have a much more limited supply of grain than we have, would come in, and a very considerable portion of the season bar us out.

Q. Do you ship any grits and hominy to New Orleans?

A. We ship there very largely.

Q. You do not ship by rail, do you?
A. We ship by rail to New Orleans altogether.

Q. The rates are very low to New Orleans?
A. They are very low; yes sir.

Q. If they were advanced any the chances are the railroad would not get much of the business, would it?

A. No sir; the railroad could not get it if there was an advance of three cents a barrel.

Q. Do you ship to Mobile?

A. We ship to Mobile also; yes sir.

Q. The rates between Evansville and Mobile and New Orleans are lower than they are to intermediate points?

A. They are; yes sir.

Q. If the through rates were advanced to intermediate points approximately, do you think you could do any business in Mobile or New Orleans by rail?

A. No sir; we could not.

By **Mr. Rucker**:

Q. What is your output per year?

A. Our output last year was a little rising a hundred thousand barrels. This year it will be considerable larger.

Q. Do you know how many flouring mills there are in Evansville?

A. Eight or nine.

Q. Where is their principal trade?

A. Their principal trade for two years has been in the South.

Q. Do you know about how many barrels they manufacture during the year?

A. I can approximate it.

Q. As near as you can.

A. I think they make between a hundred and fifty and two hundred thousand barrels.

Q. Your father is very prominently connected with the iron business there, is he not?

A. He is.

Q. Do you know anything with regard to the business of manufacturing iron; as to how much business there is, and where it goes?

A. Yes. His business, however, does not go to sea coast points. It does not extend very far into the South.

Q. There are two large plough factories there, are there not?

A. There are.

Q. Where do those ploughs go?

A. Those ploughs, a great many of them, go to the South, but they don't go very far into the interior of the South.

Q. Do they not go into Texas?

A. They do go into Texas, considerable quantities of them; but the plough business of Evansville is confined to the territory, mainly, adjacent to the Mississippi River.

W. W. Shelby appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Stahlman**:

Q. You reside at Henderson, Kentucky, do you not?

A. Yes sir.

Q. What business are you engaged in?

A. Tobacco and milling.

Q. You are a miller of grain?

A. Corn goods.

Q. You make meal and flour, do you?

A. Grits.

Q. And ship to the South?

A. Yes sir.

Q. Coast points?

A. Nine tenths of my goods go to coast points.

Q. If the rates were advanced, what effect would it have on your business?

A. Unless they were advanced on northern millers we would have to quit. It is barely a living as it is.

Q. The northern millers do not all ship your way, do they?

A. No sir. There are two or three large mills in Baltimore and in Indianapolis there are two or three. They enjoy now, I think, lower rates of freight than we do to northern points.

Q. The Baltimore mills have lower rates to the coast than you have?

A. There are times when they can ship goods to the south as ballast; that is, my broker so reports to me, and it has been done in fact. We can't stand any higher rates than we now pay.

Q. As to your tobacco business and the tobacco trade of Henderson generally: Please explain.

A. Ours is a peculiar business. It is what we call stemming. We are stemmers. We pull the stems from the leaf. We prepare solely for the English market and export altogether. The City of Henderson owns two thirds of all the strips sent to England. The reason we stem it is because of the high duty in England. It is some seventy-eight cents a pound. All the dark tobacco grown in the United States is exported; every bit of it. There are three grades grown, "burly", "cigar-leaf" and "dark". The burly is used by the American people. The dark tobacco is all exported to England, Germany and the different regions.

Q. Henderson is having a right prosperous trade in that line?

A. Yes sir; it is the largest stemming point in the United States.

Q. Is there much grain shipped to the South from Henderson?

A. Oh, yes sir; I ship a good deal myself.

Q. That goes South?

A. Yes sir; Henderson is really the center of the Ohio Valley. Take fifty miles below and fifty miles above, and fifty miles behind, and she covers the belt.

Q. With any fair adjustment Henderson ought to do a good business?

A. It ought to do a splendid business. My business has doubled since this law was passed. It has cut off rebates at St. Louis, and enabled me to do something.

Q. Then this law has done you good?

A. Yes sir; I am loading five cars a day now, and a month ago I was loading two.

Q. You are not getting any rebates on your shipments, are you?

A. I never could get them, but St. Louis could. They were selling goods where I couldn't sell them, and I was one hundred and fifty miles nearer than they were; and the only presumption I had was that they were getting rebates. I could think of nothing else.

Q. You ship a good deal of grain to the coast?

A. Yes sir; I have a boat of my own, and when I am not engaged in bringing corn to my own mill, I buy grain and send it off.

Q. If your rates on grain to the coast were advanced approximately to the rates to the interior at Atlanta and Augusta, what effect do you think it would have?

A. Mine is wholly coast business, and I don't think we could do anything at any of those distributive points. Take Charleston. She will take nearly one hundred thousand barrels of grits. Augusta don't buy any grits. I do not sell three cars a year or a car a year at Atlanta. I do not sell a car a year at Montgomery. It is the coast points and the islands. We sell to the islands too. They use those grit goods altogether.

Q. The rates on grits and flour are practically the same?

A. They are the same; yes sir.

The **Chairman**. Is there anything more?

The **Witness**. Here is a memorial by our people. It is signed by all those interested in transportation at several places on the road between Henderson and Nashville.

Q. You have some petitions from local stations?

A. Yes sir; our people are interested—most of them. In a word, our people control the strip trade.

Q. Your people are interested in this question?

A. Yes sir. Last year I shipped my strips on your cars, by the Chesapeake & Ohio, to Norfolk and London. We are expecting that route to develop fully this year and sent at least half our strips that route last year. With proper encouragement, it being nearer to us than any other sea coast point, we expect probably the larger part will go that way this year.

U. W. Armstrong appeared before the Commission and having been duly sworn was examined as follows

By **Mr. Rucker**:

Q. What is your business?

A. Furniture.

Q. Where do you reside?

A. Evansville, Indiana.

Q. How many furniture factories are there in Evansville?

A. Fifteen furniture and furniture specialties.

Q. What is the amount of the output of furniture about as near as you can estimate it?

A. About \$1,000,000.

Q. Is it shipped away from there?

A. Yes sir.

Q. In what direction?

A. Most of it, I should judge, is shipped away from there under the fourth clause; at least one half of it would come under the head of the long haul.

Q. What States does it go to; all the Southern States?

A. Yes sir.

Q. As far as Texas?

A. What I have reference to, the long haul, would be beyond the Tennessee line, in the southeast and southwest, to Texas.

Q. What proportion of it goes south of Evansville?

INTER 8.

A. I would judge five sixths of it.

Q. In what States?

A. In all the Southern States. It covers the entire southern territory.

Q. Is there any trade to California?

A. There is not much to California.

Q. What other industry in wood is there there?

A. There are three large plough factories there.

Q. I am speaking of wood. How many saw mills have you?

A. I don't know as I could tell.

Q. About how many, as near as you can come at it?

A. My judgment is at least eight or nine.

Q. Do you know how much they saw per day?

A. Some of them about 100,000 feet and some of them not quite so much. There is two or three that probably would average 75,000 feet a day.

Q. Most of that material goes South, I suppose?

A. No sir; the lumber goes east.

Mr. Stahlman. I have a petition which was left with me by some gentlemen from Paris, which I would be glad to have filed with the Commission. It represents the business interests of Paris, Tennessee.

Benjamin F. Mitchell appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Cummins**:

Q. Where do you live?

A. At Louisville, Kentucky.

Q. What is your business?

A. I occupy the position of General Freight Agent of the western division of the Newport News & Mississippi Valley R. R.

Q. That is the line of road known as the Chesapeake, Ohio & Southwestern, between Louisville and Memphis, is it not?

A. Yes sir.

Q. State whether you are acquainted with the signatures of the principal persons in business at the various way stations along that line of railroad.

A. I am; yes sir.

Q. Do you know the principal shippers at the various intermediate noncompetitive points there?

A. I do.

Q. As well as those at Louisville, Paducah, Memphis, and the principal competitive points?

A. Yes sir.

Q. Tell the Commission whether the bundle of petitions I hold in my hand contains the names of nearly all the shippers of freight at your intermediate stations as well as a very fair representation of those at Louisville, Paducah, and Memphis.

The **Witness**. Is it the lot of petitions I gave you?

Mr. Cummins. Yes sir.

A. Yes sir, they do.

Mr. Cummins. I want to present a number of petitions. They are all pretty much in the same phraseology, and come from Louisville, Paducah, and from every intermediate noncompetitive way station along the line of that railroad between Louisville and Memphis.

As the witness has said, they contain the signatures of nearly all the shippers of freight along that line of road, all asking the Commission to suspend the fourth section of the Law, so far as that road is concerned.

By the **Chairman**:

Q. How were those petitions obtained?

A. They were obtained by sending them to agents, and the agents asking the people to give us their signatures if they were willing to do so.

By **Mr. Cummins**:

Q. Please state to the Commission at what points, if at all, your line of road meets with competition by water carriers?

A. We are effected by water transportation from Louisville west fifty miles, particularly at West Point, located upon the Ohio River and Salt River. We then come in competition at Rockport with Green River; then at Eddyville with the Tennessee; at Kuttawa with the Cumberland; at Paducah, Ky., with the Ohio; at Obion, Tenn., with the streams tributary with the Mississippi; at Woodstock with the Mississippi River, and thence to Memphis.

Q. And also at Dyersburg?

A. At Dyersburg, with the Mississippi River also.

Q. If I understand your tariff, that you have filed with the Commission, you make lower rates to those points than you do to intermediate noncompetitive points; is that true?

A. We do, from the fact that we are forced to make our rates lower to competitive points to meet the rates offered by steamboat transportation, or else not vary the business.

Q. Is that making of a lower rate at those points through any desire on the part of yourself or the management of that road to foster and build up the business of those places at the expense of other noncompetitive or way points?

A. No sir; it is simply to carry our share of the business and protect the interests of our local stations east and west in either direction, giving the local people upon the line of our road the benefit of the lowest rate that can be made by using competition with the river, giving each point, east and west, the local rate that belongs to it.

Q. Have you any special rates in favor of any person or any locality, except as thus controlled by this water competition?

A. We have no special rates furnished to anyone. All rates we make less than the tariff are for the benefit of all shippers, and are special to none. In other words, we have no specials for individuals.

Q. Please state to the Commission the respective tonnage, local and through, of your line of road during the past calendar year.

A. I would have to ask what you desire to get at?

Q. How many tons of through freight do you carry, and how many tons of local freight do you carry?

The **Chairman**. You can have those statistics made and handed in afterwards.

Mr. Cummins. You can give us the respective amounts, and tell us which are the larger.

The **Witness**. The local business is much

the largest; that is, as between the local and through, the local is the largest.

Q. How much larger? Was it not double your through business?

A. More than double.

Q. Can you not tell the Commission what your average local rate earns you per ton per mile?

A. About two and three quarters cents.

Q. How much were your earnings upon through freight carried per ton per mile?

A. One dollar and eighty-four cents.

Q. I mean the rate per ton per mile?

A. Oh, I have given the wrong figures. I should have said .669 of a cent.

Q. Nearly .7 of a cent?

A. Yes sir; I had the wrong paper.

Q. You say your local tonnage was more than double that of your through tonnage?

A. Yes sir.

Q. You say your receipts on local freights were more than double, or say treble, that of your through receipts?

A. Yes sir.

Q. Tell the Commission whether, if you have to grade either your through rates up to your local, or your local rates down to your through, to bring the two together, which could be done and in what way you could level them, practically speaking.

A. We would certainly be compelled to grade our through business up to our local. We could not afford to sacrifice our local for our through freight. We consider the work on through business about one half what it is on local, and we can afford to do it for much less than we can afford to do the local business.

Q. What you mean is that the cost of service is about one half, in carrying the through freight, of what it is in carrying the local freight?

A. Yes sir.

Q. Have you been along that line of road and through that country often enough to be able to state to the Commission whether or not you are so acquainted with the volume of business in the local territory through which it runs that you could, by any inducement in reducing local rates to the basis of through rates, so increase the volume of local business as to repay the losses in the rates by such reduction?

A. That would be an absolute impossibility, for the business does not exist there. We could not increase the local, and could not increase the through business sufficiently to compensate us for the loss on the local, if the rates were reduced to compare with the rates on through business.

Q. I believe your revenue from the handling of through freight during the past was somewhat over \$400,000 out of a total earnings from freight of from \$1,200,000 to 1,400,000?

A. Yes sir.

Q. Suppose you advance your through rates to your local, how much of that through business would you retain?

A. We would not retain any of it. We would not expect people to ship by us at double what it would cost them to ship by other routes.

Q. What would be the effect on that line of

road if it were to lose that through line of business?

A. It would simply bankrupt, sir.

Q. State to the Commission whether or not the larger portion of your through freights are not loaded by the shipper, or do not come to you in loaded cars from your connections, and go on loaded cars to your connections beyond your line?

A. That is generally the case; we rarely handle our through business. It is handled almost entirely by the shipper, or by our connections. We do nothing but hitch on to it and haul it from one place to another.

Q. Is it not a fact that the trunk lines north of the Ohio River are trying to enforce the long and short haul rule of charging less for any long haul than for any intermediate short haul?

A. That is the information we gather from them and their tariffs demonstrated that such is the case.

Q. Will not the effect of enforcing such a rule as that be to put the weaker and shorter lines at the mercy of the trunk lines?

A. Yes sir; and I think that is their desire.

Q. What is the size of Paducah, Ky., as to population?

A. About 15,000.

Q. As between these competing lines (your road and the river) which is the controlling factor?

A. The river lines make the rates at all times, and we either have to follow them or come near to them, or we lose the business. The water lines name the rates of transportation.

The Chairman. It is not necessary to spend time on that.

Q. Please state whether or not, immediately upon the passage or going into effect of this Act of Congress, the river lines with whom you are in competition did not at once advance their rates?

A. They did sir.

Q. As soon as you made competitive rates to those points again what was their course?

A. They reduced their rates to meet us.

By Commissioner Morrison:

Q. By through rates you mean rates to all competitive points, do you not?

A. Yes sir.

Q. And to competitive points you haul about one fourth as much to the local points?

A. Our through business consists of what business we haul from Louisville to Memphis, and at the same time what we receive from our connections.

Q. You only mean on your road from one end to the other?

A. On our road from Louisville to Memphis.

Q. You do not count any of those points between Memphis and Louisville?

A. We consider the river points competitive points, because we come in competition with the river lines. We do not call that through business, though.

Q. How do you regard that in the estimate of your revenue?

A. That is local.

By Commissioner Walker:

Q. If freight comes to Memphis and is not
INTER 8.

delivered to any other road, do you call that local?

A. We call that local, although our rates are less in such cases, to meet competition by river.

Q. It does not make any difference what the rates are in determining whether it is local or through, does it?

A. It is local on our line.

Q. It is local if it goes off at a station on your line, or comes on at a station on your line; and it is through, if it is delivered to some other carrier?

A. Yes sir.

Logan H. Roots appeared before the Commission, and having been duly sworn said:

My name is Logan H. Roots. I live in Little Rock, Arkansas. My principal business is that of a banker, interested, however, in manufactures and other industries. I was sent here as one of a committee from the City of Little Rock, but upon reaching here we were told that the citizens were not expected to make the applications, and now we have the pleasure of saying that an application is made by the Memphis & Little Rock Railroad for a suspension of the fourth section in so far as it relates to business coming to our city. Our city has had a prosperous growth, and we were budding into one of those real estate booms there about six weeks ago, but about a month ago there came a sort of frost that blighted us. A large cloud overshadowed us. We did not know exactly what the trouble was at first. Our wholesale merchants were compelled to draw off their commercial travelers. Our flouring mill, quite a manufacturing establishment, had to stop. Our large cooperage establishment found itself unable to proceed with its business until there came by you a suspension of the effect of this clause so far as it related to the transcontinental routes, as its shipments are largely to California. Under these circumstances our Board of Trade called a meeting of all the business men, and they selected a committee, of which I was made chairman, to interview you at the first favorable opportunity, with a view to having you make a suspension of that clause so far as it related to the transportation over the railroads coming to Little Rock. As other testimony will be adduced in behalf of this application, I shall not detain you only to speak of one or two especial reasons why we think Little Rock should have the suspension in behalf of the railroads entering there. I do not mean in behalf of the railroads coming there, but that the railroads should make it in behalf of Little Rock and its tributary points. While the railroads have always treated us with reasonable and considerate care to foster our industries, we are not here to plead on behalf of the railroads, but on behalf of ourselves. When I say ourselves I do not mean the people of Little Rock, because we would not ask for Little Rock that which we did not think would be beneficial to the whole State. But our people have gone to Little Rock, and have there invested their money in wharves and in warehouses. They have brought together there that which is necessary for the

conduct of business at a business center. They have far more capital than is necessary for a mere local trade. They have warehouses and other appliances that would be wholly unnecessary were it confined to the smaller area of business to be done at a provincial town. They have fostered the outstanding communities. They have cared for them when they could not be cared for at more distant points, and they have become dependencies upon this place. We think that all of these citizens who have become dependent on Little Rock as a distributing center, as well as we ourselves, have a right to say that we have established this as a distributing center, and that no power of Congress ought to have the right to destroy that which we have thus created. I am not going to dwell long upon any one topic at this late hour. I claim that the citizens of Arkansas have established this distributing center, and that this bill enforced will destroy it, and thereby destroy that which we have created. In addition to that, I claim not only our created rights, but our inherent rights. We went there and settled upon the bank of that river. We are entitled to the benefits which that river gives us for transporting, for ingress and egress of supplies. *Commissioner Bragg* knows that the all-wise Providence has been very liberal in supplying Arkansas. We have a great many valuable sources of wealth and sources of health that other States do not have. We have springs, for example, that are unsurpassed in the world, the Eureka Springs and the Hot Springs. We say without fear of contradiction that the Congress of the United States has just as much right to go and cement the springs over at Hot Springs and Eureka Springs as they have a right to stop the flow of the Arkansas River. We say the enforcement of this Interstate Commerce Bill in effect dams up the Arkansas River, and destroys it so far as we are concerned as a source of transportation. Then we say without fear of contradiction that we have the inherent right, located upon that spot, to have the benefit of the transportation which that river gives. I have heard several intimations today "You can have it, because all they have to do is to reduce the rates between."

I ought to have mentioned, in speaking of our accrued rights, that when our little city had less than five thousand people, she voted \$100,000 in bonds to the aid of this railroad which has been such a source of expense and trial to its owners from that day to this. In addition to that \$100,000 which that city voted, for which she taxed herself and the interest on it, and has paid in full for the benefit of having this Memphis & Little Rock Railroad, her citizens came forward and as far as was in their power they aided and donated toward the construction of this line of railroad. That line of railroad goes for forty miles where it almost might as well go through a tunnel, so far as its business is concerned. For that forty miles it is perhaps as expensive a road to maintain as there is in the United States. The other eighty odd miles has local business upon it which is four times the amount of the through business from Memphis and Little Rock. It don't need any argument upon my part to show that that road with that expensive portion to

maintain, and with that large proportion of local business in comparison with the through business, if she must sacrifice that which is necessary for her maintenance, either on the through business or on the local business, must sacrifice the through business. Steamboats run from this point directly to Little Rock, down the Mississippi, and up the Arkansas, and *vice versa*, thus competing directly with that line for through business. Now if you say to that line "You must not take freight to Little Rock at a rate which will compete with the steamboat line unless you will take it to all intermediate points for that" you virtually say to that line "You must not take any business for Little Rock." We thereby lose either the benefit of the railroad, for which our people have paid their money, or we lose the benefit of the river route. We say that losing the railroad is about equal to losing the river. You say they might raise their prices. Well, it has already been demonstrated. Every person in the city knows that the steamboats will cut under, but when there comes a limit to what they can put their prices at, the steamboats will come up to it, regardless of how much that is. However high they put it, the steamboats will necessarily follow the lead. They will do so because they are like everybody else. They want to make all the money they can.

One other point. In our city we have various manufactures. For example, we have a mill to which I alluded that brings wheat from abroad, grinds it into flour and sells it in that community. That mill is stopped because it cannot pay for that wheat the price that other people can pay for it nearer a market. I have heard several allusions today to the fact, "Well, that must be to somebody else's detriment." On the contrary, the man gets more for that wheat when he comes to the competition of the Little Rock mill to buy from him, and the party who buys the flour gets it at a less rate, so that strange and anomalous as it may seem by this system, the seller gets more, and the consumer gets it at a less price. So I might speak of every industry, which with us is an industry that either sends its products far abroad, or procures its material from far abroad. I have spoken of the mill which buys its wheat at a distance. Our cotton mills, which get their cotton at home, have to ship their product away. If they cannot have a rate to enable them to compete with the manufacturers of the East, of course their business cannot be conducted with profit. And yet I say in every instance where the product goes abroad, or where that which is manufactured comes from abroad, by the maintenance of these competing rates, in every instance it gives the producer more, and at the same time gives the consumer the product at a less price.

There are many things I might talk about in a general way, but I am going to confine myself entirely to our interests right here in Little Rock, because it is for Little Rock and not for any railroad or any other community I am here to say a word. I claim that whenever legislation or anything else interferes to make a man pay more for that which he wants to consume, or prevents the producer getting as much for that

which he wishes to sell, it is in the wrong direction, and the longer it travels in that way the more damage will be done; and the sooner therefore it is stopped, the sooner justice will be done. I might talk all night, but there are just three points in behalf of Little Rock that I want to present to this Commission: First, that we have acquired the right of competition in Little Rock. Second, that we have the inherent right given us by the God of nature, when he gave us that river bank to settle upon. Third, if you don't give us the competition, you thereby prevent us from having our just rights in securing for that which we have produced the most that can be obtained for it, and for that which we have to purchase the best price at which we can obtain it. With those three points, I hope this Commission, without waiting for the railroad to urge you, will give us the permission; because it was suggested to me, for example, that unless the railroads asked for it, you are not going to do it. Our railroads have got in such a clever sort of way listening to our reasonable requests, if they never asked for this at all and you granted it to the City of Little Rock, I would guaranty where our business men presented it to them they would so for acquiesce as to give us a concession in present rates. I am not so familiar with the Iron Mountain Road, although I have some financial interest in it; but I am sure when you have heard their statement on oath, that they cannot reduce their through rates and compete with the steamboats and maintain their railroad with their local rates reduced to that minimum, you will grant their request. Let me say in behalf of Little Rock that I find here but one exception in the whole State of Arkansas to a desire to repeal this clause. I might say more than one exception, because I know of several instances—that is, our furniture factories, which get all they make at home. They make their product at home and find their consumers there. Why do they want this law? For the simple reason that they expect to sell a bedstead for 50 per cent more than they did when they had competition from other places. What I have alluded to was those industries where it had to come in from abroad, or go abroad to find a market, I will admit that a manufacturing establishment which is entirely local as to the raw material and local in its market, will naturally be in favor of selling to the people for a good deal more than they sold before, and therefore want to keep out all competition possible. I did not intend to detain you as long as I have. As there is another member of the committee here, if you please go on and hear him, I would like to have him testify.

By **Mr. Weatherford**:

Q. I wish you would state the length of the Memphis & Little Rock Railroad and the number of different navigable rivers that it has to come in direct competition with.

The **Chairman**. That is stated here under oath.

By **Commissioner Bragg**:

Q. What is the population of Little Rock?

A. We claim about 25,000.

Q. Is it situated upon the Arkansas River?

A. It is situated upon the Arkansas River.

Q. About how far from its mouth?

A. About one hundred and seventy-five or two hundred miles.

Q. The Arkansas River is navigable up to Little Rock?

A. Yes sir; they have freight rates right there now.

Q. You have a line of packets running between Memphis and Little Rock?

A. There is not at present a line of packets running from Memphis to Little Rock. They run to Pine Bluffs, where they run what they call in this country deep draught boats, and there there is a railroad direct to Little Rock, forty miles.

Q. What railroads have you at Little Rock?

A. We have the Memphis & Little Rock, of which we are now speaking, and then going around by the west we have the St. Louis, Iron Mountain & Southern that comes from St. Louis.

Q. Where does it go after leaving Little Rock?

A. It runs on to Texarkana, and then connects with the Texas & Pacific. Then we have the Little Rock & Fort Smith Railroad, which goes from Little Rock to Fort Smith, up the Arkansas Valley. Then we have on the south as we come around the southern end of the St. Louis, Iron Mountain & Southern, coming from St. Louis—and we have what is called the Little Rock & Mississippi River & Texas, which runs from Little Rock to Arkansas City on the Mississippi River.

Q. Are those all the railroads that come into Little Rock?

A. If you will ask me that question twelve months hence I hope I can answer you about one half at present.

Q. What are your rates on cotton from Little Rock to New York?

A. One of our committee who is familiar with rates will be placed on the stand. I am not *au fait* on the rates.

Q. How long have you been living at Little Rock?

A. Fifteen years.

Q. What business are you engaged in there?

A. My principal business is banking. I am president of the First National Bank.

C. F. Penzel appeared before the Commission and having been duly sworn was examined as follows:

By **Mr. Roots**:

Q. You are another member of the committee that was appointed by the business men of Little Rock to call upon this Commission?

A. Yes sir.

Q. Will you please give your business?

A. I am principally engaged in the wholesale grocery business.

Q. Will you give them a little idea of the amount of business that you do in your grocery trade?

A. About \$800,000 a year.

Q. How long have you been in Little Rock?

A. Thirty-one years.

Q. I suppose you can tell us something about the city, its geographical position as to transportation lines, etc. Will you tell us something of its condition as to the natural transportation lines that were there thirty-one years ago?

The **Chairman**. I think we may take notice of those things. Those things are all as familiar to us as other facts in the geography are. I think we understand those matters without bringing them out in detail. Just assume that we do.

Q. Tell us what you know of Little Rock as a distributing center, which we claim it should be considered?

A. The natural advantages of Little Rock, by reason of the Arkansas River, and being centrally located, has given perhaps from the very outstart, the greatest commercial advantages to the city, and it is becoming the principal distributing point in the State.

Q. How as to its being affected by the Interstate Commerce Bill as a distributing center?

A. From the short experience we have had with the Interstate Commerce Bill, I can speak of our own business of course particularly, and from information from other houses, that in the last month our business has fallen off about 33½ per cent. Whether the entire falling off is attributable to the Interstate Commerce Bill I wouldn't venture to say, but from the best information I have from our traveling men who are on the road, a great portion of it has been by reason of competition from water points which before they could meet and they are not able to meet now.

Q. You speak of Little Rock. If it is bad for Little Rock is it good for all the other places in the interior?

A. I couldn't say that it was. Little Rock has accumulated some wealth and has concentrated a good deal of business there. One peculiar thing perhaps in the Southern States—I don't know whether it is so in the other States—the small country dealer sells the consumer, and is to a large extent dependent perhaps on the merchant who does a furnishing business. Those buyers are not able to go abroad where they have no standing and no credit. They are confined of course to the home trade. If the freight rates become so much higher to any of those trade centers, of course the merchant computes the cost by the first cost on the goods and his freight, and that is the way it goes to the consumer or smaller dealer. The increased freight rate necessarily enters in as a very important part of the cost price. Those consumers and smaller dealers whose commercial standing perhaps is insufficient, or who are dependent on credit at home, naturally have to pay more for their supplies, and in consequence they suffer as well as the trade centers. In other words, they are taxed more than they have been taxed heretofore.

Q. You have spoken as to mercantile interests. What manufacturing interests are you engaged in also?

A. I am engaged in a flouring mill there in connection with our business.

Q. How about the flour mill?

A. It is stopped entirely. We discharged our hands, and shut up the mill.

Q. Your friends, I know, are largely interested in lumber matters. How about the lumber interests, and how are they likely to be affected?

A. The lumber interest perhaps is something peculiar there. A good many small mills have started throughout this place, men without

very much capital, but who have sufficient lumber land, or sufficient money to start a saw mill—not sufficient capital to put in expensive machinery. Heretofore I believe the railroads have given concession enabling the small men to ship lumber into other States. There is a planing mill established there. Of course, if they have to pay the local rate now, and it is to be equally as high as from Little Rock—the same as from local stations—those small millers who have not got the means will be taxed whatever may be the difference in the freight rate, and in consequence, their profits will be that much smaller. It will crush out the smaller mills, and possibly build up the larger mills who have more expensive machinery.

Q. You have spoken of those interests in which you are directly interested. Do you feel that by asking for Little Rock this concession of rates you are thereby damaging the local rates?

A. As I stated before, the local points are largely dependent on Little Rock, for reasons that the trade of Little Rock is entirely confined to the State of Arkansas. I don't think we have a single merchant there who trades in any other State. Arkansas, as you know, is a thinly populated State. The towns are small, and while in some there are large buyers enough who can go abroad, the small buyers are not able to go abroad, and they suffer by it. Another thing perhaps will enter into the prosperity of our State, or to the injury of our place, and also to the injury of the producer. That is the cotton interest. Little Rock has this year received about 75,000 bales of cotton. Heretofore the railroads have been able to get a local rate out from Little Rock lower than from the way stations. Thus the producers or small dealers were able to pay local freight into Little Rock either by wagon or by railroad, and market their cotton there themselves, thereby saving all the commission, insurance, warehouse charges, etc. They go in and sell it and get their money for it right away and go off. I say they did not suffer any disadvantage in the freight rate, because the lower rates from Little Rock could be had, and they had the wagon transportation, or the river or the rail. If the Little Rock rates had to be equally as high as the local stations, those people are taxed whatever that arbitrary local may be into the city; or, if they don't want to stand that, they have to ship to some distant markets where they are exposed to all the charges of insurance, commission, etc., which they don't like, and are very often exposed to great inconvenience by not being able to get their money.

By **Commissioner Bragg**:

Q. From what point does Little Rock buy most of its goods?

A. In our line we have bought from Boston to San Francisco.

Q. It does a general trade with Boston, New York, Chicago, St. Louis and Memphis, does it?

A. Very little with Chicago, perhaps. I don't know as the Chicago market has ever entered into our territory to any great extent.

Q. Do you know what the freight rate is from Little Rock to New York on first class goods?

A. At the present rates since the law went into effect, I could not tell you. Prior to that we supplied ourselves very largely, fearing there would be quite a disarrangement in freight rates. My idea is that it is \$1.84 by one of the routes, partly water and partly rail.

Q. What route is that?

A. The Virginia & East Tennessee Air Line, taken by vessel to Norfolk.

Q. What is the Boston rate?

A. I couldn't say. I have not shipped anything from Boston. The old rates to New York were alike.

Q. Where did most of your cotton go last year?

A. I can only say by information. We don't handle any cotton ourselves at all. The principal cotton is brought there by agents or brokers, and has been shipped, I think, principally to the East. Some would be shipped to England.

Q. Do you know what proportion of the business went down the river, and what proportion of it went by rail?

A. I can't give you any information, because we are not engaged in that business. We don't handle a bale of cotton in our own business.

Mr. Roots. Seventy-five per cent of it went to the East by rail; about that.

Q. Do you trade much with St. Louis?

A. Some.

Q. What is the rate from Little Rock to St. Louis?

A. At present all rail \$1 per hundred.

Q. What is it to Memphis?

A. Seventy cents per hundred.

Q. What is it from Little Rock to Kansas City?

A. The rates I mentioned to you were on first class goods. There are no first class goods brought in from Kansas City. The only product we get from the West is grain, meal, flour and meat. Those are low class goods, fourth class goods, I believe, now. I believe the present rate on them is forty or forty-five cents; one line forty cents, and the other forty-five.

Q. Do you know what the rate on cotton was per bale from Little Rock to New York, last season?

A. No sir; I have no information about it.

Mr. Roots. The railroad company will have a traffic agent on the stand, and you can get that in detail.

By Mr. Weatherford:

Q. Please state if there are not several other committee men and merchants ready to testify, if there was time?

A. There are some others here.

The Chairman. Call any one whose testimony you deem important.

Mr. Weatherford. Their testimony will be substantially like his.

By the Chairman:

Q. What draught of steamers go up to Little Rock; what tonnage?

A. I couldn't give you anything about the tonnage of the steamers. That is something entirely foreign to me. We have at present a line running between Memphis and Pine Bluff. I believe they have several packets in Little Rock. We have one packet connecting with

those steamers. They intend to put some more steamers on under the present freight rates—according to the rumors I have heard.

Q. Do steamers run up there of a size corresponding to those on the Mississippi River?

A. We have no side-wheel steamers. The steamboat men claim that stern wheels are preferred to navigate that river. We had formerly very large sized steamers. I think one of the Arkansas River steamers took one of the largest loads of cotton into New Orleans that was ever taken into that port, some years ago.

Q. The largest sized steamers that run on the river, go up to Little Rock?

A. Stern-wheels; yes sir. The steamboats have not run very extensively on our river. Before we had any railroads there, we had large sized steamers running from Cincinnati, St. Louis and New Orleans.

Q. They can come up?

A. Yes sir.

D. Miller appeared before the Commission, and having been duly sworn was examined as follows:

By Mr. Weatherford:

Q. Please state where you live, the business you are engaged in and how long you have been there?

A. I live in Little Rock; I am the general freight and passenger agent of the Memphis & Little Rock Railroad; I have been there four years.

Q. Before the Interstate Law went into effect did you charge a higher rate for a short distance than a long distance, or not?

A. Yes sir.

Q. How does section four affect the making of these rates?

A. We have advanced our rates to competitive points to the basis of the local.

Q. Why did you not lower your local rates instead of advancing your rates to competitive points?

A. Because our earnings are not sufficient now to pay the interest on the cost of the property.

Q. Do these rates affect business going through these points?

A. Yes sir.

Q. What were your rates into Little Rock and Pine Bluff before this law took effect?

A. Our first class rate was fifty cents to both places from Memphis.

Q. Can you get any business to Pine Bluff at your new rates?

A. No sir.

Q. Does the same condition of affairs prevail to Devil's Bluff, and Newport, and White River, or not?

A. Yes sir.

Q. So that you can get no business at the new rates from any of those points?

A. Yes sir.

Q. Pine Bluff is on the Arkansas River, and Devil's Bluff and Newport are on the White River?

A. Yes sir.

Q. State whether or not they were very large shipping and distributing points where considerable business was done?

A. Yes sir.

Q. And under the present arrangement you can get no business at all there?

A. Only to Little Rock. We can get business to Little Rock.

By **Mr. Roots**.

Q. How has that affected steamboat rates?

A. They have all advanced the through rates.

By **Commissioner Walker**:

Q. You have advanced your rates?

A. Yes sir; to seventy cents now, whereas it was fifty cents before.

By **Mr. Weatherford**:

Q. Can you maintain your share of the Little Rock business against river competition now?

A. No sir.

Q. Will you state in general terms any other matter that occurs to you that would be beneficial in support of the petition to suspend the fourth section?

A. I don't think of anything else.

By **Commissioner Bragg**:

Q. Is there any competition at Little Rock between railroads, outside of steamboat competition?

A. Yes sir; there are three railroads there competing for the business, besides ours.

Q. Is there any competition between them at all?

A. Yes sir; there is competition from Kansas City and St. Louis, as against Memphis, for through business.

Q. Is that competition sharp between St. Louis and Memphis, at Little Rock?

A. Yes sir.

Q. Each line tries to get all it can?

A. Yes sir.

Q. Of that business?

A. Yes sir.

Q. Has the St. Louis & Little Rock Railroad advanced its rates since the Interstate Commerce Law went into effect?

A. Yes sir.

Q. At Little Rock?

A. Yes sir.

Q. I want to ask you a little something about the rates. What was the rate on a bale of cotton from Little Rock to New York, before the Interstate Commerce Law?

A. Seventy-eight cents a hundred pounds.

Q. What was it to New Orleans?

A. Forty-three cents a hundred.

Q. What was it to St. Louis?

A. Forty cents.

Q. What was it to Memphis?

A. Twenty-five.

Q. Was it the same to Boston as it was to New York?

A. No sir; five cents a hundred higher to Boston.

Q. Can you tell us about how many bales of cotton were received at Little Rock last season?

A. About 75,000 bales.

Q. Can you tell us about what proportion of that cotton was shipped by rail, and about what proportion of it by water?

A. It was all carried out of there by rail.

Q. Was any portion of it carried down to Pine Bluff to take a steamer, or down the river?

A. No sir.

Q. Do you mean the entire amount of cotton was carried out of there by rail last season?

A. Yes sir.

Q. The steamboats did not carry any of it? A. Not out of Little Rock.

Q. Can you tell about what proportion of it went by way of Memphis, and what proportion of it went by way of other lines?

A. About one third went by way of Memphis.

Q. How did the other two thirds go?

A. One third went through Arkansas City, and one third through St. Louis. It was about evenly divided.

Q. Where is Arkansas City situated?

A. It is about 165 miles south of Memphis on the Mississippi River.

Mr. **Roots**. Below the mouth of the Arkansas River.

Q. How did it get from Little Rock to Arkansas City?

A. By rail.

Q. Is Arkansas City situated on the Mississippi River, or on the Arkansas River?

A. On the Mississippi River.

Q. Near the mouth of the Arkansas River?

A. Yes sir. The boats carry no cotton out of Little Rock on account of the agreement. They agreed to take their cotton out at Pine Bluff, and leave Little Rock alone.

Q. There was an agreement between the railroad and the steamboats to that effect?

A. Yes sir.

Q. And the railroad would not take any away from Pine Bluff?

A. No sir.

Q. The agreement was that the railroad should have Little Rock, and the steamboats should have Pine Bluff?

A. And leave their local business alone.

Q. That was last season, was it?

A. Yes sir. They would come in another season and take the business.

Q. Has that agreement been kept up lately?

A. No sir.

Q. When did it cease to be observed?

A. The first of April.

Q. Last April?

A. Yes sir.

Q. They broke loose from each other then?

A. Yes sir.

Q. About the time the Interstate Commerce Law went into effect?

A. Yes sir.

By **Commissioner Schoonmaker**:

Q. How much cotton do you say is taken from Little Rock?

A. About 75,000 bales.

Q. How much from Pine Bluff?

A. Pine Bluff handles about 40,000 bales.

Q. Then the steamboats had the worst of it?

A. They were satisfied.

Commissioner **Schoonmaker**. They had to be, I suppose.

Mr. **Roots**. They won't get the worst of it now.

H. M. Cooper appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Roots**:

Q. Please state your business, what you manufacture, where your principal market is found, and what has been the result of the Interstate Commerce Law?

A. We are manufacturers of cooperage and cooper stuff. A large part of our product we have been shipping to San Francisco and California points, but since the Interstate Commerce Bill has gone into effect, the rates have necessarily been advanced so that our business is stagnant. I haven't shipped a car load there since the first day of April. The rate of freight from Little Rock to San Francisco has been fifty cents a hundred on staves, headings, etc. The present rate is \$1.40.

By the **Chairman**:

Q. Do you ship to intermediate points?

A. We ship to common points by railroad—to Los Angeles.

Q. Do you ship to points this side of the mountains?

A. No sir; not to any points this side of Los Angeles. We ship to points between Los Angeles and San Francisco.

Q. Then you were not paying rates to any points this side of California that were greater than the rates you paid there?

A. No sir.

Q. Was there anything in the law to prevent the arrangement you had from being continued?

A. I don't know that there is, but it is the fact that they have advanced from very low rate for a long haul; and cooperage and cooperage stuffs are a commodity that will bear a very light rate.

Q. What injures you is the advance in the freight rates?

A. It has stopped our business.

By **Mr. Roots**:

Q. Don't you understand that they had a higher rate to Arizona, and that the effect of the law was that they either had to reduce the rate to Arizona, or increase the rate to California?

A. I suppose that is the fact. I do not know, as I do not ship to those points.

By **Commissioner Walker**:

Q. They had a war of rates last year on the transcontinental roads, and so got the rates down to a very low figure.

A. Yes sir; the rates on the transcontinental roads were cut about a year ago. There was a war, and we shipped for about thirty cents a hundred. It was, I suppose, a rate that the railroads could hardly make anything at. It was a very low rate for a long haul.

By the **Chairman**:

Q. What have the rates been before?

A. We had been paying eighty-two cents, but they settled down to fifty cents. I suppose eighty-two cents is probably all that that class of goods would stand. I presume they are going out from Gulf Ports now, and seaboard ports by water routes.

By **Commissioner Schoonmaker**:

Q. You said the railroad officials told you they had necessarily advanced the rates to San Francisco?

A. I was so informed by the roads.

Q. Did the railroad officials tell you so?

A. Yes sir; it was so understood all over.

Q. Did they explain to you why they necessarily advanced the rates to San Francisco?

A. The intermediate points were having a higher rate, and the San Francisco rate had to be equal to the intermediate points.

INTER 8.

Q. They gave that reason to you?

A. Yes sir. It has some effect on our shipments to points in Texas on the Gulf.

O. C. Sharp, of Humboldt, Tennessee, and **G. B. Tyler**, of Owensboro, Kentucky, presented petitions from business men of their respective localities, and made oath to the truth of the statements therein contained.

At 7 P. M. the Commission adjourned until May 5, at 10 o'clock.

MEMPHIS, Tennessee, May 5, 1887.

The Commission met according to adjournment, **Commissioner Walker** absent.

J. T. Pettit of Memphis, appeared before the Commission and said:

Mr. Chairman and Gentlemen: As Chairman of the joint committee of our two exchanges, I have a petition and memorial which we wish to read to you, asking a permanent suspension of the fourth clause of the Interstate Commerce Law, so far as Memphis is concerned. If you will permit us we will read it. It will only take a few moments.

The petition and memorial were read,

By **Mr. Cummins**:

Q. Has that paper been verified by affidavit?

A. It has been sworn to by each member of the committee.

Mr. Cummins. Will that form of verification be sufficient, without putting the several signers thereto on oath before the Commission?

The **Chairman**. Yes sir. It is a very good form indeed.

R. F. Patterson appeared before the Commission and, having been duly sworn, was examined as follows:

By **Mr. Cummins**:

Q. State to the Commission what has been the effect upon the Memphis cotton market in the matter of the competitive rates on cotton to the eastern seaboard; whether it has been advantageous or disadvantageous to this point as a cotton market?

A. It has been a help to this cotton market.

Q. If in the readjustment of rates to what we call the long and short haul clause, so that no more is charged for any intermediate shorter haul than for any longer haul over the same line in the same direction, the charges for the carriage of cotton from Memphis to the eastern seaboard, should be advanced beyond what they now are, what would be the position of your market in that new condition of things?

A. It would affect us very disastrously, sir. It would force cotton that now comes to Memphis, either to the seaboard points, or to other points where it would strike a cheaper line of transportation.

Q. What would be the effect upon your river rates, if you knew, if the rail lines should be withdrawn from this competition for the eastern seaboard cotton?

A. I imagine they would be advanced very materially, as that was done on the 5th of April, as stated in our general petition. One lino did advance its rates nearly 100 per cent on the 5th of April.

A. Yes sir.

Q. There are no more middle men now?

A. It goes usually direct to the mills or to the Continent.

Q. That is pretty much true of the entire South, is it not?

A. Yes sir.

Commissioner Morrison. Mr. Stahlman, I would like to ask you a question. Do you take cotton out of Memphis on your road for the East?

Mr. Stahlman. Yes sir.

Commissioner Morrison. Is there any place east of here at which you charge more for carrying the cotton to New York or distant markets than you do from Memphis?

Mr. Stahlman. From all points on our line. We have considerable cotton produced on our line between this point and Paris. It is a cotton line from this point to Paris.

Commissioner Morrison. And you charge more for taking cotton from those points?

Mr. Stahlman. Yes sir. The same is true, I take it of the Chesapeake & Ohio and the Memphis and Charleston. They are all cotton roads.

Commissioner Morrison. General Patterson said that so far as he knew you did not discriminate in favor of Memphis at all?

Mr. Stahlman. In bringing cotton to this market as against another market.

The Witness. That was the idea.

Mr. Stahlman. In favor of Memphis as against New Orleans or St. Louis or Nashville.

Commissioner Morrison. The discrimination you make is in favor of Memphis when the cotton goes the other way?

Mr. Stahlman. Not particularly.

Commissioner Morrison. That is a matter of argument, I suppose. The fact still exists that you charge more from some points east of here than you do here?

Mr. Stahlman. The competitive forces of course have effect.

Commissioner Morrison. Now I understand General Patterson to say that if they evened up, so as to charge as much from Memphis as they do from those other points between here and Paris, that is what would destroy the trade or be injurious to it.

The Witness. Yes sir.

Mr. Stahlman. I would like to state the situation exactly. At Memphis, as General Patterson has stated, we can load 100 car loads of cotton a day. The railroads do not load it. It is loaded at the expense of the Compress Company. We put our cars in, and in less than an hour, or two hours we can pull a train load out. This cotton is compressed here. At intermediate stations it comes to us in dray lots, two or three bales at a time. Sometimes it takes a day to fill a car. We load the cars ourselves.

Commissioner Morrison. And the cotton is not compressed.

Mr. Cummins. And therefore it only takes half the quantity to fill a car.

Commissioner Morrison. Then the circumstances are dissimilar.

The Chairman. I suppose they might be so considered.

Commissioner Morrison. There is a great difference between compressed cotton and that
INTER 8.

that you pick up on the road. Do you carry any compressed cotton from these eastern points at a higher price than you carry it from Memphis?

Mr. Stahlman. I don't think there is a compress on the line of the road. They are building one I think at Decatur.

Commissioner Morrison. Then there is no case where the circumstances are similar.

Mr. Cummins. So far as my road is concerned, there is no compress on the line.

The Chairman. What is the relevancy of putting in these rates?

Mr. Cummins. They are the rates of the trunk lines east from Louisville, St. Louis and Cincinnati.

The Chairman. But what relevancy have they? I understand there is no point east of here that takes this compressed cotton that is received and sent forward, at rates higher than are charged here.

Mr. Cummins. That is true; but interior points often might want the privilege of milling in transit, as the expression was used here yesterday; in other words to carry to Louisville, compress and carry beyond. That principle might be invoked. It has never yet been invoked that I have learned of.

The Chairman. It is in view of a possible case that you introduce these things.

Mr. Cummins. Yes. If the principle is recognized in regard to grain, it might be applied to cotton.

The Chairman. If it is applied to cotton, it would apply to cotton picked up, say 100 miles from here, brought to Memphis and then taken back over the road?

Mr. Cummins. Yes sir.

Mr. Stahlman. I don't think we have got altogether the true inwardness of this thing. I think an examination of the rates of transportation will develop the fact—

The Chairman. What rates do you speak of?

Mr. Stahlman. The cotton rates.

The Chairman. The present existing rates?

Mr. Stahlman. Yes sir; and the basis upon which rates have been fixed heretofore. The cotton shipped from Memphis to intermediate points in some cases is charged more than to further points, it being a rule, of course, what cotton from local points—

The Chairman. Cotton shipped from Memphis to what intermediate point?

Mr. Stahlman. Some of the spinning points, or some of the Canada points.

Commissioner Morrison. In Georgia or anywhere.

Mr. Stahlman. I am not sure. I think the facts show it.

The Chairman. What intermediate points have you in mind?

Mr. Stahlman. For instance, any spinning point in the East nearer than New York, or Portland, or Boston.

The Chairman. Is it not the case that the charges to the New England points have been based upon New York, and are substantially the same?

Mr. Stahlman. Largely upon Boston.

The Chairman. They are the same, are they not?

Mr. Stahlman. In some cases they are higher than Boston.

The Chairman. Have they been higher at any point through which the road would take the cotton to Boston?

Mr. Stahlman. I am not prepared to say.

The Chairman. I would like to ask Mr. Ogden about that. He knows all about it.

Mr. J. R. Ogden. Generally the rates to New England points are the same as to Boston. There are a few exceptions where locals are paid, but that is the general rule.

The Chairman. Where there are exceptions, are they not in cases that are off the line?

Mr. Ogden. They are off the lines.

By Mr. Cummins:

Q. Is it not a fact, General Patterson, that practically all the cotton shipped from Memphis is compressed prior to shipment?

A. Oh, yes sir; nearly all, if not all.

By Commissioner Schoonmaker:

Q. What are the local charges at Memphis upon a bale of cotton including the compressing?

A. Do you mean from the time it arrives here until it is put on board of the cars to be shipped?

Q. Yes sir.

A. Including one month's storage here—that is the general rule—and one month's insurance—

Q. I was about to observe, if there is any detail to it you might make up a statement.

A. I have it made up now in a very few words. Under the present rate of compressing up to the first of September, it costs \$2.49 a bale. Under the new rule compressing will be reduced from the first of September to ten cents per hundred. It is now twelve. It will cost \$2.87.

By Mr. Cummins:

Q. That includes the factor's charges, commissions etc.

A. Everything it costs the planter to sell his cotton and put it on board the cars, including the compressing.

By Commissioner Schoonmaker:

Q. What is the population of Memphis?

A. I suppose 75,000; about that. We claim that.

By Mr. Cummins:

Q. I understand that the charges of the railway lines for cotton carried to Memphis include delivery to the warehouse?

A. Oh yes sir.

Q. And they pay the drayage into the warehouse out of that charge?

A. That is from the railroads. The railroads deliver it to the sheds, and that is the cost to the planter of selling his cotton and putting it on board of the cars.

By Commissioner Bragg:

Q. Is there much competition at Memphis between the steamboats and railroads lines?

A. I should say very sharp competition.

Q. About what proportion of the cotton brought to the Port of Memphis is brought here by steamboat?

A. I would say not more than one quarter. I am not positive about that. I should say there was three quarters brought in by rail.

Q. About what proportion carried from the Port of Memphis is carried by steamboats?

A. The proportion carried out is less.

Q. About how much less?

A. Less than one quarter. More than three quarters I would say is carried out by rail. The exact amount I am not able to say.

Q. Is there any competition at Memphis between the railroad lines themselves irrespective of the steamboat competition?

A. Oh yes sir.

Q. Between what lines?

A. I think all lines running east. The four lines running east are competing for business as between themselves. There is no pool here.

Q. What lines are there?

A. The Chesapeake & Ohio, the Louisville & Nashville, and the Memphis & Charleston are the principal lines, and the Memphis & Birmingham also.

Mr. Cummins. I would state to Mr. Commissioner Bragg that on pages 10 and 11 you will find those figures exactly giving the proportion of the cotton coming in and going out, and on what lines of road, and by what river routes; and showing what are the shipments; by what rail lines they go out, and from what direction by river.

By Mr. Stahlman:

Q. There is another large and growing interest here, the milling interest and grain interest?

A. That is growing up. There has been a large mill built here within the last one or two years.

Q. And the provision trade is quite large?

A. Yes sir.

Q. And the shipping trade in all classes of merchandise?

A. Very large indeed.

Q. The cotton business has a tendency to help that class of business, and that class of business has a tendency so help the cotton business?

A. Everything is based upon cotton. Without the cotton business here this city would go down.

By the Chairman:

Q. Does the Board of Trade publish an annual report?

A. Yes sir.

The Chairman. If you will furnish that, it will save the necessity of going into particulars. All the questions of details of business we can get a good deal better from such a report than in any other way.

Mr. Stahlman. The point I desire to elicit is this: That while the cotton business is the most important element in the business at Memphis, and while perhaps it may be said that the cotton business is not so seriously affected by the long and short haul provision of the Act, that the other business which adds materially to the City of Memphis, the provision business, the merchandise and other business that very materially aids Memphis in holding her trade and cheapening the articles sold here, which the people need who ship their cotton here, is largely affected under the provisions of the Act.

The Chairman. I do not make the suggestion to cut the witness off from his evidence, but only to say that so far as the statistics of business are concerned, we can get them a good deal better from that report than in any other way.

The Witness. I will take pleasure in sending you several copies.

W. W. Schoolfield appeared before the Commission, and having been duly sworn, was examined as follows:

By Mr. Cummins:

Q. How long have you been living in Memphis?

A. Thirty one years.

Q. What is your business?

A. Wholesale grocer and cotton factor.

Q. State to the Commission from whence you draw your groceries that you sell in this market; from what other markets you bring them to Memphis, and where you get them from.

A. We get them from New York, Philadelphia, Boston and New Orleans. Meats we bring from the northwest, provisions from different points, and flour which we handle quite largely we get our principal amount from Illinois; the largest amount of flour that we handle.

Q. Flour milling is a comparatively new industry in Memphis, is it not?

A. Yes sir; comparatively so.

Q. Is it not a fact, however, that flouring mills with a capital of several hundred thousand dollars have been erected at this place within the last few years?

A. Yes sir; we have one large mill here which has been erected within the last year, I believe, or year and a half. We had one previous to that not so large.

Q. Please state to the Commission whether or not the rates charged by the rail carrier lines and water carrier lines competing into this market, have been beneficial or injurious to the building up of a trade center at this point?

A. They have been largely beneficial.

The Chairman. Take that for granted.

Q. I will ask you if you know from actual experience in the past what would be the effect if the enforcement of the long and short haul clause should induce the rail carriers to advance their through rates, upon the water carriers' rates to those points; whether they would be advanced correspondingly or not?

A. I think it would be very disastrous to our wholesale trade. To get our freight rates we have all the railroads coming into competition for freights which we bring here, as well as the river.

The Chairman. You may as well take it for granted that if the water carriers had an opportunity to put up their rates they would do so to any extent they thought best.

Mr. Stahlman. May I ask if you will also take for granted the fact that the rates of Memphis on western produce are less than to intermediate points.

The Chairman. Oh yes sir; I suppose that is so. If you say it is so, that is enough.

Mr. Stahlman. Yes sir. And also they are less from Memphis to southern coast points.

The Chairman. Your statement to that effect is just as good as the statement of forty witnesses.

Q. In your business, is it not a fact that you come into daily contact with farmers and merchants through all the country tributary to Memphis?

A. Yes sir.

INTER S.

Q. In that daily intercourse with those people have you or not information direct and positive as to how they consider the local tariffs on these rail carrier lines into Memphis; exorbitant or reasonable?

A. There is a large number of them who have no complaints to make at all. The complaints, as a general thing, come from points that are noncompetitive that are close to competitive points.

Q. Is there not a general impression through the country that the rates are in themselves reasonable?

A. Yes sir.

Q. Is it not a further fact that the local rates for the carriage of merchandise into Memphis from the country tributary to it, and the supplies from Memphis to the purchasers, have been greatly reduced during a number of past periods?

The Chairman. That has been proved several times.

Commissioner Morrison. The price has been going down all along.

Mr. Cummins. We want to show we were keeping in good company.

By Mr. Stahlman:

Q. You supply with merchandise and provisions a large area of country tributary to Memphis?

A. Yes sir; our trade extends over a large territory.

Q. The local rates to such points are reasonable as compared with the local rates of railroads from other competing points, are they not?

A. Yes sir.

Q. If the rates to Memphis should be advanced what would be the result; it would result in an advance of the price of the products to the consumer or to the man who buys from you, would it not?

A. Yes sir; that would be the natural result.

Peter McIntire appeared before the Commission and, having been duly sworn, was examined as follows:

By Mr. Cummins:

Q. You are in business in Memphis?

A. Yes sir.

Q. How long have you been so engaged?

A. Our house has been established since 1846.

Q. Where does most of the sugar that your house handles here come from?

A. Principally from Louisiana.

Q. Do you handle that sugar from New Orleans sellers or from the planters direct?

A. I should fancy the principal portion of it was handled from the planters; shipments from the plantations.

Q. State to the Commission by what lines that sugar and molasses gets to you from the planters?

A. A large portion comes here by river and by rail. I suppose it is about equally divided.

Q. If you are advised, state to the Commission what would be the effect upon your handling of that sugar so received from the local planters, if the long and short haul rule should be enforced on the rail lines?

A. I think it would seriously affect the rail shipments. It would perhaps stop the entire shipments by rail if the rates were increased.

Q. Would that have any effect also upon your river rates?

A. Yes sir; I think they would be likely to advance, and probably it would affect the receipts by river.

Q. Is it not a fact that the sugar and molasses interest is of comparatively recent growth in this city; has it not grown to very much larger proportions in the last half dozen years?

A. Yes sir.

Q. Is not that due almost exclusively to the fact that the rail lines from Memphis penetrate that entire sugar growing country?

A. Yes sir; I think that has affected it.

Q. Please give us an idea as to the margin of profit on handling this business, so as to let us know whether any reasonable increase can be stood by this line of trade in the rate of freight; what effect would it have upon it?

A. Like all staples, it is handled on a very close margin, and in considering that we have recently erected large warehouses on the line of railroad which passes through the east bank of the sugar district on the upper coast, in order that we might afford to planters the benefits of our market and be enabled to handle the product in good shape promptly; and in that way they take advantage of the rail shipments on that side of the river. I think they have had a very satisfactory experience.

Q. The market has grown under this plan of dealing with it?

A. Yes sir.

Q. State where you market your sugar and molasses received from the Louisiana planters?

A. Principally to our large jobbers in the city. Of course we have trade at other points.

Q. In other States?

A. Yes sir.

Q. Even as far as Pittsburgh?

A. Yes sir; and Chicago.

Q. Tell us the number of cars per annum of sugar and molasses goods you are now handling?

A. Our general business in the three interests amounts to from twelve to fifteen hundred cars.

John L. Welford appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Cummins**:

Q. What is your business?

A. I am the manager of the Chickasaw Cooperage Company.

Q. About how much is your annual output at your factory?

A. It is about \$150,000.

Q. What effect on your business has the Interstate Commerce Act had; or if not already shown, what effect will it have so far as you may know?

A. Section 4, as I understand it, has been suspended as far as our trade now goes, and we have not felt the effect of it. We have the same rates that we had before. If those rates do not continue it would prohibit us entirely from shipping to the points that we want to reach.

Q. You would have to shut up shop?

A. Yes sir.

Q. You say your business amounts to about \$150,000 a year?

A. Yes sir.

Q. Is it not a fact that your industry has comparatively grown up in Memphis within the last few years?

A. Yes sir; about four years; a little over four years; between four and five years.

Q. Do you employ a large number of hands?

A. Yes sir.

Q. And furnish labor to a large number of people?

The **Chairman**. Yes; undoubtedly he does.

J. A. Godwin appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Cummins**:

Q. I believe you are interested in the dry goods trade of this town?

A. Yes sir.

Q. With what house?

A. B. Lowenstein & Brothers.

Q. That firm does a large wholesale and retail dry goods business here?

A. Yes, sir.

Q. About how much per annum?

A. In the neighborhood of \$3,000,000.

Q. Is it not in your department in that business to keep up with your freight rates on goods that you buy in eastern markets and ship here?

A. Yes sir.

Q. State to the Commission what effect if any, the adjustment of rates by rail carrier lines from New York and eastern points to Memphis has had upon your shipments of dry goods to this market?

A. As we understand it from the roads giving us a rate, the new rate, if the clause goes into effect—

The **Chairman**. To where; what rates do refer to?

The **Witness**. From New York to Memphis. The present rate as compared with the rate that will be given will increase the expense of our business about 1 per cent.

Q. That one per cent is now resting upon you under the suspension of this fourth clause?

A. I don't exactly understand that question.

Q. During a temporary suspension of the fourth clause by the Commission, you are still suffering to the extent of 1 per cent?

A. No sir; the suspension of the fourth clause gives us the rate we have had, \$1.02. We are now paying that rate.

Q. But prior to the suspension how was it?

A. Prior to the suspension they never put into effect the new rate at all.

Q. But the new rate was quoted to you?

A. Yes sir. The new rate as quoted to us will increase the expense about 1 per cent. The new rate is quoted at 35 per cent increase over the present rates.

By The **Chairman**:

Q. Who quotes such rates to you?

A. The Northern Dispatches; the Chesa-

peake & Ohio Road. That is the rate I figure on as being the coming rate.

By *Mr. Cummins*:

Q. Is it not a further fact that in your business you find it necessary already to commence making arrangements with water carriers by the sea ports?

A. We have already made some inquiry in that respect with that intention; yes sir. We have not made any arrangement yet.

Q. But you are preparing to ship your goods around that way?

A. We are preparing to make some arrangement if we can.

Harlow Dow appeared before the Commission and, having been duly sworn, was examined as follows:

By *Mr. Cummins*:

Q. How long have you lived here?

A. Thirty one years.

Q. What is your business?

A. I have been an active merchant all my life in Memphis and am now engaged especially in the coal oil business; nothing else except to publish Dow's City Directory of Memphis.

Q. You are not connected with the Standard Oil Company?

A. No sir; I have never been connected with the Standard Oil Company.

Q. You are a free trader?

A. An independent dealer in coal oil.

Q. I wish you would state to the Commission what effect, if any, the enforcement of this Interstate Commerce Law will have upon your coal oil trade?

A. I cannot say it would be disastrous because we have the river. It would cut off certain points almost entirely from business; very much reduce it and ruin it in certain points.

Q. Please illustrate it.

A. Since this Commission has been in session I have been to the C. & O. Depot and there are ten barrels of oil going to Dyersburg, Tennessee. Then also I have river communication, first by the Anchor Line of steamers, and next by the Forks of Deer River, a somewhat tortuous stream navigable for small boats which run nine months in the year. I shipped two weeks ago ten barrels to that point at \$1 a barrel, fifty cents on each boat. Nine months in the year the freight by rail is in round numbers \$2 a barrel. Ten barrels at the depot are now going there at that rate. The exact rate is a little less. I think \$4.85 I paid on that line two or three weeks ago when this boat was not running. I have orders to ship now, which I shall fill very soon. I have an order of fifteen barrels, and I should sell fifteen or twenty at \$1 a barrel. I have bills of lading from Marietta at fifty cents a barrel. That is upon the Ohio River, open six months in the year. The rate by rail has been since the 15th of last January, \$1.20. To guard against irregularities during the other months I had to bring here by rail twelve or fourteen barrels of oil and suffer the leakage on it—to avoid these railroad rates. For instance, I was in Covington the other day and the railroad rate there is \$1 a barrel by rail. At the five local points on that road, Covington, Ripley, Dyersburg and Newbern, the rate is first

class rate of freight, also including Dyersburg, amounting to a difference between first and fourth class rates, from sixty cents to \$1 a barrel at Newbern and Dyersburg is an intermediate point amounting to \$1.80. Of course, in selling to these intermediate points I have to lose my profit, or not sell. I will say this: On the roads which offer a lower class freight, for instance, fourth class by the Memphis & Charleston—were it not for those roads I would be driven from the business. That is open to all at fourth class rates of freight, while upon all the others it is first class to me; and I am prepared to substantiate it that the Standard Oil Company receives fourth class rates upon the Louisville & Nashville and the Chesapeake & Ohio Railroad.

Q. Is it not your well settled conviction that the life of your trade depends upon the Commission continuing the suspension of the fourth clause?

A. No sir; only under certain qualifications.

Q. State those.

A. I have stated certain facts here in regard to the river and rail communication. I care not what the rates are, high or low. All I want is, as the sun shines for all, the law for all. I know the Standard Oil Company don't pay those rates. Here is the river coming through. They received in the last month two or three hundred barrels of oil by river at those rates, while it is \$1.27 or thereabouts by rail. I know they carry the oil for the Standard Oil Company on these roads at fourth class rates. The ten barrels of oil going today on that road receives a rebate, and it is prohibited here, and the bills are made out in Cairo to avoid the law. I saw them on the road last Monday. I ship right along and am denied, and the rate here is paid in advance. I am prepared to show such documents as will establish that point.

Mr. Cummins. That is all I desire to ask this witness. (Laughter.)

By *Mr. Stahlman*:

Q. Are the points to which you ship and of which you complain all within the limits of Tennessee?

A. No sir.

Q. They are not in Tennessee?

A. No sir.

The *Chairman.* To what point do you address that inquiry? Do you want to go into an investigation of this Standard Oil matter now?

Mr. Stahlman. No sir.

The *Chairman.* Perhaps it would be better to take it up hereafter, if this gentleman is disposed to have it done.

Mr. Stahlman. I want to suggest in connection with that, as I have been doing heretofore—

The *Chairman.* It is not proper to go into that matter.

Mr. Stahlman. The Louisville & Nashville Railroad on all the business to which the gentleman refers, charges the same rate to the Standard Oil Company that it does to others.

The *Witness.* I am prepared to offer documents in contravention of that statement. I am prepared to offer them if you want them.

Mr. Cummins. There are a large number of gentlemen representing various interests in the commerce and trade of Memphis who are present in the room and whose testimony uniformly would be in corroboration of the statements to which you have already listened from these gentlemen who have appeared upon the stand this morning. I take it, however, to be unnecessary to consume your time further with listening to mere cumulative evidence, as that would be from every branch of trade and commerce here. In that view I will not call any of the other gentlemen to the stand.

The Chairman. Very well.

A. H. Moses appeared before the Commission, and, having been duly sworn, was examined as follows:

By Mr. Stahlman:

Q. Please give the Commission your place of residence, your business and the situation with respect to the matter we are now undertaking to investigate?

A. I reside at Sheffield, Ala., and am the vice president and general manager of the Sheffield Land, Iron & Coal Company, the promoters of that town. I appear to-day, however, as one of a committee of citizens appointed by the City Council of Sheffield to appear before this body. Two of my associates are still here and two others left last night, after remaining all day.

Q. Sheffield is located on the Memphis & Charleston Road?

A. Yes sir; and on the Sheffield & Birmingham Road and on the Tennessee River.

Q. The Louisville & Nashville Road is building a line to your town?

A. Yes sir.

Q. I will ask you flatly, are you for or against the enforcement of the fourth clause?

A. I have in my pocket a paper drawn by our committee which I think represents the views of the citizens, as far as we have been able to ascertain. We think we will be benefited by suspending that clause as to Sheffield.

Q. Are you all satisfied with the rates you are now paying?

A. I am not very familiar with the details of the rates. My line of business does not bring me in contact with them.

Q. That petition practically represents the sentiment of your people, does it not?

A. I think it does. Our committee were unanimous, and it was a very representative committee.

John Atherton appeared before the Commission and, having been duly sworn, was examined as follows:

By Mr. Stahlman:

Q. Please state to the Commission where you reside and what interests you represent in coming here?

A. I live in Louisville and have distillery property on the Knoxville Branch of the Louisville & Nashville Railroad, forty-five miles south of Louisville. I came here as a manufacturer, and also in a representative capacity, having been requested to come by a large number of citizens of Louisville as signers to petitions which I have in my hand. The petitions

were circulated among the shippers of Louisville in duplicate. I will say in explanation that it was not intended that the petitions should be circulated as petitions generally are, but to those interests that were large shippers and from the character of their business would be likely to feel the greatest amount of interest in this subject. One other point, if the Commission will pardon me a moment. The petition is very short, and simply confines itself to asking the permanent suspension of the fourth section in behalf of the Louisville & Nashville, and the Chesapeake, Ohio & Southwestern Roads, and then expresses the general judgment that it ought to be suspended throughout the country. There were no reasons inserted in the petition, thinking probably it would be permitted by the honorable Commission that the views that they entertain very generally on that subject, as well as such individual views as might result from individual experience of its merchants, might be stated. I can state them in a very few moments, if it is the wish of the Commission. They feel, so far as they expressed themselves at the meeting which was held—which was pretty largely attended by the signers to that petition—that the laws of competition which have brought about the network of railway and water transportation, will adjust the rates from time to time as the business necessitates, and as the growth of the different terminal points require modifications of those rates.

The Chairman. It might be well enough to say to you that we do not understand we have any power to suspend this law through the whole country. All your testimony bearing upon that question would be somewhat out of place. Our power is only to examine cases that are supposed to be exceptional. It is just as much obligatory upon us as it is upon any railroad company or private citizen.

The Witness. That was fully understood. I presume that part was inserted on account of the fourth section containing a clause that it should be suspended in such cases as were within the discretion of the Commission.

The Chairman. We have heretofore said to parties who wanted to bring before us their views in regard to the general policy of that provision as applied to the whole country, that that was something we could not look into at all.

The Witness. I fully understood that after we came up, but of course it was too late to change the petition that was drawn there. With reference to the business in the South, where a large amount of the jobbing business of Louisville is done, they of course feel very much as has been stated by a large number of witnesses here, that they were compelled to have lower rates to water competitive points in order to carry on their business; and of course they feel that it was a contest between the increase of those rates or the lowering of the local rates; and in the judgment of our people generally who are familiar with the interest of these railroads, it was not believed that it could be accomplished by a lowering of local rates, and consequently they felt it would result in an advance of through rates which would deprive them of a large amount of their Southern business. It is a considerable manufacturing

point, and the manufacturers are generally uneasy about orders for business.

By Mr. Stahlman:

Q. In so far as it applies to your particular business and the roads that have applied for relief under this section of the Act. You are a large consumer of grain, are you not?

A. Yes sir.

Q. How many bushels?

A. We have used as high as between five and six hundred thousand bushels; last year about three hundred thousand, and the year before that three hundred thousand.

Q. You are located at a local point on the Louisville & Nashville Railroad?

A. Yes sir.

Q. The product manufactured from this grain is shipped quite largely to points south of you?

A. We ship considerably to points south of us, and also to all points in the United States. To New Orleans we make a shipment and to Texas and southern points on the Louisville & Nashville Railroad and other roads.

Q. It is true in your case although you are located at a local station, that the rates to the longer points are made less than to intermediate points, is it not? For example, the rates to New Orleans are less than to Montgomery?

A. Yes sir.

Q. And it is the same way with the South Atlantic coast. The rates to Charleston are less than to Augusta?

A. Yes sir; that is true. We don't make as many shipments of freight there as in other directions, but, generally speaking, that is the situation.

Mr. Cummins. I have here petitions from some two hundred or more merchants and business men of Louisville. I will ask the witness to look over the list of names and state to the Commission whether those are the representative men of the trade of that city.

The Witness. (After having examined the petition.) I will state in answer to the gentleman's question that I recognize the names of nearly all the signers of this petition, living in the City of Louisville, as prominent business men and shippers.

Q. You have petitions from local points on the line of your road?

A. Yes sir; I have petitions from a great many; in fact, I will say the important local stations along the line of the Louisville & Nashville Railroad, as far south as Bowling Green, and as far north on the Knoxville branch as the Tennessee state line. I recognize the names of signers to all of those petitions, or almost all, as men I know personally.

Q. About what percentage of the business interests of Louisville have affixed their signatures to the petition asking for this relief?

A. I should say, taking the business men who ship long shipments, what might be called outside of the local territory around Louisville, probably 75 per cent of the heavy business that is shipped on what might be termed a long haul rate.

Q. Was there an effort made to get all of them?

A. No sir. The meeting was called and composed principally of heavy shippers who

INTER S.

ship beyond the immediate locality to distant points.

George Gaulbert appeared before the Commission and, having been duly sworn, was examined as follows:

By Mr. Stahlman:

Q. You are a resident of Louisville?

A. Yes sir.

Q. What is your business?

A. Merchant and manufacturer.

Q. What branch of manufacturing?

A. White lead and paint.

Q. You have a pretty large business in the South?

A. Yes sir; quite a considerable business.

Q. Do you have any business with coast points and Gulf points?

A. Yes sir; to the Gulf coast I have considerable trade.

Q. Your rates to the intermediate points are higher than to those points?

A. I think so; yes sir.

Q. Is the competition pretty strong at the Gulf points?

A. Yes sir; we come in competition with both eastern and western markets.

Q. And the rates, as fixed, are practically what you need to enable you to meet the competition, are they not?

A. Generally so; yes sir.

Q. You don't think the City of Louisville has been discriminated against in favor of any other city?

A. Not that I know of.

Q. Do you import any of your paints or oil?

A. We do some importing; yes sir.

Q. The rates are very low, and competition fixes very low rates for you at times?

A. Yes sir; we usually get a pretty low rate.

Q. Have you made any shipments or received any consignment on which the rates were low? If so, please state what were the forces or elements that made the low rates?

A. We have recently had a rate of twenty-five cents, I think out of Liverpool to Louisville by the Chesapeake & Ohio Road, which was made in competition. We have been formerly making our shipments by way of New Orleans and bringing them up in that direction; but they gave us a rate to compete with the roundabout way they bring it in from Liverpool.

Q. The rail competition at the Gulf ports is getting to be so strong against the water competition that the rail lines coming from the easterly direction are obliged to reduce their rates to meet it

A. I think so; otherwise they would ship by New Orleans.

Frank Hartwell appeared before the Commission and, having been duly sworn, was examined as follows:

By Mr. Stahlman:

Q. You reside in Louisville?

A. Yes sir.

Q. What is your business?

A. Grain dealer and shipper.

Q. You ship to Southern points?
 A. Yes sir.
 Q. Your rates to distant points are lower than to intermediate points?
 A. Yes sir.
 Q. What proportion of your business goes to distant points, say coast points?
 A. We have shipped recently very little to coast points.
 Q. Notwithstanding the rates are very low to coast points, you are not able to compete successfully?
 A. We are not, sir. The rates are lower to coast points than to other points we are in the habit of shipping to.

Horace Pashaw appeared before the Commission and, having been duly sworn, was examined as follows:

By **Mr. Stahlman**:
 Q. You reside in Louisville?
 A. Yes sir.
 Q. What is your business?
 A. Wholesale flour dealer.
 Q. Do you ship at all to the South?
 A. Yes sir.
 Q. Your strongest competition is at the coast, and points tributary to the coast?
 A. Yes sir.
 Q. Your rates are lower to the coast than to the intermediate points?
 A. Yes sir.
 Q. Are you selling much to coast points?
 A. No sir; comparatively little.
 Q. You would be willing to shade your profits, in order to sell, if you thought that would induce trade?
 A. Yes sir.
 Q. Notwithstanding your willingness, and notwithstanding the low rates, you are able to do very little business?
 A. Yes sir.
 Q. The same applies to Mobile, Pensacola, and New Orleans?
 A. Yes sir.
 Q. Does not the water competition also affect you at Montgomery and Selma?
 A. Yes sir.
 Q. And the short route through Vicksburg down the Mississippi?
 A. Yes sir.

S. Zorn appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Stahlman**:
 Q. You are a resident of the City of Louisville?
 A. Yes sir.
 Q. Engaged in the grain business?
 A. Yes sir.
 Q. You ship largely to the South?
 A. Yes sir.
 Q. Are you doing much business at coast points?
 A. Very little this season.
 Q. The rates to coast points of course are less than to the interior?
 A. Yes sir.
 Q. When you had business at the coast did you not shade your prices?
 A. We generally sell lower there than at any other point.

Q. The same applies to Gulf points, Mobile, Pensacola, and New Orleans?

A. Yes sir.
 Q. You have competition to meet at Montgomery, at Vicksburg, etc., by the Alabama and Mississippi Rivers?
 A. Yes sir.
 Q. And at Selma also?
 A. Yes sir.
 Q. I will ask you to state if you think the Louisville & Nashville Railroad favors you above any other shippers particularly, or discriminates in your favor or in favor of the City of Louisville against any other city?
 A. The Louisville & Nashville Railroad never favored me that I know of.

Charles Ballard appeared before the Commission, and having been duly sworn was examined as follows:

By **Mr. Stahlman**:
 Q. You reside in the City of Louisville?
 A. I do.
 Q. What is your business?
 A. Manufacturer of flour and corn meal.
 Q. Your trade is largely in the South?
 A. It is.
 Q. You have pretty strong competition in your business?
 A. Yes sir.
 Q. Please explain the extent of the competition at the Gulf and coast points, and points tributary or immediately in the territory tributary.
 A. The competition has been so strong that we have ceased to solicit business at coast points.
 Q. You could not sell anything there at the present rates, even if you sold it without a profit, could you?
 A. Owing to the quality of our goods, we sell a little, of course, when they want good flour; but we sell very little.
 Q. You meet your competition in that way, do you?
 A. No sir; we don't attempt to meet competition at all at coast points.
 Q. What points sell flour against you, in that country?
 A. To coast points our competition is principally from points which reach the coast through Baltimore.
 Q. Are there any milling interests at Richmond, Virginia?
 A. A slight one; yes sir.
 Q. You have a good trade in the interior, where the rates of transportation are higher, have you not?
 A. Yes sir; in the Carolina territory we have.
 Q. Generally speaking, your competition is very strong?
 A. Yes sir; it is very strong.
 Q. How do you make any money with all the competition you have? Please explain to the Commission.
 A. By the quality of our goods and the magnitude of our output.
 Q. You make good goods and you make plenty of them?
 A. We attempt to run forty-five weeks in the year, night and day; and of course running

night and day the relative cost of production is very much lower.

Joseph LeCompte appeared before the Commission and, having been duly sworn, was examined as follows:

By **Mr. Stahlman**:

Q. Please state your place of residence.

A. Lexington, Kentucky.

Q. What is your business?

A. I am a merchant miller.

Q. You have a business in the South?

A. Yes sir.

Q. It requires lower rates from your point to coast points than it does to intermediate points, does it not?

A. Yes sir.

Q. I believe you have no water competition at Lexington?

A. No sir; we have not.

Q. The competition, then, in your business arises from competition between markets?

A. Competition between markets.

Q. And you have rail competition to the South?

A. Yes sir.

Q. Two lines?

A. Yes sir; we could have three lines.

Q. One of the lines between Lexington and Chattanooga is considerably shorter than the other, is it not?

A. Yes sir; very much shorter.

Q. Under the fourth section of the Act, if the rate should be fixed to intermediate points not higher than to terminal points, would the Louisville & Nashville Railroad, and the Nashville, Chattanooga & St. Louis Road be in the position of being compelled to reduce the rates for at least one hundred miles of its road, being that much more intermediate than the shorter route?

A. I don't understand the question exactly.

Q. The Louisville & Nashville Road from Lexington to Chattanooga is ninety-four miles further than the Cincinnati Southern from Lexington to Chattanooga?

A. Yes sir; and the point is that they would have to haul it that ninety-four miles for the same rate.

Q. And reduce the intermediate rates for ninety-five miles more than the other road would be obliged to do?

A. Yes sir.

Q. You have competition between Cincinnati and Lexington, have you not?

A. Yes sir.

Q. How many railroads?

A. Three.

Q. Is Lexington a pretty good business point?

A. It is a fair business point, situated right in the center of the blue grass region.

Q. How long have these competitive rates been established at Lexington?

A. Something like about five years.

Q. You have competition from the East to Lexington, too, have you not?

A. Yes sir.

Q. What lines?

A. The C. & O. and L. & N.

Q. Does the Cincinnati Southern, or the Cincinnati, New Orleans & Texas Pacific also run from Cincinnati to Lexington?

ENTER S.

A. Yes sir.

Q. And connect with the eastern lines?

A. Yes sir; there are three. The other two are the strongest competitors.

Q. What effect do you think the advance of rates to and from Lexington would have upon the general business of Lexington, including your own business?

A. I think it would have an injurious effect. That is not only my private opinion, but it is the opinion of the whole of Central Kentucky, Lexington, and of the neighboring towns. They had quite a mass meeting in Lexington, and appointed a delegation to attend this Commission, and for one reason or another they couldn't come; but I have brought petitions, not only from Lexington, but from neighboring towns that were sent in there to be sent down by the committee. Almost every one of those signers I know personally, and nearly all from the neighboring towns I know.

Q. Giving Lexington local rates would be very disastrous, in your opinion?

A. It would ruin the manufacturing that is now going on there and growing up.

Q. In which a large amount of money has been invested?

A. Yes sir: Lexington has improved very much in the last five years, especially since it has had railroad competition; since the C. & O. and Southern Road came through and gave us competition between the railroads.

Q. Your people do not think they ought to be deprived of the competition they have?

A. No sir; we have spent our money to get competition and we think we ought to have the benefit of it.

Q. How much money did Lexington spend in that way?

A. It spent over a million dollars.

By **Commissioner Schoonmaker**:

Q. What is the population?

A. 26,000.

George W. Decker appeared before the Commission and was duly sworn.

The **Chairman**. I am handed a petition with your name subscribed to it, and coming from Newport, Arkansas. I understand you desire to make some statement in regard to that petition. Please do so.

By **Mr. Cummins**:

Q. Tell the Commission what carrier lines your town has the advantage of?

A. We have the Iron Mountain Road, the Batesville & Brinkley Railroad, which connects with the Memphis & Little Rock, and we have the White River.

Q. So that you have two railroad lines and one river line?

A. Yes sir: that is with our eastern connections. We have the Batesville Branch of the Iron Mountain, but that does not enter into our business here at all.

Q. The Iron Mountain Road is a branch of the Missouri Pacific system and runs from St. Louis through your town to Little Rock?

A. Yes sir.

Q. Over the Batesville & Brinkley line you connect with the Memphis & Little Rock?

A. Yes sir.

Q. The White River runs south past your

A. K. Ward appeared before the Commission, and having been duly sworn was examined as follows

By **Mr. Cummins**:

Q. You live in Memphis?

A. Yes sir.

Q. What is your business?

A. I am secretary of the Memphis Fertilizer Company.

Q. Tell the Commission where it is you get the materials that you make into fertilizer?

A. The larger portion of it we get from Charleston. We get some chemical ingredients from New York.

Q. You make up the goods that you manufacture here in Memphis?

A. Yes sir. We get our cotton seed oil, part of it, that enters largely into the commercial fertilizers, from our home market.

Q. To what points do you sell that product?

A. The best portion of our trade is east in Connecticut and Massachusetts.

Q. What is the average annual value of the output of your factory?

A. We sell from six to eight hundred car loads.

Q. Tell the Commission the effect, if any has been felt by your trade and manufacture, under the working of this Interstate Commerce Act?

A. It has shut up our factory, sir. We had a contract with a Connecticut firm for a large amount of commercial fertilizers, which we didn't get filled before this bill went into effect. The contract was based upon a given rate of freight, and the goods were to be delivered in Connecticut. After this bill went into effect, the rate of freight was advanced to such an extent that we lost money by shipping the goods.

By the **Chairman**:

Q. Advanced where?

A. Advanced to eastern markets from Memphis.

Q. Where was the advance?

A. The advance was made by home companies.

Q. Beyond the Ohio River?

A. Yes sir.

The **Chairman**. We are not investigating that.

Mr. Cummins. That may be; but it shows the effect of the advance and how these carrier lines feel with regard to it—

The **Chairman**. We have nothing to do with that case and cannot have anything to do with it in any way. If the railroad companies over there comply with the law we have no jurisdiction. The investigation here should be confined to matters this side of the Ohio River.

Mr. Cummins. That is true; but it seems to me to be an element to be considered with regard to the effect of this law if it should be enforced upon the general trade and commerce of Memphis, when one very large industry has been suppressed.

The **Chairman**. They have a perfect right to do it over there, and we cannot interfere.

Mr. Cummins. I grant you that. It might not give this particular industry relief, but it

throws light upon how the workings of this law affect all our commerce.

The **Chairman**. We are not inquiring into the general working of the law. It is to be enforced. It is only a question of the suspension this side of the Ohio River. If the enforcement of the law north of the Ohio River destroys this man's industry, that is a thing very greatly to be regretted, but it is something we have no sort of control or influence upon; and no order we can make can influence it. We cannot inquire into it. It is not a matter under investigation before us. If they have adapted their rates there to the law, and it has an injurious effect upon this man, that is something we cannot help. If it has an injurious effect upon the City of Memphis, it is something we cannot help.

Mr. Cummins. I will try to discuss that a little further on, and I hope with better success.

The **Chairman**. Very well; if you want to discuss it, you may do it upon an assumption of the facts as you understand them to be.

Mr. Stahlman. There are three questions which I would like to determine before we go any further. One is whether or not in the judgment of the Commission, the application made by the Louisville & Nashville Railroad for relief under the operations of the fourth section of the Act is sufficiently explicit in this: That the special application for relief does not sufficiently set forth—whether it would be necessary to go into any further detail—whether we cannot undertake to elicit by proof the special application to the particular relief sought. I take it the petition is quite sufficient in that respect.

The **Chairman**. We have raised no question upon the form of the petition.

Commissioner Morrison. If we find it necessary to raise it afterwards, we will give you notice.

Mr. Stahlman. I take it you desire to take the testimony of any one who may be opposed to the relief sought by the railroad companies. I would like to ask if the Louisville & Nashville Railroad will be permitted to file testimony in the form of affidavits covering the cost of operating the road, the grades and all other facts incident to the operations of the road, and also an affidavit covering the general business of the road, the earnings, operating expenses and matters of that character.

The **Chairman**. I suppose you make an annual report. That is full enough upon all such matters.

Mr. Stahlman. I think not as between the local and through business. I don't think it is quite sufficiently explicit.

The **Chairman**. We have no objection in the world to your handing that in. **Mr. Cummins** can do the same if he desires.

Mr. Cummins. I am prepared to present it orally, if you will hear it that way.

The **Chairman**. I would rather you would put it in writing.

Mr. Stahlman. The Commission has been exceedingly patient with me. The Commission understands why patience with me has been

their statements, I would like for them to state the facts as to what the competition is, how far it is actual and how far it is sharp at points like Atlanta, Birmingham and other points where there is no water competition.

Mr. Stahlman. I was going on to take up all of those points, Birmingham, Montgomery, Chattanooga, etc., and to show how they became commercial centers. That was the object of the investigation.

Commissioner Bragg. I would like to have them further state how far the rates made by the rate committees of the Southern Railway & Steamship Association control competition, if at all, and how far competition controls those rates. I want it to be in the record.

Mr. Stahlman. Yes sir.

Mr. Cummins. In that same connection: You have upon your desk the names of half a dozen or more technical experts on behalf of the road I represent, the Louisville, New Orleans & Texas, and the names of witnesses on behalf of the Chesapeake & Ohio. We are prepared to present that testimony orally to the Commission at this session, or can present it in the form of written affidavits or depositions if the Commission prefer to have it in that shape.

The Chairman. Anything of the nature Mr. Stahlman proposes to bring out, you can hand in, in the same form.

Commissioner Bragg. We want all the statements sworn to.

Mr. Stahlman. Certainly.

Mr. Cummins. I was out of the room when Mr. Stahlman made his statement. Lest I may be mistaken in my understanding, I will state that my testimony will go to show the cost of operating the road, its capital cost, its actual money cost, what portion of its total earnings are derived from through and what from way business; the respective cost of handling in proportion to the amounts handled of through and way business; how the rates are thus adjusted, and how, on these lines, water competition is directly met and directly felt.

The Chairman. Very well. Let me say one thing in this connection. It must be apparent to you that the words "through and local business" have been used here in very different senses. When you use that term, be sure that you explain, so we shall not be misled by a different use.

Mr. Cummins. I will try in every case to be explicit; to have the witnesses state the grounds on which their opinions rest.

The Chairman. We shall be glad to have it all.

Mr. Cummins. I was handed, on yesterday a petition by Mr. Ryan, representing certain coal interests in Alabama. I expected to call him yesterday when Col. McHenry and Mr. Moores were on the stand and in the same connection. It is a petition that sets out in full their business, and the ground on which the competing carrier lines came into that territory. I have also received this morning from Eddyville, Kentucky, a local station on the Chesapeake & Ohio, a petition similar to those presented on yesterday from other non-competitive points on that line of road. I have also a petition signed by some twenty

persons and sworn to by one of the signers, representing, I might say, the entire commercial interests of the town of Greenville, Mississippi, which I desire to have filed as the petition from the merchants of Baton Rouge was filed yesterday, in support of the petition of the Louisville, New Orleans & Texas Railway Company which is pending before you. In that same connection, the witness, Mr. Mitchell (whom I introduced yesterday evening, the general freight agent of the Chesapeake, Ohio & Southwestern Railroad, a little bit out of the regular order of proceeding, so as to prevent any lapse of time) made one or two mistakes with regard to the figures which he gave the Commission, and which he desires to have corrected.

The Chairman. Very well.

Mr. Cummins. I have the corrections, and will hand them to the stenographer.

The corrections are as follows:

Coal, 208,127 tons.	Revenue per ton per mile,	.650
Local, 255,906 tons.	Revenue per ton per mile,	2.165
Coal and local, 464,033.	Revenue per ton per mile,	1.84
Through freight, 281,539.	Revenue per ton per mile,	.669

Mr. Stahlman. Conforming to the custom when those opposed to the applications have given their testimony, we should like to put in evidence something in rebuttal. I want to say now that in case the river question is not raised here in opposition, we shall ask, and be glad to have permission, to take up that question as to the relation of the railroad and the river, and will undertake to file with the river people a copy of such testimony as we may desire to file with the Commission.

The Chairman. We cannot, of course, assume to know what will be the course of the examination of witnesses in this case until they come forward. You will have the same opportunity to introduce evidence in rebuttal, if it should become necessary. Do we understand now you are through with your case?

Mr. Stahlman. Yes sir.

The Chairman. Then we will proceed to take up the evidence that shall be offered in opposition to the petitions that have been presented to us for a suspension. I hold in my hand a paper from the Board of Trade of the Town of Ackerman, Choctaw County, Mississippi, in the nature of a remonstrance against the granting of the orders prayed for. The facts are stated in some detail. The petition will go upon our files for consideration with the other documentary evidence. I have also a similar paper from a considerable number of persons in Paducah, Kentucky, residents of that city, who represent themselves to be large business dealers at that point. This paper also will go upon our files.

Are there any parties here desiring to produce witnesses to be examined orally in opposition to these applications; or does any person desire to give evidence in opposition? Parties representing the transportation interests upon the river inform us that they prefer to put their testimony and their arguments in print, and submit them to us at Washington. It is their right to do that if they prefer that

abandoned, we lost the landing at Port Gibson by the river, cutting through, and it threw the terminus of this road nearly four miles from the river. In high water the boats could come up there; but in the ordinary stage or a low stage of water, nothing but a very light boat indeed could come up there. It necessitated hauling it in wagons, or when we could run a light boat, with barges, putting it on barges and carrying it down to the landing.

Q. That change rendered the further operation of that line of road impracticable, and it was abandoned?

A. Yes sir; and this change necessitated in the carrying of freight increased the charges for carrying it.

Q. That same condition of things continued with regard to the river channel, did it?

A. Yes sir; only worse. The boats can hardly get in there at all, even at high water.

By Mr. J. W. Bryan:

Q. What is your occupation?

A. Land commissioner of the Louisville, New Orleans & Texas Railroad.

Q. That is the railroad that passes through Port Gibson?

A. Yes sir.

By Mr. Cummins:

Q. Do you think the truth of the statement you have made in response to the questions put to you, is affected at all by the fact that you are the land commissioner—

The Chairman. You need not ask that question.

Charles W. Drown appeared before the Commission and, having been duly sworn, was examined as follows:

By Mr. Bryan:

Q. You have heard the testimony of Mr. McGinnis in regard to the rates on cotton?

A. Yes sir.

B. You are connected with an association of steamboat men in New Orleans, I believe?

A. Yes sir; secretary of the Steamboat Association.

Q. What trade do they represent?

A. All the boats running to New Orleans.

Q. (Handing letter to witness.) Did you receive that letter?

A. I did.

Mr. Bryan. Will you please read it?

The witness read the letter.

By Mr. Cummins:

Q. Do you mean to state of your own knowledge the facts set forth in that letter to be true?

A. I do sir.

Q. You say those statements are true?

A. I say that Mr. Baldwin's letter states facts that I know ten or twelve years ago to have been true, because I was in that trade myself.

Q. Let us see what those facts are that you know to be true. State them.

A. That the road from Port Gibson ran not from Port Gibson to Grand Gulf, but it guaranteed a through rate \$1.50 a bale. The boat received seventy-five cents, and the railroad seventy-five cents. That state of affairs existed in 1875, and there is no reason to believe that there was any change since. In fact, I

have evidence to show that there have been no changes since.

Q. Where do you reside?

A. In New Orleans.

Q. And your interests are with the steamboat lines?

A. Yes sir.

Mr. Cummins. I think it right to correct a misapprehension. I should have done it in New Orleans when Mr. Bernhimer was on the stand. I think it my duty to do so—my duty to myself and to the other gentlemen also. The impression seems to exist among those people that I said before the Commission in Washington that they were getting their cotton carried now at a rate less by \$1 per bale than previous to the building of the Louisville, New Orleans & Texas Railroad. If I made such a statement, I was unconscious of it; and I think the stenographer's notes will bear out my recollection that I said no such thing; but only that they were getting their cotton carried at a less rate today than prior to the building of the Louisville, New Orleans & Texas Railroad. That information I got from the old superintendent of that line of road, Mr. McGinnis, and my statement was based upon that information.

I have examined the remonstrance by some of the citizens of Paducah against granting to the Newport News & Mississippi Valley, a lease of the Chesapeake, Ohio & Southwestern, any further suspension of the fourth clause. I can only say that the people there seem to have some little difference of opinion among themselves.

The Chairman. Are you going to take any testimony?

Mr. Cummins. No sir; a counter petition is already on file from a much larger number of the people of that town.

The Chairman. We understand then there are no further witnesses to be called.

Mr. Finley. There is a petition before you on behalf of Shreveport. The railroads and the parties presenting the memorial from Shreveport have given their testimony. The river interests were present at the session in New Orleans and have been present here. If it is their intention to give further testimony in writing, we would like to know it, and we would like to be furnished with copies.

Mr. Drown. That permission is granted. I will take pleasure in furnishing you with a copy of it.

The Chairman. Gentlemen, we seem to have concluded our business here. I think I may safely say on behalf of the Commission, that we have had a very agreeable and a very useful session. The testimony has been presented clearly, distinctly, and I may add rapidly on behalf of the parties; and I think we have received from it a great deal of valuable information. As we come to examine it with care, I trust it will conduce to a proper conclusion in the premises.

I have nothing further to add but to declare now that our session at this place is closed.

The Commission thereupon, at 12.15 P. M. adjourned.

advantage of their States and to the injury of the general business of the country which influenced Congress as much, or more than any other cause, to create and establish the Interstate Commerce Commission.

Mr. Depew has also explained in his testimony, how the steamers plying the Mississippi River, formed combinations with the Memphis & Charleston Railroad, which crosses the line of the Mobile & Ohio Railroad at Corinth, and the Kansas City, Memphis & Birmingham Railroad which crosses the line of the Mobile & Ohio Railroad at Tupelo, Miss. Such combination in both cases fixes the rate at Corinth and Tupelo, Miss.

The extent of the serious competition the Mobile & Ohio Railroad encounters from one end of its line to the other, both by water and rail, has been clearly and intelligently placed before the Commission by a map, which was made a part of Mr. Depew's testimony.

Mr. Depew has also very explicitly explained that if the Mobile & Ohio Railroad Company should attempt to readjust its rates between the noncompetitive and competitive points on its line with the view of putting them on a basis of something more like equality, by lowering the noncompetitive rates and raising the competitive rates, it would be equivalent to abandoning all competitive business. The Mobile & Ohio Railroad Company can only secure business at competitive points on its line at present rates by reason of the fact that the Commission has given it authority under temporary suspension to meet such competition.

Mr. Depew has specifically and positively testified that the Mobile & Ohio Railroad Company cannot afford to lose any of its business or revenue, without being forced into bankruptcy.

In respect to the relative cost of transporting and delivering local and through freight, we call the attention of the Commission to the testimony of Colonel Talcott. The reasons he gives for the great difference in the cost of transporting and delivering through competitive and local business seems to be conclusive.

This is one of the most intricate and complicated features of the railroad business, and is less appreciated by the public, because it is less understood. Every intelligent business man, however, readily concedes that every element entering into the cost of a business must be taken into consideration in order to conduct it successfully.

Colonel Talcott has explained, in his testimony, how a railroad can derive a profit from transporting and delivering through and competitive business carried at a much lower rate than for local business. This is one of the many reasons why Congress conferred the discretionary power upon the Commission to authorize railroads to participate in this competitive business at rates fixed by water, or by water and rail combinations which are beyond the jurisdiction of this Commission.

This testimony explains the exact situation at Mobile, Memphis, Humboldt, Rives, Columbus, Ky., Cairo, and St. Louis. The rates at these points are either fixed by the water ways, or by the combination of water and rail.

It has been shown by the testimony that un-

less this Commission suspends the operation of the long and short haul clause so as to authorize the Mobile & Ohio Railroad Company to meet the rates thus fixed, it cannot participate in the business at these respective points, which will deprive it of making a small profit thereon as explained by Colonel Talcott, and would to that extent relieve the noncompetitive or intermediate points.

The management of the Mobile & Ohio Railroad Company fully appreciating the responsibility placed upon the Commission by the provisions of the fourth section of the Act in respect to the long and short haul feature, and realizing that it was not fair to ask or expect this Commission to exercise the delicate discretionary power conferred by the Act, without presenting a case free of almost any doubt, brought to the consideration of this Commission in its petition, its past and present financial condition. It has proven the allegations of the petition in respect to its indebtedness and revenues, by the deposition of W. Butler Duncan.

In the deposition of Mr. Duncan it will be found that the amount of outstanding bonds, debentures and capital stock of this Company is \$31,970,600.

From his deposition it is shown that this amount represents the actual cost of the property; and as an evidence that this amount is accurate, and in no sense represents securities based upon fictitious values, it is stated by Mr. Duncan that at this date the Company could not replace the property for any less sum.

Mr. Duncan fully explains in his deposition how the original annual fixed charges were reduced from \$938,531 to \$480,000 per annum.

This accurate and complete information has been furnished this Commission, that it might know and appreciate the fact that this Company has not asked to be relieved from the operation of the long and short haul clause to make earnings to be applied to the payment of fixed charges created by securities representing fictitious values.

Mr. Duncan in his deposition explains how the through and local rates have been gradually reduced for several years past. His deposition shows one fact that we know will be regarded as important by this Commission; that is, that the reduction of local rates on noncompetitive business has, on an average, been greater in proportion than the through rates on competitive business.

The management of the Mobile & Ohio Railroad Company has not concealed anything from this Commission; but, on the contrary, it has brought to the knowledge of this Commission its entire financial and business affairs.

Throughout this important investigation, the management of the Mobile & Ohio Railroad Company has strictly followed the old maxim, "He who seeks equity must do equity."

The Mobile & Ohio Railroad Company has shown that it is brought into severe competition from one end of its line to the other, with water ways and rail lines beyond the control of this Commission.

We insist that we have shown by uncontradicted evidence that the Mobile & Ohio Railroad Company is entitled to a general suspen-

sion of the operation of the long and short haul clause, at all intermediate points on its line for the reason the condition of its traffic constitutes a "special case" within the meaning of the Act.

We have made a case which we claim justifies this Commission in granting an absolute and unconditional suspension of the long and short haul clause, and one that falls within the intention of Congress, when it conferred upon this Commission the unquestioned power to suspend this feature of the statute "after investigation in special cases;" for it was the deliberate intention of Congress that this statute should not be allowed to cripple or impair any common carrier subject to the Act in the United States. When all the evidence adduced in favor of the petition of the Mobile & Ohio Railroad Company is carefully examined, it evidences the wisdom of the law-making power in providing a remedy to prevent the certain disaster which would overtake the Mobile & Ohio Railroad Company, unless this Commission grants the relief that it is specifically authorized by the Act to grant in such cases.

This case falls within the remedial provision of the statute, and calls upon the Commission to give force and effect to the expressed intention of Congress.

On the other hand, if the Commission cannot accept this view of the case and give this Company full relief by suspending the operation of the long and short haul clause as an entirety, then we insist and urge upon the Commission to suspend the operation of the fourth section of the Statute in the following special cases, and authorize the Mobile & Ohio Railroad Company to meet competition with water lines wherever the rates are influenced or controlled, as at Mobile, Ala., Meridian, Tupelo, Columbus and Corinth, Miss., Columbus, Ky., Cairo and East St. Louis, Ill., without reducing its rates at intermediate points on its line.

We will conclude, feeling confident that we have presented the strongest possible case calling for the exercise of the authority with which this Commission has been clothed by Congress.

Re SOUTHERN RAILWAY & STEAMSHIP ASSOCIATION, *et al.**

1. The prohibition in the fourth section of the Interstate Commerce Act against a greater charge for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance, as qualified therein, is limited to cases in which the circumstances and conditions are substantially similar.
2. The phrase "under substantially similar circumstances," in the fourth section, is used in the same sense as in the second section; and under the qualified form of the prohibition in the fourth section carriers are required to judge in the first instance with regard to the similarity or dissimilarity of the circumstances and conditions that for-

bid or permit a greater charge for a shorter distance.

3. The judgment of carriers in respect to the circumstances and conditions is not final, but is subject to the authority of the Commission and of the courts to decide whether error has been committed, or whether the statute has been violated. And in case of complaint for violating the fourth section of the Act, the burden of proof is on the carrier to justify any departure from the general rule prescribed by the statute by showing that the circumstances and conditions are substantially dissimilar.
4. The provisions of section 1, requiring charges to be reasonable and just, and of section 2, forbidding unjust discrimination, apply when exceptional charges are made under section 4, as they do in other cases.
5. The existence of actual competition, which is of controlling force in respect to traffic important in amount, may make out the dissimilar circumstances and conditions, entitling the carrier to charge less for the longer than for the shorter haul over the same line in the same direction, the shorter being included in the longer, in the following cases:
 - (a) When the competition is with carriers by water which are not subject to the provisions of the statute;
 - (b) When the competition is with foreign or other railroads which are not subject to the provisions of the statute;
 - (c) In rare and peculiar cases of competition between railroads which are subject to the statute, when a strict application of the general rule of the statute would be destructive of legitimate competition.
6. When a greater charge in the aggregate is made for the transportation of passengers or the like kind of property for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer distance, it is not sufficient justification therefor that the traffic which is subjected to such greater charge is way or local traffic, and that which is given the more favorable rates is not.
 - (a) Nor is it sufficient justification for such greater charge that the short haul traffic is more expensive to the carrier, unless when the circumstances are such as to make it exceptionally expensive, or the long haul traffic exceptionally inexpensive, the difference being extraordinary and susceptible of definite proof;
 - (b) Nor that the lesser charge on the longer haul has for its motive the encouragement of manufactures or some other branch of industry;

*See ante, 15, 17 and 76.

(c) Nor that it is designed to build up business or trade centers;

(d) Nor that the lesser charge on the longer haul is merely a continuation of the favorable rates under which trade centers or industrial establishments have been built up;

(e) The fact that long haul traffic will only bear certain rates is no reason for carrying it for less than cost at the expense of other traffic.

(June 15, 1887.)

IN the Matter of the Petitions of the Louisville & Nashville Railroad Company *et al*, for relief under section 4 of the Interstate Commerce Act.

OPINION OF THE COMMISSION.

Cooley, Chairman:

The Louisville & Nashville Railroad Company was one of the first to apply for relief under the fourth section of the Act to regulate commerce, which, after declaring the general rule that more shall not be charged or received in the aggregate by a common carrier subject to the law, for the transportation of passengers or of the like kind of property, under substantially similar circumstances and conditions for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer, proceeds then to authorize exceptions, and confers upon the Commission certain powers in respect thereto.

From the first there have been two opinions regarding the proper construction of this provision for exceptions; one view being that no exception can be lawful unless made with the sanction of the Commission; and the other, apparently better supported on the words of the statute, that an order of relief is not required when the circumstances and conditions are substantially dissimilar, since the carrier, in acting upon them, would commit no breach of law, although it would be responsible in case it were found that the circumstances and conditions were misconceived or misjudged. Under this last view the order for relief would be needful only when the case was not one of plainly dissimilar circumstances and conditions, but in which, nevertheless, there might be reasons and equities that would sanction such greater charge.

The Commission is informed that the interstate roads north of the Potomac and the Ohio and east of the Missouri, with substantial unanimity, have conformed to the requirements of the fourth section by putting in force tariffs rearranged accordingly. Some friction was manifested for a time, arising largely from the discontinuance of special rates, favors and privileges, and from the adoption of new classifications; but where the fourth section has been thus made operative, very few instances have come to our attention of injury thereby occasioned.

The roads which anticipated especial injury to commerce from the strict enforcement of the law were principally those situated in the Southern States and the transcontinental lines. After a little time some of the north and south roads in the territory first mentioned found

themselves excluded to a certain extent, from business which they had previously handled; but these instances were not numerous, so far as the Commission is at present advised.

In the cases where loss of revenue to the roads and injury to the business of the country was most seriously anticipated, the railroad companies, although some of them took the ground that the statute contemplated that they would determine for themselves the exceptional cases in which they might make a lower charge for a longer haul, nevertheless were unwilling to incur the peril of so arranging their tariffs that they would in any instance conflict with the general rule which the Act prescribed, apparently deeming it more prudent to suffer temporary loss of traffic until the Act could receive authoritative construction than to subject themselves to heavy penalties in case it should finally be held that the general rule must be applied in every case until the authority of the Commission for making exceptions had been given.

The Louisville & Nashville Company was one of those which took this position, and upon its application a temporary order of relief was made. Following the making of that and of other like orders, the Commission proceeded to take a great amount of testimony bearing upon the question whether the several carriers relieved were warranted in making rates on their lines which were not in conformity to the statutory rule; and in doing so it invited light from all sources, and was glad to have the assistance, not only of the railroad companies, but of competing steamboat owners, of boards of trade, and of citizens generally, whatever might be their line of business.

The fullest opportunity has been afforded to any citizen of the United States who desired to be heard upon the matter, to present facts personally or by affidavit, and arguments *ex vivo*, in writing, or in print. The invitation has been quite largely accepted; the subject has been laid fully before us, and we have endeavored to give to it the consideration its importance demands.

In making the orders of temporary relief no opinion was expressed upon the question whether they were necessary for the protection of the carriers in case the circumstances and conditions were found to be in fact dissimilar. The railroad companies did not raise that question, but, as has been said, elected as a matter of prudence to apply for the preliminary order. No objection could well be taken to this course, provided it should prove to be practicable for the Commission to take up and in a reasonable time dispose of the several applications made to it; but it was almost immediately perceived that the number was to be so great that this would be quite out of the question. Each order for relief would necessarily be preceded by investigation into the facts, on evidence which, in most cases, would be best obtained along the line of the road itself. A single case might, therefore, require for its proper determination the taking of evidence all the way from the Pacific to the Atlantic, and this not merely the evidence of witnesses for the petitioning carrier, but of such other parties as might conceive that their interests or the interests of the public would be subserved

either by granting the relief applied for or by denying it.

If the Commission were to give to the petitions the time needed for their proper determination, it would be compelled to forego the performance of judicial and other functions which by the statute were apparently assumed to be of high importance; and even then its authority to grant relief would be performed under such circumstances of embarrassment and delay that it must, in a large measure, fail to accomplish the beneficial purposes which we must suppose the statute had in view. Assuming, as we must when the law provides for it, that it is important to the public interest that a privilege to charge more for the shorter haul than for the longer over the same line in the same direction, should be admitted in some cases, as had been the custom, the interruption of the privilege when the case was proper for it would presumptively cause mischief, and should not, therefore, be compulsory while the slow processes of an investigation were going on, especially as the particular investigation might itself be compelled to await the determination of many others.

Moreover, an adjudication upon a petition for relief would, in many cases, be far from concluding the labors of the Commission in respect to the equities involved, for questions of rates assume new forms, and may require to be met differently from day to day; and in those sections of the country in which the reasons or supposed reasons for exceptional rates are most prevalent, the Commission would, in effect, be required to act as rate makers for all the roads, and compelled to adjust the tariffs so as to meet the exigencies of business, while at the same time endeavoring to protect relative rights and equities of rival carriers and rival localities. This in any considerable State would be an enormous task. In a country so large as ours, and with so vast a mileage of roads, it would be superhuman. A construction of the statute which should require its performance would render the due administration of the law altogether impracticable; and that fact tends strongly to show that such a construction could not have been intended.

We have listened, with an earnest desire to reach a just conclusion, to all the arguments presented on the construction of the statute, by those appearing either to advocate or to oppose the applications, and after mature consideration we are satisfied that the statute does not require that the Commission shall prescribe in every instance the exceptional case and grant its order for relief before the carrier is at liberty in its tariffs to depart from the general rule. The terms of the statute clearly lead to the opposite conclusion. It declares:

"It shall be unlawful for any common carrier subject to the provisions of this Act to charge or receive any greater compensation in the aggregate for the transportation of passengers or of the like kind of property under substantially similar circumstances and conditions for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer distance."

Here we have clearly stated what is unlawful and forbidden; and for doing the unlawful

and forbidden act penalties are then provided. But that which the Act does not declare unlawful must remain lawful if it was so before; and that which it fails to forbid the carrier is left at liberty to do without permission of any one. The charging or receiving the greater compensation for the shorter than for the longer haul is seen to be forbidden only when both are under substantially similar circumstances and conditions; and, therefore, if in any case the carrier, without first obtaining an order of relief, shall depart from the general rule, its doing so will not alone convict it of illegality, since if the circumstances and conditions of the two hauls are dissimilar the statute is not violated.

Should an interested party dispute that the action of the carrier was warranted, an issue would be presented for adjudication, and the risks of that adjudication the carrier would necessarily assume. The later clause in the same section, which empowers the Commission to make orders for relief in its discretion, does not in doing so restrict it to a finding of circumstances and conditions strictly dissimilar, but seems intended to give a discretionary authority for cases that could not well be indicated in advance by general designation, while the cases which upon their facts should be acted upon as clearly exceptional would be left for adjudication when the action of the carrier was challenged. The statute becomes on this construction practical, and this section may be enforced without serious embarrassment.

From the recital of the history of the framing of this section (which is given further on) it appears among other things that the proviso respecting orders for relief was devised by the senate committee which originally drafted the section, and that it was an essential part of it as first proposed; the prohibitory part of the section being then quite stringent, but a discretion being conferred upon the Commission to relieve against its operation.

Afterwards the words "under substantially similar circumstances and conditions" were inserted in the first sentence of the section. The proviso was perfectly intelligible, so long as the leading clause contained a hard and fast rule against charging more for the shorter than for the longer haul. It was then obvious that a discretion was left to the Commission in the matter of relaxing the rule when different circumstances and conditions rendered such relaxation in its judgment proper. Had the section passed as it then stood, the exercise of such a discretion might have been entered upon by the Commission with a distinct understanding of the task imposed, even though its adequate performance might have been out of the question; but modified as it now stands, the necessity for a relieving order is greatly narrowed, it being obvious that no order is needed to relieve against the operation of the statute when nothing is done or proposed which it makes unlawful.

If any serious doubt of the proper construction of the clause of the statute now under review should, after careful consideration of its terms, still remain, it would seem that it must be removed when section 2, in which the same controlling words are made use of is examined in connection. That section provides "That if

any common carrier subject to the provisions of this Act shall, directly or indirectly, by any special rate, rebate, drawback, or other device, charge, demand, collect, or receive from any person or persons a greater or less compensation for any service rendered, or to be rendered, in the transportation of passengers or property, subject to the provisions of this Act, than it charges, demands, collects or receives from any other person or persons for doing for him or them a like and contemporaneous service in the transportation of a like kind of traffic under substantially similar circumstances and conditions, such common carrier shall be deemed guilty of unjust discrimination, which is hereby prohibited and declared to be unlawful."

Here it will be observed that the phrase is precisely the same; and there can be no doubt that the words were carefully chosen, probably because they were believed to express more accurately and precisely than would any others the exact thought which was in the legislative mind. And in this section, as well as in section 4, the phrase is employed to mark the limit of the carrier's privilege; its privilege, too, in respect to the very subject matter with which section 4, where it is employed, has to do, namely: the charges for transportation service.

It is not at all likely that Congress would deliberately, in the same Act and when dealing with the same general subject, make use of a phrase which was not only carefully chosen and peculiar, but also controlling, in such different senses that its effect as used in one place upon the conduct of the parties who were to be regulated and controlled by it would be essentially different from what it was as used in another. But beyond question the carrier must judge for itself what are the "substantially similar circumstances and conditions" which preclude the special rate, rebate, or drawback, which is made unlawful by the second section, since no tribunal is empowered to judge for it until after the carrier has acted, and then only for the purpose of determining whether its action constitutes a violation of law.

The carrier judges on peril of the consequences; but the special rate, rebate, or drawback which it grants is not illegal when it turns out that the circumstances and conditions were not such as to forbid it; and as Congress clearly intended this it must also, when using the same words in the fourth section, have intended that the carrier whose privilege was in the same way limited by them should in the same way act upon its judgment of the limiting circumstances and conditions.

Most of the applications made to the Commission for relief may be said to be based upon a showing of dissimilar circumstances and conditions claimed to justify the larger charge for the shorter haul. The Commission was asked to find that such dissimilar circumstances and conditions existed, and the question was presented in a great variety of forms. Upon this question it was believed that investigation into the conditions of railroad service in the States south of the Ohio and east of the Mississippi would be particularly useful. In the system of rate making practiced in that section, the making of a greater charge on in-

terstate business to and from intermediate stations than to and from competitive points requiring a longer haul had been, it appears, substantially universal, and business men in the larger towns united with the carriers in asserting that the cessation of the practice would force a stoppage of trade to an extent that would be destructive of many considerable interests. That section, therefore, seemed to afford a proper field for an inquiry into the reasons supposed to justify the practice. When the investigation was concluded the reasons which had been advanced appeared to be substantially the following:

That the support and maintenance of a railroad ought properly to be borne by the local traffic for which it is supposed to be built, and the through traffic may justly be carried for any sum not below the actual cost of its own transportation.

That the cost of local traffic is greatest, and the charges for carrying it should be in proportion, and if they are so they will often result in the greater charge for the shorter haul.

That traffic carried long distances will much of it become impossible if charged rates corresponding to those which may properly be imposed on local traffic; and it must, therefore, be taken in recognition of the principle, accepted the world over, that traffic must be charged only what it will bear.

That the long hauls at low rates tend to build up manufactures and other industries without injury to the traffic upon which the rates are heaviest.

That charges on long hauls, which are less than the charges on shorter hauls over the same line in the same direction, are commonly charges which the carriers do not voluntarily fix, but which are forced upon them by a competition from whose compulsion there is practically no escape.

On some one or more of these reasons each of the applications was planted.

On the construction which we give to the statute, these several applications need not have been filed, and therefore they might now be withdrawn without further judgment. But although the carrier might have acted on the judgment of its managers, it would have been at the peril of the consequences; and as it elected not to assume the responsibility, but to apply to the Commission for a relieving order, it may be proper to consider the application on its merits, especially as the question, What is a case of dissimilar circumstances and conditions within the meaning of the law must in general be a mixed question of law and fact, upon which differences of opinion would be expected to arise.

It is manifestly important to the public interest, as well as to that of the railroads themselves, that mistakes shall as far as possible be avoided. It is also important that the general rule laid down by the statute be strictly complied with whenever compliance appears to be fairly practicable, and that carriers direct their attention more to the feasibility of coming into conformity with it, than to the possibility of finding reasons upon which to ground exceptions. They are therefore entitled to the benefit of such conclusions as we have already reached upon the general merits of their

applications, that they may be guided thereby in the preparation of their tariffs respectively. In giving these conclusions we limit ourselves strictly to the cases presented, and leave out of view such other grounds of relief, if any, as are not yet formally brought forward.

I. The fact that the shorter haul is of local traffic, and the longer is not, we cannot accept as making out a case of dissimilar circumstances and conditions within the meaning of the statute. The claim to that effect which was advanced in support of one of the applications rests upon a theory that railroads are constructed for the special accommodation of the traffic along their lines respectively, and that consequently that traffic may be relied upon for their support, and may fairly be charged with all the items of cost and maintenance. Traffic originating at a distance and taken over the line may on this theory be justly transported at any rates the carrier may consent to accept, not below the actual cost of movement, and the local shippers are not in position to complain that such rates, as compared with what they must pay, seem to discriminate unjustly.

But this theory has very little foundation in fact. It is not true, as a general rule, that railroads are constructed in exclusive reliance upon local traffic; on the contrary, through traffic is also contemplated, and is sometimes expected to yield returns even greater than that which the local traffic is likely to give. And whenever a road is constructed with special regard to local traffic, it is very likely to be the case that the local communities take upon themselves especial burdens in aid of the construction. When they do so they may justly claim that their traffic should be favored if discrimination of any sort is to be admitted. There are cases also in which roads have been constructed with special regard to long haul traffic, some of them with the aid of government grants, and in such cases the theory lacks all plausibility. Indeed, it may be said to become plausible in any case only when, after a road has been constructed, some new and unanticipated business is offered it for a long haul, but at rates relatively lower than the local traffic is charged. It may be neither unreasonable nor unjust to accept the lower rates for the long haul traffic in some cases on grounds stated further on; but it will not be because of any such inherent difference between long and short haul traffic as can make the latter chargeable with heavier burdens.

II. That the cost to the carrier of handling and transporting local traffic is greater than that of traffic carried long distances is a fact which may with greater reason, when the difference is considerable and clearly shown, be claimed to make out a case of dissimilar circumstances and conditions under the statute. Cost of the service is always an important element in the fixing of rates; and the evidence taken by the Commission tends to show, what indeed is well known and understood, that in proportion to amount and to the distance it is transported the cost of the local traffic to the carrier is considerably the greater. This fact fairly establishes in favor of the carrier an equity entitling it to make for the more onerous service a greater proportionate charge.

But it does not follow that the difference may be so great as to make the case an exception to the general rule the statute has prescribed. It is obvious that the statute intends that the greater charge for the shorter haul shall only be made in cases which on their facts are exceptional; and when the carrier shows the general fact that the local traffic is most expensive, he thereby proves not the exception, but the rule. To establish the exception it would be necessary to go further and make proof that in the case of the particular traffic the difference in cost would be exceptionally great. Such cases sometimes arise. They occur on water as well as on land, and vessel owners on the rivers make the greater charge for the shorter haul in the same direction in many cases, defending their doing so with good reason, on this very ground of greater cost, in making landings, etc. The carriers by land may sometimes justify the like charges with equal reason.

There is in the case, however, an inherent difficulty of no small moment. While cost, as has been said, is an element to be taken into account in the fixing of rates, and one of the very highest importance, it cannot, for reasons well understood, be made the sole basis, but it must in any case be used with caution and reserve. This is not merely because the word "cost" is made use of in different senses when applied to railroad traffic; it being often used to cover merely the expense of loading, moving, and unloading trains, but also because, in whatever sense the word may be used, it is quite impossible to apportion with accuracy the cost of service among the items of traffic. First of all, when it is undertaken there must be an apportionment between the passenger traffic and the freight traffic; and if we suppose this to be made with reasonable accuracy, there must then be a like apportionment between the different kinds and classes of freight. Freight comes to a road in infinite variety; some heavy, some light, some in large packages, some in small; some perishable or of special value and requiring peculiar accommodations and care; it is picked up in varying quantities at numerous stations, to be carried differing distances, sometimes on fast trains and sometimes on slow; the service is performed by men whose compensation differs, but the most of whom have something to do with all branches of the traffic, so that all assist in carrying it on over a road and by means of buildings, appliances, and equipment which have been provided for the whole. Any attempt to apportion the cost, therefore, would at the best and under the most favorable circumstances only reach an approximation. This is so well understood, the world over, that the propositions which from time to time have been made in other countries to measure the charges of the carrier by the cost of the carriage solely have always been abandoned after investigation.

We may well believe, therefore, that the Statute, in its provision against the greater charge for the shorter haul, did not intend that a difference in cost, which is practically universal, and could not possibly be arrived at with accuracy, should as a general fact be a governing consideration, to the extent that

would support the greater charge for the shorter haul in the cases in which such greater charge was in general prohibited. Where there are no circumstances to make the short haul exceptionally expensive to the carrier, or the long haul relatively inexpensive, a difference in rates which reason and fairness will justify may still be made within the limitation of the statute; but to make out the exceptional case, in which the general rule of the statute may be disregarded on the ground that the circumstances and conditions are not substantially similar, the difference in cost should itself be exceptional, and be capable of proof amounting to practical demonstration.

In support of one of the applications presented to us the carrier was able to make a showing of lower costs on long haul freight more clear and distinct than is commonly possible. The showing was that the through business on its 450 miles of road was transacted by different trains from the local; that these moved much more rapidly and carried vastly the most freight to the train; that the number of men required was much less in proportion, not only upon the trains, but for the station and terminal service, and consequently all the items of expense were much smaller. These facts, which were apparent to the customers of the road, together with the peculiarly effective water competition, which affected principally the through traffic, influenced intelligent men doing business at local stations to admit, in giving evidence, that it might be just, and even necessary in some cases, that the charge for the shorter haul should be the greater.

The disproportion, it was insisted, had been too great; but when the question is one of degree, regulation rather than prohibition must be admitted to be the appropriate remedy; and the carrier must keep in mind that if the right be established in any case to make the greater charge for the shorter haul, it is not a right to make a charge not just or reasonable in itself, or one which will work unjust preference between individuals, localities, or commodities. It is, on the other hand, a right grounded in justice, and must be so exercised that the result shall be equitable.

III. We have next the case of dissimilar circumstances and conditions supposed to be made out by a showing that property now transported long distances at very low rates could not be transported at all unless concessions in rates were made to it. This is a common fact in railroad transportation; the cases are to be met with in the traffic of all the long lines. The necessity for making concessions to long haul traffic in the case of articles whose value in proportion to bulk or weight is small, and especially in that of the necessities of life, which are handled in large quantities, and in the supply of which the most distant countries compete, has long been conceded wherever railroads exist. The household goods of immigrants to the West have been carried for them at very low rates, and the results of their agriculture have afterwards been taken for seaboard and European markets in recognition of the general principle that the traffic must not be charged rates beyond what it can bear.

This is a just and sound principle when justly applied; and the country may be said

not only to have acquiesced in its recognition, but to have desired and urged its application in a great variety of cases. Any suggestion that it was meant by the statute to abrogate it would scarcely be plausible, especially since, when not misapplied, it can harm no one, but may be, and often is, of great and manifest advantage, in enabling distant sections of the country to come into closer commercial relations, and to exchange to their mutual benefit their dissimilar productions, or to compete with each other in those which are similar.

But the cases must be very rare in which the larger charge in the aggregate for the shorter haul of the same kind of property over the same line in the same direction could be justified, when no other reason supported it than the fact that the traffic for the longer haul would bear no more. Manifestly, such a discrimination when not imperative on other grounds is unjust; and the injustice becomes oppression when the effect is to increase the burden upon the traffic which has the shorter haul. There is a plain limit to the application of the principle that property is to be carried at rates it will bear; and the limit is reached when the rates charged are so low that further reduction would necessitate an increase of the charges upon other traffic in order to make up to the carrier such loss as the reduction causes. If some common vegetable, worth but five cents a hundred pounds more at a market a thousand miles distant than it is where it is grown, were to be transported that distance for the sum named, the producer nearer the market, if subjected to a higher charge, would have a right to complain that not only did the discrimination reduce the market value of his produce, but that the acceptance of the unreasonably low rates from the distant producer had a tendency to increase the charge for the shorter haul, so as to make it not only relatively, but, when considered by itself, unreasonably, high.

It is a matter of public notoriety that a belief has prevailed to a considerable extent that long haul traffic was in many cases carried at a loss; that the carriers were enabled to take it by making the charges for short haul traffic greater than would otherwise be necessary or reasonable, and that this constituted an abuse that ought to be corrected by law. Persons who did not hold to this belief have, on the other hand, taken low charges on long haul traffic as a proper measure for all charges, and have insisted that if the railroads could accept the low charges for one class of business, they could and ought to do so for all classes. And this, as a rule, would be quite true if the railroads had it in their power to make the rates for all; which, however, is far from being the fact. There are many cases in which they have the option only to take the traffic at rates prescribed by its owners, or not to take it at all. But in respect to such cases, we must repeat, by way of emphasis, that a successful appeal cannot be made to the equity of the statute on the mere ground that long haul traffic will not bear higher rates, if in fact those it can bear, if accepted, will cause a loss to the carrier which must be made up on short haul traffic. To have one's property carried at a loss would not be matter of right, but of

favor; and favors in transportation are not to be granted to any one class, at the expense of any other.

IV. The greater charge for the shorter haul has been in some cases defended, on the ground that manufactures and other industries were thereby favored and built up. But a question likely to arise in such cases is whether that which is done for some is not at the expense or to the unjust prejudice of others. The statutes of some of the Southern States seek to encourage manufactures by permitting special rates to be made in their favor; and railroad companies, in some cases which were brought to our notice, have entered into contracts with parties proposing to establish large manufactories or otherwise engage extensively in business whereby, in consideration of the investment of some named sum in the proposed enterprise, they agree that favorable rates, which are specified, shall be given on its traffic for a term of years.

The purpose of such laws and such contracts is no doubt commendable, but the practical difficulty of giving them effect without prejudice to the interest of others is always found to be serious. Very often they tend to the benefit of large establishments and to the prejudice of small. Manufactures are infinite in variety and extent; and while it might be easy for those whose transactions were large to obtain the benefit of an impartial law made for the encouragement of all, the small establishments, sending out their goods in small lots and irregularly, might find the law practically of little or no value. The railroad companies, not unwilling to make the long time contracts for rates which contemplate a large business, would scarcely be expected to stipulate for them with the small establishments, which exist in variety in every town and hamlet.

As a matter of fact the laws and the contracts which are made for the benefit of manufactures usually contemplate not all kinds of manufactures, but only those leading and most prominent kinds which require large capital, and whose operations are on an extensive scale. Encouragement to these is of public advantage when it wrongs no one; but it is just as much the duty of the common carrier in making its low rates on long hauls to consider whom they may ruin, as whom they may build up; and while the carrier cannot be held responsible for the consequences which flow legitimately from tariffs impartially arranged, it cannot justify, on the ground of public benefit, the unequal rates which, however beneficial to some, may be equally mischievous to others.

A great establishment, strengthened by the favor of the public carriers until it acquires the power to crush competition and actually exercises that power, may by that very fact become an enemy to the civil State; and no benefit it can give to the public in the low prices of its commodities or otherwise can compensate for the general sense of wrong which those must feel who are injured by it, or for the sentiment which grows up in view of its operations, that the law fails to give the equality of right and privilege which it nominally promises. That some such great establishments have been fostered by the aid of the railroad

companies is commonly believed; and provisions against unjust discriminations in this statute had for their object, among other things, to bring this mischief to an end. The plausible excuse of public benefit, if it ever had force in such cases, has none now, for the statute forbids what public sentiment had already condemned.

It was shown by the evidence that the rates upon long hauls were such as would admit of the pine lumber of Mississippi being sold in Wisconsin in competition with lumber there cut, and of the iron of Alabama being carried through Pittsburgh to Eastern manufactories. If the lines originating in Wisconsin and Pennsylvania give to the producers of those States corresponding rates for the traffic in the other direction under similar circumstances, this will prejudice no one; but, on the contrary, may operate to the public advantage, provided always that the rates actually charged are compensatory. The petitioner in this case claims that in no case does it carry such long haul traffic at rates which fall below cost. By this, however, is meant only the cost of movement of the particular traffic, leaving out of view the fixed charges of the road, which must, in any event, be provided for, whether the long haul traffic is or is not taken.

This distinction between the cost of movement and the fixed charges often becomes of importance in such cases as that of the lumber trade just mentioned. That trade is new; the roads which take it were built without anticipating its springing up, and their managers made their calculation for business to meet the whole cost of operation in reliance upon such traffic as was then apparent or probable. The fixed charges of the road may, for purposes of illustration, be assumed to equal one half of the whole, the cost of movement of freight the other half. The rates laid were doubtless calculated to cover the whole, with a margin for profit, and were so laid that all traffic would contribute towards both fixed charges and cost of movement. But now comes this new business, and from the nature of the case low rates are a necessity to it; it can pay perhaps little if anything more than half what is paid by other traffic. But taking it will not increase perceptibly the fixed charges of the road, because those are made up of items that must be paid whether the traffic is large or small. What is added to the cost by taking it is simply the expense of its own handling and movement; and upon the supposition made, there might perhaps be gain to the road instead of loss, in taking it at anything above half the rates which are levied upon other traffic corresponding to its classification. It might, therefore, be carried at such rates without wrong to any one. But if it were carried at lower rates still, not only would the other traffic be left to pay the fixed charges and the cost of its own movement, but it would also, to some extent, be burdened with the cost of movement of the long haul traffic thus added to the business of the road.

The injustice of this would be very apparent, and it would become intolerable if some portion of the short haul traffic was competitive to the long haul traffic, and was so heavily taxed by higher rates as to make con-

innance impossible. It is very plain that an unrestricted power to make such rates is liable to infinite abuses, and that it may as easily be made use of to injure one enterprise as to build up another. In the earnest and sometimes unreasoning rivalry of railroad companies, it has no doubt often been employed as much to give mere volume to business as for any anticipated net revenue; and the wrongs have in such cases far exceeded any possible advantages that could accrue either to the roads themselves or to the public.

It cannot be supposed that in any case the true interest of a road will be prejudiced by its being held strictly to the rule that excessively low rates on some traffic are not to be compensated for by excessively high rates on other traffic. And if rates are so graded as to violate the statutory general rule, it cannot be accepted as justification for the higher rates on the shorter haul that the lower rates on the longer haul had encouragement to manufacturers or other industries for their motive.

V. The chief ground on which the applicants pressed for relief from the long and short haul clause of the statute was that competition forced the railroad companies to make rates to and from connecting points to the level of which it was not possible to bring the charges at noncompetitive points, because the doing so would cause such reduction of revenues as would force roads into bankruptcy and ultimately into suspension. It was, therefore, as was said, inevitable that in a great number of cases the greater charge should be made for the shorter haul; and nothing but putting a stop to competition by law would prevent it. This it was insisted the new law does not attempt or intend. On the contrary, the importance of competition in fostering and regulating the internal commerce among the States is clearly noted.

In the sixth section carriers are permitted to reduce their rates at any time, but are forbidden to raise them except after giving ten days' notice. In the fifth section the pooling of freight is forbidden, unquestionably because the practice was regarded as having a tendency to prevent or check competition. The Act studiously omits to bring the steamboats and other independent water lines within its control, and must, therefore, have contemplated the continuance not only of competition, but of those things which competition renders inevitable. The existence of competitive forces to an extent that the railroad companies at competitive points are unable to control, it was therefore argued, would make out a case of circumstances and conditions so dissimilar to those prevailing at noncompetitive points as might justify the making of the greater charge for the shorter haul which was in general prohibited.

The competition which was brought to our attention as having this imperative force was, *first*, the competition of railroads with water ways; *second*, the competition of railroads with other railroads which are not subject to the provisions of the "Act to Regulate Commerce"; *third*, the competition with each other of railroads which are subject to that Act; *fourth*, the competition of business or trade centers with each other, operating indirectly upon the roads

which form their channels of trade; and, *fifth*, the competition of business interests in like manner operating upon the roads, by whose assistance the business is carried on.

This fifth species of competition has already been remarked upon to some extent, and it has been seen that it will not justify a railroad company in discriminating between its own customers to an extent that would create an exception to the general rule the statute prescribes. We pass it now without further remark. The others demand at our hands due consideration.

I. It was fairly shown before us that instances exist, and may be found, along the routes of petitioner's lines in the States of Kentucky, Tennessee, Georgia, Alabama, Mississippi, and Louisiana, where the competition of water ways forces down the railroad rates below what it is possible to make them at non-competitive points and still maintain the roads with success or efficiency. The reason is that the carriers by water can perform the service at very much less cost than the carriers by land. The general fact is that railroad rates for the transportation of property must approximate closely those which are made between the same points by steamer; and the steamer rates are generally, if not invariably, much below what the railroads can afford to accept upon all their business.

In such cases if competition is maintained, more must be charged at interior points than can be obtained at the points of competition; and if the competitive rates are such as are productive of some gain, however slight, the non-competitive points are likely to receive indirect advantage therefrom, while the competitive points have the larger and more direct benefit, and are afforded a choice of agencies in transportation whose rivalry may fairly be expected to keep the cost down to a minimum. The interior points may have no ground for complaint in such a case, provided the rates they are charged are in themselves just and reasonable, even though the effect be that in some cases more is charged for the short than for the long haul over the same line in the same direction. This general fact is recognized the world over; and of English railways it has been often remarked that some of them would be deprived of much of their value if they were not allowed to meet water competition by such concessions, at the points of contact, as the competition would compel.

The only question that fairly arises in regard to it is whether the competition is kept within proper bounds. Vessel owners produced evidence before us to show that the railroads put down their rates to a ruinous point in their determination to take the competitive traffic at all hazards, and eventually to crush out competition; and railroad managers retorted with evidence that the blame for unremunerative rates was upon their rivals. But the question of relative fault is not important now. Low rates are a necessity of the situation; and if railroads compete with water transportation either on the ocean or on the navigable rivers, they have no choice but to accept such rates.

To compel the roads to observe strictly the general rule laid down by the fourth section would necessitate their abandonment of some

classes of business in which their competition with water transportation is now of public importance. Vessel owners, who appeared before us to oppose the applications made for relief, put their opposition in some cases explicitly on the ground that denying the applications would enable the vessel men to put up their own rates. This was to be expected, and is far from being blameworthy, if in fact their business is not now reasonably profitable; but it is suggestive of the fact that the interest of the public and that of any class of public carriers is not in all respects identical.

It is more than probable that the complaints made by the vessel owners against certain of the railroads are to some extent well founded; that the railroads have not only made the rates at points of competition with vessels much too low, in order that they might at all events obtain the business, but that this has been done in disregard alike of right and of true policy. This is only saying that in their wars of rates with vessel owners they have sometimes shown the same recklessness as in like wars among themselves; but the fact still remains that they must either be allowed to compete with vessel owners and make low charges for the purpose, or they must leave vessel owners in possession of the business without the check upon charges which competition would afford.

The question here is whether this limitation of competition was intended by the statute; or, on the other hand, did Congress intend that the existence of competition might in some cases make out the dissimilar circumstances and conditions which would support a greater charge for the shorter haul, even though it might be over the same line in the same direction, the shorter being included in the longer distance?

On this subject the history of the proceedings in Congress which resulted in the adoption of the fourth section as it stands is instructive, and with such brevity as is practicable it is recited here, not as determining conclusively the construction of the section, but as showing beyond question that the benefits of competition were meant to be retained, and that exceptions to the rigorous general rule were provided for to meet the contingencies which the competition might create.

In the report of the senate select committee, submitted January 18, 1886, known as the Cullom Report, is found the following language:

No question connected with the problem of railroad regulation has given the committee more perplexity than that relating to the utility and expediency of legislation prohibiting a carrier from charging more for a shorter than a longer haul under any circumstances; not that we have any doubt as to the injustice of such a charge under most circumstances, but because it seems inexpedient to enforce such a regulation under all circumstances.

When the effect of the proposed prohibition is considered with reference to the whole internal commerce of the United States, and especially with reference to the necessity of preserving the prevailing cheap rates for long distance transportation, there is reason to fear that the result of rigidly enforcing the proposed

regulation would be to stifle competition in numberless cases where it now exists and is to the general public interest, and perhaps to deprive the country of the benefits of the low through rates now and for years given to and from the tide water, without practical or appreciable advantage to intervening points.

The bill introduced with the report contained the following provision upon this subject:

Sec. 4. That it shall be unlawful for any common carrier subject to the provisions of this Act to charge or receive any greater compensation in the aggregate for the transportation of passengers or property for a shorter than for a longer distance over the same line in the same direction, and from the same original point of departure, if such greater charge for the shorter distance constitute an unjust discrimination; but such greater charge for a shorter distance shall be presumptive evidence of unjust discrimination, which may, however, be rebutted by the common carrier.

Upon application to the Commission appointed under the provisions of this Act, such common carriers may, in special cases, be authorized to charge less for longer than for shorter distances for the transportation of passengers or property; and the Commission may from time to time make general rules covering exceptions to any such common carrier in cases where there is competition by river, sea, canal, or lake, exempting such designated common carrier from the operation of this section of this Act; and when such exceptions shall have been made and published they shall have like force and effect as though the same had been specified in this section.

Afterwards, and before debate, the committee, on February 16, 1886, reported as a substitute for this bill another, in which the following language is found:

Sec. 4. That it shall be unlawful for any common carrier to charge or receive any greater compensation in the aggregate for the transportation of passengers or property subject to the provisions of this Act for a shorter than for a longer distance over the same line in the same direction, and from the same original point of departure; *Provided, however*, That upon application to the Commission, etc. * * * [substantially as before].

The formal discussion of the measure was commenced April 14, 1886, the chairman of the select committee opening the debate by a speech in which he said concerning the fourth section:

It is agreed that this is the principle that should be observed as a general rule. The committee found, however, that the principle was not of universal application; that there were cases in which the railroads were compelled to make lower rates for longer than for shorter distances by the great law of competition, which is stronger than any law we can make, and that in some cases it would be a great hardship to the public as well as the railroads to rigidly enforce the general principle.

It is perfectly clear that the intention of the original framers of the senate bill was to leave it to the discretion of the Commission to exempt carriers from the operation of the rule

in cases when the "great law of competition" made such a relaxation proper, having in view the interests of the carriers and the people.

On May 6, 1886, *Senator* Cullom moved to amend the section by striking out the words "covering exceptions to any such common carrier in cases where there is competition by river, sea, canal, or lake." He supported this motion by the suggestion that these words were not necessary, and that without them the Commission would have the same power and more. *Senator* Harris favored the amendment, as giving a broader discretion to the Commission, and it was adopted.

On May 12, a motion was made by *Senator* Camden to change the phraseology of the first part of the section, so that it should read "of like kind of property under substantially similar circumstances and conditions." This amendment was agreed to as a substitute for a previous amendment proposed by *Senator* Camden, and with little additional debate.

The bill was finally passed on the part of the Senate, section 4 remaining substantially as above, with the insertion of the following:

But this shall not be construed as authorizing any common carrier within the terms of this Act to charge and receive as great compensation for a shorter as for a longer distance.

The bill then went to the House of Representatives, and was referred to the committee on commerce. That committee reported as a substitute for it the bill before pending in the House, which contained the following provision upon the subject embraced in section 4 of the senate bill:

That it shall be unlawful for any person or persons engaged in the transportation of property as provided in the first section of this Act to charge or receive any greater compensation for a similar amount and kind of property, for carrying, receiving, storing, forwarding, or hauling the same, for a shorter than for a longer distance, which includes the shorter distance on any one railroad; and the road of a corporation shall include all the road in use by such corporation, whether owned or operated by it under a contract, agreement, or lease by such corporation.

In opening the debate on July 21, 1886, Mr. Reagan, chairman of the house committee on commerce, severely criticized the fourth section of the senate bill, saying that the closing part of the section substantially nullified the former part, while his proposed substitute contained an absolute prohibition.

The minority of the committee, four in number, opposed the substitution, and in their report the following passage occurs:

Nor do the minority favor the provision prohibiting a greater charge for a shorter than a longer haul, as it was shown to a satisfactory degree, as we think, in the hearing that, where two competing points were connected by water as well as rail, it was impossible for the railroads to secure the traffic unless they made their rates as low as the water rates, and that while they might be able to do this on a portion of their traffic, it would be destructive of their interests to reduce all their rates to those which were forced upon them between certain points by the competition of the water routes.

INTER 8.

It is obvious therefore that, in the House as well as in the Senate, it was understood that the existence of competition was intended to be included in the margin of discretion provided for by the Senate measure. The question as to this point was distinctly marked; the debate, so far as this section was concerned, was upon that basis. On July 30, 1886, the substituted bill was agreed to and passed on the part of the House. A conference committee was appointed, and at the second session of the Congress that committee agreed upon a report, which was presented to the Senate December 15, 1886. By this report the fourth section of the senate bill was amended so as to read as it now stands.

The work of the conference committee was very elaborately and carefully performed. The two bills which were referred to it presented very clearly the views which had prevailed in the two Houses respectively, on the general subject of relative charges on long and short haul traffic, the house view of an inflexible rule, forbidding absolutely the greater charge for the shorter haul, and the senate view that the rule should be subject to exceptions when the circumstances and conditions required it.

The conference committee accepted deliberately the senate view, and presented it, in the report to the two houses. In the Senate the report, before adoption, was discussed, and what was proposed by it on this point of vital interest was very distinctly brought out and made prominent; and in the House, where also the report was adopted, nothing which was said by anyone indicated that the situation was otherwise understood.

It is impossible to resist the conclusion that in finally rejecting the "long and short haul clause" of the house bill, which prescribed an inflexible rule, not to be departed from in any case, and retaining in substance the fourth section as it had passed the Senate, both Houses understood that they were not adopting a measure of strict prohibition in respect to charging more for the shorter than for the longer distance; but that they were, instead, leaving the door open for exceptions in certain cases, and among others in cases where the circumstances and conditions of the traffic were affected by the element of competition, and where exceptions might be a necessity if the competition was to continue water competition was beyond doubt especially in view.

In thus deliberately making provision for competition, even though it might be necessary to allow for the purpose exceptions to the general rule laid down in the statute, Congress must be supposed to have done so because the public interest required it. That competition is the life of trade is one of the most generally accepted of maxims; among its principal benefits is the protection it gives against extortionate charges. But legitimate, open, and fair competition was meant; not everything that has been done under the name of competition, and which in many cases has been equally destructive of public and of private right. Among the common abuses have been the granting of special favors in exceptional rates, rebates, drawbacks, etc., all of which are now expressly prohibited by law when they assume the form of unjust discrimination. There has

England. The peculiarity of the competition is that the business on the roads respectively is started in opposite directions when destined to the same point, so that on east bound traffic from Pittsburgh, the haul by one road is shorter than from Youngstown, and longer by the other. As the Pennsylvania Road has the shorter line, it is in position to determine what the rates shall be, and the longer line has no option but to conform to them. In making them, the leading road gives to Pittsburgh lower rates than to Youngstown, as it justly should do, in recognition of the geographical position. But the other road must do the same, although over its line the traffic between Youngstown and the seaboard will have the shorter haul.

There is nothing unreasonable or unjust in this; and if the longer line were to attempt a change which should reduce the rates from Youngstown to the level of those of Pittsburgh it would, in doing so, only open a war of rates in which all the advantages would be with its rival. Finding itself in this dilemma it applied to the Commission for an order permitting a greater charge to be made on traffic to and from Youngstown, than is made on that to and from Pittsburgh, and its application is strenuously opposed by the Pennsylvania Road, which insists that competition by this roundabout route is illegitimate and ought not, therefore, in any manner to be aided.

Whether this position is sound the Commission may determine hereafter. It is sufficient to say of the case at this time, that it is one, and not a solitary, instance, in which a strict application of the general rule laid down by the statute must be fatal to competition. If the competition in itself is illegitimate, it may be right to permit its destruction. But it is not admitted by those interested in the road just mentioned, that its case is of this nature. It is shown that it was constructed by Pittsburgh capital, for the express purpose of the competition; and it appears that although the route is indirect, the competition has given it considerable business, and large investments have been made in reliance upon its continuance.

One fact obvious on the statement of this case is that the wrong against which the long and short haul clause of the statute is aimed is not to be found in it. When the greater charge for the shorter haul over the same line in the same direction is spoken of, the natural suggestion to the mind is of a line leading with some directness to the place to which the traffic is destined; and there seems to be in such greater charge a manifest unfairness, since it deprives the place of shipment nearest the destination of its proper advantage of situation. But in the case stated the position is the opposite to this; the greater charge for the shorter haul preserves the proper advantage of situation, and has in itself no element of injustice to localities. It is the situation which forces upon the road an unequal charge which is, nevertheless, not unfair; and a strict application of the statute must compel the surrender of what is now competitive traffic to the older and more direct route whose very conformity to the general rule precludes conformity by the competitor.

INTER 8.

There are other cases in the country, of roads now taking part in competitive traffic which the peculiarities of situation will compel them to abandon if the long and short haul clause of the statute is strictly applied. This, to some extent, might be the case with certain north and south roads, like the road from Cincinnati to Toledo, and that from New Albany to Chicago, which have heretofore engaged considerably in east and west bound traffic which they deliver to or receive from other roads crossing them, or at their terminals. In many cases these roads have been accustomed to make the greater charge for the shorter haul simply because the direction they run compels it; but in doing so they may wrong no one, because the rates are not determined by them, but by the direct east and west lines, and are made with regard to relative distance. Both the roads named now have applications pending for relief from an embarrassment for which they are not themselves responsible; and they aver, with plausibility at least, that the public interest will suffer if they are shut out from such share in competition as they have hitherto taken.

We do not pass upon these cases finally, at this time, and therefore do not undertake to say of them that they constitute cases in which the competition of roads subject to the federal law creates the dissimilar circumstances and conditions which make up an exceptional case. But this brief reference to the facts is suggestive of a possibility, at least, that the exceptional case may exist; and if it does exist, a strict enforcement of the general rule might be found quite as injurious to the public interests as to those of the railroads which would thereby be shut out from competition.

IV. Whether the competition of towns which are trade centers or distributing points can, in any case, make out the dissimilar circumstances and conditions independent of the competition of the carriers, is a question which may be said to be presented by the evidence taken, but not with such distinctness as to call for an expression of opinion at this time. The pre-eminence of such trade centers in the territory reached by the petitioner's roads, is peculiar, and has probably been increased by the concessions in rates which the railroads have made to them, while making less concessions, or none at all, to less important stations. This condition of affairs tends to perpetuate itself; and the disparity of rates as between competitive and noncompetitive towns, the former being the "trade centers," must have had some influence to increase steadily the disparity in growth and prosperity.

By some of the witnesses before us this was bitterly complained of, while by others it was defended as being best for both classes of towns. The smaller towns in this part of the country, it was said, are dependent on the trade centers for their supplies, and they get, indirectly, the benefit of low rates to the distributing points, in lower prices than could otherwise be given to them. In proportion, also, as the distributing points are prosperous, they can, and do, extend to the dealers at other points, credit and indulgence. The prevalence of such ideas, and the acting upon them in making freight tariffs, gives to railroad

would support the greater charge for the shorter haul in the cases in which such greater charge was in general prohibited. Where there are no circumstances to make the short haul exceptionally expensive to the carrier, or the long haul relatively inexpensive, a difference in rates which reason and fairness will justify may still be made within the limitation of the statute; but to make out the exceptional case, in which the general rule of the statute may be disregarded on the ground that the circumstances and conditions are not substantially similar, the difference in cost should itself be exceptional, and be capable of proof amounting to practical demonstration.

In support of one of the applications presented to us the carrier was able to make a showing of lower costs on long haul freight more clear and distinct than is commonly possible. The showing was that the through business on its 450 miles of road was transacted by different trains from the local; that these moved much more rapidly and carried vastly the most freight to the train; that the number of men required was much less in proportion, not only upon the trains, but for the station and terminal service, and consequently all the items of expense were much smaller. These facts, which were apparent to the customers of the road, together with the peculiarly effective water competition, which affected principally the through traffic, influenced intelligent men doing business at local stations to admit, in giving evidence, that it might be just, and even necessary in some cases, that the charge for the shorter haul should be the greater.

The disproportion, it was insisted, had been too great; but when the question is one of degree, regulation rather than prohibition must be admitted to be the appropriate remedy; and the carrier must keep in mind that if the right be established in any case to make the greater charge for the shorter haul, it is not a right to make a charge not just or reasonable in itself, or one which will work unjust preference between individuals, localities, or commodities. It is, on the other hand, a right grounded in justice, and must be so exercised that the result shall be equitable.

III. We have next the case of dissimilar circumstances and conditions supposed to be made out by a showing that property now transported long distances at very low rates could not be transported at all unless concessions in rates were made to it. This is a common fact in railroad transportation; the cases are to be met with in the traffic of all the long lines. The necessity for making concessions to long haul traffic in the case of articles whose value in proportion to bulk or weight is small, and especially in that of the necessities of life, which are handled in large quantities, and in the supply of which the most distant countries compete, has long been conceded wherever railroads exist. The household goods of immigrants to the West have been carried for them at very low rates, and the results of their agriculture have afterwards been taken for seaboard and European markets in recognition of the general principle that the traffic must not be charged rates beyond what it can bear.

This is a just and sound principle when justly applied; and the country may be said

not only to have acquiesced in its recognition, but to have desired and urged its application in a great variety of cases. Any suggestion that it was meant by the statute to abrogate it would scarcely be plausible, especially since, when not misapplied, it can harm no one, but may be, and often is, of great and manifest advantage, in enabling distant sections of the country to come into closer commercial relations, and to exchange to their mutual benefit their dissimilar productions, or to compete with each other in those which are similar.

But the cases must be very rare in which the larger charge in the aggregate for the shorter haul of the same kind of property over the same line in the same direction could be justified, when no other reason supported it than the fact that the traffic for the longer haul would bear no more. Manifestly, such a discrimination when not imperative on other grounds is unjust; and the injustice becomes oppression when the effect is to increase the burden upon the traffic which has the shorter haul. There is a plain limit to the application of the principal that property is to be carried at rates it will bear; and the limit is reached when the rates charged are so low that further reduction would necessitate an increase of the charges upon other traffic in order to make up to the carrier such loss as the reduction causes. If some common vegetable, worth but five cents a hundred pounds more at a market a thousand miles distant than it is where it is grown, were to be transported that distance for the sum named, the producer nearer the market, if subjected to a higher charge, would have a right to complain that not only did the discrimination reduce the market value of his produce, but that the acceptance of the unreasonably low rates from the distant producer had a tendency to increase the charge for the shorter haul, so as to make it not only relatively, but, when considered by itself, unreasonably, high.

It is a matter of public notoriety that a belief has prevailed to a considerable extent that long haul traffic was in many cases carried at a loss; that the carriers were enabled to take it by making the charges for short haul traffic greater than would otherwise be necessary or reasonable, and that this constituted an abuse that ought to be corrected by law. Persons who did not hold to this belief have, on the other hand, taken low charges on long haul traffic as a proper measure for all charges, and have insisted that if the railroads could accept the low charges for one class of business, they could and ought to do so for all classes. And this, as a rule, would be quite true if the railroads had it in their power to make the rates for all; which, however, is far from being the fact. There are many cases in which they have the option only to take the traffic at rates prescribed by its owners, or not to take it at all. But in respect to such cases, we must repeat, by way of emphasis, that a successful appeal cannot be made to the equity of the statute on the mere ground that long haul traffic will not bear higher rates, if in fact those it can bear, if accepted, will cause a loss to the carrier which must be made up on short haul traffic. To have one's property carried at a loss would not be matter of right, but of

tinuance impossible. It is very plain that an unrestricted power to make such rates is liable to infinite abuses, and that it may as easily be made use of to injure one enterprise as to build up another. In the earnest and sometimes unreasoning rivalry of railroad companies, it has no doubt often been employed as much to give mere volume to business as for any anticipated net revenue; and the wrongs have in such cases far exceeded any possible advantages that could accrue either to the roads themselves or to the public.

It cannot be supposed that in any case the true interest of a road will be prejudiced by its being held strictly to the rule that excessively low rates on some traffic are not to be compensated for by excessively high rates on other traffic. And if rates are so graded as to violate the statutory general rule, it cannot be accepted as justification for the higher rates on the shorter haul that the lower rates on the longer haul had encouragement to manufacturers or other industries for their motive.

V. The chief ground on which the applicants pressed for relief from the long and short haul clause of the statute was that competition forced the railroad companies to make rates to and from connecting points to the level of which it was not possible to bring the charges at noncompetitive points, because the doing so would cause such reduction of revenues as would force roads into bankruptcy and ultimately into suspension. It was, therefore, as was said, inevitable that in a great number of cases the greater charge should be made for the shorter haul; and nothing but putting a stop to competition by law would prevent it. This it was insisted the new law does not attempt or intend. On the contrary, the importance of competition in fostering and regulating the internal commerce among the States is clearly noted.

In the sixth section carriers are permitted to reduce their rates at any time, but are forbidden to raise them except after giving ten days' notice. In the fifth section the pooling of freight is forbidden, unquestionably because the practice was regarded as having a tendency to prevent or check competition. The Act studiously omits to bring the steamboats and other independent water lines within its control, and must, therefore, have contemplated the continuance not only of competition, but of those things which competition renders inevitable. The existence of competitive forces to an extent that the railroad companies at competitive points are unable to control, it was therefore argued, would make out a case of circumstances and conditions so dissimilar to those prevailing at noncompetitive points as might justify the making of the greater charge for the shorter haul which was in general prohibited.

The competition which was brought to our attention as having this imperative force was, *first*, the competition of railroads with water ways; *second*, the competition of railroads with other railroads which are not subject to the provisions of the "Act to Regulate Commerce"; *third*, the competition with each other of railroads which are subject to that Act; *fourth*, the competition of business or trade centers with each other, operating indirectly upon the roads

INTER 8.

which form their channels of trade; and, *fifth*, the competition of business interests in like manner operating upon the roads, by whose assistance the business is carried on.

This fifth species of competition has already been remarked upon to some extent, and it has been seen that it will not justify a railroad company in discriminating between its own customers to an extent that would create an exception to the general rule the statute prescribes. We pass it now without further remark. The others demand at our hands due consideration.

I. It was fairly shown before us that instances exist, and may be found, along the routes of petitioner's lines in the States of Kentucky, Tennessee, Georgia, Alabama, Mississippi, and Louisiana, where the competition of water ways forces down the railroad rates below what it is possible to make them at noncompetitive points and still maintain the roads with success or efficiency. The reason is that the carriers by water can perform the service at very much less cost than the carriers by land. The general fact is that railroad rates for the transportation of property must approximate closely those which are made between the same points by steamer; and the steamer rates are generally, if not invariably, much below what the railroads can afford to accept upon all their business.

In such cases if competition is maintained, more must be charged at interior points than can be obtained at the points of competition; and if the competitive rates are such as are productive of some gain, however slight, the noncompetitive points are likely to receive indirect advantage therefrom, while the competitive points have the larger and more direct benefit, and are afforded a choice of agencies in transportation whose rivalry may fairly be expected to keep the cost down to a minimum. The interior points may have no ground for complaint in such a case, provided the rates they are charged are in themselves just and reasonable, even though the effect be that in some cases more is charged for the short than for the long haul over the same line in the same direction. This general fact is recognized the world over; and of English railways it has been often remarked that some of them would be deprived of much of their value if they were not allowed to meet water competition by such concessions, at the points of contact, as the competition would compel.

The only question that fairly arises in regard to it is whether the competition is kept within proper bounds. Vessel owners produced evidence before us to show that the railroads put down their rates to a ruinous point in their determination to take the competitive traffic at all hazards, and eventually to crush out competition; and railroad managers retorted with evidence that the blame for unremunerative rates was upon their rivals. But the question of relative fault is not important now. Low rates are a necessity of the situation; and if railroads compete with water transportation either on the ocean or on the navigable rivers, they have no choice but to accept such rates.

To compel the roads to observe strictly the general rule laid down by the fourth section would necessitate their abandonment of some

classes of business in which their competition with water transportation is now of public importance. Vessel owners, who appeared before us to oppose the applications made for relief, put their opposition in some cases explicitly on the ground that denying the applications would enable the vessel men to put up their own rates. This was to be expected, and is far from being blameworthy, if in fact their business is not now reasonably profitable; but it is suggestive of the fact that the interest of the public and that of any class of public carriers is not in all respects identical.

It is more than probable that the complaints made by the vessel owners against certain of the railroads are to some extent well founded; that the railroads have not only made the rates at points of competition with vessels much too low, in order that they might at all events obtain the business, but that this has been done in disregard alike of right and of true policy. This is only saying that in their wars of rates with vessel owners they have sometimes shown the same recklessness as in like wars among themselves; but the fact still remains that they must either be allowed to compete with vessel owners and make low charges for the purpose, or they must leave vessel owners in possession of the business without the check upon charges which competition would afford.

The question here is whether this limitation of competition was intended by the statute; or, on the other hand, did Congress intend that the existence of competition might in some cases make out the dissimilar circumstances and conditions which would support a greater charge for the shorter haul, even though it might be over the same line in the same direction, the shorter being included in the longer distance?

On this subject the history of the proceedings in Congress which resulted in the adoption of the fourth section as it stands is instructive, and with such brevity as is practicable it is recited here, not as determining conclusively the construction of the section, but as showing beyond question that the benefits of competition were meant to be retained, and that exceptions to the rigorous general rule were provided for to meet the contingencies which the competition might create.

In the report of the senate select committee, submitted January 18, 1886, known as the Cullom Report, is found the following language:

No question connected with the problem of railroad regulation has given the committee more perplexity than that relating to the utility and expediency of legislation prohibiting a carrier from charging more for a shorter than a longer haul under any circumstances; not that we have any doubt as to the injustice of such a charge under most circumstances, but because it seems inexpedient to enforce such a regulation under all circumstances.

When the effect of the proposed prohibition is considered with reference to the whole internal commerce of the United States, and especially with reference to the necessity of preserving the prevailing cheap rates for long distance transportation, there is reason to fear that the result of rigidly enforcing the proposed

regulation would be to stifle competition in numberless cases where it now exists and is to the general public interest, and perhaps to deprive the country of the benefits of the low through rates now and for years given to and from the tide water, without practical or appreciable advantage to intervening points.

The bill introduced with the report contained the following provision upon this subject:

Sec. 4. That it shall be unlawful for any common carrier subject to the provisions of this Act to charge or receive any greater compensation in the aggregate for the transportation of passengers or property for a shorter than for a longer distance over the same line in the same direction, and from the same original point of departure, if such greater charge for the shorter distance constitute an unjust discrimination; but such greater charge for a shorter distance shall be presumptive evidence of unjust discrimination, which may, however, be rebutted by the common carrier.

Upon application to the Commission appointed under the provisions of this Act, such common carriers may, in special cases, be authorized to charge less for longer than for shorter distances for the transportation of passengers or property; and the Commission may from time to time make general rules covering exceptions to any such common carrier in cases where there is competition by river, sea, canal, or lake, exempting such designated common carrier from the operation of this section of this Act; and when such exceptions shall have been made and published they shall have like force and effect as though the same had been specified in this section.

Afterwards, and before debate, the committee, on February 16, 1886, reported as a substitute for this bill another, in which the following language is found:

Sec. 4. That it shall be unlawful for any common carrier to charge or receive any greater compensation in the aggregate for the transportation of passengers or property subject to the provisions of this Act for a shorter than for a longer distance over the same line in the same direction, and from the same original point of departure; *Provided, however,* That upon application to the Commission, etc. * * * [substantially as before].

The formal discussion of the measure was commenced April 14, 1886, the chairman of the select committee opening the debate by a speech in which he said concerning the fourth section:

It is agreed that this is the principle that should be observed as a general rule. The committee found, however, that the principle was not of universal application; that there were cases in which the railroads were compelled to make lower rates for longer than for shorter distances by the great law of competition, which is stronger than any law we can make, and that in some cases it would be a great hardship to the public as well as the railroads to rigidly enforce the general principle.

It is perfectly clear that the intention of the original framers of the senate bill was to leave it to the discretion of the Commission to exempt carriers from the operation of the rule

in cases when the "great law of competition" made such a relaxation proper, having in view the interests of the carriers and the people.

On May 6, 1886, *Senator Cullom* moved to amend the section by striking out the words "covering exceptions to any such common carrier in cases where there is competition by river, sea, canal, or lake." He supported this motion by the suggestion that these words were not necessary, and that without them the Commission would have the same power and more. *Senator Harris* favored the amendment, as giving a broader discretion to the Commission, and it was adopted.

On May 12, a motion was made by *Senator Camden* to change the phraseology of the first part of the section, so that it should read "of like kind of property under substantially similar circumstances and conditions." This amendment was agreed to as a substitute for a previous amendment proposed by *Senator Camden*, and with little additional debate.

The bill was finally passed on the part of the Senate, section 4 remaining substantially as above, with the insertion of the following:

But this shall not be construed as authorizing any common carrier within the terms of this Act to charge and receive as great compensation for a shorter as for a longer distance.

The bill then went to the House of Representatives, and was referred to the committee on commerce. That committee reported as a substitute for it the bill before pending in the House, which contained the following provision upon the subject embraced in section 4 of the senate bill:

That it shall be unlawful for any person or persons engaged in the transportation of property as provided in the first section of this Act to charge or receive any greater compensation for a similar amount and kind of property, for carrying, receiving, storing, forwarding, or hauling the same, for a shorter than for a longer distance, which includes the shorter distance on any one railroad; and the road of a corporation shall include all the road in use by such corporation, whether owned or operated by it under a contract, agreement, or lease by such corporation.

In opening the debate on July 31, 1886, *Mr. Reagan*, chairman of the house committee on commerce, severely criticized the fourth section of the senate bill, saying that the closing part of the section substantially nullified the former part, while his proposed substitute contained an absolute prohibition.

The minority of the committee, four in number, opposed the substitution, and in their report the following passage occurs:

Nor do the minority favor the provision prohibiting a greater charge for a shorter than a longer haul, as it was shown to a satisfactory degree, as we think, in the hearing that, where two competing points were connected by water as well as rail, it was impossible for the railroads to secure the traffic unless they made their rates as low as the water rates, and that while they might be able to do this on a portion of their traffic, it would be destructive of their interests to reduce all their rates to those which were forced upon them between certain points by the competition of the water routes.

INTER 8.

It is obvious therefore that, in the House as well as in the Senate, it was understood that the existence of competition was intended to be included in the margin of discretion provided for by the Senate measure. The question as to this point was distinctly marked; the debate, so far as this section was concerned, was upon that basis. On July 30, 1886, the substituted bill was agreed to and passed on the part of the House. A conference committee was appointed, and at the second session of the Congress that committee agreed upon a report, which was presented to the Senate December 15, 1886. By this report the fourth section of the senate bill was amended so as to read as it now stands.

The work of the conference committee was very elaborately and carefully performed. The two bills which were referred to it presented very clearly the views which had prevailed in the two Houses respectively, on the general subject of relative charges on long and short haul traffic, the house view of an inflexible rule, forbidding absolutely the greater charge for the shorter haul, and the senate view that the rule should be subject to exceptions when the circumstances and conditions required it.

The conference committee accepted deliberately the senate view, and presented it, in the report to the two houses. In the Senate the report, before adoption, was discussed, and what was proposed by it on this point of vital interest was very distinctly brought out and made prominent; and in the House, where also the report was adopted, nothing which was said by anyone indicated that the situation was otherwise understood.

It is impossible to resist the conclusion that in finally rejecting the "long and short haul clause" of the house bill, which prescribed an inflexible rule, not to be departed from in any case, and retaining in substance the fourth section as it had passed the Senate, both Houses understood that they were not adopting a measure of strict prohibition in respect to charging more for the shorter than for the longer distance; but that they were, instead, leaving the door open for exceptions in certain cases, and among others in cases where the circumstances and conditions of the traffic were affected by the element of competition, and where exceptions might be a necessity if the competition was to continue water competition was beyond doubt especially in view.

In thus deliberately making provision for competition, even though it might be necessary to allow for the purpose exceptions to the general rule laid down in the statute, Congress must be supposed to have done so because the public interest required it. That competition is the life of trade is one of the most generally accepted of maxims; among its principal benefits is the protection it gives against extortionate charges. But legitimate, open, and fair competition was meant; not everything that has been done under the name of competition, and which in many cases has been equally destructive of public and of private right. Among the common abuses have been the granting of special favors in exceptional rates, rebates, drawbacks, etc., all of which are now expressly prohibited by law when they assume the form of unjust discrimination. There has

also been favoritism between places and communities as a result of violent competition; but this also is no longer permissible.

Other similar wrongs will be referred to further on; but the wars of rates, under the excitement of which traffic is carried at a loss, to be made good by excessive charges on other traffic at other times, is not the least of those from which the public has suffered. And these wars are as indefensible when vessel owners are their objects as when made between the railroads themselves, and are not to be justified on any pretense of competition. Water transportation is entitled to such traffic as in fair rivalry and at fair prices it can take, and the railroads in competition with it must recognize this right and not recklessly attempt to preclude its exercise. It is true that while the roads are obliged to publish their tariffs, and the carriers by water are not, the former are at a disadvantage in the competition; but possibly the law in this regard may be amended if justice shall be found to require it.

Every railroad company ought, when it is practicable, to so arrange its tariffs that the burden upon freights shall be proportional on all portions of its line and with a view to revenue sufficient to meet all the items of current expense, including the cost of keeping up the road, buildings, and equipment, and of returning a fair profit to owners. But it is obvious that, in some cases, when there is water competition at leading points, it may be impossible to make some portion of the traffic pay its equal proportion of the whole cost. If it can then be made to pay anything toward the cost, above what the taking of it would add to the expense, the railroad ought not, in general, to be forced to reject it, since the surplus, under such circumstances, would be profit.

As has been tersely said by M. de la Gournerie, formerly inspector general of bridges and railways in France, "A railroad ought not to neglect any traffic of a kind that will increase its receipts more than its expenses;" and long haul traffic which can only be had on these terms, may sometimes be taken without wronging any one, when, to carry all traffic, or even the major part of it, at the like rates, would be simply ruinous.

But we desire to apply generally to every kind of competition herein discussed the observation above made, that when competition leads to the transportation of property below actual cost, fairly computed, it ceases to be legitimate. Fair and reasonable competition is a public benefit; excessive and unreasonable competition is a public injury. Competition is to be regulated, not abolished. The other sections of the law of themselves imply ample authority for its regulation, and, in connection with the fourth section, support the interpretation that it is wholly inadmissible to press competition to a point where expenses are increased beyond the increase of income.

II. The question whether railroad competition with other railroads which are not subject to the control of this law, can present a case of dissimilar circumstances and conditions, within the meaning of section 4, may possibly be one of greater doubt. The classes of roads not thus subject, and whose competition might be severe, are the Canadian roads and roads which

are entirely within the control of a single State. As regards the latter, it is not improbable that cases exist of roads not restrained by any long and short haul clause corresponding to the federal statute, which are so situated in respect to rivals coming under the law of Congress as to be able to monopolize to the public detriment the traffic at important points of competition, unless the latter are given equal freedom of action.

We do not understand, however, that any of the pending applications are of this nature; and we therefore leave such cases to be considered when they shall be presented more directly. Competition with Canadian roads may, it is believed, present a case of dissimilar circumstances and conditions. Whenever such roads compete with roads in the United States for business between one part of our country and another, a state of circumstances arises and exists as to such business which justifies American roads in meeting such competition by a corresponding reduction of rates, without regard to the fact that in so doing the rates between the terminals may be reduced below rates to and from intermediate places which are otherwise reasonable and just in themselves. The fact that American roads are left free to meet such competition is of itself an assurance that no extensive war of rates is likely to be engaged in by the Canadian roads, or, if engaged in, to be long pursued.

III. The competition with each other of the railroads which are subject to the federal law, can seldom, as we think, make out a case of dissimilar circumstances and conditions within the meaning of the statute, because it must be seldom that it would be reasonable for their competition at points of contact to be pressed to an extent that would create the disparity of rates on their lines which the statute seeks to prevent. But we cannot now assume that no case has arisen or can hereafter arise, which, on its own peculiar facts, and in consideration of its special equities, can be deemed to present a just claim under the statute.

First, it may be observed here that in some parts of the country it is not easy to separate railroad competition altogether from competition by the water ways.

Water competition is not limited in force strictly to the points of contact of water and rail lines, but extends its influence to an indefinite distance therefrom, qualifying to greater or less extent the all rail rates. But passing that consideration by, it will be found on investigation that cases will exist in which, unless the force of strictly railroad competition is allowed to create exceptions under the statute, an existing competition which is supposed to be of public interest must come to an end. And where that is the case the strong lines will in general be gainers at the expense and sometimes to the destruction of those which are weaker.

One such case is that of the railroad extending from Pittsburgh, Pa., parallel to the Pennsylvania Railroad as far as Youngstown, and thence to Ashtabula, Ohio, where, through connection with the Lake Shore, it gives to the people of Pittsburgh and Youngstown competition with the Pennsylvania Road in their business to and from New York and New

England. The peculiarity of the competition is that the business on the roads respectively is started in opposite directions when destined to the same point, so that on east bound traffic from Pittsburgh, the haul by one road is shorter than from Youngstown, and longer by the other. As the Pennsylvania Road has the shorter line, it is in position to determine what the rates shall be, and the longer line has no option but to conform to them. In making them, the leading road gives to Pittsburgh lower rates than to Youngstown, as it justly should do, in recognition of the geographical position. But the other road must do the same, although over its line the traffic between Youngstown and the seaboard will have the shorter haul.

There is nothing unreasonable or unjust in this; and if the longer line were to attempt a change which should reduce the rates from Youngstown to the level of those of Pittsburgh it would, in doing so, only open a war of rates in which all the advantages would be with its rival. Finding itself in this dilemma it applied to the Commission for an order permitting a greater charge to be made on traffic to and from Youngstown, than is made on that to and from Pittsburgh, and its application is strenuously opposed by the Pennsylvania Road, which insists that competition by this roundabout route is illegitimate and ought not, therefore, in any manner to be aided.

Whether this position is sound the Commission may determine hereafter. It is sufficient to say of the case at this time, that it is one, and not a solitary, instance, in which a strict application of the general rule laid down by the statute must be fatal to competition. If the competition in itself is illegitimate, it may be right to permit its destruction. But it is not admitted by those interested in the road just mentioned, that its case is of this nature. It is shown that it was constructed by Pittsburgh capital, for the express purpose of the competition; and it appears that although the route is indirect, the competition has given it considerable business, and large investments have been made in reliance upon its continuance.

One fact obvious on the statement of this case is that the wrong against which the long and short haul clause of the statute is aimed is not to be found in it. When the greater charge for the shorter haul over the same line in the same direction is spoken of, the natural suggestion to the mind is of a line leading with some directness to the place to which the traffic is destined; and there seems to be in such greater charge a manifest unfairness, since it deprives the place of shipment nearest the destination of its proper advantage of situation. But in the case stated the position is the opposite to this; the greater charge for the shorter haul preserves the proper advantage of situation, and has in itself no element of injustice to localities. It is the situation which forces upon the road an unequal charge which is, nevertheless, not unfair; and a strict application of the statute must compel the surrender of what is now competitive traffic to the older and more direct route whose very conformity to the general rule precludes conformity by the competitor.

INTER 8.

There are other cases in the country, of roads now taking part in competitive traffic which the peculiarities of situation will compel them to abandon if the long and short haul clause of the statute is strictly applied. This, to some extent, might be the case with certain north and south roads, like the road from Cincinnati to Toledo, and that from New Albany to Chicago, which have heretofore engaged considerably in east and west bound traffic which they deliver to or receive from other roads crossing them, or at their terminals. In many cases these roads have been accustomed to make the greater charge for the shorter haul simply because the direction they run compels it; but in doing so they may wrong no one, because the rates are not determined by them, but by the direct east and west lines, and are made with regard to relative distance. Both the roads named now have applications pending for relief from an embarrassment for which they are not themselves responsible; and they aver, with plausibility at least, that the public interest will suffer if they are shut out from such share in competition as they have hitherto taken.

We do not pass upon these cases finally, at this time, and therefore do not undertake to say of them that they constitute cases in which the competition of roads subject to the federal law creates the dissimilar circumstances and conditions which make up an exceptional case. But this brief reference to the facts is suggestive of a possibility, at least, that the exceptional case may exist; and if it does exist, a strict enforcement of the general rule might be found quite as injurious to the public interests as to those of the railroads which would thereby be shut out from competition.

IV. Whether the competition of towns which are trade centers or distributing points can, in any case, make out the dissimilar circumstances and conditions independent of the competition of the carriers, is a question which may be said to be presented by the evidence taken, but not with such distinctness as to call for an expression of opinion at this time. The pre-eminence of such trade centers in the territory reached by the petitioner's roads, is peculiar, and has probably been increased by the concessions in rates which the railroads have made to them, while making less concessions, or none at all, to less important stations. This condition of affairs tends to perpetuate itself; and the disparity of rates as between competitive and noncompetitive towns, the former being the "trade centers," must have had some influence to increase steadily the disparity in growth and prosperity.

By some of the witnesses before us this was bitterly complained of, while by others it was defended as being best for both classes of towns. The smaller towns in this part of the country, it was said, are dependent on the trade centers for their supplies, and they get, indirectly, the benefit of low rates to the distributing points, in lower prices than could otherwise be given to them. In proportion, also, as the distributing points are prosperous, they can, and do, extend to the dealers at other points, credit and indulgence. The prevalence of such ideas, and the acting upon them in making freight tariffs, gives to railroad

managers a power of determining, within certain limits, what towns shall be trade centers, and what their relative advantages; and while it may be, as they assert it is, that in deciding upon rates under the pressure of the competition of trade centers they endeavor to do justice between them, yet, as they do not, at the same time, feel a like pressure from noncompetitive points, it is obvious that justice to such points is in great danger of being overlooked, and it is altogether likely that it is so to some extent.

One result is that towns recognized by railroad managers as trade centers come to be looked upon as towns with special privileges, and other towns strive for recognition as such, and complain, perhaps, of injustice, when they fail. It was made very clear, by the evidence produced in behalf of the railroads, that the exceptionally favorable rates which were given to certain localities, were, in some cases, given to build up trade centers; and as they had had that effect and large establishments had been located at such centers, invited by the favoring rates, it was urged that there would be injustice in now compelling the roads to go back to the rule of equality.

Of this it may be said: *first*, that as between different localities, it is no sound reason for discriminating in favor of one against another that the purpose is to build up the favored locality as a trade center; and *second*, if the discrimination has existed and has had its effect, the fact that large establishments have thereby been encouraged is no reason why the injustice should be perpetuated. This statute aims at equality of right and privilege, not less between towns than between individuals, and it will no more sanction preferential rates for the purpose of perpetuating distinctions than of creating them.

These general views will indicate as far as we deem at this time necessary the bounds within which the railroad managers must limit their action in making charges which are greater in the aggregate for the transportation of passengers or of the like kind of property for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer distance. With responsibility to the law and to the restraining power of the Commission in case the bonds are exceeded, it may confidentially be expected that all carriers will bring themselves into conformity with the general law so far as it may be found reasonably practicable, and that the occasions for special interference will not be numerous.

Our observation and investigations so far may lead to the conclusion that strict conformity to the general rule is possible in large sections of the country, without material injury to either public or private interests; and that in other sections the exceptions can be and ought to be made much less numerous than they have been hitherto, and that when exceptions are admitted, the charges should be less disproportionate. Very many of the roads, as we are informed, have so arranged their tariffs as to make no exception whatever; and where that has been proved to be reasonably feasible, return to the former custom cannot be tolerated. In any case in which a company fails to bring its tariffs into conformity with the gen-

eral rule, if parties whose interests are thereby unfavorably affected complain, it must be prepared to justify its action by a showing of circumstances and conditions which render it just and reasonable.

In the views above expressed the members of the Commission, after full consideration are unanimous.

The order for temporary relief which was made in favor of the petitioner, will be allowed to remain in force until the day originally limited for its expiration; and in the meantime its officers will have the opportunity to make thorough revision of its freight and passenger tariffs, in order to bring them as nearly as may be reasonably feasible into harmony with the general rule of the statute and with the views expressed in this opinion. That they may be brought much nearer to conformity than they now are without the sacrifice of any substantial interest, we have very little question; and as business adapts itself to the new principle established by Congress, it will no doubt be found that exceptions can safely and steadily be made less and less numerous.

The other applications for relief under this section which remain to be disposed of are as follows: fifteen are by the Richmond & Danville Railroad Company, the East Tennessee, Virginia & Georgia Railroad Company, and other members of the Southern Railway & Steamship Association, which is an association of railroad and steamship companies operating lines of transportation in the territory south of the Ohio and Potomac, and east of the Mississippi River. Eleven are by other railroad lines in the same territory, the Mobile & Ohio, "Queen & Crescent," Illinois Central, and others. Two are on behalf of companies in Louisiana and Texas. Seven are presented by the various transcontinental lines. One is in favor of the New York, New Haven & Hartford and other companies operating short lines in Connecticut, Rhode Island, and Massachusetts, which also seek relief against alleged water competition. One is filed by the Delaware & Hudson Canal Company, and another by the Rome, Watertown & Ogdensburg Railroad Company, in the State of New York, asking relief in respect to Canadian competition. Four are presented in behalf of the Pittsburg & Lake Erie, the Cincinnati, Hamilton & Dayton, and two other roads similarly situated. One by the Mason City & Fort Dodge Company, a north and south road in the State of Iowa. Four are in behalf of certain roads in the vicinity of Peoria. Two are in behalf of roads in Southern Illinois, relating to their connection south of the Ohio. Three are by the Wisconsin Central and two other roads in Wisconsin and Minnesota. One by the New York, Philadelphia & Norfolk, in Delaware. One by the Memphis & Little Rock, in Arkansas; and one by the Detroit, Grand Haven & Milwaukee, in the State of Michigan.

The temporary orders which have been made on some of these petitions will in like manner be permitted to remain in force until the expiration of the time originally limited in each. No further order will be made upon any of the petitions, for although some two or three of the cases may not, by the facts recited in the ap-

plications for relief, be brought strictly within the principles above discussed, yet they all present what are claimed to be different circumstances and conditions adequate to authorize exceptions to the general rule; and if the petitioners are persuaded that the fact is as they represent, they should act under the statute accordingly.

The points that are intended to be decided at this time are as follows:

First. That the prohibition in the fourth section against a greater charge for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance, as qualified therein, is limited to cases in which the circumstances and conditions are substantially similar.

Second. That the phrase "under substantially similar circumstances and conditions," in the fourth section is used in the same sense as in the second section; and under the qualified form of the prohibition in the fourth section, carriers are required to judge in the first instance with regard to the similarity or dissimilarity of the circumstances and conditions that forbid or permit a greater charge for a shorter distance.

Third. That the judgment of carriers in respect to the circumstances and conditions is not final, but is subject to the authority of the Commission and of the courts, to decide whether error has been committed, or whether the statute has been violated. And in case of complaint for violating the fourth section of the Act, the burden of proof is on the carrier to justify any departure from the general rule prescribed by the statute by showing that the circumstances and conditions are substantially dissimilar.

Fourth. That the provisions of section 1, requiring charges to be reasonable and just, and of section 2, forbidding unjust discrimination, apply when exceptional charges are made under section 4 as they do in other cases.

Fifth. That the existence of actual competition which is of controlling force, in respect to traffic important in amount, may make out the dissimilar circumstances and conditions entitling the carrier to charge less for the longer than for the shorter haul over the same line in the same direction, the shorter being included in the longer, in the following cases: 1, when the competition is with carriers by water which are not subject to the provisions of the statute; 2, when the competition is with foreign or other railroads which are not subject to the provisions of the statute; 3, in rare and peculiar cases of competition between railroads which are subject to the statute, when a strict application of the general rule of the statute would be destructive of legitimate competition.

Sixth. The Commission further decides that when a greater charge in the aggregate is made for the transportation of passengers or the like kind of property for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer distance, it is not sufficient justification therefor that the traffic which is subjected to

such greater charge is way or local traffic, and that which is given the more favorable rates is not.

Nor is it sufficient justification for such greater charge that the short haul traffic is more expensive to the carrier, unless when the circumstances are such as to make it exceptionally expensive, or the long haul traffic exceptionally inexpensive, the difference being extraordinary and susceptible of definite proof.

Nor that the lesser charge on the longer haul has for its motive the encouragement of manufacturers or some other branch of industry.

Nor that it is designed to build up business or trade centers; nor that the lesser charge on the longer haul is merely a continuation of the favorable rates under which trade centers or industrial establishments have been built up.

The fact that long haul traffic will only bear certain rates is no reason for carrying it for less than cost at the expense of other traffic.

(May 23, 1887.)

CHICAGO & ALTON R. R. CO.,

v.

PENNSYLVANIA R. R. CO.

CHICAGO, ROCK ISLAND & PACIFIC R. CO.,

v.

NEW YORK CENTRAL & HUDSON RIVER R. R. CO.

MR. William Brown, in behalf of the Chicago & Alton Railroad, filed charges before the Commission, against the Pennsylvania Railroad Company of violation of the third section of the Interstate Commerce Act.

He charged that the Pennsylvania Company had unlawfully given preference and advantage to the Chicago, Burlington & Quincy Railroad, in the interchange of passengers at Chicago, and denied the Chicago & Alton reasonable facilities for the interchange of passenger traffic. This is alleged to be the result of an unlawful combination on the part of the Pennsylvania and other companies to coerce the public.

Mr. Brown also filed, in behalf of the Chicago, Rock Island & Pacific Railroad Company similar charges against the New York Central & Hudson River Railroad Company.

The Commission, after hearing Mr. Brown's statement, entered an order for the Companies, against which the complaints are made to appear and make answer in ten days.

(May 24, 1887.)

BOSTON & ALBANY R. R. CO.,

v.

BOSTON & LOWELL R. R. CO. *et al.*

THE Boston & Albany Railroad Company, by its general traffic manager, filed with the Commission a complaint against the Bos-

ton & Lowell Railroad Company, the Concord Railroad Company, the Northern Railroad Company, the Central Vermont Railroad Company and the Grand Trunk Railroad Company, charging that these Companies, under the name of the National Dispatch Line, have issued schedules of joint rates to Detroit and other points in the West, where they come in competition with the Boston & Albany Company and its connections, which are less than those of the latter companies to the same points; while at the same time a certain combination of roads, including a part of the roads in the National Dispatch Line, viz.: The Boston & Lowell, Concord, Northern and Central Vermont Railroad Companies, maintain higher rates to St. Albans and other intermediate points than the Dispatch Line charges to terminal points.

Re SUSPENSION OF THE FOURTH SECTION.

MR. Green, of Buffalo, representing the Lake Shore & Michigan Southern Railroad and the Pittsburg & Lake Erie Railroad Companies, made an argument before the Commission in support of the petitions of those companies for relief from the fourth section of the Act. He asked to be permitted to haul freight from Pittsburg to eastern points at the same rates made by the Pennsylvania Railroad Company to those points, although those rates may be lower than from some intermediate points from Youngstown easterly.

Mr. John Scott, attorney for the Pennsylvania Railroad Company, said he had never known an application so indefinite as that under consideration. It would, if granted, leave the companies at liberty to fix their local rates at an indefinite number of points without reference to geographical location.

John Newell, President and Manager of the Lake Shore Company, and President of the Pittsburg & Lake Erie Company, said that he had heard no complaint of the local rates, and it was desirable that these rates be maintained while the through rates are reduced in order to secure Pittsburg business going to New York.

D. S. Gray, of the western division of the Pennsylvania Railroad Company, opposed the application. In answer to a question by Commissioner Walker, he said that the rates of the Pennsylvania Railroad Company had been adjusted in conformity with the terms of the Law, and the result up to the present time had been satisfactory.

J. T. Brooks, representing the Pennsylvania Railroad interests, said that favorable action upon the application of the Lake Shore would be an invitation to every road in the United States to come here and upon similar equitable grounds to ask relief.

James Reed, representing the Pittsburg, Lake Erie & Western Railroad, made a plea for a suspensory order in the case of that road as affecting traffic west of Pittsburg.

T. A. Delamater, General Superintendent of the Meadville & Louisville Railroad Company, appeared to request a suspension of the long and short haul clause so far as it affects east-

ern business on that road, so as to meet trunk line rates.

(May 27, 1887.)

MISSOURI & ILLINOIS TIE & LUMBER CO., v.

CAPE GIRARDEAU & SOUTHWESTERN R. R. CO.

THE Commission received a petition from the Missouri & Illinois Tie & Lumber Company, of Cape Girardeau, Mo., charging the Cape Girardeau & Southwestern Railroad Company with discriminating against them, and in favor of T. J. Moss, a competitor, in the matter of furnishing cars for the transportation of ties and lumber, to such a degree as to give Moss a complete monopoly of the railroad tie and lumber business on the line of the defendant's road.

(May 31, 1887.)

Re SUSPENSION OF THE FOURTH SECTION.

THE Atlantic & North Carolina Railroad Company filed an application for a suspension of the fourth section as far as it affects Morehead City and Kingston, N. C., averring that at both those points the water competition will ruin its business unless the relief sought is granted.

T. H. Barrett, President of the State Farmers' Alliance of Minnesota, transmitted a long list of requests by the executive committee of the alliance, looking to a vigorous enforcement of the Interstate Commerce Law, especially that part relating to the long and short haul.

William H. COUNCIL

WESTERN & ATLANTIC R. R. CO.

A COMPLAINT was received from William H. Council, a colored man, directed against the Western & Atlantic Railroad Company, in which he avers that on account of his color he was forcibly ejected from a first class car, after having paid for a first class ticket. He asks that the Commission award him \$25,000 damages, and such other relief as it may deem proper.

(June 1, 1887.)

Re MILK TRAFFIC. *

THE Commission received the answer of the New York, Ontario & Western Railroad Company to the complaint of Nathaniel W. Howell and others, that the rates charged for the transportation of milk from Orange County, N. Y., to Jersey City are unreasonable and unjust.

The answer makes a general denial of the charge of the complaint, and furthermore denies that the company transports milk at any

*See ante, 24.

less rate for any one person, company or corporation than for another, or that it subjects any particular person, corporation or locality to any undue prejudice or disadvantage, or that it gives any special rate to any shipper of milk.

(June 8, 1887.)

RE SUSPENSION OF THE FOURTH SECTION.

THE Commission received a protest from Woodruff Sutton, of the firm of Sutton & Co., New York City, against the granting of the application of the transcontinental railroads for a permanent suspension of the fourth section of the Law.*

Sutton & Co. are engaged in transporting freight from New York and Philadelphia to San Francisco and Portland, in clipper ships; and the author of protest declares that the transcontinental roads made war against the clippers, instead of the latter making war against the railroads. He asserts that it has been the custom of the railroads to require shippers of freight from New York to the Pacific Coast to enter into written contracts to ship all freight by the railroads, and that as an inducement contractors were charged only six cents per pound, while noncontractors were charged twelve cents per pound.

Mr. Sutton asserts that the effect of the transcontinental roads combining against the clipper ships has been to reduce the number of firms engaged in the latter business from eight to two, and that now only the cheapest and coarsest grades are shipped by clippers. He expresses the opinion that the Pacific Mail Steamship Company is interested with the transcontinental roads in this effort to procure a permanent suspension of the fourth section; and in the interest of the clippers and of other shippers he protests against such suspension.

(June 17, 1887.)

CHICAGO & ALTON R. R. CO.

PENNSYLVANIA R. R. CO. et al.

HEARING before the Commission.

Mr. Brown, for the Chicago & Alton R. R. Co.—

Explained that the burden of the complaint is that the Pennsylvania Railroad Company and the Pennsylvania Company have violated the Interstate Law in three particulars: In the first place it is alleged that the Pennsylvania Company has refused to accord to the complainant equal facilities and advantages with other roads; in the second place it has subjected the complainant to undue disadvantage; and in the third place it is charged that the defendants have not afforded all reasonable facilities for the interchange of traffic and passengers.

Therefore the complainant asks that the Pennsylvania Railroad Company and the Pennsylvania Company be required by the Commission to afford these facilities.

Mr. Scott, for the Pennsylvania Co.—

*See ante, 26, 27.

Gave in detail the complaint. Mr. Scott stated the position of the Pennsylvania Railroad Company, giving in detail a history of the negotiations between the companies leading up to the refusal to exchange traffic. He held that the Commission must hold as the supreme court had held in the case of *Atchison, Topeka & Santa Fe R. R. Co. v. Denver & New Orleans R. R. Co.* 110 U. S. 687 (Bk. 28, L. ed. 291), that a road is not bound to go beyond its own lines for the purpose of making facilities.

The broad general question was whether the Commission would enable a few lines to continue a system which can only result in actual demoralization among the officers of other companies; whether the good morals of the railroad companies of the country and the interests of the general public do not require that this practice of permitting the officers of one company to pay commission to the agents of another company for the purpose of securing traffic shall have put upon it the seal of the Commission's reprobation.

A controversy arose when Mr. Brown attempted to secure an admission that the Pennsylvania Railroad Company is a member of the Eastern Association, succeeding what was formerly known as the Eastern Pool, which managed Castle Garden and required the western roads to pay a commission of ten cents for the sale of their tickets. Finally, Mr. Scott admitted that his Company was a member of the association, while refusing to admit the truth of the charges against the association.

Mr. Scott offered to present testimony of railroad men to show the demoralizing effect of the practice of paying commissions to agents on sales of tickets, but Mr. Brown objected to the competency of the evidence—saying that he could produce any amount of testimony of an opposite character. In answer to the contention of Mr. Scott that the commission practice is an offense against morality, he declared that it was not the function of the Commission to enforce good morals.

The Commission decided to admit the testimony offered by the counsel for the Pennsylvania Railroad Company, and President Roberts was sworn. He said that he had found the practice of paying commissions to be a great wrong to the public and an evil in railroad management. Several years ago the Pennsylvania Railroad Company had endeavored to stop the practice, but as the other roads continued it the result had been that the Pennsylvania Road lost heavily in traffic and was forced to again pay commissions.

When the Interstate Commerce Bill passed the company had seen an opportunity to put a stop to the practice, and co-operating with the Chicago, Burlington & Quincy had ordered the agents to refuse to accept commissions. The sole reason for refusing to sell the tickets of the Chicago & Alton was the declining of that company to agree not to interfere with the agents of the Pennsylvania Railroad Company.

Mr. Brown inquired if the Castle Garden Association does not require the western railroads to pay 10 per cent for tickets sold over their lines.

Mr. Roberts replied that the roads deriving traffic from Castle Garden were assessed an

amount based upon their revenue from the source to pay the expenses of the association; but this had no relation to the payment of commissions to agents.

Commissioner Morrison inquired if he had not known before the passage of the law that the practice was unlawful.

The witness admitted that he had, and added that the Pennsylvania Railroad Company had discharged an important agent and spent \$120,000 in the effort to discontinue the commission practice in 1883.

The next witness called by the Pennsylvania counsel was George R. Blanchard, commissioner of the Central Traffic Association. He said he was certain of the evil results of the payment of passenger commissions and could thoroughly support what President Roberts had said about its demoralizing effects. The practice had gone so far that cases had been known where the agents made an arrangement with conductors by which the tickets were not punched but were resold to the agents. The scalpers were paid fees by commissions, and their offices were the hot-beds—the brood nests—of every form of railway corruption. Continuing, the witness said that of the total railroad mileage, 85 per cent of the companies assented to the terms of the circular agreeing to refrain from paying commission.

E. A. Ford, general ticket agent of the Pennsylvania Company, and J. R. Wood, general passenger agent of the same company, also testified.

General Manager C. H. Chappell, of the Chicago & Alton, then took the stand and said that all of the roads running west of Chicago had agreed upon a stated amount of commission upon tickets sold. Witness believed this tended to prevent discrimination and cutting of rates. As a result, all of the roads were put upon an equal basis.

Mr. Scott wished to be informed as to the object of all of the roads running west from Chicago paying the same amount of commission to an agent of the Pennsylvania Company under orders to sell their tickets.

The witness replied that the commission was an inducement to the agent to sell through tickets, to explain the different routes to the buyer of tickets, and to take some interest in the business of the western road.

General Passenger Agent James Charlton,

of the Chicago & Alton, testified that twelve of the roads with which his road had done business last year had boycotted it because of its refusal to sign the agreement. Witness never had an agent who ventured to cut rates without his permission.

Mr. Brooks asked what the witness would think of the propriety of the officers of one line seeking to tempt the agents of another line to violate instructions.

The witness had no opinion on the subject; has not thought of it, but would not do it himself.

"Don't you know it is a reprehensible piece of conduct?" inquired Mr. Brooks.

Mr. Brown took exception to the question, however, and it was not allowed to stand.

With this testimony both sides announced that their evidence was all in, and the counsel for both sides summed up for their respective companies. The Commission took the matter under advisement.

SWIFT & Co. *et al.*

v.

BALTIMORE & OHIO R. R. Co. *et al.*

Swift & Co. and Armour & Co., Chicago, together with the East St. Louis Dressed Beef Company, Nelson Morris & Co., and George H. Hammond & Co., presented a petition to the Commission complaining against unjust discrimination and excessive charges at the hands of the Baltimore & Ohio, Chicago & Grand Trunk, Indianapolis & St. Louis, Lake Shore & Michigan Southern, Chicago, St. Louis & Petersburg, Pittsburg & Fort Wayne and Michigan Central Railroad Companies.

It is alleged that the unjust rates complained of are fixed by an agreement between the owners of railroad lines to destroy competition, and that the purpose of the combination is to prevent the petitioners from obtaining reasonable rates. It is also alleged that for the transportation to the East of dressed beef, sheep and hogs, thirty-five cents per 100 pounds more is demanded than for the transportation of other meat provisions, although the conditions are the same, except that the carriers' liability is less in the first instance.

UNITED STATES CIRCUIT COURT FOR THE NORTHERN DISTRICT OF FLORIDA.

Re PETITION OF C. H. MALLORY & Co. *et al.*, in

Cutting *v.* Florida Railway & Navigation Co.

Under the Interstate Commerce Act all charges made by the receiver of a railroad, in respect to such business as falls under the head of interstate commerce, for any services in the transportation of passengers or property, or for receiving, delivering, storing or handling property, must be reasonable and just; and such receiver may not discriminate in his rates, charges and facilities for or against either of

two connecting steamship lines, but should give to both equal rates and facilities for trade and travel, for equal service, from all points.

(April 12, 1887.)

PETITION by C. H. Mallory & Co. and the New York & Texas Steamship Company, for an order directing H. R. Duval, Receiver of the Florida Railway & Navigation Company, appointed by the court, to desist from discriminating against the petitioners' steamship line in favor of the Clyde line.

The steamships of the petitioners' line and of the Clyde line both connect with the

railroad in question, and are competitors for its business.

The answer of the receiver alleged that the railroad is without means to earn revenue or to discharge its duty as a public carrier, unless it can have the assistance of and a connection with a line of steamships; that its business will not support two lines of steamships; that the service offered by the Clyde line is superior to that of the petitioners' line, and that it is essential to the interest of the railroad that the receiver should have the right to discriminate between the two lines, and that he had discriminated for that reason; but it further alleged that since the Interstate Commerce Act came into operation he had reformed his tariff, and that it was his intention to make no discrimination in the future.

Mr. Horatio Bisbee, for petitioners.
Messrs. John A. Henderson and Hart-ridge & Young, for respondent.

Settle, J., delivered the following opinion:
This petition was filed on the 21st day of

March, 1887, which was before the Interstate Commerce Act went into effect. The answer of the Receiver, H. R. Duval, was filed on the 4th day of April, 1887, in which he submits that he has reformed his tariff of rates, and intends to comply, in all respects, with the provisions of the Interstate Commerce Act.

In view of this answer, I deem it unnecessary and inexpedient at this time to do more than to give to the Receiver of the Florida Railway & Navigation Company some general instructions in respect to such of his business with the parties to this petition as falls under the head of interstate commerce:

1. All charges made for any service in the transportation of passengers or property, or for receiving, delivering, storing or handling property, must be reasonable and just.

2. He will not discriminate, in his rates, charges and facilities, for or against the Clyde line or the Mallory line, but will give to both equal rates and facilities for trade and travel, for equal service, from all points.

UNITED STATES SUPREME COURT.

HENRY S. BARRON, *Plff. in Err.*,
v.

GEORGE W. BURNSIDE, Sheriff of LINN
COUNTY, IOWA.

(From Lawyer's ed. U. S. Reports, Bk. 30.)

1. The jurisdiction of the federal courts depends upon and is regulated by the laws of the United States, and it cannot be affected by state legislation.
2. A corporation is a citizen of the State by which it is created and in which its principal place of business is situated, so far as its right to sue and be sued in the federal courts is concerned, and within the clause of the Constitution extending the jurisdiction of said courts to controversies between citizens of different States.
3. The Iowa Act of April 6, 1886, seeking to make the right of foreign corporations to transact business in that State dependent upon their surrender of the right to remove causes to the federal courts, is invalid.

(Argued March 18, 21, 1887. Decided April 11, 1887.)

IN ERROR to the Supreme Court of the State of Iowa. *Reversed.*

The history and facts of the case appear in the opinion of the court.

Messrs. W. C. Goudy and J. J. Herrick, for plaintiff in error:

The Statute of 1886, if enforced, will deprive the Chicago and Northwestern Railway Company of its property without due process of law.

The franchise to operate a railroad company is property. And to deprive such a company of the right to use its property is, in effect, to deprive the company of the property itself.

Morawetz, *Priv. Corp.* 2d ed. § 982; *Mem-*
INTER S.

phis & L. R. R. Co. v. Berry, 112 U. S. 619 (28: 887); *New Orleans etc. R. R. Co. v. Delamare*, 114 U. S. 509 (29: 244).

The right to remove a cause coming within the provisions of the Act of Congress is one existing under the Constitution and Laws of the United States, and any Act of a State Legislature which seeks to destroy or impair that right is void.

Home Ins. Co. v. Morse, 87 U. S. 20 Wall. 450 (22: 385); *Doyle v. Continental Ins. Co.* 94 U. S. 543 (24: 148); *Baltimore & O. R. R. Co. v. Cary*, 28 Ohio, 208.

But it is claimed that the *Doyle Case* justifies the Act of legislation now in question, and that the Chicago and Northwestern Railway Company, being a corporation of another State, could be excluded from the State of Iowa, or that any condition could be imposed upon the right to do business in the State.

There is a difference between the Wisconsin and Iowa Statutes. The one collided with no provision of the Constitution; the other did.

It is said in *Lafayette Ins. Co. v. French*, 59 U. S. 18 How. 407 (15: 451), that: "A corporation created by Indiana can transact business in Ohio only with the consent, express or implied, of the latter State. This consent may be accompanied by such conditions as Ohio may see fit to impose; and these conditions must be deemed valid and effectual by other States, and by this court, provided they are not repugnant to the Constitution and laws of the United States, or inconsistent with those rules of public law which secure the jurisdiction and authority of each State from encroachment by all others, or that principle or maxim of justice which forbids condemnation without opportunity for defense."

The power of the State to exclude a foreign corporation is not denied, that principle having been clearly established by the decision of the Supreme Court of the United States with reference to insurance companies; but the power is not an unlimited one. Whenever it collides with the Constitution of the United States

eral courts, in the same manner, and to the same extent, as is now authorized by law.

"Sec. 2. No foreign corporation which has not in good faith complied with the provisions of this Act, and taken out a permit, shall hereafter be authorized to exercise the power of eminent domain, or exercise any of the rights and privileges conferred upon corporations, until they have so complied herewith and taken out such permit.

"Sec. 3. Any foreign corporation sued or impleaded in any of the courts of this State upon any contract made or executed in this State or to be performed in this State, or for any act or omission, public or private, arising, originating or happening in the State, who shall remove any such cause from such state court into any of the federal courts held or sitting in this State, for the cause that such corporation is a nonresident of this State or a resident of another State than that of the adverse party, or of local prejudice against such corporation, shall thereupon forfeit and render null and void any permit issued or authority granted to such corporation to transact business in this State; such forfeiture to be determined from the record of removal, and to date from the date of filing of the application on which such removal is effected; and whenever any corporation shall thus forfeit its said permit no new permit shall be issued to it for the space of three months, unless the executive council shall for satisfactory reasons cause it to be issued sooner.

"Sec. 4. Any foreign corporation that shall carry on its business and transact the same on and after September 1, 1886, in the State of Iowa, by its officers, agents, or otherwise, without having complied with this statute, and taken out, and having a valid permit, shall forfeit and pay to the State for each and every day in which such business is transacted and carried on, the sum of one hundred dollars (\$100), to be recovered by suit in any court having jurisdiction. And any agent, officer or employee who shall knowingly act or transact such business for such corporation when it has no valid permit as provided herein, shall be guilty of a misdemeanor, and for each offense shall be fined, not to exceed one hundred dollars (\$100), or imprisoned in the county jail not to exceed thirty days, and pay all costs of prosecution.

"Sec. 5. All Acts and parts of Acts inconsistent with the provisions hereof are hereby repealed; *Provided*, That nothing contained in this Act shall relieve any company, corporation, association or partnership from the performance of any duty or obligation now enjoined upon them or required of them or either of them by the laws now in force."

The information on which the warrant of arrest was issued was as follows:

"State of Iowa, } ss:
"Linn County, }

"Before C. W. Burton, Justice of the Peace in and for Rapids Township.

"The State of Iowa, }
" u
"Henry Barron. }

"The defendant is accused of the crime of knowingly transacting a portion of the business of the Chicago & Northwestern Railway

Company within the State of Iowa, when such railway company has no valid permit to do business in the State of Iowa, as provided in chapter 76 of the Laws of the 21st General Assembly of said State of Iowa, and taking effect September 1, 1886.

"For that the said defendant, on the 5th day of October, 1886, at the City of Cedar Rapids, in the county and State aforesaid, well knowing the Chicago & Northwestern Railway Company to be a foreign corporation organized under the laws of Illinois, and not a corporation organized under the laws of Iowa, and well knowing that the said Chicago & Northwestern Railway Company was such foreign corporation for pecuniary profit other than for carrying on mercantile or manufacturing business, to wit: for the operating of a line of railroad, and well knowing that said railway company has failed, neglected and refused to file its articles of incorporation with the Secretary of State of the State of Iowa, and has neglected and refused to request the issuance to such Chicago & Northwestern Railway Company of a permit to transact business in said State of Iowa, and well knowing that said railway company has no permit to do business in said State of Iowa, as required by said chapter 76 of the Laws of Iowa, passed by the 21st General Assembly aforesaid, did knowingly act as a locomotive engineer for the transaction of the business of said Chicago & Northwestern Railway Company within the State of Iowa, by running a locomotive engine, with a passenger train attached thereto, through the Township of Rapids, in the county and State aforesaid, contrary to law, and the statute in such case made and provided.

J. H. Preston.
"Subscribed and sworn to by J. H. Preston before me, this 5th day of October, A. D. 1886.

[Notarial Seal.]

E. C. Preston.

Notary Public in and for Linn County, Iowa."

Barron, having been arrested, applied to the Supreme Court of the State for a writ of *habeas corpus*, by a petition setting forth various facts as showing that his imprisonment was illegal, and praying that his petition might be tried before the supreme court. The writ was issued, a return was made to it by the sheriff, and the case was heard upon an agreed statement of facts, the only material ones, in the view we take of the case, being, that the Chicago & Northwestern Railway Company was and is an Illinois corporation, operating railroads in Iowa, and claiming to do so under the authority of statutes of that State, and that Barron, "at the time he was arrested, was in the employment of the Chicago & Northwestern Railway Company, and engaged as an engineer on a locomotive in running a passenger train, which was made up at Chicago, in the State of Illinois, and was destined to Council Bluffs, in Iowa, and that said train was carrying passengers and the United States mails received at different points in the State of Illinois, and destined to points in the State of Iowa and beyond, and also from points in the State of Iowa to other points in the same State," and that he was arrested while he was engaged in controlling the engine on the train while it was running. It was admitted that the company had not complied with the Iowa statute by taking out the required permit.

On the hearing before the state court it was urged, among other things, that the Statute of Iowa is void as an attempt to interfere with the jurisdiction of the federal courts, as established by the Constitution of the United States and Acts of Congress. The court upheld the validity of the statute.

The statute manifestly applies to the Chicago & Northwestern Railway Company, as an Illinois corporation. The first section provides that a foreign corporation, desiring to continue the transaction of its business in Iowa, is required, on and after September 1, 1886, "to file with the Secretary of State a certified copy of its articles of incorporation duly attested, accompanied by a resolution of its board of directors or stockholders, authorizing the filing thereof, and also authorizing service of process to be made upon any of its officers or agents in this State engaged in transacting its business, and requesting the issuance to such corporation of a permit to transact business in this State; said application to contain a stipulation that said permit shall be subject to each of the provisions of this Act; and thereupon the Secretary of State shall issue to such corporation a permit in such form as he may prescribe, for the general transaction of the business of such corporation; and, upon the receipt of such permit, such corporation shall be permitted and authorized to conduct and carry on its business in this State."

The initial step required is a resolution authorizing the filing of the copy of the articles of incorporation, and authorizing service of process in the manner specified, and requesting the issue of the permit, the application to be accompanied by a stipulation that the permit shall be subject to each of the provisions of the Act. This proceeding is a unit. The filing of the articles of incorporation and the provision in regard to service of process are to be authorized by the same resolution which requests the issue of the permit, and this request or application is to contain the stipulation above mentioned. These various things are not separable. They are all indissolubly bound up with the application for a permit, which is to be subject to every provision of the Act. The permit cannot be issued unless such a stipulation is given, and the corporation is not to be permitted to carry on its business in the State unless the permit is issued to it and received by it.

Section 8 of the Act provides that if the permit is issued, and the foreign corporation (being thereafter sued in a court of Iowa, upon a contract made or executed in Iowa, or to be performed in Iowa, or for any act or omission, public or private, arising, originating or happening in Iowa) shall remove the suit from the state court into any federal court in Iowa, because the corporation is a nonresident of Iowa, or a resident of a State other than the State of the adverse party, or because of local prejudice against the corporation, that fact shall forfeit the permit and render it void, such forfeiture to be determined from the record of removal, and to date from the filing of the application on which the removal is effected.

Section 4 imposes a penalty of \$100 a day on the corporation for carrying on its business in Iowa without having complied with the statute, and having a valid permit, and provides

that any agent, officer or employee who shall knowingly act, or transact such business, for the corporation, when it has no valid permit, shall be guilty of a misdemeanor, and for each offense shall be fined not to exceed \$100, or be imprisoned in the county jail not to exceed thirty days, and pay all costs of prosecution.

It is apparent that the entire purpose of this statute is to deprive the foreign corporation, in suits such as those mentioned in section 8, of the right conferred upon it by the Constitution and laws of the United States, to remove a suit from the state court into the federal court, either on the ground of diversity of citizenship, or of local prejudice. The statute is not separable into parts. An affirmative provision requiring the filing by a foreign corporation, with the Secretary of State, of a copy of its articles of incorporation, and of an authority for the service of process upon a designated officer or agent in the State, might not be an unreasonable or objectionable requirement, if standing alone; but the manner in which, in this statute, the provisions on those subjects are coupled with the application for the permit and, with the stipulation referred to, shows that the real and only object of the statute, and its substantial provision, is the requirement of the stipulation not to remove the suit into the federal court.

In view of these considerations, the case falls directly within the decision of this court in *Home Insurance Co. v. Morse*, 87 U. S. 20 Wall. 445 [22:365]. In that case, which was twice argued here, a Statute of Wisconsin provided that it should not be lawful for any foreign fire insurance company to transact any business in Wisconsin unless it should first appoint an attorney in that State, on whom process could be served, by filing a written instrument to that effect, containing an agreement that the company would not remove a suit for trial into the federal court. The Home Insurance Company, a New York corporation, filed the appointment of an agent, containing the following clause: "And said company agrees that suits commenced in the State Courts of Wisconsin shall not be removed by the acts of said company into the United States Circuit or Federal Courts." A loss having occurred on a policy issued by the company, it was sued in a court of the State. It filed its petition in proper form for the removal of the suit into the federal court. The state court refused to allow the removal, and, after a trial, gave a judgment for the plaintiff, which was affirmed by the Supreme Court of Wisconsin. The company brought the case into this court, which held these propositions: *First*, The agreement made by the company was not one which would bind it, without reference to the statute. *Second*, The agreement acquired no validity from the statute. The general proposition was maintained, that agreements in advance to oust the courts of jurisdiction conferred by law, are illegal and void, and that, while the right to remove a suit might be waived, or its exercise omitted, in each recurring case, a party could not bind himself in advance, by an agreement which might be specifically enforced, thus to forfeit his rights at all times and on all occasions, whenever the case might be presented.

In regard to the second question, the proposition laid down was that the jurisdiction of

the federal courts, under article 3, section 2, of the Constitution, depends upon and is regulated by the laws of the United States; that state legislation cannot confer jurisdiction upon the federal courts, nor limit or restrict the authority given to them by Congress in pursuance of the Constitution; and that a corporation is a citizen of the State by which it is created, and in which its principal place of business is situated, so far as its right to sue and be sued in the federal courts is concerned, and within the clause of the Constitution extending the jurisdiction of the federal courts to controversies between citizens of different States. The conclusions of the court were summed up thus: 1, the Constitution of the United States secures to citizens of another State than that in which suit is brought an absolute right to remove their cases into the federal court, upon compliance with the terms of the removal statute; 2, the Statute of Wisconsin is an obstruction to this right, is repugnant to the Constitution of the United States and the laws made in pursuance thereof, and is illegal and void; 3, the agreement of the insurance company derives no support from an unconstitutional statute, and is void, as it would be had no such statute been passed. For these reasons the judgment of the Supreme Court of Wisconsin was reversed, and it was directed that the prayer of the petition for removal should be granted.

The case of *Doyle v. Continental Insurance Co.* 94 U. S. 535 [24:148], is relied on by the defendant in error. In that case this court said that it had carefully reviewed its decision in *Home Insurance Co. v. Morse*, and was satisfied with it. In referring to the second conclusion in *Insurance Co. v. Morse*, above recited, namely: that the Statute of Wisconsin was repugnant to the Constitution of the United States, and was illegal and void, the court said, in *Doyle v. Continental Insurance Co.*, that it referred to that portion of the statute which required a stipulation not to transfer causes to the courts of the United States. In that case, which arose under the same Statute of Wisconsin, the foreign insurance company had complied with the statute, and had filed an agreement not to remove suits into the federal courts, and had received a license to do business in the State. Afterwards, it removed into the federal court a suit brought against it in a state court of Wisconsin. The state authorities threatening to revoke the license, the company filed a bill in the Circuit Court of the United States, praying for an injunction to restrain the revoking of the license. A temporary injunction was granted. The defendant demurred to the bill, the demurrer was overruled, a decree was entered making the injunction perpetual,

and the defendant appealed to this court. This court reversed the decree and dismissed the bill. The point of the decision seems to have been that, as the State had granted the license, its officers would not be restrained by injunction, by a Court of the United States, from withdrawing it. All that there is in the case beyond this, and all that is said in the opinion which appears to be in conflict with the adjudication in *Insurance Co. v. Morse* [supra] must be regarded as not in judgment.

In both of the cases referred to, the foreign corporation had made the agreement not to remove into the federal court suits to be brought against it in the state court. In the present case no such agreement has been made; but the locomotive engineer is arrested for acting as such in the employment of the corporation, because it has refused to stipulate that it will not remove into the federal court suits brought against it in the state court, as a condition of obtaining a permit, and consequently has not obtained such permit. Its right, equally with any individual citizen, to remove into the federal court, under the laws of the United States, such suits as are mentioned in the third section of the Iowa Statute, is too firmly established by the decisions of this court to be questioned at this day; and the State of Iowa might as well pass a statute to deprive an individual citizen of another State of his right to remove such suits.

As the Iowa Statute makes the right to a permit dependent upon the surrender by the foreign corporation of a privilege secured to it by the Constitution and laws of the United States, the statute requiring the permit must be held to be void.

The question as to the right of a State to impose upon a corporation engaged in interstate commerce the duty of obtaining a permit from the State, as a condition of its right to carry on such commerce, is a question which it is not necessary to decide in this case. In all the cases in which this court has considered the subject of the granting by a State to a foreign corporation of its consent to the transaction of business in the State, it has uniformly asserted that no conditions can be imposed by the State which are repugnant to the Constitution and laws of the United States. *Lafayette Ins. Co. v. French*, 59 U. S. 18 How. 404, 407 [15:451, 452]; *Ducat v. Chicago*, 77 U. S. 10 Wall. 410, 415 [19:972, 973]; *Home Ins. Co. v. Morse*, 87 U. S. 20 Wall. 445, 456 [22:365, 369]; *St. Clair v. Cox*, 106 U. S. 350, 356 [27:222, 225]; *Phila. Fire Assn. v. New York*, 119 U. S. 110, 120 [30:342, 345].

The judgment of the Supreme Court of Iowa is reversed, and the case is remanded to that Court, with an instruction to enter a judgment discharging the plaintiff in error from custody.

SUPREME COURT OF VERMONT.

STATE of Vermont

v.

Baxter PRATT.

(From 4 New England Reporter, p. 367.)

That part of Rev. Laws, § 3952, which requires a license from a person peddling tea, the growth of a foreign country, is in conflict with the Federal Constitution, art. 1, §§ 8, 10.

INTER 8.

(Orleans—Decided May 28, 1887.)

INFORMATION filed against respondent for peddling without a license. Heard on an agreed statement, September Term, 1885, Orleans County, Ross, J., presiding. The respondent was adjudged guilty. Reversed.

The case is stated in the opinion.

Mr. George W. Cahoon, for respondent:

The statute (Rev. Laws, § 8952) is unconstitutional.

Welton v. State, 91 U. S. 275 (Bk. 23, L. ed. 347); *Brown v. State*, 12 Wheat. 436 (35 U. S. bk. 6, L. ed. 684); *Waite, Ch. J.*, in *Hall v. DeCuir*, 95 U. S. 485 (Bk. 24, L. ed. 547); *State Tonnage Tax*, 12 Wall. 204 (79 U. S. bk. 20, L. ed. 870); *Sherlock v. Alling*, 93 U. S. 99 (Bk. 23, L. ed. 819); *Philadelphia & R. R. Co. v. Commonwealth*, 15 Wall. 284 (82 U. S. bk. 31, L. ed. 164); *Cook v. Commonwealth*, 97 U. S. 566 (Bk. 24, L. ed. 1015); *Guy v. Baltimore*, 100 U. S. 434 (Bk. 25, L. ed. 743); *Howe Mach. Co. v. Gage*, 100 U. S. 676 (Bk. 25, L. ed. 754); *Tiernan v. Rinker*, 102 U. S. 123 (Bk. 26, L. ed. 108); *Mobile v. Kimball*, 102 U. S. 691 (Bk. 26, L. ed. 238); *Webber v. Virginia*, 103 U. S. 844 (Bk. 26, L. ed. 565); *Walling v. People*, cited in *Albany L. J. Vol. 33, No. 13, 254*; *State v. Furbush*, 72 Maine, 493; *Western U. T. Co. v. Texas*, 105 U. S. 460 (Bk. 26, L. ed. 1067); *Brown v. Houston*, 114 U. S. 622 (Bk. 29, L. ed. 257).

Mr. C. A. Prouty, State's Attorney, for the State.

Powers, J., delivered the opinion of the court:

Revised Laws, § 8951, imposes a penalty upon persons who become peddlers without a license. Section 8952 provides that "A person going from town to town, or from place to place in the same town, on foot or otherwise, carrying to sell or exposing for sale goods, wares, or merchandise, the growth or manufacture of a foreign country * * * shall be deemed a peddler."

The respondent, among other things, carried from town to town and exposed for sale tea; and he is thus prosecuted for peddling without a license. It is answered that so much of section 8952, *supra*, as requires a license from persons peddling tea—an article of foreign growth,—is in conflict with the Federal Constitution, and therefore void.

The Constitution, in article 1, § 8, declares that Congress shall have power "to regulate commerce with foreign nations and among the several States;" and, in section 10, that "No State shall, without the consent of Congress, lay any imposts or duties on imports or exports." In article 6 it is declared that "This Constitution and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding;" and in article 3, § 2, "The judicial power [of the United States] shall extend to all cases in law and equity arising under this Constitution." The construc-

tion, therefore, given to the clauses of the Constitution above referred to, by the Supreme Court of the United States, is conclusive upon the court.

In *Brown v. State*, 12 Wheat. 436 [35 U. S. bk. 6, L. ed. 684], it was held that a tax upon the sale of an article was in legal effect a tax upon the article itself, and that the law of the State of Maryland requiring persons to take out a license for selling imported goods in the original package was in conflict with the Constitution, in that it purported to tax an import and sought to regulate commerce with foreign Nations. The opinion of Marshall, *Ch. J.*, in that case is exhaustive, and it has stood for more than a half a century as the settled and unquestioned doctrine of the subject.

In *Welton v. State*, 91 U. S. 275 [Bk. 23, L. ed. 347], decided in 1875, the question again arose upon a statute of Missouri which required a license of peddlers selling goods not the growth, produce, or manufacture of that State, and it was argued that the license fee was a new tax upon the occupation or calling of the peddler, and not upon the goods themselves. But the court said: "Where the business or occupation consists in the sale of goods, the license tax required for its pursuit is, in effect, a tax upon the goods themselves." The court held that the Missouri Statute was in conflict with the Constitution, as an attempted regulation of commerce between the States. It permitted the free sale of goods which were of the growth or manufacture of Missouri, but taxed the sale of those of the growth of other States.

The same rule obviously must apply to a statute which permits the free sale of goods of Vermont growth or manufacture, but taxes the sale of those grown in foreign countries; inasmuch as the clause giving to Congress the power to regulate commerce specified interstate and foreign commerce in the same section.

Under our system of dual government, wherein two existing jurisdictions are exerted over the same territory and people, it is of the highest importance that legislation in each be restricted to the proper boundaries that circumscribe it. Free intercourse and travel between the States and with foreign countries can be safely regulated only by that jurisdiction that looks to the general interests of the nation as a whole, rather than the separate advantage of a particular locality. The clauses of the Constitution referred to are couched in clear and explicit language; and the cases cited are directly in point.

The judgment of the County Court is reversed, and judgment upon the agreed facts is rendered, that the respondent is not guilty and that he be discharged.

ADDRESS BY SENATOR CULLOM.

SENATOR Shelby M. Cullom, one of the authors of the Interstate Commerce Law, at a recent session of the Illinois Grain Merchants' Association, at Springfield, Ill., delivered the following address on the Law. As a brief explanation of the design of the Act, bearing upon its construction, its source will add both interest and value to its matter:

I may be allowed to say in the outset that since the passage of the Law I have so far been silent in relation to the Act or its effect upon the country, preferring to wait for a time after the Law had been in force and until

the Commission appointed to enforce it had got fairly to work in the performance of their responsible duties. The Law has not yet been in force quite three months; yet in this brief time the business of the country and the rail-

roads have, in a large degree, adjusted themselves to the new Law; and, I may be mistaken, but I venture to say that I doubt not that you gentlemen and the farmers with whom you have to deal feel that you have so far been benefited by the Act.

The enactment of that Law at the last session of Congress marked the beginning of a new era in railway administration, and was the culmination of a memorable and long continued struggle for supremacy between the people of this country and the combined power of the railway corporations which the people brought into being, but which have assumed to be independent of control by the power that created them. This was the real issue, although it was ingeniously involved in innumerable side issues, and all the powerful influences possessed by vast aggregations of capital were arrayed together with the common purpose of preventing the Federal Government from assuming to control the operations of the railroads subject to its authority.

The contest which has been waged of late years in Congress was but a continuation of the struggle inaugurated here in Illinois and in neighboring States years ago, and which finally resulted in the notable triumph achieved by the people in the decisions by the United States Supreme Court in the so-called "*Granger Cases*" and in the establishment of state railroad regulation. Whatever may be found upon trial to be the merits or demerits of the new Law, I consider its enactment a great victory for the people, because its passage was a declaration by the Congress of the United States of its power over the subject under the Constitution, and that hereafter the power of the general government will be used to see that these great highways of traffic are conducted upon honest business principles for the common good, instead of, as in many cases, for the benefit of such localities and individuals or corporations as their managers might see fit to build up and favor.

It cannot be denied, and men engaged in the conduct of railroads will not deny, that in the management of the business of railroads there has not been exercised that regard for the rights of the people that there should have been.

The new Law is confessedly an experiment. Those who are responsible for its terms have never been disposed to claim that it was perfect, but it represented their best judgment after careful investigation. To put it in a little different way: it was the best Bill to which the two Houses of Congress could agree. It could not reasonably be expected that the intricacies and complications of the railroad problem which have puzzled the wisest minds of this and other Nations for years could be solved at the first attempt, but a good beginning has been made; a long stride in advance has been taken; and if we hold fast to the great advantages already gained, time and experience will render further progress safe and certain. The Act will not be repealed, and if any persons or corporations are imagining that it will, they may as well dismiss that expectation. Its substantial provisions have come to stay, because the people will find out, I trust.

if they have not already, that they are in the interest of the general welfare.

This new Law is often represented by those with whose accustomed privileges it has interfered, to be a vague, ambiguous, bungled affair, which its promoters did not understand and could not explain. This was the fashionable mode of attack upon the measure while it was pending in Congress, but that mode of attack has become less popular since the Law went into force, and those interested have been obliged to study its provisions. As a prominent railroad man said to me the other day, referring to such statements: "We quit saying that some time ago; we know too well what it means." So far as my observation goes, it is those who are attacking the Law and seeking to overthrow it who profess to find difficulty in understanding its meaning. It is in their way. They want to get rid of it. The true ground of objection on the part of such critics is to be found in the purposes and not in the alleged ambiguity of the Law.

The fact is that there is nothing particularly new, novel, or startling in its provisions. Similar provisions are found in the constitutions and statutes of many of the States, and in the laws of other countries. Much of the language used in the most important sections has a settled meaning, having been judicially construed either in this country or in England; and this is specially true of some of the phrases which have been most generally attacked as meaningless and ambiguous. Briefly stated, the great purpose of the Law is to prevent unjust discrimination,—about all the wrong doing by common carriers in dealing with people. The Law requires that all charges shall be reasonable and just; it prohibits all kinds of unjust discriminations between individuals; it prohibits undue or unreasonable preferences or advantages in favor of persons or places or any particular description of traffic. It requires reasonable and equal facilities to be extended by each railroad to others for the interchange of traffic, and it prohibits pooling.

Surely there is nothing unreasonable or outrageous in these requirements. They simply apply the cardinal principles of the Declaration of Independence to the management of railroads by declaring that all men shall be equal in the eye of the railroad manager, and that all who are situated alike shall be treated without fear or favor.

The need of such a declaration has been shown more plainly than ever before by the nature and character of the complaints made against the enforcement of the Law. The entire system of railroad management has been honeycombed with discriminations—some justifiable, but more wholly without excuse. The new Law, to a large degree, revolutionized the methods of railway ratemaking that previously prevailed, and it was to be expected that when it went into operation it would seriously disturb the existing conditions of business. The object of the Law is to secure the greatest good to the greatest number, and this could not be accomplished without interfering with the interests of those who were the recipients of undue and unreasonable advantages. It was necessary that those who had previously been

especially favored should be denied these privileges for the common good. The readjustment of business to the changed condition of affairs, brought about when the Law took effect, has taken place with very much less friction or commercial disturbance than I had anticipated.

The prohibition of a greater charge for a shorter than for a longer haul is objected to, on the ground that it is an interference with the natural laws of trade and of trade centers. My answer to this is that for many years past the railroads of the country have so absolutely controlled our internal commerce that we have no means of knowing what are the natural channels of trade, or what would be the effect of the natural laws of trade upon many, at least, of the present recognized commercial centers.

What the critics of the Law call the natural centers of trade are centers created by railway favoritism, which has diverted trade from its natural channels into artificial ones, at the expense of less favored localities. So far the chief opposition to the Law by the railroads has been directed against its fourth section, which provides for the longer distance on the same line and in the same direction, etc. This section was attacked with such earnestness and by so many railroads and combinations of roads, immediately after the Law took effect and the Commission was appointed, that the Commission was induced to make orders in several cases suspending the operation of that section as to certain roads, or rather to grant relief to certain roads from the operation of that section of the Law in the transaction of their business.

The Commission has been somewhat severely criticised in certain quarters for so doing. It has recently given notice that the relief will not be continued after the specified time expires. I thought the Commission was straining the authority granted to it, in its action in granting relief; and if it had the power it was perhaps a mistake to exercise it to the extent it did. The Commissioners had just come into office a few days before the Law became in force. There had been a constant expression of fear on the part of some, and the declaration of many men operating along the lines of road, that a compliance with that section would injure them and the business of the country, and, under all the circumstances, I am not surprised at the action of the Board.

They have now their grip and feel that they comprehend the situation; and their recent opinion on petitions for relief under section 4 of the Act indicates that they intend to allow section 4 to have the same force and effect as other provisions of the statute, except in such cases as clearly call for relief after investigation in special cases. I trust that relief will only be granted after careful investigation. It is easy to abuse a public officer, and the most ignorant can do it and frequently do, with more freedom than do the wise. And I feel like saying, and I take pleasure in saying, that

while the Commission may have made a mistake in giving relief for the short haul clause to the extent they did in the outset, yet I have no question that they believed the course they pursued was the wise one; and I am not prepared to say with confidence that it was not. I believe they are doing the best they can, and I do not believe the Law would result in any substantial good to the people without such a special tribunal for its enforcement.

It is fashionable to attack commissioners charged with a special duty, but I trust that the Commission charged with the great work of protecting the people in their dealings with railroads engaged in interstate commerce will be upheld and strengthened in the performance of their duty. It is their duty to enforce the Law, and I wish to say that I trust, now that they have made known to the railroads and the people their general views on the question of the construction of the statute, as it applies to the operation of railroads and as it affects their own action, that they will give more definite and specific attention to the question whether the schedules of rates of freight filed in their office are made out according to law, without unjust discrimination or extortion against any person, and also to the direct question whether the roads are actually complying with the Law. It is charged that they are not. It is charged that they are trying to so operate by appearing to comply with the statute as to make the Law offensive to the people and thereby secure its repeal. I make no such charge, because I do not know what the fact is; but railroad companies and their managers need not attempt to deceive the people, and I trust they will not, for any such attempt will fail, and only prolong the struggle.

There should be no antagonism between the shipper and the common carriers. The one is necessary to the other. You, gentlemen, engaged in the grain trade cannot get along without the railways; and I am sure so many railroads can not be supported without your aid. So the relation between the railroads and the people should be thoroughly friendly, their prosperity being dependent on each other. The great purpose, as I said, is to prevent unjust discrimination and to bring the common carriers down to legitimate, fair, straightforward business dealing. The railroads are common carriers. They are in a sense agents of the people; they occupy a different relation to the public from the merchant or the farmer.

But, gentlemen, I promised you that I would be brief. This subject is too great to discuss in a few minutes' time. If the Law in its general scope and purpose is right, stand by it; if it is imperfect, or needs modifying, strengthening, or in any wise amending, let the Commission and Congress know wherein; and I trust it will not be long before we shall have a perfected statute that will secure justice to the people and the railroads alike, and that increased prosperity may result to all.

THE INTERSTATE COMMERCE COMMISSION.

THE DRESSED MEAT CASES.

ARMOUR & Co., represented by *Messrs. Campbell & Custer*; G. H. Hammond & Co., by *Mr. Don M. Dickinson*; Nelson Morris & Co., by *Messrs. Dupee, Judah & Willard*; East St. Louis Dressed Beef & Canning Co., and Swift & Co., both by *Mr. Albert H. Veeder*.

The complaints of these Companies are substantially alike.

It is expected that the Commission will hear the cases in Chicago or Detroit at some future date. We learn that there is to be a strong contest on this matter and therefore give one sample petition in full,—that of

Nelson Morris & Co. v. Lake Shore Road.

Your petitioners, Nelson Morris & Company, complain to this honorable Commission of the aforesaid Lake Shore & Michigan Southern Railroad Company, a common carrier, for violating the Interstate Commerce Law:

1. That your petitioners now are and for fifteen years last past have been engaged in the business of slaughtering cattle and sheep, at the Union Stock Yards, near Chicago, and in shipping dressed beef, sheep and other meat provisions and products from said Union Stock Yards to points on the eastern seaboard, to wit: New York, Philadelphia, Boston, Baltimore, and to other points in, to and through States east of those from which said shipments are made.

2. That in the course of such business your petitioners have given and are now giving, from time to time, dressed meats and meat provisions for such shipment to the said Lake Shore & Michigan Southern Railway Company; that said Railroad Company receives the same for carriage to said terminal points, or some of them, and under some contract or arrangement between said Railroad Company and other railroad companies, carries the same to said terminal points; and that said Lake Shore & Michigan Southern Railway Company is a common carrier, engaged with other common carriers in the transportation of property wholly by railroad, or partly by railroad and partly by water, under a common control, management and arrangement for a continuous carriage or shipment of such and other property from one State of the United States, either directly or through a foreign country, to places in other States of the United States, and said common carrier is subject to the provisions of said Act as aforesaid, and has published (as required by said Act) its schedule showing the rates and charges for the transportation of property which said common carrier has established, and which are now in force, between said Union Stock Yards and said eastern points, as aforesaid.

3. That for the purpose of having such dressed meats carried, your petitioners have provided and provide, at their own expense, sidings at said point of shipment and at points of destination when required; furnish ice; provided the labor for re-icing in transit; load and unload the cars; and ship said meats at their own risk of refrigeration and condition, thus relieving said common carrier from all special

expense, labor and risk attending the transportation of such property.

4. That since the United States Statute, known as "An Act to Regulate Commerce," went into effect, to wit: April 5, 1887, your petitioners have been compelled to pay, in conformity with the schedule rates established by said common carrier, for the carriage of dressed beef, sheep and hogs, minimum weight of car load 20,000 pounds, from Union Stock Yards to New York or Boston, the rate of sixty-five cents per 100 pounds; to Philadelphia the rate of sixty-three cents per 100 pounds; to Baltimore the rate of sixty-two cents per 100 pounds, and to other eastern points rates in like proportion. That the rates now exacted are much greater than the average rate exacted for several years prior to April 5, 1887, as is shown by the following table of rates compiled from published tariffs from Chicago to New York (being the basis of rates from western to eastern points), from May 1, 1881, to date, although your petitioners charge that those rates were unjust and unreasonable.

Table of Rates on Dressed Beef.

Date in effect.	Rate per 100 lbs.
May, 1881, to April 10, 1882	- - - 40 cents.
April 10, 1882, to May 6, 1884	- - - 64 "
May 6, 1884, to August 30, 1884	- - - 48 "
August 30, 1884, to December 8, 1884	- - - 32 "
December 8, 1884, to May 1, 1885	- - - 70 "
May 1, 1885, to July 1, 1885	- - - 52½ "
July 1, 1885, to March 1, 1886	- - - 42½ "
March 1, 1886, to date	- - - 65 "

The average rate by months, as appears from said table, was fifty-four cents per 100 lbs.

The rate now exacted, and which has been exacted since said Act went into force, is more than 20 per cent greater than the average tariff rate for the same service for six years prior to that date.

Your petitioners insist that the tariff rates charged by said common carrier, as shown by said table, have at all times been excessive, unjust, and unreasonable, except as to the following rates, which were more nearly what your petitioners claim should have been charged:

Date in effect.	Rate per 100 lbs.
May 1, 1881, to April 10, 1882	- - - 40 cents.
August 30, 1884, to December 8, 1884	- - - 32 "
July 1, 1885, to March 1, 1886	- - - 42½ "

The above shows that for more than twenty-two months (nearly one third of the time covered by said table) the average rate was but forty cents per 100 lbs.

Your petitioners insist that said last mentioned average rate was a remunerative rate to said common carrier, and was largely in excess of the rate charged by said common carrier for a like and contemporaneous service in the transportation of a like kind of property under substantially similar circumstances and conditions, as will more fully appear by tables hereinafter referred to.

5. Your petitioners charge the fact to be that the rates now demanded as aforesaid are unjust and unreasonable rates for the service rendered; and they have requested in writing, said Railroad Company to make a reduction in said rates of freight so charged, as aforesaid, and to make the same just and reasonable; but

the said common carrier has neglected and refused to grant such request.

6. That the unjust and unreasonable rates complained of are fixed by said common carrier by an agreement between it and certain other common carriers, which are the owners of or control competing lines of transportation, and which are subject to the provisions of said Act of Congress. And your petitioners charge that said rate is so fixed by agreement, as aforesaid, to destroy competition between them, and that said common carrier refuses, because of such agreement, to make your petitioners a just and reasonable rate, based upon the service rendered, as is its duty to do; that the purpose of said combination between said common carriers is to prevent your petitioners and other shippers from obtaining a just and reasonable rate to which, by the provisions of said Act, they are entitled.

Your petitioners believe that said common carrier would make and establish a much less rate for the service performed as aforesaid, but is prevented from so doing by reason of the combination aforesaid.

7. That said common carrier demands and collects a much greater compensation for services rendered in transportation of dressed beef, sheep and hogs, from the initial to the terminal points herein mentioned than for like and contemporaneous service rendered in the transportation of any other like kind of traffic or property under substantially similar circumstances and conditions; that the rates of transportation charged by said common carrier upon dressed beef, sheep and hogs, and the rates upon meat provisions and beef, sheep, and hog products (meats requiring refrigeration in transit), such as side meats partly cured or cured; beef, pork or pickled tongues, in barrels or tierces; loose green hams, loose salt meats, salt tongues, sugar cured hams, beef hams and pork hams—like kinds of property with dressed beef, sheep and hogs, transported under similar circumstances and conditions, from the following initial to the following terminal points, are as shown in the annexed table. The rates to other points are in like proportion:

Chicago & Union Stock Yards	On dressed beef, sheep and hogs per 100 lbs. (in refrigerator cars.)	On side meat, pork and beef hams in tierces or barrels, salt and pickled tongues, loose green hams and other similar meat, provisions requiring refrigeration in C. L. per 100 lbs. (in refrigerator cars.)
To N. Y.	65 cents.	80 cents.
To Philad'a	63 cents.	28 cents.
To Balt'm're	62 cents.	27 cents.

So that, for the transportation of dressed beef, sheep, and hogs, between said initial and terminal points, thirty-five cents per 100 lbs more is demanded than for the transportation of other meat provisions, although the car and train, the initial and terminal points, the length, direction and character of haul, the product and its value, and every other condition and circumstance are the same, except said difference in rates; while the responsibility of the carrier is less because the dressed meats are carried at owner's risk of refrigeration and condition, while the provisions are carried at carrier's risk of refrigeration and condition,

thus reducing the liability of the carrier; the dressed meats are also loaded by the shipper and unloaded by the consignee, while provisions are loaded by the shipper and unloaded by the carrier. Yet, notwithstanding these facts, the charges for transportation of dressed beef, sheep, and hogs, are 116½ per cent more than for the transportation of meat provisions.

Your petitioners further show that said provision rate is fixed by said common carrier as above stated, and that it is an ample and remunerative rate for the service rendered. That such freight at said rate is eagerly sought for by said common carrier. That such rate is an established rate, and has been maintained for many years without material variation, as will appear from the annexed table compiled from published tariffs or schedules of rates for carrying provisions in refrigerator cars from Chicago to New York, during the period named from June 15, 1881, to date (the rates to other eastern points being in like proportion).

Table of Rates on Meat Provisions.

Date in effect	Rate per 100 lbs.
June 15, 1881, to March 13, 1882	- - 25 cents.
March 13, 1882, to December 1, 1882	- - 30 "
December 1, 1882, to April 23, 1883	- - 35 "
April 23, 1883, to November 26, 1883	- - 30 "
November 26, 1883, to January 5, 1884	- - 35 "
January 5, 1884, to January 14, 1884	- - 25 "
January 14, 1884, to March 14, 1884	- - 35 "
March 14, 1884, to March 22, 1884	- - 25 "
March 22, 1884, to June 24, 1884	- - 20 "
June 24, 1884, to July 21, 1884	- - 25 "
July 21, 1884, to March 16, 1885	- - 30 "
March 16, 1885, to November 23, 1885	- - 25 "
November 23, 1885, to December 20, 1885	- - 30 "
December 20, 1885, to April 1, 1887	- - 35 "
April 1, 1887, to date	- - 30 "

The above shows that the average rate on provisions for the last six years was twenty-nine cents per 100 lbs.

Your petitioners show that the difference between the rate charged on dressed beef, sheep and hogs and that on meat provisions is excessive, unreasonable and unjust, as will appear by a comparison of the difference in said rates in the published tariffs of railroads doing the same business from the same initial points to southern and southeastern points, as well as eastern points.

Table of Rates to Southern Points, February 7, 1887.

From Chicago and Union Stock Yards.	Provisions per 100 lbs. Boxed or loose.	Fresh meats. Per 100 lbs. in refrigerator cars.
	24,000 per car.	24,000 per car.
To Atlanta, Ga. - -	50 cents.	55 cents.
To Charleston, S. C. - -	46 "	51 "
To Macon, Ga. - -	42 "	57 "
To Montgomery, Ala. - -	45 "	50 "
To Savannah, Ga. - -	46 "	51 "
To Jacksonville, Fla. - -	46 "	51 "
To Mobile, Ala. - -	35 "	40 "
To Pensacola, Fla. - -	43 "	48 "

Table of Rates to Ohio River Points, April 5, 1887.

From Chicago and Union Stock Yards.	Provisions per 100 lbs. 25,000 per car.	Fresh meats. per 100 lbs.
To Cincinnati and adjacent points - -	14 cents.	19 cents.
To Louisville - -	16 "	21 "
To Jeffersonville, Ind. - -	14 "	19 "
To New Albany, Ind. - -	14 "	19 "
To Evansville, Ind. - -	14 "	19 "
To Cairo, Ill. - -	14 "	19 "

And your petitioners further show that the

excessive difference between the rate to eastern points charged on dressed beef, sheep and hogs and that on meat provisions is unjust and unreasonable and an unusual one, as will appear from the following table showing rates made by western roads on the same kind of property taken under similar circumstances and conditions, and transported from Omaha to Chicago:

Table of Rates from Omaha to Chicago.

On the Following Freight in Refrigerator Cars in Car Loads, May 3, 1887.

Provisions	- - -	30 cents.	Per 100 lbs.
Dressed beef	- - -	30 28-100 cents.	"
Dressed hogs	- - -	25 cents.	"

From the foregoing table of rates charged by southern and western roads it will be seen that said roads regard a difference in rates on dressed beef, sheep and hogs over meat provisions of from twenty-eight one hundredths of one cent, per 100 lbs., to not over five cents per 100 lbs., as remunerative, and have so regarded it for years; in addition to which the railway commissioners of Illinois, after investigation, have classified "fresh meat in refrigerator cars, cars to be iced, loaded and unloaded by owner, in straight or mixed car loads, minimum weight 20,000 pounds, fourth class," which is the same classification as made by them of meats, dried or salted in bulk, in car loads; thus adding the weight of their judgment to the practice of such railroads as are untrammelled by any combination to compel the charging of an unjust and burdensome rate for the transportation of said dressed meats.

As further showing that the present rates on dressed beef, sheep and hogs, as compared with the rates on meat provisions charged by said common carrier, are unjust and unreasonable, your petitioners call the attention of the Commission to the published tariffs of said common carrier, making the difference between dressed hogs in common cars and dressed hogs in refrigerator cars five cents per 100 lbs.; thus establishing, by their own published tariffs, that the difference in transporting the same class of freight from said initial to said terminal points, even if loaded in different kinds of cars, should not be more than five cents per 100 lbs. (See Special Joint Tariff No. 50, issued February 1, 1887.) The rate therein on dressed hogs in common cars is sixty cents per 100 lbs., and in refrigerator cars sixty-five cents per 100 lbs., although the rates charged in both cases are excessive, unjust and unreasonable. That a difference of five cents per 100 lbs. in such cases has been considered ample by railroad companies is further shown by the following quotation from "Joint Through Freight Tariff and Classification No. 20, from Chicago to Southern Points, in effect February 7, 1887:"

"Fresh beef or other meat, and poultry released, in mixed car loads or in straight car loads of each, will be charged for 24,000 lbs. at five cents per 100 lbs. higher than class B;" i. e., provision rates.

From said tariff it will appear that the Chicago, St. Louis & Pittsburgh R. Co., one of the railroads which have established and are

maintaining in conjunction with said Lake Shore & Michigan Southern R. Co. said unjust and unreasonable rates, carries the same products over its own lines of railway from the same initial point, under like circumstances and conditions, to southern and southeastern points, at a difference between said kinds of freight of only five cents per 100 lbs., as shown by its published tariffs; while the difference made by the same road from the same initial point to eastern points is thirty-five cents per 100 lbs.

8. That said common carrier requires that when meat provisions and products other than dressed beef, sheep and hogs are loaded, either loose or in boxes, in refrigerator cars with dressed beef, sheep or hogs, the said products shall take the dressed beef rate, although when said meat provisions and products are carried separately in refrigerator cars in car load lots, the said common carrier charges thirty cents per 100 lbs. therefor, so that when said articles are carried in refrigerator cars in which there is dressed beef, sheep or hogs, the said common carrier charges from Chicago to New York thirty-five cents per 100 lbs. more, or sixty-five cents per 100 lbs., on said meat products and provisions, and that said rate so exacted upon other meat provisions in a car in which there is dressed beef, sheep or hogs, is a higher rate than that charged for other like kinds of property under substantially similar circumstances and conditions.

That the above practice is arbitrary and unjust and contrary to the rules and customs of railways, and contrary to the practice of some of the eastern roads, which carry the same articles over their own rails from the same point to different destinations, is further illustrated by the following quotation from above "Joint Through Freight Tariff and Classification No. 20:" "Special note No. 1. Fresh beef or other meat, and poultry released, in mixed car loads, or in straight car loads of each, will be charged for 24,000 lbs., at five cents per 100 lbs., higher than class B;" i. e., provision rates.

9. Your petitioners further represent that the present rates demanded by said common carrier for the transportation of dressed beef, sheep and hogs, as hereinbefore set forth, subject that particular description of traffic to an unjust and unreasonable disadvantage.

10. That direct damage is being done your petitioners by reason of the premises.

Therefore, your petitioners have elected to apply to this honorable Commission and ask that a statement of the charges herein made be forwarded to said common carrier, and that said common carrier be called upon to satisfy this complaint, and to cease and desist from the violations of law herein complained of, and to make and establish its maximum rates for the carriage of dressed beef, sheep and hogs, as aforesaid, reasonable and just, and not to exceed the rates by it charged for the transportation of other like kinds of property under substantially similar circumstances and conditions, and to make reparation to your petitioners for the damage done them by reason of the violation of law complained of herein, as shall be determined by this honor-

able Commission, or to answer this complaint within a reasonable time to be fixed by this Commission.

Your petitioners pray for such other and further relief as this honorable Commission may deem proper.

UNITED STATES SUPREME COURT.

WESTERN UNION TELEGRAPH COMPANY, *Plff. in Err.*,
v.
William PENDLETON.

(From Lawyers' ed. U. S. Reports, Book 80.)

1. **Intercourse by telegraph between the States is interstate commerce.**
2. **A State has no authority to regulate the transmission of telegraphic messages into other States and their delivery therein.**
3. **The Statute of Indiana, which attempts to regulate the mode in which messages sent by telegraphic companies doing business in said State shall be delivered in other States, is void, such regulation being an interference with the freedom of interstate commerce.**

(Argued April 27, Decided May 27, 1887.)

IN ERROR to the Supreme Court of the State of Indiana. *Reversed.*

Statement of the case by *Mr. Justice Field*:

The Statute of Indiana declares that "Every electric telegraph company, with a line of wires wholly or partly in this State, and engaged in telegraphing for the public, shall, during the usual office hours, receive dispatches, whether from other telegraphing lines or from individuals; and on payment or tender of the usual charge, according to the regulations of such company, shall transmit the same with impartiality and good faith, and in the order of time in which they are received, under penalty, in case of failure to transmit, or if postponed out of such order, of one hundred dollars, to be recovered by the person whose dispatch is neglected or postponed; *Provided, however*, That arrangements may be made with the publishers of newspapers for the transmission of intelligence of general and public interest out of its order, and that communications for and from officers of justice shall take precedence of all others." Sec. 4176, R. S. Ind. 1881. And that "Such companies shall deliver all dispatches, by messenger, to the persons to whom the same are addressed, or to their agents, on the payment of any charges due for the same; *Provided*, Such persons or agents reside within one mile of the telegraphic station or within the city or town in which such station is." Sec. 4178, *Id.*

The present action is brought by William Pendleton, the plaintiff below, to recover of the Western Union Telegraph Company the penalty of \$100 prescribed by the above statute, for failing to deliver at Ottumwa, in Iowa, a message received by it in Indiana for transmission to that place. The complaint, as finally amended, alleges that the defendant below, the Western Union Telegraph Company, is a corporation organized and subsisting under the laws of Indiana, with a line of wires from Shelbyville, in that State, to Ottumwa, in Iowa;

that on the 14th of April, 1883, at thirty-five minutes past 5 o'clock in the afternoon, at which time the Company was engaged in telegraphing for the public, the plaintiff delivered to its agent at its office in Shelbyville, the following telegram for transmission to its office in Ottumwa, viz.:

"April 14th, 1883.

To Rosa Pendleton; care James Harker, near city graveyard, Ottumwa, Iowa.

Have you shipped things? If not, don't ship. Answer quick.

Wm. Pendleton;"

that upon its delivery, the plaintiff paid the agent sixty cents, being the amount of the charge required for its transmission from Shelbyville to Ottumwa; that, without any fault or interference on his part, the Company, after transmitting the message to Ottumwa, where it was received at half past seven in the afternoon of that day, failed to deliver it either to Rosa Pendleton or to James Harker, whereby the plaintiff sustained damage, and the defendant became liable for \$100, under the Statute of Indiana; for which sum plaintiff demands judgment.

To this Complaint the Company answered, admitting the receipt of the telegram as alleged, and setting up that it transmitted the message with impartiality and good faith, in the order of time in which it was received, and without delay, to its office in Ottumwa, Iowa, where it was received, as alleged, at half past seven of that day; that James Harker, to whose care the message was directed, lived more than one mile from the telegraph station at Ottumwa; that, in accordance with the usual custom of the office, the message was, without delay, placed in the postoffice of that town, with proper stamp thereon, and duly addressed; and that the telegram was received by the person to whom it was addressed on the following morning, April 15, 1883, at about 9 o'clock.

The answer further set forth that the duties and liabilities of telegraph companies in Iowa, and the transmission and delivery of the telegrams within the State, are regulated by a special statute of that State, which is as follows, viz.: "Any person employed in transmitting messages by telegraph must do so without unreasonable delay; and anyone who willfully fails thus to transmit them, or who intentionally transmits a message erroneously, or makes known the contents of any message sent or received to any person, except him to whom it is addressed or to his agent or attorney, is guilty of a misdemeanor. The proprietor of a telegraph is liable for all mistakes in transmitting messages made by any person in his employment, and for all damages resulting from a failure to perform any other duties required by law;" that by that statute the defendant was not required to deliver telegrams by messenger to the persons to whom they were addressed; that in the City of Ottumwa it had established a certain district within which it delivered tel-

egrams by messenger; and that on the receipt of the telegram in question at Ottumwa it was ascertained that Harker, to whose care it was addressed, did not reside within the delivery district, but outside of it, and more than one mile from the defendant's office, and that, in accordance with the custom and usage of the office, and in order to facilitate the delivery of the message, a copy of the telegram was promptly placed in the postoffice at Ottumwa, with proper address, and delivered as stated above.

To this answer the plaintiff demurred; the Circuit Court of the State sustained the demurrer; and, the defendant electing to stand upon its answer, judgment was rendered for the plaintiff for \$100, which, on appeal to the Supreme Court of the State, was affirmed, and the Company brings the case here for review.

Messrs. Augustus L. Mason, Joseph E. McDonald, and John M. Butler, for plaintiff in error:

The business of telegraphing from one State to another is interstate commerce, within the meaning of the eighth section of the first article of the Constitution of the United States.

Penacola Tel. Co. v. Western Union Tel. Co. 96 U. S. 1 (24: 708); *Telegraph Co. v. Texas*, 105 U. S. 460 (26: 1067).

The power of Congress to regulate interstate commerce is exclusive in all cases where the subject over which the power is exercised is in its nature national, or admits of one uniform system or plan of regulation. The inaction of Congress upon such a subject is equivalent to a declaration that it shall be free from all state regulation or interference.

Gloucester Ferry Co. v. Pa. 114 U. S. 196 (29: 158); *Brown v. Houston*, 114 U. S. 622 (29: 257); *Pickard v. Pullman Southern Car Co.* 117 U. S. 34 (29: 785); *Wabash, St. L. & P. R. R. Co. v. Ill.* 118 U. S. 557 (30: 244); *Walling v. Mich.* 116 U. S. 454 (29: 693); *Corson v. Md.* 120 U. S. 502 (30: 699); *Case of The State Freight Tax*, 82 U. S. 15 Wall. 232 (21: 146); *Cooley v. Port Wardens*, 53 U. S. 12 How. 299 (18: 996); *Gilman v. Phila.* 70 U. S. 3 Wall. 713 (18: 96); *Hall v. De Cuir*, 95 U. S. 485 (24: 547), on page 497 (551); *R. R. Co. v. Huse*, 95 U. S. 465 (24: 527).

The subject over which the power of regulation is attempted to be exercised in this case is in its nature national and properly admits only of one uniform system or plan of regulation.

Telegraph Co. v. Texas, 105 U. S. 460, 466 (24: 1067, 1068).

Acts rendered penal by law are penal only because the law of the place where committed makes them so.

Graham v. Monsergh, 22 Vt. 543; *Richardson v. Burlington*, 33 N. J. L. 192; *Slack v. Gibbs*, 14 Vt. 357; *Whitford v. Panama R. R. Co.* 23 N. Y. 465; *Story, Conf. Law*, §§ 18, 20; *Hutchinson, Carriers*, § 777; *Nashville etc. R. R. Co. v. Eakin*, 6 Cold. (Tenn.) 582; *Crowley v. Panama R. R. Co.* 30 Barb. 99; *Leonard v. Steam Nav. Co.* 84 N. Y. 48; *Shedd v. Moran*, 10 Bradw. 618.

(No counsel appeared for defendant in error.)

Mr. Justice Field, after stating the case as above, delivered the opinion of the court, as follows:

The contention of the Western Union Telegraph Company is that the law of Indiana is in conflict with the clause of the Constitution vesting in Congress the power to regulate commerce among the States.

In *Telegraph Co. v. Texas*, 105 U. S. 460 (26: 1067), it was decided by this court that intercourse by the telegraph between the States is interstate commerce. Its language was: "A telegraph company occupies the same relation to commerce as a carrier of messages that a railroad company does as a carrier of goods. Both companies are instruments of commerce, and their business is commerce itself. They do their transportation in different ways, and their liabilities are in some respects different; but they are both indispensable to those engaged to any considerable extent in commercial pursuits."

Although intercourse by telegraphic messages between the States is thus held to be interstate commerce, it differs in material particulars from that portion of commerce with foreign countries and between the States which consists in the carriage of persons and the transportation and exchange of commodities, upon which we have been so often called to pass. It differs not only in the subjects which it transmits, but in the means of transmission. Other commerce deals only with persons, or with visible and tangible things. But the telegraph transports nothing visible and tangible; it carries only ideas, wishes, orders and intelligence. Other commerce requires the constant attention and supervision of the carrier for the safety of the persons and property carried. The message of the telegraph passes at once beyond the control of the sender, and reaches the office to which it is sent instantaneously. It is plain, from these essentially different characteristics, that the regulations suitable for one of these kinds of commerce would be entirely inapplicable to the other.

In the consideration of numerous cases, in which questions have arisen relating to ordinary commerce with foreign countries and between the States, this court has reached certain conclusions as to what subjects of commerce the regulation of Congress is exclusive, and indicated on what subjects the States may exercise a concurrent authority until Congress intervenes and assumes control. *Cooley v. Board of Wardens*, 53 U. S. 12 How. 299 [18:996]; *Gilman v. Phila.* 70 U. S. 3 Wall. 713 [18:96]; *Crandall v. Nevada*, 73 U. S. 6 Wall. 35 [18:745]; *Welton v. Missouri*, 91 U. S. 275 [23:347]; *Henderson v. Mayor*, 92 U. S. 259 [23:543]; *Inman Steamship Co. v. Tinker*, 94 U. S. 238 [24:118]; *Hall v. De Cuir*, 95 U. S. 485 [24:547]; *County of Mobile v. Kimball*, 102 U. S. 691 [26:238]; *Transportation Co. v. Parkersburg*, 107 U. S. 691 [27:584]; *Gloucester Ferry Co. v. Pa.* 114 U. S. 196 [29:158]; *Wabash, St. L. & P. R. Co. v. Ill.* 118 U. S. 557 [30:244]; and *Robbins v. Shelby Tax. Dist.* 120 U. S. 489, 493 [30:694]. But with reference to the new species of commerce, consisting of intercourse by telegraphic messages, this court has only in two cases been called upon to inquire into the power of Congress and of the State over the subject. In *Penacola Tel. Co. v. Western Union Tel. Co.* 96 U. S. 1 [24:708], this court had before it the Act of Congress of July 24, 1866, 14 Stat. at L. 221, "To aid in the construction of telegraph lines,

and to secure the use of the same for postal, military and other purposes;" and it held that the Act was constitutional so far as it declared that the erection of telegraph wires should, as against state interference, be free to all who accepted its terms and conditions, and that a telegraph company of one State accepting them could not be excluded by another State from prosecuting its business within her jurisdiction. In *Telegraph Company v. Texas*, 105 U. S. 460 [supra], from the opinion in which we have quoted above, it was held that a statute of Texas imposing a tax upon every message transmitted by a telegraph company doing business within its limits, so far as it operated on messages sent out of the State, was a regulation of foreign and interstate commerce, and, therefore, beyond the power of the State.

In these cases the supreme authority of Congress over the subject of commerce by the telegraph with foreign countries or among the States is affirmed, whenever that body chooses to exert its power; and it is also held that the States can impose no impediments to the freedom of that commerce. In conformity with these views the attempted regulation by Indiana of the mode in which messages sent by telegraphic companies doing business within her limits shall be delivered in other States cannot be upheld. It is an impediment to the freedom of that form of interstate commerce, which is as much beyond the power of Indiana to interpose, as the imposition of a tax by the State of Texas upon every message transmitted by a telegraph company within her limits to other States was beyond her power. Whatever authority the State may possess over the transmission and delivery of messages by telegraph companies within her limits, it does not extend to the delivery of messages in other States.

The object of vesting the power to regulate commerce in Congress was to secure, with reference to its subjects, uniform regulations, where such uniformity is practicable, against conflicting state legislation. Such conflicting legislation would inevitably follow with reference to telegraphic communications between citizens of different States, if each State was vested with power to control them within its own limits. The transmission of intelligence by telegraph and public interest out of its mission, communications for and from of each State shall take precedence of all above. *sec. 4176, R. S. Ind. 1881.* And that for companies to be established by charter, to be addressed in the manner and order of the delivery of telegrams, as well as of the delivery of communications for and from of each State. Indiana, as seen by its judges and officers of justice shall take precedence, and that arrangements may be made with publishers of newspapers for the transmission of intelligence of general and public interest of its order, but that all other messages shall be transmitted in the order in which they are received; and punishes as an offense a disregard of this rule. Her attempt, by penal statutes, to enforce a delivery of such messages in other States, in conformity with this rule, could hardly fail to lead to collision with their state laws. Other States might well direct that telegrams on many other subjects should have precedence in delivery within their limits over some of these, such as telegrams for the attendance of physicians and surgeons in case of sickness or accident, telegrams in case of fire or other

grams respecting the sickness or death of relatives.

Indiana also requires telegrams to be delivered by messengers to the persons to whom they are addressed, if they reside within one mile of the telegraph station, or within the city and town in which such station is; and the requirement applies, according to the decision of its supreme court in this case, when the delivery is to be made in another State. Other States might conclude that the delivery by messenger to a person living in a town or city being many miles in extent was an unwise burden, and require the duty within less limits; but if the law of one State can prescribe the order and manner of delivery in another State, the receiver of the message would often find himself incurring a penalty because of conflicting laws, both of which he could not obey. Conflict and confusion would only follow the attempted exercise of such a power. We are clear that it does not exist in any State.

The Supreme Court of Indiana placed its decision in support of the statute principally upon the ground that it was the exercise of the police power of the State. Undoubtedly, under the reserved powers of the State, which are designated under that somewhat ambiguous term of police powers, regulations may be prescribed by the State for the good order, peace and protection of the community. The subjects upon which the State may act are almost infinite; yet in its regulations with respect to all of them there is this necessary limitation, that the State does not thereby encroach upon the free exercise of the power vested in Congress by the Constitution. Within that limitation it may undoubtedly make all necessary provisions with respect to the buildings, poles and wires of telegraph companies within its jurisdiction which the comfort and convenience of the community may require.

It follows from the views expressed that the judgment of the court below must be reversed and the cause remanded for further proceedings not inconsistent with this opinion; and it is so ordered.

PHILADELPHIA & SOUTHERN MAIL

AGENCY COMPANY, *Pff. in Err.*,
The answer.

and liabilities OF WEALTH OF PENNSYLVANIA.

and the transmission of telegrams within the State.

statute of that State not constitutionally im-

posed: "Any person engaged in the business of transmitting telegrams by telegraph must observe the delay; and any one derived from the State to transmit them, or persons and property, or a message erroneously transmitted to different States, or contents of any message, and freights

of telegrams, except him, and the agent or attorney of the State, or the proprietor of a different

1. A State cannot mistake in its power of corporate upon a person in his power of its gross receipts, the defendant, and to and from foreign countries, it had established it delivered

2. The regulation of telegrams by messengers, persons and goods between different States, and between the States, and between the States, is within the power of Congress.

4. Where a subject of interstate commerce is national in character, or admits of only one uniform system of regulation, the power of Congress is exclusive; and its failure to make express regulations indicates its will that the subject shall be free.

5. If a state statute imposing a tax upon interstate commerce is unconstitutional, it is not cured by including in its provisions subjects within the jurisdiction of the State.

The case of the *Philadelphia & Reading R. R. Co. v. Pennsylvania*, 15 Wall. 304, bk. 31, L. ed. 184, criticised.

(Argued April 1, 1897. Decided May 27, 1897.)

IN ERROR to the Supreme Court of the State of Pennsylvania. *Reversed.*

The history and facts of the case appear in the opinion of the court.

Mr. Morton P. Henry, for plaintiff in error.
Messrs. W. S. Kirkpatrick, *Atty-Gen. of Pennsylvania* and John F. Sanderson, *Deputy Atty-Gen. of Pennsylvania*, for defendant in error.

Mr. Justice Bradley delivered the opinion of the court:

The question in this case is whether a State can constitutionally impose upon a steamship company, incorporated under its laws, a tax upon the gross receipts of such company derived from the transportation of persons and property by sea, between different States, and to and from foreign countries.

By an Act of the Legislature of Pennsylvania, passed March 20, 1877, it was, amongst other things, enacted as follows, to wit:

"That every railroad company, canal company, steamboat company, slack water navigation company, transportation company, street passenger railway company, and every other company now or hereafter incorporated by or under any law of this Commonwealth, or now or hereafter incorporated by any other State, and doing business in this Commonwealth, and owning, operating, or leasing to or from another corporation or company any railroad, canal, slack water navigation, or street passenger railway, or other device for the transportation of freight or passengers, or in any way engaged in the business of transporting freight or passengers, and every telegraph company incorporated under the laws of this or any other State, and doing business in this Commonwealth, and every express company, and any palace car and sleeping car company, incorporated or unincorporated, doing business in this Commonwealth, shall pay to the State Treasurer, for the use of the Commonwealth a tax of eight tenths of 1 per centum upon the gross receipts of said company for tolls and transportation, telegraph business, or express business."

A similar Act was passed by the same Legislature on the 7th of June, 1870.

By the terms of these Acts, returns of the gross receipts are required to be made every six months to the auditor-general, who is to

tax is assessed by him and charged against the company.

Under and by virtue of these Acts, the Auditor-General of the State, in October, 1892, charged the appellant, the Philadelphia & Southern Mail Steamship Company, taxes upon its gross receipts for the years 1877, 1878, 1879, 1880 and 1881, all of which receipts were derived from freight and passage money between the Ports of Philadelphia and Savannah, and in foreign trade from New Orleans, and a small amount for charter parties in the like trade. The tax thus charged against the Company for the five years in question amounted to about \$8,500, and, with accumulated interest and penalties, to over \$9,000. After serving the account upon the Company, an action was brought for its recovery in the Common Pleas of Dauphin County, at Harrisburg. The defendant pleaded that it was a Steamship Company, "operating sea going steamships engaged in the business of ocean transportation between different States of the United States and between the United States and foreign countries; and that all the said steamships of the said defendant were duly enrolled or registered under the laws of the United States for the coasting or foreign trade of the United States; and that the gross receipts so returned to the Auditor-General, upon which a tax has been levied by the Commonwealth of Pennsylvania, were received by defendant for freight and passengers carried in the said steamships on the ocean and on the navigable waters of the United States, between the State of Pennsylvania and other States of the United States, and between the States of the United States and foreign countries, and for the charter and hire of the said steamships to other parties in such trade and business; and that no part of the said gross receipts was received for the transportation of freight and passengers between places within the State of Pennsylvania, or for the hire and use of the said steamships within the State of Pennsylvania."

On the trial of the cause the parties entered into an agreement as to the facts, showing the gross receipts for each year, in each branch of the Company's trade; which facts supported the allegations of the plea. A trial by jury was dispensed with, and the court gave judgment for the Commonwealth for the principal of the tax and interest from the time of commencing suit. Exceptions were taken, on the ground that the judgment was in conflict with the clauses of the Constitution of the United States giving to Congress the power to regulate commerce with foreign Nations and among the several States. The judgment, being removed by writ of error to the Supreme Court of Pennsylvania, was affirmed by that court, and its judgment is now before us for review.

The question which underlies the immediate question in the case is whether the imposition of the tax upon the Steamship Company's receipts amounted to a regulation of, or an interference with, interstate and foreign commerce, and was thus in conflict with the power granted by the Constitution to Congress? The tax was levied directly upon the receipts derived by the Company from its fares and freights for transportation of persons and goods be-

1940

4. Where a subject of interstate commerce is national in character, or admits of only one uniform system of regulation, the power of Congress is exclusive; and its failure to make express regulations indicates its will that the subject shall be free.

5. If a state statute imposing a tax upon interstate commerce is unconstitutional, it is not cured by including in its provisions subjects within the jurisdiction of the State.

The case of the Philadelphia & Reading R. Co. v. Pennsylvania, 15 Wall. 284, bk. 31, L. ed. 164, criticised.

(Argued April 7, 1887. Decided May 27, 1887.)

IN ERROR to the Supreme Court of the State of Pennsylvania. *Reversed.*

The history and facts of the case appear in the opinion of the court.

Mr. Morton P. Henry, for plaintiff in error.

Messrs. W. S. Kirkpatrick, Atty-Gen. of Pennsylvania and *John F. Sanderson, Deputy Atty-Gen. of Pennsylvania*, for defendant in error.

Mr. Justice Bradley delivered the opinion of the court:

The question in this case is whether a State can constitutionally impose upon a steamship company, incorporated under its laws, a tax upon the gross receipts of such company derived from the transportation of persons and property by sea, between different States, and to and from foreign countries.

By an Act of the Legislature of Pennsylvania, passed March 20, 1877, it was, amongst other things, enacted as follows, to wit:

"That every railroad company, canal company, steamboat company, slack water navigation company, transportation company, street passenger railway company, and every other company now or hereafter incorporated by or under any law of this Commonwealth, or now or hereafter incorporated by any other State, and doing business in this Commonwealth, and owning, operating, or leasing to or from another corporation or company any railroad, canal, slack water navigation, or street passenger rail-

tax is assessed by him and charged against the company.

Under and by virtue of these Acts, the Auditor-General of the State, in October, 1882, charged the appellant, the Philadelphia & Southern Mail Steamship Company, taxes upon its gross receipts for the years 1877, 1878, 1879, 1880 and 1881, all of which receipts were derived from freight and passage money between the Ports of Philadelphia and Savannah, and in foreign trade from New Orleans, and a small amount for charter parties in the like trade. The tax thus charged against the Company for the five years in question amounted to about \$6,500, and, with accumulated interest and penalties, to over \$9,000. After serving the account upon the Company, an action was brought for its recovery in the Common Pleas of Dauphin County, at Harrisburg. The defendant pleaded that it was a Steamship Company, "operating sea going steamships engaged in the business of ocean transportation between different States of the United States and between the United States and foreign countries; and that all the said steamships of the said defendant were duly enrolled or registered under the laws of the United States for the coasting or foreign trade of the United States; and that the gross receipts so returned to the Auditor-General, upon which a tax has been levied by the Commonwealth of Pennsylvania, were received by defendant for freight and passengers carried in the said steamships on the ocean and on the navigable waters of the United States, between the State of Pennsylvania and other States of the United States, and between the States of the United States and foreign countries, and for the charter and hire of the said steamships to other parties in such trade and business; and that no part of the said gross receipts was received for the transportation of freight and passengers between places within the State of Pennsylvania, or for the hire and use of the said steamships within the State of Pennsylvania."

On the trial of the cause the parties entered into an agreement as to the facts, showing the gross receipts for each year, in each branch of the Company's trade; which facts supported the allegations of the plea. A trial by jury was dispensed with, and the court gave judgment for the Commonwealth for the principal of the tax and interest from the time of commencing suit. Exceptions were taken, on the ground that the judgment was in conflict with the clause of the Constitution of the United States giving to Congress the power to regulate commerce with foreign Nations and among the several States. The judgment, being removed by writ of error to the Supreme Court of Pennsylvania, was affirmed by that court; and its judgment is now before us for review.

The question which underlies the immediate question in the case is whether the imposition of the tax upon the Steamship Company's receipts amounted to a regulation of, or an interference with, interstate and foreign commerce, and was thus in conflict with the power granted by the Constitution to Congress? The tax was levied directly upon the receipts derived by the Company from its fares and freights for the transportation of persons and goods be-

and to secure the use of the same for postal, military and other purposes;" and it held that the Act was constitutional so far as it declared that the erection of telegraph wires should, as against state interference, be free to all who accepted its terms and conditions, and that a telegraph company of one State accepting them could not be excluded by another State from prosecuting its business within her jurisdiction. In *Telegraph Company v. Texas*, 105 U. S. 460 [*supra*], from the opinion in which we have quoted above, it was held that a statute of Texas imposing a tax upon every message transmitted by a telegraph company doing business within its limits, so far as it operated on messages sent out of the State, was a regulation of foreign and interstate commerce, and, therefore, beyond the power of the State.

In these cases the supreme authority of Congress over the subject of commerce by the telegraph with foreign countries or among the States is affirmed, whenever that body chooses to exert its power; and it is also held that the States can impose no impediments to the freedom of that commerce. In conformity with these views the attempted regulation by Indiana of the mode in which messages sent by telegraphic companies doing business within her limits shall be delivered in other States cannot be upheld. It is an impediment to the freedom of that form of interstate commerce, which is as much beyond the power of Indiana to interpose, as the imposition of a tax by the State of Texas upon every message transmitted by a telegraph company within her limits to other States was beyond her power. Whatever authority the State may possess over the transmission and delivery of messages by telegraph companies within her limits, it does not extend to the delivery of messages in other States.

The object of vesting the power to regulate commerce in Congress was to secure, with reference to its subjects, uniform regulations, where such uniformity is practicable, against conflicting state legislation. Such conflicting legislation would inevitably follow with reference to telegraphic communications between citizens of different States, if each State was vested with power to control them ~~within~~ ^{within} its own limits. The manner and order of the delivery of telegrams, as well as of their transmission, would vary according to the judgment of each State. Indiana, as seen by its law given above, has provided that communications for or from officers of justice shall take precedence, and that arrangements may be made with publishers of newspapers for the transmission of intelligence of general and public interest out of its order, but that all other messages shall be transmitted in the order in which they are received; and punishes as an offense a disregard of this rule. Her attempt, by penal statutes, to enforce a delivery of such messages in other States, in conformity with this rule, could hardly fail to lead to collision with their statutes. Other States might well direct that telegrams on many other subjects should have precedence in delivery within their limits over some of these, such as telegrams for the attendance of physicians and surgeons in case of sudden sickness or accident, telegrams calling for aid in cases of fire or other calamity, and tele-

grams respecting the sickness or death of relatives.

Indiana also requires telegrams to be delivered by messengers to the persons to whom they are addressed, if they reside within one mile of the telegraph station, or within the city and town in which such station is; and the requirement applies, according to the decision of its supreme court in this case, when the delivery is to be made in another State. Other States might conclude that the delivery by messenger to a person living in a town or city being many miles in extent was an unwise burden, and require the duty within less limits; but if the law of one State can prescribe the order and manner of delivery in another State, the receiver of the message would often find himself incurring a penalty because of conflicting laws, both of which he could not obey. Conflict and confusion would only follow the attempted exercise of such a power. We are clear that it does not exist in any State.

The Supreme Court of Indiana placed its decision in support of the statute principally upon the ground that it was the exercise of the police power of the State. Undoubtedly, under the reserved powers of the State, which are designated under that somewhat ambiguous term of police powers, regulations may be prescribed by the State for the good order, peace and protection of the community. The subjects upon which the State may act are almost infinite; yet in its regulations with respect to all of them there is this necessary limitation, that the State does not thereby encroach upon the free exercise of the power vested in Congress by the Constitution. Within that limitation it may undoubtedly make all necessary provisions with respect to the buildings, poles and wires of telegraph companies within its jurisdiction which the comfort and convenience of the community may require.

It follows from the views expressed that the judgment of the court below must be reversed and the cause remanded for further proceedings not inconsistent with this opinion; and it is so ordered.

The case of the *Philadelphia & Reading R. Co. v. Pennsylvania*, 15 Wall. 284, bk. 21, L. ed. 164, criticised.

(Argued April 7, 1887. Decided May 27, 1887.)

IN ERROR to the Supreme Court of the State of Pennsylvania. *Reversed.*

The history and facts of the case appear in the opinion of the court.

Mr. Morton P. Henry, for plaintiff in error.
Messrs. W. S. Kirkpatrick, Atty-Gen. of Pennsylvania and John F. Sanderson, Deputy Atty-Gen. of Pennsylvania, for defendant in error.

Mr. Justice Bradley delivered the opinion of the court:

The question in this case is whether a State can constitutionally impose upon a steamship company, incorporated under its laws, a tax upon the gross receipts of such company derived from the transportation of persons and property by sea, between different States, and to and from foreign countries.

By an Act of the Legislature of Pennsylvania, passed March 20, 1877, it was, amongst other things, enacted as follows, to wit:

"That every railroad company, canal company, steamboat company, slack water navigation company, transportation company, street passenger railway company, and every other company now or hereafter incorporated by or under any law of this Commonwealth, or now or hereafter incorporated by any other State, and doing business in this Commonwealth, and owning, operating, or leasing to or from another

tax is assessed by him and charged against the company.

Under and by virtue of these Acts, the Auditor-General of the State, in October, 1882, charged the appellant, the Philadelphia & Southern Mail Steamship Company, taxes upon its gross receipts for the years 1877, 1878, 1879, 1880 and 1881, all of which receipts were derived from freight and passage money between the Ports of Philadelphia and Savannah, and in foreign trade from New Orleans, and a small amount for charter parties in the like trade. The tax thus charged against the Company for the five years in question amounted to about \$6,500, and, with accumulated interest and penalties, to over \$9,000. After serving the account upon the Company, an action was brought for its recovery in the Common Pleas of Dauphin County, at Harrisburg. The defendant pleaded that it was a Steamship Company, "operating sea going steamships engaged in the business of ocean transportation between different States of the United States and between the United States and foreign countries; and that all the said steamships of the said defendant were duly enrolled or registered under the laws of the United States for the coasting or foreign trade of the United States; and that the gross receipts so returned to the Auditor-General, upon which a tax has been levied by the Commonwealth of Pennsylvania, were received by defendant for freight and passengers carried in the said steamships on the ocean and on the navigable waters of the United States, between the State of Pennsylvania and other States of the United States, and between the States of the United States and foreign countries, and for the charter and hire of the said steamships to other parties in such trade and business; and that no part of the said gross receipts was received for the transportation of freight and passengers between places within the State of Pennsylvania, or for the hire and use of the said steamships within the State of Pennsylvania."

On the trial of the cause the parties entered into an agreement as to the facts, showing the result each year, in each branch of trade; which facts supported of the plea. A trial by jury with, and the court gave judgment for the principal interest from the time of commencement. Exceptions were taken, on the ground that the judgment was in conflict with the Constitution of the United States. Congress the power to regulate foreign Nations and among the States. The judgment, being removed to the Supreme Court of Pennsylvania, was affirmed by that court; and its decision is now before us for review.

which underlies the immediate case is whether the imposition of a tax upon the Steamship Company's receipts is a regulation of, or an interference with, interstate and foreign commerce, in conflict with the power granted to Congress? The tax is levied upon the receipts derived by the Company from its fares and freights for the transportation of persons and goods be-

and to secure the use of the same for postal, military and other purposes," and it held that the Act was constitutional so far as it declared that the erection of telegraph wires should, as against state interference, be free to all who accepted its terms and conditions, and that a telegraph company of one State accepting them could not be excluded by another State from prosecuting its business within her jurisdiction. In *Telegraph Company v. Texas*, 105 U. S. 460 [*supra*], from the opinion in which we have quoted above, it was held that a statute of Texas imposing a tax upon every message transmitted by a telegraph company doing business within its limits, so far as it operated on messages sent out of the State, was a regulation of foreign and interstate commerce, and, therefore, beyond the power of the State.

In these cases the supreme authority of Congress over the subject of commerce by the telegraph with foreign countries or among the States is affirmed, whenever that body chooses to exert its power; and it is also held that the States can impose no impediments to the freedom of that commerce. In conformity with these views the attempted regulation by Indiana of the mode in which messages sent by telegraphic companies doing business within her limits shall be delivered in other States cannot be upheld. It is an impediment to the freedom of that form of interstate commerce, which is as much beyond the power of Indiana to interpose, as the imposition of a tax by the State of Texas upon every message transmitted by a telegraph company within her limits to other States was beyond her power. Whatever authority the State may possess over the transmission and delivery of messages by telegraph companies within her limits, it does not extend to the delivery of messages in other States.

The object of vesting the power to regulate commerce in Congress was to secure, with reference to its subjects, uniform regulations, where such uniformity is practicable, against conflicting state legislation. Such conflicting legislation would inevitably follow with reference to telegraphic communications between citizens of different States, if each State was vested with power to control the manner and order of the delivery of telegrams, as well as of their transmission, which would vary according to the judgment of each State. Indiana, as seen by its law given above, has provided that communications for or from officers of justice shall take precedence, and that arrangements may be made with publishers of newspapers for the transmission of intelligence of general and public interest out of its order, but that all other messages shall be transmitted in the order in which they are received; and punishes as an offense a disregard of this rule. Her attempt, by penal statutes, to enforce a delivery of such messages in other States, in conformity with this rule, could hardly fail to lead to collision with their statutes. Other States might well direct that telegrams on many other subjects should have precedence in delivery within their limits over some of these, such as telegrams for the attendance of physicians and surgeons in case of sudden sickness or accident, telegrams calling for aid in cases of fire or other calamity, and tele-

grams respecting the sickness or death of relatives.

Indiana also requires telegrams to be delivered by messengers to the persons to whom they are addressed, if they reside within one mile of the telegraph station, or within the city and town in which such station is; and the requirement applies, according to the decision of its supreme court in this case, when the delivery is to be made in another State. Other States might conclude that the delivery by messenger to a person living in a town or city being many miles in extent was an unwise burden, and require the duty within less limits; but if the law of one State can prescribe the order and manner of delivery in another State, the receiver of the message would often find himself incurring a penalty because of conflicting laws, both of which he could not obey. Conflict and confusion would only follow the attempted exercise of such a power. We are clear that it does not exist in any State.

The Supreme Court of Indiana placed its decision in support of the statute principally upon the ground that it was the exercise of the police power of the State. Undoubtedly, under the reserved powers of the State, which are designated under that somewhat ambiguous term of police powers, regulations may be prescribed by the State for the good order, peace and protection of the community. The subjects upon which the State may act are almost infinite; yet in its regulations with respect to all of them there is this necessary limitation, that the State does not thereby encroach upon the free exercise of the power vested in Congress by the Constitution. Within that limitation it may undoubtedly make all necessary provisions with respect to the buildings, poles and wires of telegraph companies within its jurisdiction which the comfort and convenience of the community may require.

It follows from the views expressed that *the judgment of the court below must be reversed and the cause remanded for further proceedings not inconsistent with this opinion; and it is so ordered.*

PHILADELPHIA & SOUTHERN MAIL
SHIP COMPANY, *Plff. in Err.*,
v.
COMMONWEALTH OF PENNSYLVANIA.

(From *Lafayette* ed. U. S. Reports, Bk. 80.)

1. A State cannot constitutionally impose upon a steamship company, incorporated under its laws, a tax upon its gross receipts, derived from the transportation of persons and property by sea, between different States, and to and from foreign countries.
2. The regulation of fares and freights receivable for the transportation of persons and goods between different States, and between the States and foreign countries, is within the power of Congress equally with the regulation of such transportation itself.
3. In the case presented, the tax in question can not be regarded as an impost tax.

4. Where a subject of interstate commerce is national in character, or admits of only one uniform system of regulation, the power of Congress is exclusive; and its failure to make express regulations indicates its will that the subject shall be free.
5. If a state statute imposing a tax upon interstate commerce is unconstitutional, it is not cured by including in its provisions subjects within the jurisdiction of the State.

The case of the *Philadelphia & Reading R. Co. v. Pennsylvania*, 15 Wall. 284, bk. 21, L. ed. 164, criticised.

(Argued April 7, 1887. Decided May 27, 1887.)

IN ERROR to the Supreme Court of the State of Pennsylvania. *Reversed.*

The history and facts of the case appear in the opinion of the court.

Mr. Morton P. Henry, for plaintiff in error.

Messrs. W. S. Kirkpatrick, Atty-Gen. of Pennsylvania and John F. Sanderson, Deputy Atty-Gen. of Pennsylvania, for defendant in error.

Mr. Justice Bradley delivered the opinion of the court:

The question in this case is whether a State can constitutionally impose upon a steamship company, incorporated under its laws, a tax upon the gross receipts of such company derived from the transportation of persons and property by sea, between different States, and to and from foreign countries.

By an Act of the Legislature of Pennsylvania, passed March 20, 1877, it was, amongst other things, enacted as follows, to wit:

"That every railroad company, canal company, steamboat company, slack water navigation company, transportation company, street passenger railway company, and every other company now or hereafter incorporated by or under any law of this Commonwealth, or now or hereafter incorporated by any other State, and doing business in this Commonwealth, and owning, operating, or leasing to or from another corporation or company any railroad, canal, slack water navigation, or street passenger railway, or other device for the transportation of freight or passengers, or in any way engaged in the business of transporting freight or passengers, and every telegraph company incorporated under the laws of this or any other State, and doing business in this Commonwealth, and every express company, and any palace car and sleeping car company, incorporated or unincorporated, doing business in this Commonwealth, shall pay to the State Treasurer, for the use of the Commonwealth a tax of eight tenths of 1 per centum upon the gross receipts of said company for tolls and transportation, telegraph business, or express business."

A similar Act was passed by the same Legislature on the 7th of June, 1879.

By the terms of these Acts, returns of the gross receipts are required to be made every six months to the auditor-general, upon which the

tax is assessed by him and charged against the company.

Under and by virtue of these Acts, the Auditor-General of the State, in October, 1882, charged the appellant, the Philadelphia & Southern Mail Steamship Company, taxes upon its gross receipts for the years 1877, 1878, 1879, 1880 and 1881, all of which receipts were derived from freight and passage money between the Ports of Philadelphia and Savannah, and in foreign trade from New Orleans, and a small amount for charter parties in the like trade. The tax thus charged against the Company for the five years in question amounted to about \$6,500, and, with accumulated interest and penalties, to over \$9,000. After serving the account upon the Company, an action was brought for its recovery in the Common Pleas of Dauphin County, at Harrisburg. The defendant pleaded that it was a Steamship Company, "operating sea going steamships engaged in the business of ocean transportation between different States of the United States and between the United States and foreign countries; and that all the said steamships of the said defendant were duly enrolled or registered under the laws of the United States for the coasting or foreign trade of the United States; and that the gross receipts so returned to the Auditor-General, upon which a tax has been levied by the Commonwealth of Pennsylvania, were received by defendant for freight and passengers carried in the said steamships on the ocean and on the navigable waters of the United States, between the State of Pennsylvania and other States of the United States, and between the States of the United States and foreign countries, and for the charter and hire of the said steamships to other parties in such trade and business; and that no part of the said gross receipts was received for the transportation of freight and passengers between places within the State of Pennsylvania, or for the hire and use of the said steamships within the State of Pennsylvania."

On the trial of the cause the parties entered into an agreement as to the facts, showing the gross receipts for each year, in each branch of the Company's trade; which facts supported the allegations of the plea. A trial by jury was dispensed with, and the court gave judgment for the Commonwealth for the principal of the tax and interest from the time of commencing suit. Exceptions were taken, on the ground that the judgment was in conflict with the clause of the Constitution of the United States giving to Congress the power to regulate commerce with foreign Nations and among the several States. The judgment, being removed by writ of error to the Supreme Court of Pennsylvania, was affirmed by that court; and its judgment is now before us for review.

The question which underlies the immediate question in the case is whether the imposition of the tax upon the Steamship Company's receipts amounted to a regulation of, or an interference with, interstate and foreign commerce, and was thus in conflict with the power granted by the Constitution to Congress? The tax was levied directly upon the receipts derived by the Company from its fares and freights for the transportation of persons and goods be-

NOTE.—Constitutional law; interstate commerce; regulation of power of Congress; how far exclusive. See *Gloucester Ferry Co. v. Pa.* 114 U. S. bk. 20, L. ed. 168, note.

tween different States, and between the States and foreign countries, and from the charter of its vessels which was for the same purpose. This transportation was an act of interstate and foreign commerce. It was the carrying on of such commerce. It was that, and nothing else. In view of the decisions of this court, it cannot be pretended that the State could constitutionally regulate or interfere with that commerce itself. But taxing is one of the forms of regulation. It is one of the principal forms. Taxing the transportation, either by its tonnage, or its distance, or by the number of trips performed, or in any other way, would certainly be a regulation of the commerce, a restriction upon it, a burden upon it. Clearly, this could not be done by the State without interfering with the power of Congress. Foreign commerce has been fully regulated by Congress, and any regulations imposed by the States upon that branch of commerce would be a palpable interference. If Congress has not made any express regulations with regard to interstate commerce, its inaction, as we have often held, is equivalent to a declaration that it shall be free, in all cases where its power is exclusive; and its power is necessarily exclusive whenever the subject matter is national in its character and properly admits of only one uniform system. See the cases collected in *Robbins v. Shelby Taring District*, 120 U. S. 489, 492, 493 [80: 694]. Interstate commerce carried on by ships on the sea is surely of this character.

If, then, the commerce carried on by the plaintiff in error in this case could not be constitutionally taxed by the State, could the fares and freights received for transportation in carrying on that commerce be constitutionally taxed? If the State cannot tax the transportation, may it, nevertheless, tax the fares and freights received therefor? Where is the difference? Looking at the substance of things, and not at mere forms, it is very difficult to see any difference. The one thing seems to be tantamount to the other. It would seem to be rather metaphysics than plain logic for the state officials to say to the Company: "We will not tax you for the transportation you perform, but we will tax you for what you get for performing it." Such a position can hardly be said to be based on a sound method of reasoning.

This court did not so reason in the case of *Brown v. Maryland*,* 25 U. S. 12 Wheat. 419 [6: 678]. The State of Maryland required all importers of foreign goods, and other persons selling the same by wholesale, bale or package, to take out a license and pay \$50 therefor, subject to a penalty and forfeiture for selling without such license. It was contended on the part of the State that this was a mere tax on the occupation of selling foreign goods, affecting only the person and not the importation of the goods themselves, or the occupation of importing them. Chief Justice Marshall met this objection by showing that the attempt to regulate the sale of imported goods was as much in conflict with the power of Congress to regulate commerce as a regulation of their importation itself would be. "If this power," said he (referring to the power of Congress), "reaches

the interior of a State, and may be there exercised, it must be capable of authorizing the sale of those articles which it introduces. Commerce is intercourse; one of its most ordinary ingredients is traffic. It is inconceivable that the power to authorize this traffic, where given in the most comprehensive terms, with the intent that its efficacy should be complete, should cease at the point when its continuance is indispensable to its value. To what purpose should the power to allow importation be given, unaccompanied with the power to authorize a sale of the thing imported? Sale is the object of importation, and is an essential ingredient of that intercourse, of which importation constitutes a part. It is as essential an ingredient, as indispensable to the existence of the entire thing, then, as importation itself. It must be considered as a component part of the power to regulate commerce. Congress has a right, not only to authorize importation but to authorize the importer to sell. * * * Any penalty inflicted on the importer for selling the article in his character of importer must be in opposition to the Act of Congress which authorizes importation. * * * The distinction between a tax on the thing imported, and on the person of the importer, can have no influence on this part of the subject. It is too obvious for controversy that they interfere equally with the power to regulate commerce." pp. 446-448 [688].

The application of this reasoning to the case in hand is obvious. Of what use would it be to the ship owner, in carrying on interstate and foreign commerce, to have the right of transporting persons and goods free from State interference if he had not the equal right to charge for such transportation without such interference? The very object of his engaging in transportation is to receive pay for it. If the regulation of the transportation belongs to the power of Congress to regulate commerce, the regulation of fares and freights receivable for such transportation must equally belong to that power; and any burdens imposed by the State on such receipts must be in conflict with it. To apply the language of Chief Justice Marshall, fares and freights for transportation in carrying on interstate or foreign commerce are as much essential ingredients of that commerce as transportation itself.

It is necessary, however, that we should examine what bearing the cases of the *State Freight Tax* and *Railway Gross Receipts*, reported in 15th of Wallace, have upon the question in hand. These cases were much quoted in argument, and the latter was confidently relied on by the counsel of the Commonwealth. They both arose under certain tax laws of Pennsylvania. The first, which is reported under the title of *Case of the State Freight Tax*, 15 Wall. 232 [21: 146], was that of the Reading Railroad Company, and arose under an Act passed in 1864, which imposed upon every railroad, steamboat, canal and slack water navigation company, a tax of a certain rate per ton on every ton of freight carried by or upon the works of said company; with a proviso directing, in substance, that every company, foreign or domestic, whose line extended partly in Pennsylvania, and partly in another State, should pay for the freight carried over that portion of its line in Pennsylvania, the same as

*See note and cases cited, L. ed. [Ed.]

if its whole line were in that State. Under this law the Reading Railroad Company was charged a tax of \$38,000 for freight transported to points within Pennsylvania, and of \$46,000 for that exported to points without the State. The latter sum the company refused to pay; and the question in this court was whether that portion of the tax was constitutional; and we held that it was not. *Mr. Justice Strong* delivered the opinion of the court. It was held that this was not a tax upon the franchises of the companies, or upon their property, or upon their business, measured by the number of tons of freight carried; but was a tax upon the freight carried, and because of its carriage: that transportation is a constituent of commerce; that the tax was, therefore, a regulation of commerce, and a regulation of commerce among the States; that the transportation of passengers or merchandise from one State to another is in its nature a matter of national importance, admitting of a uniform system or plan of regulation, and therefore, under the rule established by *Cooley v. Port Wardens*, 53 U. S. 12 How. 299 [18:996], exclusively subject to the legislation of Congress. The inevitable conclusion was that the tax then in question was in conflict with the exclusive power of Congress to regulate commerce among the States, and was therefore unconstitutional. Referring to the decision in *Crandall v. Nevada*, 78 U. S. 6 Wall. 35 [18:745], in which this court had decided that a State cannot tax persons for passing through or out of it, *Justice Strong* said: "If state taxation of persons passing from one State to another, or a state tax upon interstate transportation of passengers, is unconstitutional, *a fortiori*, if possible, is a state tax upon the carriage of merchandise from State to State in conflict with the Federal Constitution. Merchandise is the subject of commerce. Transportation is essential to commerce; and every burden laid upon it is *pro tanto* a restriction. Whatever, therefore, may be the true doctrine respecting the exclusiveness of the power vested in Congress to regulate commerce among the States, we regard it as established that no State can impose a tax upon freight transported from State to State, or upon the transporter because of such transportation."

The court in its opinion took notice of the fact that the law was general in its terms, making no distinction between freight transported wholly within the State and that which was destined to, or came from, another State. But it was held that this made no difference. The law might be valid as to one class, and unconstitutional as to the other. On this subject *Justice Strong* said: "The State may tax its internal commerce, but if an Act to tax interstate or foreign commerce is unconstitutional, it is not cured by including in its provisions subjects within the jurisdiction of the State. Nor is a rule prescribed for carriage of goods through, out of, or into a State, any the less a regulation of transportation because the same rule may be applied to carriage which is wholly internal." This last observation meets the argument that might be made in the present case, namely: that the law is general in its terms, and taxes receipts for all transportation alike, making no discrimination against receipts for interstate or foreign transportation, and hence cannot be regarded as a special tax on

INTER 8.

the latter. The decision in the case cited shows that this does not relieve the tax from its objectionable character.

If this case stood alone, we should have no hesitation in saying that it would entirely govern the one before us; for, as before said, a tax upon fares and freights received for transportation is virtually a tax upon the transportation itself. But at the same time that the *Case of State Freight Tax* was decided, the other case referred to, namely, that of *State Tax on Railway Gross Receipts*, was also decided, and the opinion was delivered by the same member of the court. 83 U. S. 15 Wall. 234 [21:164]. This was also a case of a tax imposed upon the Reading Railroad Company. It arose under another Act of Assembly of Pennsylvania, passed in February, 1866, by which it was enacted that "In addition to the taxes now provided by law, every railroad, canal and transportation company incorporated under the laws of this Commonwealth, and not liable to the tax upon income under existing laws, shall pay to the Commonwealth a tax of three fourths of 1 per centum upon the gross receipts of said company; the said tax shall be paid semi-annually." Under this statute the accounting officers of Pennsylvania stated an account against the Reading Railroad Company for tax on gross receipts of the company for the half year ending December 31, 1867. These receipts were derived partly from the freight of goods transported wholly within the State, and partly from the freight of goods exported to points without the State, which latter were discriminated from the former in the reports made by the company. It was the tax on the latter receipts which formed the subject of controversy. The same line of argument was taken at the bar as in the other case. This court, however, held the tax to be constitutional. The grounds on which the opinion was based, in order to distinguish this case from the preceding one, were two: first, that the tax, being collectible only once in six months, was laid upon a fund which had become the property of the company, mingled with its other property, and incorporated into the general mass of its property, possibly expended in improvements, or otherwise invested. The case is likened, in the opinion, to that of taxing goods which have been imported, after their original packages have been broken, and after they have been mixed with the mass of property in the country, which, it was said, are conceded in *Brown v. Maryland* to be taxable.

This reasoning seems to have much force. But is the analogy to the case of imported goods as perfect as is suggested? When the latter become mingled with the general mass of property in the State, they are not followed and singled out for taxation as imported goods, and by reason of their being imported. If they were, the tax would be as unconstitutional as if imposed upon them whilst in the original packages. When mingled with the general mass of property in the State they are taxed in the same manner as other property possessed by its citizens, without discrimination or partiality. We held in *Wells v. Missouri*, 91 U. S. 275 [23:347] that goods brought into a State for sale, though they thereby become a part of the mass of its property, cannot be taxed by

reason of their being introduced into the State, or because they are the products of another State. To tax them as such was expressly held to be unconstitutional. The tax in the present case is laid upon the gross receipts for transportation as such. Those receipts are followed and caused to be accounted for by the Company, dollar for dollar. It is those specific receipts, or the amount thereof, which is the same thing, for which the Company is called upon to pay the tax. They are taxed not only because they are money, or its value, but because they were received for transportation. No doubt a ship owner, like any other citizen, may be personally taxed for the amount of his property or estate, without regard to the source from which it was derived, whether from commerce, or banking, or any other employment. But that is an entirely different thing from laying a special tax upon his receipts in a particular employment. If such a tax is laid, and the receipts taxed are those derived from transporting goods and passengers in the way of interstate or foreign commerce, no matter when the tax is exacted, whether at the time of realizing the receipts, or at the end of every six months or a year, it is an exaction aimed at the commerce itself, and is a burden upon it, and seriously affects it. A review of the question convinces us that the first ground on which the decision in *State Tax on Railway Gross Receipts* was placed is not tenable; that it is not supported by anything decided in *Brown v. Maryland*; but, on the contrary, that the reasoning in that case is decidedly against it.

The second ground on which the decision referred to was based was that the tax was upon the franchise of the corporation granted to it by the State. We do not think that this can be affirmed in the present case. It certainly could not have been intended as a tax on the corporate franchise, because, by the terms of the Act, it was laid equally on the corporations of other States doing business in Pennsylvania. If intended as a tax on the franchise of doing business, which in this case is the business of transportation in carrying on interstate and foreign commerce, it would clearly be unconstitutional. It was held by this court in the case of *Gloucester Ferry Co. v. Pennsylvania**, 114 U. S. 196 [20:158], that interstate commerce carried on by corporations is entitled to the same protection against state exactions which is given to such commerce when carried on by individuals. In that case the tax was laid upon the capital stock of a ferry company incorporated by New Jersey, and engaged in the business of transporting passengers and freight between Camden, in New Jersey, and the City of Philadelphia. The law under which the tax was imposed was passed by the Legislature of Pennsylvania on the 7th of June, 1879, and declared "That every company or association whatever, now or hereafter incorporated by or under any law of this Commonwealth, or now or hereafter incorporated by any other State or Territory of the United States, or foreign government, and doing business in this Commonwealth, * * * (with certain exceptions named) shall be subject to and pay into the treasury of the Commonwealth annually a

tax to be computed as follows, namely:" the amount of tax is then rated by the dividends declared, and imposed upon the capital stock of the company at the rate of so many mills, or fractions of a mill, for every dollar of such capital stock. It was contended that the ferry company could not hold property in Philadelphia for the purpose of carrying on its ferrying business, and could not carry on its said business there without a franchise, express or implied, from the State of Pennsylvania. But this court held, in its opinion, delivered by Mr. Justice Field, that the business of landing and receiving passengers and freight at the wharf in Philadelphia was a necessary incident to, and a part of, their transportation across the Delaware River from New Jersey; that without it, that transportation would be impossible; that a tax upon such receiving and landing of passengers and freight is a tax upon their transportation, that is, upon the commerce between the two States involved in such transportation; and that Congress alone can deal with such transportation, its nonaction being equivalent to a declaration that it shall remain free from burdens imposed by state legislation. The opinion proceeds as follows: "Nor does it make any difference whether such commerce is carried on by individuals or corporations. *Welton v. Missouri*, 91 U. S. 275 [*supra*]; *Mobile Co. v. Kimball*, 102 U. S. 691 [26:238]. As was said in *Paul v. Virginia*, 75 U. S. 8 Wall. 168 [19:357] at the time of the formation of the Constitution, a large part of the commerce of the world was carried on by corporations; and the East India Company, the Hudson Bay Company, the Hamburg Company, the Levant Company, and the Virginia Company were mentioned as among the corporations which, from the extent of their operations, had become celebrated throughout the commercial world. The grant of power [to Congress] is general in its terms, making no reference to the agencies by which commerce may be carried on. It includes commerce by whomsoever conducted, whether by individuals or corporations." P. 204 [162]. Again; "While it is conceded that the property in a State belonging to a foreign corporation engaged in foreign or interstate commerce may be taxed equally with like property of a domestic corporation engaged in that business, we are clear that a tax or other burden imposed upon the property of either corporation because it is used to carry on that commerce, or upon the transportation of persons or property, or for the navigation of the public waters over which the transportation is made, is invalid and void as an interference with, and obstruction of, the power of Congress in the regulation of such commerce." P. 211 [164]. It is hardly necessary to add that the tax on the capital stock of the New Jersey Company, in that case, was decided to be unconstitutional, because, as the corporation was a foreign one, the tax could only be construed as a tax for the privilege or franchise of carrying on its business, and that business was interstate commerce.

The decision in this case, and the reasoning on which it is founded, so far as they relate to the taxation of interstate commerce carried on by corporations, apply equally to domestic and foreign corporations. No doubt the capital stock of the former, regarded as inhabitants of

*See note and cases cited, L. ed. [Ed.]

the State, or their property, may be taxed as other corporations and inhabitants are, provided no discrimination be made against them as corporations carrying on foreign or interstate commerce, so as to make the tax, in effect, a tax on such commerce. But their business as carriers in foreign or interstate commerce cannot be taxed by the State under the plea that they are exercising a franchise.

There is another point, however, which may properly deserve some attention. Can the tax in this case be regarded as an income tax? And, if it can, does that make any difference as to its constitutionality? We do not think that it can properly be regarded as an income tax. It is not a general tax on the incomes of all the inhabitants of the State; but a special tax on transportation companies. Conceding, however, that an income tax may be imposed on certain classes of the community, distinguished by the character of their occupations, this is not an income tax on the class to which it refers, but a tax on their receipts for transportation only. Many of the companies included in it may, and undoubtedly do, have incomes from other sources, such as rents of houses, wharves, stores, and water power, and interest on moneyed investments. As a tax on transportation, we have already seen, from the quotations from the *State Freight Tax Case*, that it cannot be supported where that transportation is an ingredient of interstate or foreign commerce, even though the law imposing the tax be expressed in such general terms as to include receipts from transportation which are properly taxable. It is unnecessary, therefore, to discuss the question which would arise if the tax were properly a tax on income. It is clearly not such, but a tax on transportation only.

The corporate franchises, the property, the business, the income of corporations created by a State may undoubtedly be taxed by the State; but in imposing such taxes care should be taken not to interfere with or hamper, directly or by indirection, interstate or foreign commerce, or any other matter exclusively within the jurisdiction of the Federal Government. This is a principle so often announced by the courts, and especially by this court, that it may be received as an axiom of our constitutional jurisprudence. It is unnecessary, therefore, to review the long list of cases in which the subject is discussed. Those referred to are abundantly sufficient for our purpose. We may add, however, that since the decision of the *Railway Tax Cases* now reviewed, a series of cases has received the consideration of this court, the decisions in which are in general harmony with the views here expressed, and show the extent and limitations of the rule that a State cannot regulate or tax the operations or objects of interstate or foreign commerce. We may refer to the following: *R. R. Co. v. Husen*, 95 U. S. 465 [24: 527]; *Cook v. Pa.* 97 U. S. 566 [24: 1015]; *Guy v. Baltimore*, 100 U. S. 434 [25: 743]; *Webber v. Va.* 103 U. S. 344 [26: 565]; *Moran v. New Orleans*, 112 U. S. 69 [28: 658]; *Walling v. Mich.* 116 U. S. 446 [29: 691]; *Pickard v. Pullman Southern Car Co.* 117 U. S. 84

[29: 785]; *Wabash etc. R. R. Co. v. Ill.* 118 U. S. 557 [30: 244]; *Robbins v. Shelby County*, 120 U. S. 489 [30: 694]; *Fargo v. Mich.* 121 U. S. 230 [30: 888.] The cases of *Moran v. New Orleans* and *Fargo v. Michigan* are especially apposite to the case now under consideration. As showing the power of the States over local matters incidentally affecting commerce, see *Munn v. Illinois* 94 U. S. 123 [24: 88], and other cases in the same volume, pp. 161, 176, 180 [95, 98, 99], as explained by *Wabash etc. R. R. Co. v. Illinois*; *Wharfage Cases*, viz.: *Keokuk etc. Packet Co. v. Keokuk*, etc. 95 U. S. 80 [24: 377]; 100 U. S. 428 [25: 690]; 105 U. S. 563 [26: 1171]; 107 U. S. 698 [27: 587]; 121 U. S. —; *Mobile Co. v. Kimball*, 102 U. S. 691 [26: 288]; *Brown v. Houston*, 114 U. S. 622, 630 [29: 257, 260]; *R. R. Commission Cases*, 116 U. S. 307 [29: 636]; *Coe v. Errol*, *Id.* 517 [29: 715].

It is hardly within the scope of the present discussion to refer to the disastrous effects to which the power to tax interstate or foreign commerce may lead. If the power exists in the State at all, it has no limit but the discretion of the State, and might be exercised in such a manner as to drive away that commerce, or to load it with an intolerable burden, seriously affecting the business and prosperity of other States interested in it; and if those States, by way of retaliation, or otherwise, should impose like restrictions, the utmost confusion would prevail in our commercial affairs. In view of such a state of things which actually existed under the Confederation Chief Justice Marshall, in the case before referred to, said: "Those who felt the injury arising from this state of things, and those who were capable of estimating the influence of commerce on the prosperity of Nations, perceived the necessity of giving the control over this important subject to a single government. It may be doubted whether any of the evils proceeding from the feebleness of the Federal Government contributed more to that great revolution which introduced the present system, than the deep and general conviction that commerce ought to be regulated by Congress. It is not, therefore, matter of surprise that the grant should be as extensive as the mischief, and should comprehend all foreign commerce, and all commerce among the States. To construe the power so as to impair its efficacy would tend to defeat an object, in the attainment of which the American public took, and justly took, that strong interest which arose from a full conviction of its necessity." *Brown v. Maryland*, 25 U. S. 12 Wheat. 446 [6: 688].

Nothing can be added to the force of these words.

Our conclusion is that the imposition of the tax in question in this cause was a regulation of interstate and foreign commerce, in conflict with the exclusive powers of Congress under the Constitution.

The judgment of the Supreme Court of Pennsylvania is therefore reversed, and the case is remanded, to be disposed of according to law, in conformity with this opinion.

THE INTERSTATE COMMERCE COMMISSION.

(July 6, 1887.)

Re OPELIKA BOARD OF TRADE.

W. O. HARWELL, H. B. T. Montgomery and J. W. Ponder, a transportation committee of the Opelika, Alabama, Board of Trade, complain to the Interstate Commerce Commission that the Columbus & Western Railway and the Western Railroad, practice such discrimination in freight rates against Opelika and in favor of Montgomery and Columbus that merchants of the two last named towns retail goods in Opelika's suburban villages at lower rates than Opelika merchants can give, and that the interests of Opelika are being ruined in consequence.

W. H. HEARD

v.

GEORGIA RAILROAD.

W. H. HEARD, a colored man of Charleston, S. C., who complained to the Interstate Commerce Commission of discrimination against him on account of color, by the Georgia Railroad, has reduced his complaint to the form of an affidavit. He asks that the Georgia Railroad be compelled to furnish equal accommodation to persons holding first class tickets "irrespective of race or color."

ARMOUR & CO.

v.

LAKE SHORE & MICHIGAN SOUTHERN R. R. CO.*

ANSWERS have been received from the Lake Shore & Michigan Southern Railroad Company to the complaints of Armour & Co., and Nelson Morris & Co., alleging excessive rates upon meat products.

It is denied that the agreement was made for the purpose of destroying competition between said common carriers, or that the respondent refuses in consequence of said agreement to make petitioners just and reasonable rates based upon the service rendered.

(July 11, 1887.)

Mrs. J. H. STAHL

v.

OREGON RAILWAY & NAVIGATION CO.

THE first case before the Commission to be adjusted by the refunding of an alleged overcharge, is that of Mrs. J. H. Stahl, of Walla Walla, Washington Territory, against the Oregon Railway & Navigation Company.

Mrs. Stahl's letter of complaint was an informal document in which she described in German-English phraseology her business troubles, mentioning the fact that she was a widow.

*See ante, 294, 303.

Commissioner Bragg, on behalf of the Commission, forwarded the complaint to the Railway Company, requesting an investigation and, if it was found that an overcharge had been made, that the money be refunded.

The Company's attorneys filed their reply, to the effect that the beer kegs over which the complaint arose were shipped from Milwaukee; that the rates were fixed by a company over which respondent had no control, and that the said rates were not unreasonable or unjust. Notwithstanding this, however, the respondent says it has fully satisfied complainant in respect to all matters connected with said shipment of beer kegs. Mrs. Stahl's receipt for \$20 in full settlement and complete satisfaction for overcharges was inclosed, and her complaint withdrawn.

HARTFORD & NEW YORK TRANSPORTATION CO.

v.

NEW YORK & NEW ENGLAND R. R. CO. et al.

O. C. GOODRICH, general agent of the Hartford & New York Transportation Company, has written to the Commission that "the most outrageous wrong doing on cargo freights" is practiced by the New York & New England Railroad and the Connecticut Western Railroad, in an endeavor to drive out and destroy the water commerce.

The roads, he says, having fixed a reasonable rate to Hartford, have put in force an enormous local tariff from river points to inland towns, thus depriving inland points from all benefit of water competition and compelling shippers to send by all rail.

William H. REED.

v.

OREGON RAILWAY & NAVIGATION CO.**Milton EVANS v. SAME.**

ANSWERS have been received by the Commission from the Oregon Railway & Navigation Company to the complaints of William H. Reed and Milton Evans, of Walla Walla, Washington Territory. These cases practically involve the interests of a large wheat growing region. The complaints are in substance that the charge of \$6 a ton for the transportation of grain from Walla Walla to Portland is excessive and unreasonable.

The Company sets forth that the whole traffic, freight and passenger, between Portland and Walla Walla, inclusive, amounted during the eleven months ending May 31, 1887, to \$606,405, and the operating expenses for the same period amounted to \$792,490. The Company declares that the lowest charge upon wheat from Walla Walla to Portland previous to the time the road went into operation was \$12 a ton. In anticipation of a large yield in 1887, the rates have already and voluntarily been reduced to \$5 a ton, to take effect from

July 5. It avers that the adoption of the rates prayed for (\$8 a ton) would in effect destroy defendant's entire property as an investment.

(July 12, 1887.)

Nelson L. DERBY

v.

ST. PAUL, MINNEAPOLIS & MANITOBA RAILWAY CO.

THE Commission received a complaint from Nelson L. Derby, of St. Thomas, Dakota, which is supplementary to those already received from other farmers of that vicinity, alleging a refusal on the part of the Manitoba Railroad Company to furnish cars for the shipment of the wheat crop of that region.

The complaint assumes to speak for the entire community of farmers, and bears evidence of being the outcome of a general movement of farmers for relief. It avers that the local press is muzzled, that the free pass system is in as full operation as before the passage of the Interstate Law, and that the prosperity of the community hangs upon the intervention of the Commission. It is stated as the prevailing belief of the farmers that the proprietor of a certain elevator line, by collusion with the railroad authorities, has reached a position "from which he controls the price of wheat, if not through the entire country, certainly through the spring wheat belt of the Northwest."

The complaint narrates some past experiences, among them the receipt of an order from the Railroad Company to ship his wheat through these particular elevators, accompanied by an intimation that if he did not wish to do so he could stop raising wheat. At one time, he says, the farmers seized the cars they needed, despite the railroad company, and loaded their wheat, which resulted in the adoption of a plan by the railroad of keeping its cars at a distance from the wheat stations.

(July 13, 1887.)

Re MILK TRAFFIC.*

THE Commission began a hearing in the matter of Nathaniel W. Howard and others against the New York, Lake Erie & Western and other railroads. This is the complaint of the Orange County, N. Y. milk producers.

Congressman Henry Bacon appeared for the complainants. The railroads were all represented. After the submission of a statement by the complainants the hearing was adjourned.

(July 14, 1887.)

William M. HOLBROOK *et al.*

v.

ST. PAUL, MINNEAPOLIS & MANITOBA R. CO.

MR. S. S. Burdette, attorney for the St. Paul, Minneapolis & Manitoba Railway Company, appeared before the Commission, and

*See *ante*, 24, 202.

INTER S.

submitted two motions; the first was to dismiss the complaints of Holbrook, Derby and others, farmers of Dakota, upon the general ground that the acts complained of antedated the passage of the Interstate Law; the second was to dismiss the complaints, upon the ground that the so-called testimony submitted was taken without notice to defendant, and without giving an opportunity to cross examine witnesses.

The Commission stated to Mr. Burdette that there seemed to be no reason for his further attendance, and that its decision would be made a matter of record. Mr. Burdette said that the Company now had plenty of cars, and would supply the demand. The action of the Commission is equivalent to a dismissal.

(July 15, 1887.)

LEHIGH VALLEY R. R. CO.

v.

PHILADELPHIA & READING R. R. CO.*

THIS matter, which involves the question of free baggage allowance upon the registry and indemnity certificates of the Traders & Travelers Union, came on for hearing before the Commission, all parties to the case being represented by counsel, and Russell P. Hoyt, general manager of the Traders & Travelers Union, being present.

There was substantial unanimity among the parties to the case, in desiring an authoritative opinion from the Commission upon the question of the right of a railroad to recognize the certificates of the union and carry free for the holders of such certificates an amount of baggage in excess of that so carried for other passengers. The operation of the union's system was explained to the Commission; and it was shown that its advantages were open to all who might choose to avail themselves of them, the passenger securing free transportation of extra baggage, together with insurance, against loss, and the railroads being relieved from responsibility, in case of loss or injury, and securing an additional safeguard against fraud on the part of its employees.

The decision of the Commission was reserved.

(July 15, 1887.)

Re ANNAPOLIS, WASHINGTON & BALTIMORE R. R. CO. *et al.*

So far as a railroad company, whose line is entirely within one State, issues through bills of lading over its connecting lines to points in other States, and makes through rates, it falls under the provision of the Interstate Commerce Act.

THE authorities of the Annapolis, Washington & Baltimore Railroad Company have written to the Commission asking if their line is subject to the provisions of the Interstate Law, lying as it does wholly within the State of Maryland. A great many like inquiries

*See *ante*, 62.

and Pittsburg, Cincinnati & St. Louis Railroad Companies.

The burden of the complaint is that the defendant companies are the owners of the stock yards at Covington, through which they require complainants to pass all stock shipped by them, charging for the privilege twenty-five cents a head upon horned cattle, six cents upon hogs, and five cents upon sheep as a tribute, notwithstanding that complainants have convenient stock yards, platforms, and chutes of their own.

Re EXPRESS COMPANIES.*

THREE express companies have filed their schedules with the Commission. To the others a letter has been addressed by Secretary Moseley, giving them thirty days to do the same before final action in their case is taken.

(July 21, 1887.)

Ralph W. THACHER

v.

DELAWARE & HUDSON CANAL CO.†

The Commission heard arguments and testimony upon the complaint of R. W. Thacher, of Schenectady, against the Delaware & Hudson Canal Company, and its eastern connections.

The defendant did not appear by counsel.

Mr. Thacher was represented by George L. Stedman, Esq.

Henry S. Marcy, of Ballston, N. Y., general traffic manager of the Delaware & Hudson Canal Company, was examined as a witness for complainant. He said the through rate on grain from Chicago to Boston points was thirty cents a hundred, of which the Fitchburg Road received five and seven tenths as its proportion for the haul from Mechanicsville. The same rate was accepted by the Fitchburg when the grain was transhipped either at Buffalo or Ogdensburg; but if transhipped at Schenectady

the Fitchburg demanded eight cents as its proportion, the service performed being exactly similar.

Mr. Thacher testified that 80 per cent of his eastern business had been destroyed by reason of this alleged discrimination. The Delaware & Hudson Canal Company was willing to accept its proportion of the lower rate, but the Fitchburg Road insisted upon correcting all way bills upon defendant's grain, putting the rate up more than three cents a hundred as soon as the grain reached Mechanicsville.

Mr. Stedman maintained that the railroad was responsible under the Law for the manner of the performance of its duty, irrespective of the acts of other roads. It had no right to ask where grain came from, or whether it came by rail or water. To permit this would sanction a discrimination against localities.

Decision was reserved.

Re CLASSIFICATION OF RAILROAD FREIGHTS.

A committee of the New York Board of Trade and Transportation submitted to the Commission a statement with regard to the classification of railroad freights.

It is alleged therein that when the Interstate Commerce Law went into force the trunk lines adopted a new system of classification, in which an unjust discrimination is made against small shippers of some varieties of goods, by placing less than car load quantities in a higher class than car loads, so that the small shippers are forced to pay from 16 to 60 per cent more for transportation than the large ones. A slight change has been made by the classification committee of the trunk lines on representations made to them; but the same objectionable principle still prevails.

The committee ask return to the old west bound classification, or if, after considering the subject, the Commission decides this would be unreasonable, that they will recommend the establishment of reasonable differences, define them, and where a doubt exists as to what is reasonable, that the smaller shippers shall be given the benefit of that doubt.

UNITED STATES CIRCUIT COURT FOR THE DISTRICT OF OREGON.

Ex parte Richard KOEHLER, RECEIVER OF THE OREGON & CALIFORNIA R. CO.

†1. Long and short haul—competition.

The fact that there is competition in the carriage of persons or property to or from a particular place is a circumstance that justifies a common carrier under section 4 of the Interstate Commerce Act to charge less for a long haul to or from said place than a short one included therein.

2. Passes to families of employees.

Section 2 of the Interstate Commerce Act in effect prohibits the giving of passes or free carriage to particular per-

sons; and the exception allowed in section 22, in favor of officers and employees of the road, does not include the families of such persons.

(July 4, 1887.)

PETITION for instruction.

The facts and questions presented are stated in the opinion.

Mr. John W. Whalley, for petitioner.

Deady, J., delivered the following opinion:

On June 25, 1887, the Receiver of the Oregon & California Railway Company filed his petition in this court asking for direction touching certain questions arising in the management of the road under the Interstate Commerce Act.

The road is 400 miles in length, and lies wholly in this State, between Portland and the

*See ante, 23.

†See nature of the complaint stated, ante, 24.

‡Head notes by DEADY, J.

assume that the State has the power to prevent a railway company from discriminating between persons and places for the sake of putting one up or another down, or any other reason than the real exigencies of its business. Such discrimination, it seems to me, is a wanton injustice, and may therefore be prohibited. It violates the fundamental maxim *Sic utere tuo ut alienum non laedas*, which, in effect, forbids anyone to so use his property as to injure another. * * * But where the discrimination is between places only, and it is the result of competition with other lines or means of transportation, the case, I think, is different. For instance, the Act prescribes a reasonable rate for carrying freight between Corvallis and Portland, or from either to points intermediate thereto. But Corvallis is on the river, and has the advantage of water transportation for some months in the year. The carriage of goods by water usually costs less than by land, and as water craft are allowed to carry at a rate less than the maximum fixed for the railway, they will get all the freight from this point unless the latter is allowed to compete for it. But if, to do this, it must adopt the water rate for all the points intermediate between Portland and Corvallis, where there is no such competition, it is in effect required to carry freight to and from such points at a less rate than that which the Legislature has declared to be reasonable, or else give up the business at Corvallis altogether. If the Legislature cannot require a railway corporation formed under the laws of the State, to carry freight for nothing, or at any less rate than a reasonable one, then it necessarily follows that this provision of the Act cannot be enforced, so far as to prevent the railway from competing with the water craft at Corvallis and other similarly situated points, even if, in so doing, they are compelled to charge less for a long haul than a short one in the same direction. It is not the fault or contrivance of the railway company that compels this discrimination. It is the necessary result of circumstances altogether beyond its control. It is not done wantonly, for the purpose of putting the one place up or the other down, but only to maintain its business against rival and competing lines of transportation. In other words, the matter, so far as the railway is concerned, resolves itself into a choice of evils. It must either compete with the boats during the season of water transportation, and carry freight below what the Legislature has declared to be a reasonable rate, or abandon the field and let its road go to rust. Nor can the shipper at the noncompeting point or over the short haul, complain, so long as his goods are carried at a reasonable rate. It is not the fault of the railway that the shipper who does business at a competing point has the advantage of him. It is a natural advantage to which he must submit, unless the Legislature will undertake to equalize the matter by prohibiting the carriage of goods by water for a less rate than by rail; and when this is done the inequalities of distance, as well as place, may also be overcome by requiring goods to pay the same rate over a short haul as a long one.

This opinion has been before the world for more than two years and, on account of the INTER 8.

importance of the subject, has attracted some attention; but so far as I am aware it has received no unfavorable criticism; and time and reflection have fully satisfied me of the correctness of the ruling.

In *Ex parte Koehler*, 25 Fed. Rep. 73, I had occasion to consider this subject again, on account of the competition at Corvallis with the Oregon Pacific Railway Company running in connection with the steamers of the Oregon Development Company for freight destined to and from San Francisco, in which the receiver was instructed to make rates that would enable the Oregon & California Road to compete for freight with the Oregon Pacific Company at Corvallis.

At common law a carrier has a right to charge less for a long haul than a short one in the same direction, but the rate for the short haul must be reasonable.

In *Atchison etc. R. Co. v. Denver etc. R. R. Co.* 110 U. S. 683 [Bk. 28, L. ed. 297], the supreme court held that the former could not be required to carry freight over its road from Kansas City to Pueblo, Colorado, for the latter at the same rate it obtained on a division of through rates among combined companies, of which it was one, on a through line from Kansas to Denver, the latter being a competitive point for the business to and from the Missouri River, while Pueblo is not. And this conclusion was reached notwithstanding the Constitution of Colorado (§ 6, art. 15) prescribes—"All individuals, associations and corporations shall have equal rights to have persons and property transported over any railroad in this State, and no undue or unreasonable discrimination shall be made in charges or facilities for transportation of freight or passengers within the State."

The judgment of the court is authority then, for this proposition: two or more corporations, in order to meet competition, may form a through line and charge through rates for transportation thereon, which may be less than the sum of the local rates of the several roads constituting the line; and the portion of the through rate received by each corporation may be less than the local rate charged by said corporation for carrying freight over the whole length of its road.

The Interstate Commerce Act is intended, among other things, to prevent discrimination between long and short hauls, except where they are made under substantially dissimilar circumstances and conditions. In my judgment, Congress, in limiting the prohibition contained in section 4 of the Act against discriminating charges between long and short hauls, to cases where such hauls are made "under substantially similar circumstances and conditions," has recognized the rule laid down in *Ex parte Koehler* as a proper one.

Freight carried to or from a competitive point is always carried under "substantially dissimilar circumstances and conditions" from that carried to or from noncompetitive points.

In the latter case the railway makes its own rates, and there is no good reason why it should be allowed to charge less for a long haul than a short one. When each haul is made from or to a noncompetitive point, the

southern boundary thereof; and since January 19, 1885, it has been operated by the petitioner, as Receiver of this court.

It appears from the petition that the Oregon & California Road will soon be connected with the California & Oregon Road, when the two will form a through line between Portland and San Francisco; that between these points there is also water communication by steamers and sail vessels, that carry passengers and freight at less than the average cost of transportation by rail between said places and all intervening stations; that the road of the Oregon Pacific Railway Company runs from Yaquina Bay to Albany in this State, and there crosses the line of the Oregon & California Road, from whence it is being constructed to the eastward; that, with the aid of steamboats on the Wallamet River, it receives a portion of the freight which would otherwise be carried on the Oregon & California Road; that the bulk of the freight obtained by the Oregon Pacific Railway Company from the Wallamet Valley, is carried to Yaquina Bay, and thence to San Francisco, at special rates, on the steamers of the Oregon Development Company, which are apparently under the same control as the Oregon Pacific Road; that the Canadian Pacific Road connects with a line of steamers running between its western terminus and San Francisco; and that to compete with such all water and rail and water transportation between Portland and points to the north and east of it, and in the Wallamet Valley on the one hand and San Francisco on the other, it is necessary to make corresponding rates on the Oregon & California Road.

The petitioner also states that it will be necessary for him, under section 6 of the Interstate Commerce Act, in conjunction with those in control of the connecting lines, to make the rates between Portland and San Francisco; and in view of these general statements and many illustrative details contained in the petition, he asks: 1, whether, under the Interstate Commerce Act, such rates can be made, for through travel and traffic, as will enable the Oregon & California Road to compete for the same, at points where competition by water or rail exists, although the rates for the long haul between Portland and San Francisco or intervening points may be less than those for a shorter haul in the same direction between said places or such points; and 2, whether, in conjunction with the Northern Pacific Railway Company or other transportation lines, the Oregon & California Road may meet the competition of the Canadian Pacific Road or other transportation lines, on transcontinental business originating to the north and east of Portland, although its share of the through rate may be less than the local charges over the road, or its share of the through rate on competitive business between Portland and San Francisco.

The petitioner also states that it has been customary to issue passes to the families of employees of the road, as well as the employees themselves, and that the same have been regarded as a part of the consideration for the services of the latter, and asks whether, under section 22 of the Interstate Commerce Act, he can issue such passes over the Oregon & Cali-

fornia Road to be used on interstate travel, and whether he can interchange the same for the passes of other roads to be used in such travel by the families of the employees of such other roads.

The Interstate Commerce Act applies, by its own terms, "to any common carrier engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, when both are used under a common control, management or arrangement for a continuous carriage or shipment" not "wholly within one State;" and all charges for any such service "shall be reasonable and just."

Section 4 of the Act provides "That it shall be unlawful for any common carrier, subject to the provisions of this Act, to charge or receive any greater compensation in the aggregate for the transportation of passengers or of like kind of property, under substantially similar circumstances and conditions, for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance; but this shall not be construed as authorizing any common carrier within the terms of this Act, to charge and receive as great compensation for a shorter as for a longer distance."

From *Ex parte Koehler*, 23 Fed. Rep. 529, it appears that the Oregon & California Company was formed under the general Incorporation Act (1882) of Oregon, passed in pursuance of section 2 of article 9 of the Constitution of the State, which provides for the formation of corporations under general laws, and reserves to the Legislature the power to alter, amend or repeal any Act passed in pursuance thereof; "but not so as to impair or destroy any vested corporate right;" and § 36 of this Corporation Act provides that "any corporation formed thereunder shall be deemed a common carrier; and shall have power to collect and receive such freights for transportation of persons and property thereon, as it may prescribe." Laws, 582.

From these premises I concluded in *that* this corporation has a vested right to collect and receive a reasonable compensation for the transportation of persons and property on its road, which the Legislature cannot alter or destroy; and that while the Legislature may prescribe rates of transportation which are presumed reasonable, until the contrary appears, the judiciary are the final judges of what is reasonable or not, or what is the vested right of the corporation to receive reasonable compensation for its service.

Following this conclusion, I held in the same case that, notwithstanding the action of the Oregon Legislature (Sess. Laws, 1884, called "the Houtt Act," prohibiting transportation from charging a greater rate for carrying similar property for a short haul than for a long one, in the same direction, the Oregon & California Road might, for the purpose of maintaining and securing business, at a place where there are competing lines of transportation, charge less for a long haul than for a short one, in the same direction, so long as the charge for the latter is reasonable.

In the course of the opinion it was

assume that the State has the power to prevent a railway company from discriminating between persons and places for the sake of putting one up or another down, or any other reason than the real exigencies of its business. Such discrimination, it seems to me, is a wanton injustice, and may therefore be prohibited. It violates the fundamental maxim *Sic utere tuo ut alienum non laedas*, which, in effect, forbids anyone to so use his property as to injure another. * * * But where the discrimination is between places only, and it is the result of competition with other lines or means of transportation, the case, I think, is different. For instance, the Act prescribes a reasonable rate for carrying freight between Corvallis and Portland, or from either to points intermediate thereto. But Corvallis is on the river, and has the advantage of water transportation for some months in the year. The carriage of goods by water usually costs less than by land, and as water craft are allowed to carry at a rate less than the maximum fixed for the railway, they will get all the freight from this point unless the latter is allowed to compete for it. But if, to do this, it must adopt the water rate for all the points intermediate between Portland and Corvallis, where there is no such competition, it is in effect required to carry freight to and from such points at a less rate than that which the Legislature has declared to be reasonable, or else give up the business at Corvallis altogether. If the Legislature cannot require a railway corporation formed under the laws of the State, to carry freight for nothing, or at any less rate than a reasonable one, then it necessarily follows that this provision of the Act cannot be enforced, so far as to prevent the railway from competing with the water craft at Corvallis and other similarly situated points, even if, in so doing, they are compelled to charge less for a long haul than a short one in the same direction. It is not the fault or contrivance of the railway company that compels this discrimination. It is the necessary result of circumstances altogether beyond its control. It is not done wantonly, for the purpose of putting the one place up or the other down, but only to maintain its business against rival and competing lines of transportation. In other words, the matter, so far as the railway is concerned, resolves itself into a choice of evils. It must either compete with the boats during the season of water transportation, and carry freight below what the Legislature has declared to be a reasonable rate, or abandon the field and let its road go to rust. Nor can the shipper at the noncompeting point or over the short haul, complain, so long as his goods are carried at a reasonable rate. It is not the fault of the railway that the shipper who does business at a competing point has the advantage of him. It is a natural advantage to which he must submit, unless the Legislature will undertake to equalize the matter by prohibiting the carriage of goods by water for a less rate than by rail; and when this is done the inequalities of distance, as well as place, may also be overcome by requiring goods to pay the same rate over a short haul as a long one.

This opinion has been before the world for more than two years and, on account of the INTER 8.

importance of the subject, has attracted some attention; but so far as I am aware it has received no unfavorable criticism; and time and reflection have fully satisfied me of the correctness of the ruling.

In *Ex parte Koehler*, 25 Fed. Rep. 73, I had occasion to consider this subject again, on account of the competition at Corvallis with the Oregon Pacific Railway Company running in connection with the steamers of the Oregon Development Company for freight destined to and from San Francisco, in which the receiver was instructed to make rates that would enable the Oregon & California Road to compete for freight with the Oregon Pacific Company at Corvallis.

At common law a carrier has a right to charge less for a long haul than a short one in the same direction, but the rate for the short haul must be reasonable.

In *Atchison etc. R. Co. v. Denver etc. R. R. Co.* 110 U. S. 683 [Bk. 28, L. ed. 297], the supreme court held that the former could not be required to carry freight over its road from Kansas City to Pueblo, Colorado, for the latter at the same rate it obtained on a division of through rates among combined companies, of which it was one, on a through line from Kansas to Denver, the latter being a competitive point for the business to and from the Missouri River, while Pueblo is not. And this conclusion was reached notwithstanding the Constitution of Colorado (§ 6, art. 15) prescribes — "All individuals, associations and corporations shall have equal rights to have persons and property transported over any railroad in this State, and no undue or unreasonable discrimination shall be made in charges or facilities for transportation of freight or passengers within the State."

The judgment of the court is authority then, for this proposition: two or more corporations, in order to meet competition, may form a through line and charge through rates for transportation thereon, which may be less than the sum of the local rates of the several roads constituting the line; and the portion of the through rate received by each corporation may be less than the local rate charged by said corporation for carrying freight over the whole length of its road.

The Interstate Commerce Act is intended, among other things, to prevent discrimination between long and short hauls, except where they are made under substantially dissimilar circumstances and conditions. In my judgment, Congress, in limiting the prohibition contained in section 4 of the Act against discriminating charges between long and short hauls, to cases where such hauls are made "under substantially similar circumstances and conditions," has recognized the rule laid down in *Ex parte Koehler* as a proper one.

Freight carried to or from a competitive point is always carried under "substantially dissimilar circumstances and conditions" from that carried to or from noncompetitive points.

In the latter case the railway makes its own rates, and there is no good reason why it should be allowed to charge less for a long haul than a short one. When each haul is made from or to a noncompetitive point, the

effect of such discrimination is to build up one place at the expense of the other. Such action is willfully unjust, and has no justification or excuse in the exigencies or conditions of the business of the corporation.

In the former case the circumstances are altogether different. The power of the corporation to make a rate is limited by the necessities of the situation. Competition controls the charge. It must take what it can get, or as was said in *Ex parte Koehler*, "Abandon the field, and let its road go to rust."

Competition may not be the only circumstance that makes the condition under which a long and a short haul are performed substantially dissimilar. But certainly it is the most obvious and effective one; and must have been in the contemplation of Congress in the passage of the Act.

Section 6 of the Act of July 1, 1862 (12 Stat. 489), incorporating the Union Pacific, provides that the United States shall have the preference in the use of the road of the corporation, for the transportation of mails, troops, and munitions of war "at fair and reasonable rates of compensation, not to exceed the amount paid by private parties for the same kind of service."

In the *Union Pacific R. Co. v. U. S.* 104 U. S. 662 [Bk. 26, L. ed. 884] and 117 U. S. 355 [Bk. 29, L. ed. 920] a question arose under this section, as to what compensation the corporation was entitled to receive for transporting persons connected with the postal and military service of the government, over the line of its road, when it appeared from the finding of the court of claims that the uniform rate of the Union Pacific for carrying passengers over its road between Council Bluffs and Ogden, on tickets purchased at either of these points, was \$78.50; but by contract with connecting railway corporations, passengers were carried on through tickets from New York to San Francisco at reduced rates, of which the Union Pacific received as its proportion \$54 a passenger. [117 U. S. 862.]

As stated by the supreme court, 117 U. S. 363 [Bk. 29, L. ed. 928]. "The contention of the United States is that local passengers, carried on its account between Council Bluffs and Ogden, shall be carried at the same rates as are charged for through passengers passing between these points, as part of a journey over the whole line, although a difference is made in respect to all other persons."

The question was decided in favor of the corporation, the court holding, in the language of the syllabus, [117 U. S. 355]: "The service rendered by a railway company in transporting a local passenger from one point on its line to another, is not identical with the service rendered in transporting a through passenger over the same rails."

The decisions of the supreme court in these two cases are quite recent (1881, 1883 and 1885), and were doubtless present in the mind of Congress at the passage of the Interstate Commerce Act. In effect they both hold that a short haul without competition is not a like service, or a service performed under similar circumstances and conditions, with a long one subject to competition—and that the circum-

stances in such case are so dissimilar as to warrant discrimination, or a less rate over the long haul than the short one.

Section 90 of the English Railway Act of 1845 (8 and 9 Vic. chap. 20) requires equality of rates for the passage of goods "passing only over the same portion of the line of said railway under the same circumstances."

In *Denaby Main Colliery Co. v. M. S. & L. Railway Co.* L. R. 10 H. of L. 97; S. C. 26 Am. & Eng. R. Cas. 298, it was held, in an action against the defendant for overcharges, made in violation of the Act, in carrying coal from a group of collieries, situate at different points along the line of its road, at a uniform rate, that the Act only applied to goods passing between the same termini and over no other part of the line; and that inequality of rate, where unequal distances are traversed does not constitute a preference contrary to the Act. In other words, the court held that two tons of coal, passing over the road of the defendant between B & C, did not pass over such portion of its line under the same circumstances, if one of them also passed over that portion of the road between A & B, and therefore the defendant was not guilty of an infraction of the Act, when it charged no more for carrying a ton of coal from A to the point C, than it did from B to such point.

But under the Interstate Commerce Act, mere difference in distance is not such a circumstance as will justify a greater or even an equal charge for a short haul than for a long one. Yet Congress must have contemplated that there might be such a difference in the circumstances attending a long and short haul, as would justify such charge—as would make it necessary for a railway corporation in the retention and acquisition of the business for which it is constructed and operated, to charge less for a long haul than a short one. Congress never intended to make of this Act a Procrustean bed, in which the conduct of the business of all the roads engaged in interstate commerce shall be made to conform to one arbitrary rule, without reference to the probable and even unavoidable differences in the conditions and circumstances under which it must be transacted. And, as I have said, in my judgment, competition between the termini of a long haul, is the most obvious and effective circumstance, that justifies a railway in making a rate below what it might reasonably and does charge where there is no competition. The places, between which competition in transportation exists between water craft and railways, or even the latter, always will and must send and receive freight at lower rates than others not so favored. This is the result of natural advantage, supplemented often by exceptional sagacity and enterprise, and it would be folly in the Legislature to prevent it, if it could.

As long as people and places differ so widely in capabilities and facilities, social or business equality is impossible. Society can do no more than to give each one an even chance and a fair show, to make the most of his or its opportunities, and leave the result to circumstances over which it has little if any direct control.

The third question propounded by the Receiver is easily answered.

Section 2 of the Act by prohibiting any carrier subject thereto, from charging any one person a greater or less compensation, for any service rendered in the transportation of persons or property subject to the Act, than it does any other person for a like and contemporary service, under substantially similar circumstances and conditions, in effect prohibits the issuing of passes or the carrying of any person free of charge, so long as the same privilege is denied to any other person under substantially similar circumstances and conditions.

Now it may be said, and with much plausibility, that the wife or minor child of an employee sustains a different relation to the employer from that of the public generally; and that therefore the carriage of such a person on a pass, or free of charge, is a service rendered by the carriers under "substantially dissimilar circumstances and conditions," from that rendered to any other person, not belonging to the family of an employee.

But section 22 of the Act contains some specific exceptions to the operation of section 2. Among them is this: "Nothing in this Act shall be construed to prevent railroads from giving free carriage to their own officers and employees or to prevent the principal officers of any railroad company or companies from exchanging passes or tickets with other railroad companies for their officers and employees."

The language of the exception is explicit. There is no room for interpretation or construction. The words cannot be made to in-

clude the family of an employee, without violence to the apparent purpose of the Legislature. In effect the exception declares that the circumstance of a person being the employee of a railway corporation is sufficient to justify the latter in carrying him free of charge, but not his wife or his children. The exception takes the subject of free carriage on account of any persons' employment by a railway corporation, out of the question of "similar circumstances and conditions" as provided in section 2, and declares that the person so employed may be carried on that account, without reference to any other circumstance or condition, and by a necessary implication, no one else.

Doubtless it would be expedient to include the immediate family—the wife and minor children—of the employee in this exception. By this means the corporation might, without material cost to itself or prejudice or injustice to anyone, augment in a graceful way the compensation and convenience of faithful servants.

But the remedy, if any, is with Congress and not the courts.

The receiver is instructed that he is authorized to make a less rate for a long haul than a short one, in conjunction with connecting lines or otherwise, whenever, by reason of competition with other lines or means of transportation, the same is necessary to enable the Oregon & California Road to retain or acquire business, and that he is not authorized to give passes over his road to any member of the family of an employee thereof, for the purpose of or in connection with interstate travel.

THE INTERSTATE COMMERCE COMMISSION-

ASSOCIATED WHOLESALE GROCERS
OF ST. LOUIS

v.

MISSOURI PACIFIC R. CO.

1. A motion to dismiss a complaint denied, because: 1, no notice of motion had been given; and 2, because the object of the motion was to reach the merits of the case and have them passed upon summarily, instead of at the customary final hearing.

2. It is the desire of the Commission that the practice and proceedings shall be as simple as possible, and that final hearings be had forthwith, without the interposition of dilatory motions, etc.

(July 12, 1887.)

COMPLAINT alleging excessive charges in the sale of thousand mile tickets. Motion by defendant to dismiss complaint. *Motion not entertained.*

COMPLAINT.

To the Honorable, the Interstate Commerce Commissioners:

Your petitioner herewith, the Associated Wholesale Grocers of St. Louis, a corporate body existing under the laws of the State of Missouri, asks leave to present this complaint against the Missouri Pacific Railway Company, a corporation existing under and by virtue of the laws of the State of Missouri, and of the United States, and to charge that the said Railway Company has violated and is daily violat-

INTER 8.

ing the provisions of an Act of Congress, entitled an Act to Regulate Commerce, and known as the Interstate Commerce Law, to the injury of this complainant.

In support of this charge it is hereby averred:

Specification 1.

That the said Missouri Pacific Railway Company has made a combination and arrangement with other and separate railway lines connecting therewith, whereby it charges to shippers of other States, by those lines of railway, a less compensation for services rendered in transporting property from points within the State of Missouri, to points without the State, than it charges to citizens of the State of Missouri for rendering substantially similar services in transporting property between the same points, all in violation of sections 1 and 2 of the said Interstate Commerce Law.

Specification 2.

That the said Missouri Pacific Railway Company, itself owning no connecting line between the City of St. Louis in the State of Missouri, and the City of East St. Louis, in the State of Illinois, nevertheless, by its published tariff, offers to transport property from both the points named to points in Kansas, Nebraska, and elsewhere, at the same rate; and it being evident that the said Railway Company must part with some portion of its compensation to the line transporting the property from East St. Louis to St. Louis, it practically follows that an undue preference is shown to

appeared before me Joseph Lathrop, a notary public, within and for the City of St. Louis, State of Missouri, Jacob Furth and W. E. Schweppe, who are known to me, and to be respectively the Vice President and the Secretary of the Associated Wholesale Grocers of St. Louis, and they severally acknowledged their signatures to the foregoing petition, and declared the same to be true to the best of their knowledge and belief.

Joseph Lathrop,
Notary Public.

ANSWER.

Answer of the Missouri Pacific Railway Company to the bill of complaint made by the Associated Wholesale Grocers, before the Interstate Commission, at Washington, D. C.

To the Honorable T. M. Cooley and members of the Interstate Commission, Washington, D. C.:

The Missouri Pacific Railway Company, respondent in the above case, for its answer to the bill of complaint filed therein, respectfully submits the following:

No. 1. The Missouri Pacific Railway Company admits that, as is customary with all common carriers, it does, in some instances, accept as a division of a through rate a lower proportion than its published local tariff from point of interchange with connecting transportation lines to destination of the freight; but denies that in any case it is a party to the making of a less through rate from point of shipment to destination than the rates charged between intermediate points on any interstate shipments.

No. 2. The Missouri Pacific Railway Company admits that it, in some instances, publishes and charges the same through rate from East St. Louis as from St. Louis, to some of the stations on its own and connecting lines; but it denies that this is in any manner in conflict with the requirements of any of the provisions of the Interstate Commerce Law; and it further alleges that it does control and operate, under joint lease with another company, a connecting line between the City of St. Louis, in Missouri, and the City of East St. Louis, in Illinois.

No. 3. The Missouri Pacific Railway Company admits that, as is customary with nearly all if not all common carriers, it makes a lower charge for freight in car load quantities than for similar shipments in less than car loads; but avers that in doing this it does not violate any of the provisions of the Interstate Commerce Law, and does not unjustly discriminate against anyone, as its tariffs, formulated on this basis, are applicable alike to all shippers.

The Missouri Pacific Railway Company denies that there is any discrimination in any of its acts, as admitted under the different specifications named in the complaint; and denies that such action as herein admitted, regarding its rates, is in any manner in conflict with any of the sections of the Interstate Commerce Law, and in further evidence of this makes reference to the tariffs on file in your office.

The Missouri Pacific Railway Company,
By W. H. Newman,
Genl. Traffic Manager.

INTER 8.

MOTION TO DISMISS.

Now comes the Missouri Pacific Railway Company by John S. Blair, its attorney, and moves that the complaint of the Associated Grocers of St. Louis, dated June 27, 1887, be dismissed for want of jurisdiction; and for grounds of said motion he points out that the complaint is simply and solely that your respondent is charging commercial travelers \$25 for a thousand mile ticket; *whereas*, as alleged, \$15 would be sufficient.

Section 22 of the Act of February 4, 1887, provides:

That nothing in this Act shall apply to * * * the issuance of mileage, excursion or commutation passenger tickets.

Jno. S. Blair,
for Missouri Pacific R. Co.

OPINION.

By the Commission:

The petition in this case complains of the defendant that in the sale of thousand mile tickets for passenger transportation it makes excessive charges. The price charged for each such ticket is \$25; *whereas*, it is averred that a fair and sufficient charge would be \$15.

Mr. John S. Blair, for defendant, now moves to dismiss the complaint, for the reason that it shows no case within the jurisdiction of the Commission, the Interstate Commerce Act expressly providing that it is not to apply to the issuance of mileage tickets. No notice had been given of the motion.

The Commission declines to take up the motion.
First, because notice to the complainant had not been given.

Second, because the object of the motion was to reach the merits of the case and have them discussed and passed upon summarily, instead of at the customary final hearing. A practice thus to anticipate by motion the final hearing the Commission did not think advisable and would not therefore favor.

It is the desire of the Commission that the practice and proceedings in cases before us shall be in the simplest form possible, consistent with justice, and that without dilatory motions, pleas in abatement or other interlocutory proceedings, the matter in question may be brought to an issue at the earliest practicable day when a final hearing may be had forthwith, and all proper questions will then be entertained, whether jurisdictional or going to the merits of the controversy.

William M. HOLBROOK *et al.*,

v.

ST. PAUL, MINNEAPOLIS & MANITOBA
R. CO. *

1. Where no overt acts of misconduct on the part of a defendant railroad company, which could support any judgment of the Commission or any mandatory order, are made to appear, the Commission has no discretion but to dismiss the complaint.

*See ante, 315.

complaint, this Company will gladly furnish it with all information in its possession; but it submits that it is not within the province of your Commission to investigate the actions of railroad companies prior to the passage of the Act of Congress, approved February 4, 1887, entitled "An Act to Regulate Commerce."

Dated St. Paul, Minn., May 4, 1887.

W. E. Smith,
General Solicitor, St. Paul, Minne-
apolis & Manitoba R. Co.,
St. Paul, Minn.

State of Minnesota, }
Ramsey County, } ss.

E. Sawyer, being duly sworn, deposes and says, he is the Secretary of the St. Paul, Minneapolis & Manitoba Railway Company, the defendant herein; that he has read the foregoing answer, and knows the contents thereof; and that the same is true of his own knowledge, except as to those matters therein stated to be alleged on information and belief; and as to those matters he believes the same to be true.

E. Sawyer.

Subscribed and sworn to before me,
this 4th day of May, 1887.

F. W. Woodruff, Notary Public,
Ramsey Co., Minn.

MOTION TO STRIKE OUT.

Comes the defendant Company and moves the honorable Commission to disregard and strike from the files of this case the certain papers and documents described as follows:

The sworn statement of Nelson L. Derby and others, dated April 18, 1887—Filed April 23, 1887.

The sworn statement of Nelson L. Derby and W. M. Holbrook, sworn to July 2, 1887, and filed July —, 1887.

And for cause of motion the defendant says that said papers purport to be and contain evidence in support of the petition or complaint in this case filed.

That the said testimony was taken without notice to defendant, and without opportunity to be present, or to cross examine the witnesses produced.

That the testimony therein contained is irrelevant, immaterial, and insufficient.

S. S. Burdett,
Atty. for defendant.

MOTION TO DISMISS.

Comes the defendant, the said St. Paul, Minneapolis & Manitoba Railway Company, by S. S. Burdett its attorney, and moves the Commission to dismiss the cause and complaint herein for insufficiency.

1. Because there is no matter set out therein cognizable by this Commission under the Act of Congress approved February 4, 1887.

2. Because the said petition or complaint shows on its face that the matters and things therein complained of happened prior to the approval of the Act aforesaid and prior to its taking effect as a law.

3. Because said complaint contains no allegation or averment that the matters therein complained of continued after the passage of said Act.

INTER S.

4. Because the allegation in said complaint of a belief as to what may happen in the future to the detriment of the petitioners is not ground for interposition in that behalf by the honorable Commission.

S. S. Burdett

Attorney for St. Paul, Minneapolis & Manitoba Railway Co.

OPINION.

By the Commission:

The petition in this case, which was filed April 18, 1887, avers that the complainants during the last fall and winter, for nearly two months, were denied cars by the defendant company, and fearing that the course of the defendant will be similar the coming fall, and thinking the present a proper time to bring the matter to the attention of the Commission, that the apprehended inconvenience may be avoided, the complainants apply to the Commission for some proper and adequate remedy.

The reason given for the failure to supply cars to the complainants is stated to be that the defendant has been engaged in constructing an extension of the road, and has used its rolling stock for that purpose, thus making itself a preferred shipper.

As the facts stated did not show any violation of the Law occurring since the Act was passed, under which the Commission is acting, but only a fear that there might be such a violation, the Commission might, with entire propriety, have advised the parties that they should wait until it was seen whether their fears of misconduct on the part of the defendant were to be realized; the Commission having no authority to anticipate violations of law, or to issue mandatory process upon suppositions or fears that any such violations will take place. But as it was quite possible that the fears which were asserted might not be wholly groundless, it was deemed proper to send to the defendant company a copy of the petition, that it might have an opportunity for explanation, and also for giving assurances as to the future if inclined to do so.

This course having been taken, the defendant answered, excusing its failure to furnish cars during the time of which complaint of deficiency was made by the complainants, and averring that the Company had now procured an additional quantity of cars, so that it was believed there would hereafter be no difficulty in handling its business promptly and without delay. A copy of this answer was served upon the complainants, and this day was assigned for a public hearing if the parties or either of them desired to have one.

The complainants have not appeared today, but have forwarded certain affidavits on which (and upon the pleadings and certain facts appearing by the report of the Railroad Commission of Dakota) they desire the case to be heard. The affidavits were taken *ex parte*, and the defendant Company was not notified to appear for cross examination when they were taken. They are not, therefore, legal evidence, whatever they might show, and we could not base an opinion upon them. We have looked into them, however, enough to satisfy ourselves that they do not show any violation of law committed since the Act to regulate commerce

was passed. Nor does any such violation appear from anything else to which our attention is called. If, therefore, the complaint was sufficient in substance, it would stand without evidence of any overt acts of misconduct on the part of the defendant, which could support any judgment by the Commission or any mandatory order. Under such circumstances we have no discretion but to dismiss the complaint.

If the defendant was guilty of any wrong prior to April of the present year, we cannot for such wrong call it to account, because it antedates our authority. If at this time the defendant avows a purpose to comply with the Law, we must not only assume that it will do so, but we must act upon that assumption until we have evidence that the purpose is not lived up to. At this time we have no such evidence and these proceedings will, therefore, here terminate.

All concur in this memorandum.

MILTON EVANS

v.

OREGON RAILWAY & NAVIGATION CO.*

PROCEEDING by a resident of Walla Walla, Washington Territory, based upon allegations of exaction of excessive charges by defendant company for the transportation of wheat.

COMPLAINT.

To the honorable Interstate Commerce Commission.

Milton Evans, petitioner, respectfully shows and alleges.

First; That he is a citizen of the United States, over twenty-one years of age, and residing in Walla Walla County, in the Territory of Washington.

Second; That the defendant, The Oregon Railway and Navigation Company is a corporation and, as such, has been for several years last past and is now a common carrier engaged in operating a railroad and transporting passengers and property between the City of Walla Walla, in the Territory of Washington, and the City of Portland, in the State of Oregon, and other points in the State of Oregon and the Territories of Idaho and Washington.

Third; That the said defendant's line of railroad from Walla Walla City, in the Territory of Washington, to the City of Portland, in the State of Oregon, is one continuous line of road, 246 miles in length, about thirty-six miles of which is in the Territory of Washington, and 210 miles in the State of Oregon, and that the same is now and has been at all times, since the same has been owned and operated by the defendant as aforesaid, running through trains between said cities without change of cars.

Fourth; That on April 26, 1887, your petitioner, being the owner of a car load of wheat consisting of 27,000 pounds of wheat, delivered the same on board of one of defendant's cars at Walla Walla City, in the Territory of Washington, aforesaid, for transportation to the City of Portland, in the State of Oregon; that

said defendant Railroad Company, as aforesaid, charged complainant \$81 (thirty cents per 100 lbs.), for transporting said car load of wheat from said Walla Walla City to the City of Portland, aforesaid, and refused to carry or transport the same for any less sum or compensation, and petitioner, in order to have said wheat transported as aforesaid, was compelled to pay and did pay said defendant therefor the sum of \$81, and received from said defendant a receipt or contract in the words and figures following, to wit:

"Walla Walla, W. T. April 26, 1887.

"Received today from Milton Evans Eighty-One Dollars, as payment in full for freight on Twenty-Seven Thousand pounds (27,000 lbs.) wheat shipped to day from here on car 1992 to Portland, Oregon, that being our regular rate on car load lots, viz.: 30 per cental from here to Portland.

\$81.00.

Subject to corrections.

"W. F. Wamsley, Agt."

and petitioner was also required by said defendant to load and unload said car at his own expense.

Fifth; That the said charge made, demanded, and received by said defendant from petitioner for the transportation of said car load of wheat as aforesaid, was unjust, unreasonable, and extortionary, and was at least twice as much as it was reasonably worth to transport the same as aforesaid.

Sixth; That petitioner has other large quantities of wheat, to wit: four thousand bushels which he is desirous of having transported over said defendant's railroad from said City of Walla Walla, in the Territory of Washington, to the City of Portland, in the State of Oregon; that said defendant refuses to transport or carry the same or any part thereof at just or reasonable rates, or at any rate less than the aforesaid unjust, unreasonable and extortionate rates.

Wherefore, Your petitioner prays that an investigation of the matters and things alleged in the foregoing petition be ordered and had by the honorable Interstate Commerce Commission, and that the aforesaid rate charged your petitioner by the said defendant be adjudged unreasonable and unjust, and that the said defendant be ordered to repay and refund to petitioner one half of the aforesaid sum of \$81, extorted from petitioner as aforesaid, and that said defendant be required and ordered by this honorable Commission to transport the wheat of petitioner now on hand at the rate of three dollars per ton in car load lots, and that the honorable Interstate Commerce Commission fix and establish a reasonable rate for the transportation of freight and property over the said Oregon Railway & Navigation Company's Railroad between the said Cities of Walla Walla, in the Territory of Washington, and Portland, in the State of Oregon; and for such other and further order and relief as may be just and equitable; and your petitioner will ever pray, etc.

Milton Evans,
Petitioner.

Territory of Washington, }
County of Walla Walla. } ss.

Milton Evans, being first duly sworn, deposes and says, that he is the petitioner named in the foregoing petition and that he has read the said

Frank Filber,
Notary Public.

ANSWER.

Answering to the complaint of Milton Evans, of Walla Walla, Washington Territory, the Oregon Railway and Navigation Company, the above named defendant:

Admits that this defendant is a corporation incorporated under the Laws of the State of Oregon, having its principal office at the City of Portland, in said State, and that as such, it has been for several years last past, to wit: since the 21st day of October, 1883, and now is, a common carrier engaged in operating a railroad and transporting passengers and property between the City of Walla Walla, in the Territory of Washington, and the City of Portland, in the State of Oregon, and other points in the State of Oregon and the Territory of Washington, but denies that it is engaged in operating any continuous line of railroad between either of said points and any point in the Territory of Idaho.

Defendant admits that this defendant's line of railroad from the City of Walla Walla, in the Territory of Washington, to the City of Portland, in the State of Oregon, is one continuous line of road, 246 miles in length, about thirty-six miles of which is in the Territory of Washington, and 210 miles in the State of Oregon, and that this defendant is now and has heretofore been running through trains between said cities without change of cars, except where such changes became necessary by reason of the interruptions hereinafter mentioned.

Defendant admits that on or about the 26th day of April, 1887, the petitioner delivered on board of one of defendant's cars at Walla Walla, in the Territory of Washington, 27,000 pounds of wheat for transportation to the City of Portland, in the State of Oregon, and that this defendant charged said petitioner \$81, or thirty cents per 100 pounds for transporting said car load of wheat from said Walla Walla to the City of Portland aforesaid, including, however, all terminal charges at said City of Portland; and this defendant admits that it refused to transport said wheat for a less charge than said thirty cents per 100 pounds, amounting in the aggregate to \$81 upon the shipment made by complainant, which said complainant paid defendant, and defendant issued and delivered to complainant a receipt therefor, substantially in the words and figures set forth in the petition filed herein.

Defendant denies that said charge, or any charge made, demanded or received by this defendant from petitioner or any person for the transportation of said car load of wheat as aforesaid, or otherwise, or the transportation of any wheat or other freight, was or is unjust, unreasonable or extortionary, and denies that the same was any more than it was reasonably worth to transport the same as aforesaid.

Defendant says that as to whether or not petitioner has other large or other quantities of

wheat, either 4,000 bushels or any amount, which he is desirous of having transported over defendant's railroad from Walla Walla to Portland, Oregon, or otherwise, this defendant has no knowledge or any information sufficient to form a belief, and it denies that defendant refuses to transport the same or any part thereof, or any wheat or other merchandise, at just and reasonable rates, or at less than any unjust, unreasonable or extortionate rates.

And further answering unto the complaint of said petitioner, this defendant respectfully alleges and shows to Your Honors:

That the railroad line of this defendant between the City of Portland, in the State of Oregon, and the City of Walla Walla, in Washington Territory, a distance of 246 miles, is necessarily constructed and operated for the most part through a rugged and mountainous country, with extraordinary grades and curves, and being so constructed, is operated at exceptionally great expense.

That between the said City of Portland and Dalles City, a distance of eighty-eight miles, its said road runs over and across the Cascade Mountains in the State of Oregon, and the adjoining mountainous country is unproductive and unsettled.

That, during the winter seasons, the operation of this part of defendant's road is frequently interrupted by storms and snow blockades, and earth slides, and the defendant is thereby subjected to extraordinary expense; that between said Dalles City and said City of Walla Walla, defendant's road for the greater part of the way runs through a sandy and unproductive desert, and is subject to constant obstruction from sand drifts. Its ties and bridge sub-structures along this portion of its line require to be renewed every six or seven years on account of deterioration caused by alkali in the soil.

That defendant's road consists of 572 miles of main track, and runs through the Counties of Wasco, Gilliam, Umatilla, Union and Baker in the State of Oregon, and the Counties of Walla Walla, Columbia and Garfield in Washington Territory; that said counties contain in the aggregate, 34,441 square miles, that the population of said counties is in the aggregate, 58,520.

That the total of way freights between Portland and said Dalles City during the eleven months ending May 31, 1887, amounted to the sum of \$424.86.

That the whole local traffic, both passenger and freight, between the said City of Portland and Walla Walla, including the business received at said points during said eleven months ending May 31, 1887, amounted to the sum of \$606,450.39, and the operating expenses of that portion of said road amounted to \$792,490 during the same time.

That wheat furnishes much the largest part of the freight shipped over defendant's lines; that the total wheat shipped during the eleven months ending May 31, 1887, over all defendant's lines of road was 121,152 tons, and that the total from Walla Walla was 15,249 tons during the same time; that the amount shipped from Walla Walla during the month of May, 1887, was but 167 tons.

That labor in the vicinity where this defendant's railroad is operated, is excessively high and exceeds by at least 25 per cent the prices paid therefor upon other railroads within the United States, and skilled labor, like engineers of the capacity and experience required in the operation of defendant's railroad exceeds that amount.

That this defendant has constructed its said railroad solely by private capital invested in the enterprise, and without any government, state or municipal aid.

That the capital stock and bonded indebtedness of defendant's railroad, represents only the actual paid up capital and moneys actually invested in its business, and the fixed charges upon that portion of its said road exceed at the present time, and at the present rates of freights and fares, the whole amount of the income derived from the business of said road between the said City of Portland and said City of Walla Walla, upon all freights and fares between said points, including all freights and fares received at said Walla Walla and Portland; so that if this defendant were compelled to rely entirely upon local traffic between the points aforesaid, and that originating at the said Cities of Walla Walla and Portland, at the present tariff of freights and fares, the income from the said railroad would not be sufficient to pay its said fixed charges and maintenance without making any returns whatever upon its capital stock expended in building its said railroad.

That at its present tariff rates, with the most economical management possible in the operation of its said railroad, this defendant is able to pay no more than 8 per cent upon its paid up capital stock, while the ordinary rates of interest upon first class loans at said Walla Walla in the vicinity of defendant's said railroad, is 10 per cent per annum.

That defendant has been engaged in operating its said railroad between said City of Port-

And this defendant alleges the fact to be that the adoption of a rate of freight charges for its road as low as that prayed for herein would make it impossible to operate defendant's said road, and pay operating expenses and cost of repairs, leaving nothing for dividends or interest; that such rate would prevent the construction of the new lines under way and in contemplation, and would, in effect, destroy its entire property as an investment.

Wherefore, Defendant prays that the complaint herein be dismissed.

Notary Public for Oregon.

William H. REED
v.

OREGON RAILWAY & NAVIGATION
CO.*

PROCEEDING by a resident of Walla Walla, Washington Territory, based upon allegations of exaction of excessive charges by defendant company, for the transportation of wheat.

*See ante, 214.

COMPLAINT.

The plaintiff complains and alleges:

1. That now and at the time hereinafter mentioned, the defendant is and was a common carrier engaged in the transportation of passengers and property wholly by railroad, under a common control, for a continuous carriage from the City of Walla Walla, in the Territory of Washington, to the City of Portland, in the State of Oregon.

2. That on the 26th day of May, A. D. 1887, at the City of Walla Walla, Washington Territory, the plaintiff delivered to the defendant, on board its cars at the defendant's depot in said city, a certain amount of wheat, in sacks, the property of the plaintiff, to wit: one hundred and eighty-five (185) sacks of wheat, weighing 24,000 pounds, being 400 bushels, of the value of sixty-five cents a bushel, in sacks, on board the defendant's cars at Walla Walla, Washington Territory. And the defendant, as such carrier, received said wheat for delivery to the plaintiff on board the defendant's cars at Portland, Oregon. And the defendant for such service, which it subsequently performed, the loading and unloading of the car being done by the plaintiff, charged the plaintiff the sum of \$72, which was at the rate of thirty cents per hundred pounds, or eighteen cents a bushel, equalling 2.439 cents per ton per mile. This sum was paid by the plaintiff, through his order, the receipt for said payment being hereto attached, dated May 28, 1887. Said receipt gives the date of the way bill as May 26, the number of way bill as 297, and the number of the car as 1794.

3. Said transportation being for a distance of but 246 miles, this charge of \$72 for transporting 24,000 pounds of wheat that distance, the plaintiff deems unjust and unreasonable, to the extent and in the sum of \$3 a ton.

The plaintiff and his neighbors have been repeatedly made to pay the same unjust and unreasonable rate for the same service since the Interstate Commerce Act, approved February 4, 1887, took effect; and the plaintiff prays your honorable body to find, under the first section of said Act, that such charge is excessive and unlawful to the extent and in the sum of \$3 a ton; and plaintiff asks your honorable body to issue an order on said defendant to return to said plaintiff said excessive charge, and that the defendant be restrained by your honorable body from hereafter making a charge of over \$3 a ton for a like service of transporting wheat from Walla Walla, Washington Territory, to Portland, Oregon.

William H. Reed, Plaintiff.
Territory of Washington. } ss.
County of Walla Walla.

William H. Reed, being duly sworn, says he is the above named plaintiff, that he has read the foregoing complaint, and that the same is true to the best of his knowledge and belief.

Subscribed and sworn to before me this, the tenth day of June, A. D. 1887.

The answer to the above complaint is similar to that set forth in the case of Milton Evans against the same defendant, *supra*.

BURTON STOCK CAR CO.

CHICAGO, BURLINGTON & QUINCY R.
R. CO. *et al.*

1. The **milage** rate of $\frac{3}{4}$ of a cent per mile run, which is customary among railroads, for **freight cars** of other railroad companies used upon the paying company's line, and which payment is, by the interchange of cars, practically equalized among the different roads, is **not** to be taken as the **measure of payment** for the use of cars belonging to other persons than railroad companies.
2. The **Burton Stock Car Company**, which furnishes special improved live stock cars owned by it, to shippers over railroads, does not exchange with or use cars belonging to others, and is in no sense a "connecting line," entitled to equal facilities for interchange of traffic, under paragraph 2 of section 3 of the Act to Regulate Commerce.
3. The **Burton Stock Car Company** is **not** entitled to claim that it is **unjustly discriminated against** by a refusal on the part of railroad companies to pay it the same rate of milage which carriers adopt as the basis in adjusting their car service accounts with each other.
4. The expense of hauling the **Burton cars** in one direction unloaded (for the reason that by their construction they are not suited to carrying general freight) as compared with the greater ability to load back the ordinary railroad cattle cars, and the fact that a large percentage of the ordinary cattle cars are so back-loaded upon the long hauls of western roads, are **considerations which justify a difference in charge against shippers who prefer to hire the improved stock cars.**
5. *Doubted (but not decided)* whether the extra charges made to shippers of live stock in special cars (including the **Burton cars**) over thirty feet in length, according to the revised classification of the Western Railroad Classification

Committee, put in force April 7, 1887, are not unreasonable.

(Decided July 25, 1887.)

BILL OF COMPLAINT.

To the Honorable T. M. Cooley, Chairman, and Members of the Interstate Commerce Commission, Washington.

The Burton Stock Car Company (Incorporated), with headquarters at Boston, and offices at Chicago, Washington, Kansas City, Portland, (Maine), etc., complain against the Chicago, Burlington & Quincy Railway Company, Chicago, Rock Island & Pacific Railway Company, Chicago & Alton Railway Company, Union Pacific Railway Company, Lake Shore & Michigan Southern Railway Company, Cleveland, Columbus, Cincinnati & Indianapolis Railway Company, Chicago, Burlington & Northern Railway Company, Hannibal & St. Joseph Railway Company, Missouri Pacific Railway Company, Chicago, Milwaukee & St. Paul Railway Company, and the Burlington & Missouri Railway Company—all within the jurisdiction of your honorable Commission, and say:

That the said Burton Stock Car Company have, own, and operate a large number of cars designed especially for the humane transportation of live stock. These cars weigh from twelve and one half to thirteen tons each (no more than the common cattle car of the same length), are thirty-four, thirty-six and thirty-eight feet in length, and have a carrying capacity for sixteen full sized horses or neat cattle. Said cars being equipped, they are with all modern improvements and appliances, require less motive power to haul the same than is required for the transaction of an ordinary stock car, such as is owned and operated by the various railroad companies complained against, according to the admissions of officials of the said roads.

And said Burton Stock Car Company avers that it has repeatedly demanded of said railroads the customary mileage of three quarters of one cent per mile per car paid by said roads to each other, and to other roads, private corporations, and owners and operators of cars running over their lines, which sum is paid as compensation for the use of these cars while on their respective lines, and that said railway companies have repeatedly refused to report to or pay to said Burton Stock Car Company said mileage, and demand from them a charge of 120 per cent of the tariff rate for thirty foot cars, and an additional charge of 8 per cent of tariff rate for each additional foot or fraction thereof in excess of thirty feet in length; that is, if cattle are shipped in a Burton stock car which is thirty-six feet in length, internal measurement, the shipper will be charged 188 per cent for the privilege, as they term it, of shipping in a Burton stock car.

And said Company avers that this is an exorbitant and extortionate charge and a discrimination against the Burton Stock Car Company and a hindrance and oppression to its business.

And said Company further avers that the said roads have, own, and operate cars of more

than thirty feet in length on which no such excess charge is made.

And said Burton Stock Car Company further avers that the extortionate charge as above is a great injury and detriment to said Burton Stock Car Company, and to the detriment and injury of public and private rights, and to the annoyance and great inconvenience of shippers and dealers desiring to ship and have transported their live stock with the advantages of said improved stock cars, and is in direct violation of the terms of sections 1, 2, and 3 of the Interstate Commerce Act.

Over one hundred railroad companies operating within the United States pay the Burton Stock Car Company the usual mileage of three quarters of one cent per mile per car, and operate the cars of the Burton Company in every respect on the same terms and conditions as they haul their own, and cars of individuals, private corporations, and other railroad companies.

And said Burton Stock Car Company prays that it may be relieved from such unjust discrimination, and that said railroad companies may be enjoined and restrained from making any extortionate demands and charges, and that said railroad companies may be ordered to haul and operate the cars of the Burton Stock Car Company on the same terms and conditions as they operate their own and the cars of other railroads, individuals, and private companies, and that they may also be ordered to report and account to said Burton Stock Car Company for such mileage as has been earned in the past, or may be earned in the future over the several lines referred to, by the cars of the said Burton Stock Car Company, and for such further relief as may be deemed just and proper by your honorable board.

(Signed) Burton Stock Car Company,
By Chas. E. Barber,
Solicitor and Stockholder.
Benjamin P. Butler, of counsel.

Dated May 2, 1887.

Sworn to and subscribed before me by Charles E. Barber this 4th day of May, A. D. 1887.

(Seal.) Edward J. Steelwagen,
Notary Public, D. C.

THE ANSWER OF THE CHICAGO, BURLINGTON & QUINCY RAILROAD Co., one of the defendants herein, to the complaint exhibited against it by the Burton Stock Car Company.

This respondent admits that the said Stock Car Company, has, owns, and operates a number of cars designed especially for the transportation of live stock, and that they weigh from twelve and one half to thirteen tons each, and that they are thirty-four, thirty-six and thirty-eight feet in length; but it denies that the said cars weigh no more than the ordinary cattle cars, and asserts that ordinary cattle cars do not exceed thirty-four feet in length, and that the majority of ordinary cattle cars are less than thirty-four feet in length.

This respondent denies that it requires less motive power to haul said Burton stock cars than to haul the ordinary stock cars, and asserts that it requires more motive power and

greater expense to haul said Burton stock cars than to haul the ordinary stock cars.

And this respondent admits that it pays a mileage of three quarters of one cent per mile to other roads, corporations, owners and operators of certain classes of cars running on its lines, for the use of said cars while running thereon, and that it has, at all times, refused to pay said mileage to said Burton Stock Car Company; but it avers that the character of the cars first mentioned in this paragraph, and the conditions of their operation are totally different from the cars of said Burton Stock Car Company and the conditions of their operation; and it further admits that it does demand and has demanded from said Burton Stock Car Company for the transportation of its cars the rates alleged in said complaint; but it denies that said charge is exorbitant or extortionate, or in any way a discrimination against said Burton Stock Car Company or a hindrance or oppression to its business, or that the same is an injury or detriment to said Burton Stock Car Company or to any public or private rights, nor is it an annoyance or inconvenience to shippers and dealers desiring to ship and have transported their live stock with the advantages of said Burton stock cars, or that it has been guilty of any violation of the terms of sections 1, 2 and 8 of the Interstate Commerce Act, or of any other section thereof.

And this respondent admits that it hauls cars over more than thirty feet in length on which no excess charge is made, but it denies that said cars are of the same character as the Burton stock cars, or that the conditions of their operation are similar to the condition governing the operation of said Burton stock cars; and it asserts that said cars are operated under circumstances and conditions radically different from those under which the Burton stock cars are or can be operated.

And this respondent neither admits nor denies the allegation in the complaint that more than one hundred railroad companies pay mileage to the said Burton Stock Car Company, and that they operate the cars of the said Burton Stock Car Company on the same terms and conditions as they haul their own cars and cars of individuals, private corporations, or other railroad companies, inasmuch as it is unadvised in reference thereto; but it submits that said allegation is impertinent and irrelevant to said complaint.

But this respondent alleges and shows the facts to be as follows: that it owns and operates lines of railroad in the States of Illinois, Iowa, and Missouri, and that the same connect with other lines of railroad owned and operated by other corporations with which this company does a thorough freight business; that the railroads of this respondent and of said connecting companies are furnished with a full equipment of stock cars sufficient to transact and carry on their ordinary business; that said stock cars of this respondent and of said connecting roads are of substantially similar construction and of such a character that they can be and are loaded with lumber, and many other kinds of merchandise; it is the custom of this respondent to receive from and deliver to the said connecting

roads its stock cars, but it is not the custom of this respondent or said connecting roads to use said stock cars of said other companies when their own stock cars are not in use, but this respondent's road and its connections claim and have always claimed and exercised the right to refuse to accept the cars of their connections, and have forwarded all freight in their own cars when the same were available for that purpose, and it asserts that it pays mileage of three fourths of one cent per mile to connecting companies and others, for the reason that it is enabled from the construction of the ordinary stock cars furnished to it by connecting companies and others to use the same in the transportation of freight in both directions upon its line of railroad, and that said mileage is a compensation for such use in both directions.

But this respondent asserts that the cars of the said Burton Stock Car Company are elaborately constructed stock cars, ordinarily called palace stock cars; that the same cannot be and are not used for the transportation of freight other than live stock, and that from the character of said cars this respondent and other railroad companies are compelled to haul them empty in one direction at great expense and without earning any freight therewith, and that there is not the same consideration for the payment of mileage on said Burton stock cars, as in the case of ordinary stock cars, as herein set forth, nor is there any consideration moving to this respondent therefor.

And this respondent asserts that, for the reason last mentioned and because it is compelled to haul the cars of said Burton Stock Car Company empty in one direction and without any compensation for said empty haul, it is entitled to make a rate which shall cover such additional cost and service; and it asserts that, in view of the conditions governing the use of said Burton stock cars, the rate for hauling the same, as herein set forth, is reasonable and just; and this respondent further asserts that, by reason of the fact that it hauls the cars of said Burton Stock Car Company in one direction empty and without compensation, and that said Burton Stock Car Company will not and does not permit this respondent to forward in ordinary cars of its own the live stock delivered to it by said Burton Stock Car Company, this respondent is compelled to allow its own cars to lie idle to the extent of said Burton Stock Car Company's shipments and to the number of the cars offered by them, and it loses the freight on its own cars and on said Burton stock cars in one direction, which fact in itself justifies the additional charge on said Burton stock cars, as hereinbefore set forth.

And this respondent asserts that it has but one rate and schedule for all palace stock cars similar to the cars of the Burton Stock Car Company, and that it makes no other rate to any person or corporation running similar cars over its road, nor does it pay any mileage thereon; and it asserts that it does not discriminate against the cars of the Burton Stock Car Company, but that it extends to it the same facilities for the transportation of its cars as to all other persons and corporations operating cars similar thereto; and it asserts that it pays

no millage to any person or corporation running cars over its road similar to those of the said Burton Stock Car Company.

And this respondent further asserts that the payment of millage to said Burton Stock Car Company would be an unjust discrimination against the cars of other corporations and companies constructed in such a way as to earn the freight in both directions as a consideration for such millage.

Wherefore, this respondent prays that the charge against it may be dismissed, and that the relief asked for by the Burton Stock Car Company may be denied. Henry B. Stone,

General Manager C. B. & Q. R. R.

Wirt Dexter,

Defendant's solicitor.

State of Illinois, }

Cook County, }

Personally appeared before me, a notary public in and for the county and State aforesaid, Henry B. Stone, and made oath that he is the general manager of this defendant railroad company, that the statements contained in the foregoing answer by him subscribed are true, except such statements as are therein made upon information and belief, and as to those statements he believes them to be true.

Witness my hand and notarial seal this 24th day of May, 1887. Chester M. Dawson,

[Seal]

Notary Public.

The other respondents filed separate answers, to the same general effect as that of the Chicago, Burlington & Quincy Railroad Company.

BRINFA.

Mr. Benjamin F. Butler, with Mr. Charles E. Barber, for complainant:

Since the Act of Congress requiring live stock to be fed at intervals while being transported, which was the only improvement on the method always used, the carriers by rail have used cars varying at their pleasure between twenty-eight and thirty-six feet in length, the tendency being now to extend the car in length, into which as many animals were driven by them, large and small, as could be got in, the car then closed and the animals so conveyed to their destination, stopping an interval of five hours once in twenty-four, when all the animals in the train were turned out into a yard supplied with water troughs, and dry hay and corn, bought by the shipper from the railroad company at the stock yard, were thrown to them upon the ground as fodder. The cattle were then driven back into the cars and the journey renewed. No other equipment of any railroad complained of is shown to exist, or to ever have existed as the property of said road.

The disadvantages of this mode of transportation are:

First, the crowding of the cattle, the strong and the weak, the young and the old, together, so that if one falls it is trampled to death. Second, their being heated and sickened in the hot season. Third, that by the horns of their fellows, and by prodding with goads shod with iron in driving them in so frequently in long hauls, their hides are greatly injured, the flesh ulcerates and the pus from the

wounds poisons the blood, so that the meat becomes tainted, and in many cases poisonous and unfit for food, so as to call for the intervention at the market stations of the boards of health of the States. Fourth, the inability of the weaker cattle to get water, and after long thirst the inordinate quantity of water taken, so that the animal for a considerable time refuses food, making a depreciation as a rule in the summer of about 15 per cent and about 10 per cent in the winter months in the weight of the stock, the depreciation in its worth from the other causes mentioned not being capable of ascertainment. In case of highly valuable stock for breeding purposes, the depreciation is very large. All these losses, of necessity, come upon the producer, except the unhealthy quality of the meat, which is shared by the consumer.

These consequences of this method of transportation have caused a change in the course of this class of commerce, so that the meat is now largely killed at Chicago and other slaughtering points, to which it comes from the West, and is forwarded to the East for consumption and export as dressed beef in refrigerator cars, which are fitted up at great expense, and in which large amounts of ice have to be transported, and the freight and cost of the ice are added to the cost of the meat to the consumer at the East. This expense reacts upon the producer, because it is taken into account in the purchase of the cattle at the slaughtering point. Besides, slaughtered meat is of necessity so changed in its appearance, in a large degree, that the quality of the meat cannot be determined, and the greed of the seller causes him to salt down his bad and blood poisoned meat, whereby its condition cannot be tested by the producer and consumer.

This condition of transportation of live stock has stimulated the inventive genius of many people to prepare cars by which these evils may be avoided; and the use of these cars on railroads, as was shown without contradiction, has always been prevented or hindered by the railroads. Many impediments and discriminations in the use of cars adapted to the humane, economical and prudential transportation of cattle have always been interposed by the railroads.

The Burton Stock Car Company, the petitioner, made a car which was constructed to be as near like as possible, in its running gear and other equipment which is below the platform, the best burden cars on any railroad, and was capable of being made a part of any burden train on any railroad of a standard gauge. The improvements in these cars consisted in their being fitted with apartments, feed troughs and appliances for watering the stock at all times. They carry sixteen cattle, with an attendant to take care of them. In them the cattle are not transhipped. The fodder is taken along on the car with the cattle, furnished by the shipper and fed out by men employed by him. The stock on a thousand miles' travel in such a car, under the most unfavorable circumstances, were shown not to have depreciated more than 5 per cent in weight, and in every other respect were delivered in as good order and condition as when they started.

These cars can be used as a part of any freight or burden train, as there is no occasion for them to stop any more than for any other freight car. They were transported over one hundred different roads east of Chicago upon the same terms as any other stock freight car. The request of the shipper that they might be permitted to pass over the Lake Shore Railroad was refused. Many instances were proven of discrimination on the roads petitioned against, and especially the Union Pacific Railroad, which refused to allow the car to pass over its road at all.

It was in evidence that the Burton Stock Car Company, by a published circular, had offered to allow any railroad company to manufacture and use the cars constructed according to its patents for \$15 a year royalty; but that no railroad had ever availed itself of that privilege to the extent of a single car.

It was also in evidence that there was a demand for the car for the purpose of shipping cattle; that there were discriminations against it by the railroads, and that the high rates put upon its use prevented its use largely in transshipping cattle from the plains, which are intended for food, as their value would not bear the increased charges. It was in evidence that the experiment had been tried in several instances, and that the cars could have been transported at the same rates as any other car, and would have been used to any extent that they could have been obtained. They have been used quite extensively for valuable stock—all that would be allowed to be used—that stock being such as could afford to pay the enhanced price.

It was in evidence that one of the railroads, represented through its manager, had said in substance that as there was a large profit to the shipper and the petitioner in the use of these cars; the railroad wanted a share of that profit.

There was some evidence attempted to be put in by some of the respondents as to the capability of those cars to bring back return freight.

I do not discuss that part of the evidence, because I think it is amply disposed of in the brief of my associate, Mr. Barber, which is filed with the Commission.

It was in evidence that after the Interstate Commerce Act was passed, a combination of western railroads was made and a joint tariff rate was passed, by which greatly enhanced rates and charges were put upon the use of all classes of cars that had any appliances for the humane and proper care of cattle during their transportation, they being classed, in apparent derision, as "palace cars for cattle."

It was also in evidence that these railroads owned no refrigerator cars, and that the refrigerator cars were larger and heavier than the ordinary Burton stock cars, and yet were charged no greater rates for the same weight of meat transported, with an extra charge only for the ice carried.

It was also in evidence that larger and heavier cars for the transportation of oil were received by those same roads without extra charge.

It was also in evidence that the stock yards in which cattle are fed at intervals are managed by the railroads, which control the fur-

nishing of fodder and make very large profit thereon, furnishing hay at double the market price, and corn that would cost from twenty to forty cents a bushel, at \$2 a bushel. The calculations of this profit, which show it to be simply enormous, will be found in my brother's brief.

The claims of the contending parties arise upon this statement of facts, which, I believe, is complete, so far at least as all the questions involved are concerned.

The claims of the petitioner are that its cars when presented as part of a train, or to be made a part of a train to be carried over roads forming a continuous line between different States, shall be charged with no greater rate of freight and subject to no other hindrances than any other car carrying like freight of substantially the same weight; or, in other words, that no discriminations shall be made by railroads against the shipper in its car under substantially similar circumstances. This we claim to be its right both at common law and under the Interstate Commerce Act. It would seem to need no argument to establish that right as a legal proposition.

The respondents object upon several grounds: First, that they have, all of them, a sufficient equipment of cars to do their business.

That we admit. Their equipment is sufficient and proper to do their business in their way for their profit; but we submit that the Commission will feel constrained to find that they have no equipment whatever with which to do the public business of transporting live stock on interstate hauls in the way the public desire it to be done, and in the way that economy, humanity, public health and public welfare require it to be done. No man can doubt that there is a very great public demand for the use of cars for the transportation of live stock of the kind owned by the petitioner.

Again; they object and say that if the petitioner's cars are used for this purpose, their cars will lie in their yards and rot.

Why? Because the public do not want to use them, and will not use them if they can get any other. That is admitted in their several answers. What stronger argument does the Commission need than that admission that there is a public demand for the petitioner's cars? If theirs are better than his for the public commerce in this regard, it will be his that will rot and not theirs.

Again; they object that the Commission has no right to cause them to use a patented article; and one of the learned counsel grew eloquent upon that proposition as a very dangerous one for the Commission to entertain.

We answer to that simply that we do not require the railroads to use any part of our car except the wheels, the drawbars, bunters, and platforms, and we have no patent on any part of those. Our patents are upon appliances above the platform and within the outside walls of the car, with which the railroad has simply nothing to do, no part of which is claimed to be injurious, offensive or dangerous.

Again; it is objected that so many cattle cannot be carried in our cars as are carried in the ordinary cars.

To that we answer that by their tariff the car is made the unit of computation—so much a

car per mile, going and coming. If we pay the same as the ordinary car when we carry only sixteen cattle in our car, then the railroad saves the hauling of the three additional cattle which would be in their car, or, in other words, they get for hauling our car the same price as they would get for hauling other cars carrying three thousand pounds more freight upon them than is hauled upon ours. Ours have but sixteen, and theirs have nineteen cattle.

There was some attempt to show that our car weighed something more than their cars.

Be it so, when loaded it is not contended that it does not weigh less than theirs.

Again, they object, and spend the larger portion of their evidence in an attempt to sustain that objection, that they discriminate against our car because on its return it would be heavier.

On that the fair weight of evidence shows that our car hauls easier than theirs does, and was purposely contrived so to do by springs and appliances, not so much with regard to the weight of the car as to the ease with which cattle could ride in it, and who does not know that an easy riding car is a light hauling car, even with great additions of weight. I believe that the parlor and drawing room passenger cars are as easily drawn cars as any cars in a train of which it forms a part, because of their superior appliances.

Not much consideration, however, was put upon this; but great reliance was put upon the fact that when empty, going for live stock, it could not carry out freight, and returning empty after having deposited its freight it could not be so used. The freight instanced upon the evidence that it could not carry, as well as any other car, was steel rails, railroad ties, and sixteen foot lumber.

We submit that this class of evidence was simply intended to throw dust in the eyes of the Commission. What is the question we are examining? It is whether the great live stock corporation transportation business for the supply of this country and Europe shall be properly done, and we are answered that the Commission cannot do this without mixing it up with the carriage of steel rails, sixteen foot lumber and railroad ties. Upon consulting Poor's Manual it will be found that in the year 1893 the whole railroad mileage in the United States was 126,967, while the number of miles of road constructed that year was 3,121. We have no statistics of the exact profits of the roads from carrying steel rails, but the gross earnings from freight that year were \$519,090,000. I will leave the Commission to work out the percentage of earnings of the railroads in carrying steel rails, railroad ties, and sixteen foot lumber.

Again; sixteen foot lumber comes from the lumber belt north of Michigan, in Canada, and I suppose the Grand Trunk takes care of that. Maine is substantially exhausted, and that goes south by water. As I am instructed, and I have no doubt the Commission is also, the cattle come from an entirely different direction, and from where there is substantially no use for lumber.

In regard to railroad ties, if the Commission will do me the favor to remember the evidence, we showed that we could carry a very much

larger per cent—34 per cent more railroad ties in our cars, because of their extra width, by piling them crosswise, than could be done in the ordinary car. But there is a more decisive answer still: it was in testimony before the Commission, which it would have known without, that not one half it is admitted, and our testimony was not more than one tenth, of the ordinary empty stock trains both ways are filled with freight. If there is any doubt upon this point, please examine the discussion of the evidence in my brother's brief.

Again; it is objected that the Commission cannot interfere with the instrumentalities with which interstate commerce is carried on by railroads.

I am so unfortunate as to believe that you can interfere with nothing else. Congress has not given you any power to regulate interstate commerce, to say that this shall not be shipped and that shall be shipped. You are only to regulate how shipments which the public desire to be made shall be carried by the railroads; by what means and appliances, and what conveniences shall be furnished for that purpose; and above all that under substantially like circumstances all that shall be done with equal convenience and safety and at equal cost to the shipping public for their goods and merchandise of all kinds.

Another objection is made that the railroads ought not to be compelled to take cars not of other railroads on to their roads loaded with freight, and transport them at the same rate that they do the cars of connecting roads; and that is instanced as a dissimilarity which should weigh against the petitioner's case. But the facts find expressly that in the case of refrigerator cars, oil cars, coal cars, cars for showmen, they do take them and transport them at the same rates that they do the cars of other railroads. Why then should they discriminate against the Burton stock cars? They have established this rule for themselves as a proper one when they choose to follow it, and in cases where they do not make great profits by feeding the elephant en route. Barnum feeds his elephants in an apartment car, and the railroads do not discriminate against him but charge him by weight.

I may be called upon to answer, well, Why do the railroads discriminate against the Burton stock car and other cars which don't require a stoppage in transit to feed the animals transported? It is because, as a slight computation will show which my brother has made for you, they make enormous profits out of that enterprise; and while that furnishes a sufficient motive, we respectfully submit that the business of selling hay and oats is not within their charters at all; or, if at all, not for the purpose of making a discrimination in the rates, safety, economy and proper appliances for transporting live stock, to the damage of the producer or shipper, public health and public welfare.

In the briefs furnished by the respondents, reliance is placed upon the *Express Company Case*, and they are cited as if controlling in this case. The distinction, however, is a broad one. The *Express Company* demanded that the railroad be obliged to accommodate their cars to their business in distinction and differ-

them in the same manner that other railroads have transported them. | for its stockholders the benefits intended, and conferred, by the grant of incorporation.

If it has not sufficient rolling stock or machinery to meet a particular business or demand, it may go into the market, and hire such additional rolling stock or machinery, either temporarily or permanently, as it may think best. But it does this not because it is required to do so by its charter, nor because its duty to the public compels it to do so. It does it simply to accommodate a certain class of business, outside of the regular course, and to meet demands of individuals, based on luxury to be obtained or money to be made, or to meet inducements in that direction offered by competing lines of roads.

When it hires such other cars or appliances it becomes an employer, and it may make such contracts with the owner thereof as it can. It may make a contract with one as to stock cars, with another as to oil cars, with another as to refrigerator cars, with another as to hay cars, with another as to locomotives, with another as to sleeping and parlor cars, and so on infinitely; but what cars it will hire, or from whom it will hire, is a matter entirely within its discretion; and the fact that it makes a contract with one, does not give the owner of other cars, or like appliances, the right to have his cars or appliances hired, or compel the railroad company to use them upon the same terms it uses those it has by contract.

None of these private car companies are common carriers under the law, and do not hold themselves out as such.

The Burton Stock Car Company is under no obligation to the public, and the public cannot enforce or make any demands on it. It may hire its car to one individual and not to another. It may permit it to run over one line of road and refuse its use over the line of another. It may, in short, honor a request for cars, or refuse, at pleasure. With a railroad it is different. It is bound to receive freight at all reasonable times, and provide suitable cars for its transportation. The moment any such special car loaded with freight is delivered to it (unless exempted by a special legal contract), the railroad becomes a common carrier of such freight, becomes an insurer of its safety, and is bound to deliver as consigned, unless prevented by the act of God or the public enemy; and the owner of the car is only interested in the safe return of the car and the money made by such special use.

The Burton Stock Car Company is not a shipper. It is only the owner and hirer of cars, and does not pretend to be anything else. It has a commodity which it offers to sell by contract for a certain price. It has in effect a house which it offers for rent for a certain purpose and for a certain time. As its number of cars is limited, it does not pretend it can furnish them for the whole carrying trade in cattle, and therefore makes a specialty of them for certain classes and shipments, and charges for their use a large price on the investment, and a much larger price than is charged by other parties furnishing rolling stock to railroad companies. In a word, it is a speculation on its part, whereby it invests money in a private enterprise with the intention and expectation of realizing a large return from it; and by the order prayed for in the complaint filed herein, asks the Commission to become a

INTER S.

party in boosting its enterprise, and assure it permanency and profit.

Aside from these general reasons there are many special reasons why the Burton stock car should not be placed on the same footing with the cars of railroads, among which are:

There is no reciprocity between it and the railroads. It cannot give a pound of freight that the railroad would not otherwise get.

Its cars are not interchangeable with the cars of any railroad.

Its cars, as a rule, are only loaded in one direction, and usually on long hauls from distant points, to which they have to be specially sent empty.

They are of unusual length and height, and the interior is partitioned off so as to accommodate the shipment of fancy cattle, and by so doing it destroys their usefulness for general freight purposes.

They are inconvenient, as to loading lumber, steel rails or other commodities of that class, composing largely the western bound shipments, a forty-four foot car, by reason of its construction, being only equal in carrying capacity to a thirty or thirty-four foot ordinary stock car, for such freight.

The Burton stock car under the most favorable circumstances can only carry sixteen head of cattle, and from the model exhibited, it would seem that the car must be forty-four feet long to do that. A car of that length on the plan of model, would not carry sixteen horses. It would require the length these cars were originally built (fifty-one feet) to give proper space between the horses so they would not injure each other by kicking. Indeed, this fact seems to have impressed itself upon the Company, as it claims to have abandoned that length of car, and only claims merit for this patent as "a palace cattle car."

Two of these cars would be of about the length of three ordinary thirty foot stock cars, and would only carry thirty-two head of cattle, while the three stock cars would carry from sixty to sixty-nine head, as appears from the testimony.

The Burton Car Company pays nothing to the railroad, although it might have the whole equipment of that company in use. The railroad gets the ordinary freight, but it would get this if it used its own cars, and each carried the same tonnage. In addition to getting no revenue from the use of these cars, the Railroad Company becomes a common carrier of the freight contained in them—becomes responsible for the safe condition of the car—and to the Burton Company for the car itself, and all damages to it; is compelled to supply oil and waste to keep it in running condition, inspect it, and supply all defects as they appear, including parts peculiar to this patent, and not common to ordinary cars; and in all respects, while it is in its possession, treat it as one of its own cars.

The Railroad Company hauls this car say 1,000 miles, empty, to the exclusion of its own cars, and the freight they would contain, and gets in return a Burton car load of freight at a price at least 25 per cent less than it would get for a car load of freight if loaded in one of its own cars.

The Burton Company gets two and a half

cents per mile for each car from the party leasing it, for the distance it is used in transporting his stock; and it seems like assurance, to say the least, that it should ask the railroad company to pay it mileage for hauling them empty, so that it might get the load back at two and one half cents per mile; and additional assurance to ask that the railroads be compelled to pay it three and one fourth cents per mile in addition to that paid by its lessee.

The two and one half cents per mile charged one way for the Burton car is 66 per cent greater than is paid by one railroad to another for the use of its cars, and is 66 per cent greater than would be charged by any reputable Car Trust Company, for furnishing any desired number or kind of cars. Two and a half cents a mile would make millionaires of the owners of the Burton stock car, could it supply the cars, induce all cattle shippers to use them, and compel the railroads to haul them without charge.

The three fourths of a cent per mile paid by one railroad to another is to a great extent fictitious, as I will show hereafter.

Under the evidence given it is evident that practically, to the extent the complainant's cars are used, the cars of the railroads are thrown out of service and their use is lost. This should not be permitted, unless there is some great public necessity imperatively requiring it, and I submit that no such a state of facts is made to appear.

Now, in the light of these facts, would it not be gross discrimination against the railroads, to compel them to haul the Burton car upon the same terms they haul cars for each other; even if the Commission had power to make such an order?

The companies, if they haul these cars, insist they shall be paid for so doing. And as to the amount of compensation, they are as competent to judge as the complainant is as to what it will charge shippers for the use of its cars; and if figures are to be relied upon, the railroad charges will not be more exorbitant in proportion than those of the complainant.

But it is claimed by counsel for complainant, that because cattle shipped in these cars receive humane treatment, and because they are less liable to become diseased, the public is interested, and this is sufficient to give the Commission jurisdiction, and justify such an order as he has prayed for.

If his claim is based upon a solid foundation, then the innumerable owners of patents, and patent cars, may make the same showing he did, and exact from the railroad companies the same service, without compensation, that he would like to have for his client; and supply rolling stock for the railroads, while their own cars will be sidetracked and go into decay.

But what showing does the complainant make on the ground of humanity or public necessity?

The evidence shows that complainant has at present to supply this imperative public demand on all roads in the United States, the grand total of eighty-eight cars, including its fifty-one foot cars, and that it is building or going to build 100 more. The testimony of Mr. Stone shows that the C. B. & Q. R. R.

system alone has 5,000 stock cars, and at least this number is required to do the stock business of that road. The other western lines out of Chicago have, probably, 15,000 more, making a total of at least 20,000 stock cars necessary to do the business in and out of Chicago alone.

Then take the lines centering at St. Louis, and the great number of stock cars required to do their business, and some idea can be had of the large equipment necessary to accommodate the live stock traffic originating west of Chicago, and the insignificant equipment that can be furnished by complainant, even if the whole number of its cars could be run in this trade, and all the other railroads deprived of its valuable and humane service. It would be less than one half of 1 per cent of the cars required.

But counsel says the employment of these cars will prevent diseased meat, and the laboring man will no longer be compelled to eat meat poisoned and festered by being shipped in the ordinary stock cars. Let us see how this logic holds. If it requires 20,000 cars to ship cattle from the West to Chicago and other points, and the Burton Company can only furnish cars to ship less than 1 per cent of that number, it follows that more than 99 per cent of the stock shipped will be, or is liable to be, poisoned and diseased by the shipment in ordinary stock cars. If the cattle shipped by each mode are turned in together, and slaughtered and used without separation, it would seem the small percentage of sound beef would be liable to be tainted by the large percentage of that which was unsound.

If, on the contrary, there was a separation, in the killing, sale and use, then it requires no imagination to say that there would be a difference in price, and people who live in palatial houses, would get and eat the palace car meat, while the poor man would continue to get and eat the diseased and unwholesome meat.

This talk of humane treatment and public necessity is all talk, and while it may help advertise the Burton car, it lays no foundation for the action of this Commission.

As to the Second Question.

What has been said above as to the duty or obligation of railroad companies to receive and transport the Burton stock car, upon the same terms they transport cars for connecting railroads, applies with equal force to the second question submitted.

Railroad companies are entitled to the full use of their tracks, and all the revenues derived therefrom; and unless they abuse their powers and violate their obligation to the State or to the public, they are the sole judges of the instrumentalities to be used in operating their roads.

They owe no duty to private parties who own or control private cars or equipments, and are under no obligation to receive or haul such cars at all in the absence of a special contract to do so.

Why? 1, because such parties are not shippers; 2, because they are not common carriers; 3, because there is no mutuality or reciprocity be-

tween them and the railroad companies; 4, because the railroad companies have the right to make proper rules and regulations as to the operation of their respective roads, and the agencies to be employed; and the exclusion of such private cars or private car companies from their tracks without a special contract for such privileges, is a proper exercise of such right.

That these private cars or private car companies, as to the employment and use of their cars, are not shippers is self evident, and requires no further statement.

That they are not common carriers is equally true. A common carrier is defined to be: "One who undertakes as a business for hire to carry from one place to another goods of all persons who may apply, provided the goods be of the kind which he professes to carry, and the person so applying will agree to have them carried upon the lawful terms prescribed by the carrier, and who, if he refuses to carry such goods for one who is willing to comply with such terms, becomes liable to an action by the aggrieved party for such refusal."

Hutchinson, Carriers, § 47.

There is not a private car company, nor the owner of a private car in existence that comes within the definition.

A private car company, whether an association of individuals or a corporation, claims to have cars specially adapted, in whole or in part, to a particular kind of business or traffic, and as a rule that part of the car which covers this specialty is likewise covered by a patent, giving the owner the exclusive right to its use. These companies own no railroad. They cannot of themselves carry freight a foot. They simply sell the use of their patent, or the privileges covered by it, upon terms made by themselves, to such parties as for any reason desire to buy. They are under no obligation to sell. They may sell to one and refuse another, or may sell today and refuse tomorrow. The public has no claim on them, and they have no claim on the public. No duty is imposed on either side. They organize and build cars for a speculative purpose. The value of their investment depends upon getting their cars hauled, and the sale of their use. If they fail in either, their investment fails. The more they can sell the use of their cars, and get them hauled, the better their investment; and if they can get them hauled for nothing their profit is still greater.

Sleeping, parlor, refrigerator, stock, hay, oil and other special cars are of the same class, and are to be regarded alike.

In New York, Ohio, Indiana, Pennsylvania and other States the courts have declared sleeping car companies not common carriers.

Railroad Co. v. Walrath, 88 Ohio St. 461; *Woodruff etc. Coach Co. v. Diehl*, 84 Ind. 474; 3 Wood, Ry. Law, § 368, and cases cited.

On principle, can any distinction be drawn between sleeping cars and other special private cars?

There is no mutuality or reciprocity between these private cars and the railroads.

It has been shown that, as a rule, but few of these special cars are adapted to any business, except some particular freighting. They are

usually hauled loaded one way and empty the other, and revenue is derived by the carrier for only one half of the distance hauled.

They bring no freight that would not otherwise be received; and no greater amount of freight is received from their load than would be earned by the railroad, had the freight been shipped in its own cars. If additional freight is charged, it is to cover hauling the car one way empty.

They are not interchangeable with other roads, and cannot be diverted from the particular business or trade for which they are designed.

Railroads pay to each other for the use of cars three fourths of a cent per mile, but this compensation is more apparent than real. Each company is fully equipped with rolling stock of all kinds necessary to do all its business, if all its cars were kept on its own line; but in the formation of through lines, and interchange of business, and to prevent delays in transshipment, its cars are permitted to run on other lines of road, and in turn the cars of other lines take the place of those that are absent. While its cars are on the lines of other roads it receives mileage upon them, and for the foreign cars used by it, it pays mileage. When the mileage account is balanced at the end of the year it is found that the mileage paid out and the mileage received, practically balance each other, and in effect each road is using its own cars all the time and getting revenue from them.

With private cars there can be no such readjustment. It is all profit to the private cars and all loss to the railroads. There is no quality of use or compensation, and the railroads in using them are compelled to run a side show, at the expense of their legitimate business. The fact that these cars can sometimes be wholly or partially loaded with catch freight does not change the rule. The exception should not have any force in determining a duty or fixing a liability, and if there is a single element of mutuality or reciprocity between these private patent cars or their owners, and the railroad companies, I have been unable to discover it.

It is no discrimination to compel a party who desires to use your property for his personal gain to pay you a fair price for such use.

The right of a railroad to make needful and proper rules and regulations for the operation of its railroad and the agencies to be employed, has been affirmed by almost every respectable court in the United States, and has not been denied by any.

The law requires it to perform its duties as a common carrier, but does not provide for the special instrumentalities by which it shall be done.

If it does not possess the cars or appliances necessary to do its general business, or to meet a particular demand on its line, it may make contracts with whom it will, to do the work or furnish the appliances. But such employment of other agencies does not throw its road open to the world, so that any one may be so employed or perform similar service as a matter of right. All such rights rest on contracts. The railroads may or may not make them. If

it makes them, the terms of them govern the parties. If it refuses, then no rights are obtained and none can be enforced.

I think the Supreme Court of the United States, in the cases referred to by the counsel for other respondents herein, in 110, 115, 117, and 118 U. S. Reports (see also 23 Am. & Eng. Ry. Reports, page 545—notes), fully sustain the position taken: that the respondents owe no duty to the Burton Stock Car Company, as the Burton Stock Car Company, nor to any other private car company, as such; and that in the absence of voluntary consent on the part of respondents, neither the complainant, nor other parties similarly situated, have any right to have their cars run upon any of the railroads here represented, much less to have pay for such forced use.

I respectfully submit that not only should the complaint be dismissed in this case, but that the honorable Commissioners should in unmistakable terms declare the law to be that the railroad companies own their tracks and roads, and are entitled to the full and exclusive use of the same; and that no party, coming under whatever guise he may, can participate in the use of any railroad, without the consent of the owner, nor without paying adequate compensation therefor.

Mr. Edward C. Perkins, for Chicago, Burlington & Quincy, and Chicago, Burlington & Northern Railroad Companies:

The complaint in this case is that the various railroad companies named have and do discriminate against the Burton Stock Car Company, in violation of the Interstate Commerce Act. They base the claim of discrimination on two distinct and very dissimilar grounds:

First, that the railroad companies will not pay to the Burton Company a mileage for the use of their cars, and second, that the companies charge to the shippers a higher rate of freight on cattle when carried in the Burton cars than when carried in common cars.

As to the first ground: the mileage which they ask for and say is customary, is simply a rental paid by a railroad company to some person or company, for the use of cars belonging to such person or company; and the refusal to pay such rental to the Burton Company, or any other company, that is, the refusal to hire the cars of such company, can in no sense be a discrimination against such company unless in law a railroad company is bound to hire and pay a rent for all mechanically correct and properly constructed cars which are offered it by any person or corporation.

It should be kept clearly in mind that, although it is alleged in the complaint and was argued that it is customary for railroad companies to take all cars which are offered and to pay the mileage, yet there was no evidence of any such fact. The evidence showed, on the contrary, that there was no such custom, but that railroads took cars from each other only as they needed them, and that they hired such special cars, refrigerator, etc., as they needed, from particular persons or companies, by special contract; that when they had cars enough of their own on hand, and it could be done without too great expense, it was their

practice to unload the cars of others on receipt of the same, and tranship the freight into cars of their own.

As to the second ground: this is a claim that the railroad companies charge to persons who have cattle shipped in Burton cars, not, it will be noticed, to the Burton Stock Car Company, a rate which is higher than is charged to shippers of cattle on common cars, and that this rate is extortionate, and a discrimination under the Interstate Commerce Act.

It would seem that if the charge made is a discrimination, it is a discrimination against the shippers of cattle, and not against the complainant.

The questions presented by this complaint seem to be:

First. Is a railroad company by law required to accept and pay rent for all cars, mechanically correct and properly constructed which are tendered to it by any person or company, to be used by it in the transportation of persons or property over its road?

It is submitted that the order requested by the complainant cannot be given, unless the above question is answered in the affirmative; that neither this Commission nor a court can or will go into the question of the value of each patent, or so-called improvement in a car, and order one car, having a so-called improvement, taken, and another car with a different improvement, not taken; but that if the order can be made at all, it must be that all cars which are mechanically correct and properly constructed must be accepted and paid for by the company to whom they are offered.

The car is but a part of the great machine called a railroad. Improved springs in the cars, patent interlocking switches, improved chairs for holding the rails, patent couplers, and a thousand and one other things may become parts of the same great machine; and it may easily be that any one or more of them may be of as great value in the proper transportation of cattle as the feeding and watering arrangements in the cars of the complainant company. And can it be contended that it is within the province of any court or of your Commission to hear and decide upon the value of each and every patent applicable to any part of a railroad?

And can the general question be answered in the affirmative? We think not.

Even on the old theory that a railroad was a highway, upon which anyone was entitled to place his vehicles of transportation, it by no means follows that the carrier who owns the road must pay for the use of such vehicles. The carrier could hire vehicles for his own use, but was not obliged to hire all that were offered, or to hire from one because he had hired from another. But it is submitted that the theory of a railroad being in that sense a highway, is no longer, if it ever was, the law; that the needs of the great business of transportation has shown that it is absolutely impossible to carry it on, on any such theory.

It is submitted that the law on the matter is as follows:

That a railroad company is required to furnish suitable and proper equipment to meet the requirements of its business; but how they

shall furnish such equipment, whether by building, leasing or buying from others, is not a matter for any court's decision.

That a railroad company cannot be compelled to buy or hire from any one particular person or company, nor from every person or company.

That if it fails to furnish suitable and proper equipment, it can be punished.

That in case of such failure the court might, on a proper presentation of the case, have power to order that the company furnish suitable and proper equipment, but could not direct in what manner it procure the same; could not order that it purchase or hire from any particular person or company, or from every one generally.

That the duty of so furnishing the equipment would be imposed on the railroad company, and it must see, at its peril, that it does it properly.

That the method of furnishing the equipment is a matter as fully within the judgment and decision of the company as the kind of oil it uses on its locomotives, or the kind of grease on its car wheels.

And it is submitted that your honorable Commission, even granting that the question of the quality and fitness of the equipment of railroads is within the powers granted to you, and that you have the full powers of a court of equity could go no further.

That if, under those circumstances, you were satisfied that any railroad named in this complaint was not supplied with proper and suitable stock cars, you might order that it supply itself; but that the question of what cars the company got, and whether by hiring from the Burton Company or the Street Company, or by building or buying, must be left to the decision of the railroad company.

The case of *Pullman's Palace Car Co. v. Missouri Pac. R. Co.* 115 U. S. 587 (Bk. 29, L. ed. 499), seems clearly to support this view.

Here it was claimed that the car company, under a certain contract, had a right to have its cars run over the railroad of the defendant, but the court held that the contract did not apply. It was also argued for the car company that the defendant was obliged to haul its cars, aside from any obligation under the contract, and the court said: "It may be, as is also alleged, that it has 'become indispensable, in the conduct of the business of a railroad company, to run on passenger trains, sleeping and drawing room cars, with the conveniences usually afforded by such cars for night travel;' but it by no means follows that the railway is, in law, obliged to arrange with the Pullman Company for such accommodations. According to the bill itself, two such car companies cannot successfully carry on a competing business on the same road, and the custom has been for the Pullman Company, if possible, to contract for the exclusive right. The business is always done under special contracts. These contracts must necessarily vary, according to the special circumstances of each particular case. Certainly it cannot be claimed that a court of chancery is competent to require these companies to enter into such a contract for the furnishing and hauling of Pullman cars, as the court may deem reasonable.

A mere statement of the proposition is sufficient to show that it is untenable."

The case is exactly like other cases of a railroad company hiring cars. A railroad company not having sleeping cars of its own hires such cars from such other person or company and on such terms as it sees fit. As a matter of fact, it generally does so by paying to the lessor a mileage on the cars used. It also hires, as appears by the evidence in this case, such refrigerator, coal, oil, freight, lumber or cattle cars as it may need, usually paying a mileage; but there is nothing to prevent its paying a yearly or monthly rental; and it is not in the power of the courts to say with whom it shall contract, or what kind of a contract it shall make.

By the statutes of the various States by which the companies are chartered, they are required to furnish proper and suitable equipment; and shippers have their full remedy in case of failure or neglect to do so.

The principles laid down and the reasoning in the so-called *Express Cases*, 117 U. S. 1-29 (Bk. 29, L. ed. 791-803), seem to fully sustain this view; and as they say, speaking of the decision in the lower court, and referring to business arrangements between the express companies and the railroad companies, and as can be equally well said as to contracts between railroad companies and other parties for hiring cars, "The court has made an arrangement for the business intercourse of these companies, such as, in its opinion, they ought to have made for themselves, and that we said—in *Atchison etc. R. R. Co. v. Denver etc. R. R. Co.* 110 U. S. 667 (Bk. 28, L. ed. 291), followed at this term in *Pullman's Palace Car Co. v. Missouri Pac. R. Co.* 115 U. S. 587 (Bk. 29, L. ed. 499)—could not be done. The regulation of matters of this kind is legislative in its character, not judicial."

There is no legislative requirement—congressional or State—making it the duty of railroad companies to enter into such contracts with particular parties, or with anyone making a demand for such a contract.

The counsel for the complainant takes the ground that it does not ask that railroads should hire its cars to be used by them for transporting freight over their roads, but simply makes a tender to them of a package of freight to be transported like any other freight package. His proposition is: "I now hold, as a general proposition, that the car is our package, in which shippers who buy it, after we have made it, desire their merchandise to be carried by weight, as everybody else's is carried. And unless it is claimed that there is something inside that is detrimental to the public business of railroads, the railroad has no more right to look into that package for the purpose of rejecting it, and preventing it from passing over the railroad, than they have to look into any other package. What is inside my package, assuming it to be lawful merchandise within, is substantially and exactly none of their business, when they are to carry it at so much a ton."

Let us look at the proposition carefully.

According to this, the car is, by itself, simply a wrapper or crate in which goods are transported. On this basis, let us see what are

the facts in a particular case. A shipper comes to the Chicago, Burlington & Quincy Railroad Company with a load of cattle in his crate, and says: "I want this crate load of cattle sent to Council Bluffs. I want the crate delivered to the Burton Company here again at Chicago, and you must pay that company a rental of so much a mile for each mile, out and back, that the crate is carried."

Or he comes with the crate empty, and says: "I want this crate sent to Council Bluffs, where I will load it with cattle, and send it back to Chicago; You cancel lect from me the usual freight on a crate of cattle from Council Bluffs to Chicago; and you must pay to the Burton Company a rental for each mile, out and back, that the crate is carried."

We answer: "We have crates enough of our own. We do not want your crate, and can neither afford to pay you for the use of it, nor carry it both ways for one freight."

He answers: "You take the crates of the Lake Shore Railroad Company over your road, and pay them a rental for their use."

We answer: "We do, when we need crates in our business, but we prefer their crates to yours. They are better suited to our business, will carry more than one kind of goods, and yours will not; and so we can get freight on the loads in the crates both ways."

It should be kept clearly in mind that the railroad company gets payment for hauling the freight in the car, not for hauling the car. On the contrary, it is claimed that it should pay the owner for the use of the car.

No matter how you put it, it gets back to the simple demand: "You must haul our car (or use our crate) whenever asked to do so. You must not charge the owner of the freight in such car (or crate) any higher rate than you charge the owner of freight in any other car (or crate); and you must pay us for the use of the car (or crate)."

It is therefore, respectfully submitted that it all turns on the question: Is a railroad company bound to accept, use and pay for all cars and other instrumentalities of railroad traffic offered to it?

If a railroad hires crates for the transportation of pigs, fruits, or baggage from A, and pays him by way of mileage, must it also take B's and pay him a mileage? And if not crates for those purposes, why crates or cars for other purposes?

It should be kept in mind that the additional charge in the tariff is put on instead of making a charge for hauling the empty cars. If the cars are offered to us as so much freight to be carried, we certainly have a right to make a reasonable charge.

The second question is: Has Congress granted, or attempted to grant, by the Interstate Commerce Act, to this Commission, any power to consider or decide upon the quality or fitness of the equipment of railroad companies?

It is respectfully submitted that the only powers of this honorable Commission are those specially granted by this Act, and that the Act must be strictly construed. The Act contains no reference to or suggestion of any power in the Commission to consider or decide upon the quality or fitness of the equipment of railroad companies. If they have it in regard to cars,

they must equally have it as to locomotives, terminal facilities, road bed, brakes, couplers, grease, fuel, and every detail of railroad property and management, and the act would amount to the appointment of a commission to run and manage all the railroads in the United States which do an interstate business, the taking, the spending of the company's money, and the management of its property, out of the hands of the company. Congress has made no attempt to grant such an authority to the Commission, and it may well be doubted whether it could do so.

The next question is: Has not Congress, by the terms of the Act, specifically limited the power of this Commission, so that it cannot give to the cars of others the use of the track of any railroad company, and has no power to make any order in regard to the same?

It is respectfully submitted that it has. By the last clause of the third section of the Act it is provided "That this shall not be construed as requiring any such common carrier to give the use of its tracks or terminal facilities to another carrier engaged in like business."

It was suggested that the Burton Stock Car Company did not come under the terms of this clause, as it was not a "common carrier." As was also suggested before the Commission, this is true, so long as the Burton Company confines its business to the manufacture and selling or leasing of cars; but when it comes to a railroad with its cars loaded or unloaded, and requests that they be carried over such railroad—not as so much freight to be carried—but as a car or vehicle for the transportation of freight over such road, it comes as a common carrier, within the meaning of this section, just as much as a railroad company would which had hired the cars from the Burton Company.

How can it be held otherwise? Take an example: the Lake Shore Company buys ten stock cars from the Burton Company. A train comes over the Lake Shore Road made up of the ten cars of the Burton patent belonging to the Lake Shore Company, and ten cars of the Burton patent belonging to the Burton Company, all twenty cars being loaded with cattle. The Commission clearly cannot order that the Chicago, Burlington & Quincy Railroad Company accept and run over its line the ten cars belonging to the Lake Shore Road. Can they order the Chicago, Burlington & Quincy to take and run over its line the ten cars belonging to the Burton Company? A mere statement of the proposition is sufficient to show that it is untenable.

The fourth question is: Assuming that the Commission has full power to make the order asked for, could it properly do so, having due regard to the whole question? It must be kept in mind that a railroad, considered as a machine for transportation purposes, is a great and delicate machine, requiring the most careful and exact management, in order to do its business in such a way as to satisfy its patrons, and do the business successfully, safely, and profitably; that any interference which will take the management in any of its details out of the hands of the men trained and appointed for that purpose will have a tendency to make the whole machine go wrong; that an order that railroad companies must accept, run, and

pay for all cars mechanically correct and properly constructed, might and would have a tendency to so interfere with the management as to prevent the safe, prompt, proper, and profitable doing of the business railroad companies are called upon to do. It would interfere with the proper discharge of their duties to the public, by requiring the company to haul over its road trains of empty cars which could not be used for the transportation of other freight, and so using up its motive power, and leaving the companies without proper cars at proper places to attend to its necessary traffic, and in a thousand ways taking out of their hands the management of their own business. If, on the other hand, it is ordered that cars of a certain kind and pattern be taken when offered, it should be borne in mind that the car is only a part of the whole great machine; that the car is no more an essential part of the safe, speedy, and proper transportation of merchandise or cattle, than the locomotives, signals, road bed, rails, interlocking switches, and many other things used in connection with a railroad; and the Commission must, if it undertakes to determine upon the value or propriety of using a car, also determine upon the value of all other portions of the great machine called a railroad.

In fact, if the Commission can and should order either that all cars offered, or that cars of any particular kind or kinds should be taken, it would work greatly to the injury of both the public and the railroads, and railroads could no more be run on satisfactory bases under such an order than a cotton mill could, were it required to take portions of its machinery for manufacturing from anyone who had, or thought he had, or whom a commission thought had, a piece of machinery fitted for such manufacturing.

The fifth question is: Has the complainant proved any discrimination? The evidence offered showed the following facts:

That railroad companies receive from other companies, and pay mileage for, such cars, freight, cattle, oil, refrigerator, coal, etc., as they need in the transaction of their own business, and such cars only; that when they have cars of their own ready for use, they tranship from cars of others into their own cars, unless the expense of such transshipment is greater than the expense of taking cars of such other person or company; that they never take cars simply on the demand or request of others, but simply when it is to their own advantage, and then under special agreement; that refrigerator, coal, and other special classes of cars are taken from others only when the company has not enough of the same to do their business; that the companies complained of were abundantly supplied with cars to do their cattle business.

Further, the evidence showed that the cars of the complainant were of such construction that they could not be loaded with lumber or steel rails; that the compartments in the Burton car were only sixteen feet long, and that what is called sixteen foot lumber is generally a little over that; that, moreover, the doors of the Burton cars were in the side, so that it would practically be impossible to put the lumber in, even if the compartment was

fully long enough. It was stated that Mr. Stone said that the length of the car was twenty-eight feet, and next that it was thirty feet, and that was the standard, and they do not want any on their road longer than thirty feet.

Mr. Stone made no such statements. His statement in answer to questions on cross examination, was as follows:

Q. State whether the tendency is not to increase the length of stock cars lately.

A. It is, up to thirty-four feet. It used to be twenty-eight.

Q. The needs of commerce and the comfort of the stock have, I suppose, called for that?

A. No sir; two things called for it: the first to make cars more available for general use. The twenty-eight and thirty foot cars were both too short to take in two lengths of sixteen foot lumber, and too short to take in thirty foot steel rails, and in order to get the benefit of return loads of lumber and rails, there were strong reasons for making the car thirty-four feet long, so that it would take two lengths of sixteen foot lumber without going above the 40,000 pounds capacity of the car. Otherwise it was impossible to load it full with lumber and rails.

The evidence further was that a very small percentage of cattle were carried west, and that a very small percentage of these cars could consequently be carried west loaded, but must be taken empty; that, so far as the Chicago, Burlington & Quincy Railroad Company is concerned the western freight consisted mainly of lumber and steel rails, with a good many railroad ties; that of the whole mileage on the Chicago, Burlington & Quincy Railroad, 80 per cent of cars went loaded, and 20 per cent empty, and that of the west bound cars probably 70 to 75 per cent went loaded. Now, taking a case on the Chicago, Burlington & Quincy Railroad; do the facts show discrimination in any form on the present ratio?

A Burton car is wanted at Council Bluffs, 500 miles from Chicago, for a load of cattle. The car is procured in Chicago and hauled to Council Bluffs empty, the company receiving no pay for such hauling. It is hauled back loaded, and the shipper is charged the tax rate \$70 plus 20 per cent additional, making \$84, which the Chicago, Burlington & Quincy Railroad Company receives for having hauled the car 1,000 miles—500 empty, 500 loaded.

A Lake Shore Railroad car is hauled from Chicago to Council Bluffs. The rate for that haul on a load of lumber or steel rails is about \$40, but as, say only, 70 per cent of the cars go west loaded, we get an average of \$28 per car. That car is loaded back with cattle, and we get the tariff rate, \$70, making for our total trip \$98. Out of this the Chicago, Burlington & Quincy Railroad Company pays the Lake Shore Company mileage of three fourths of a cent per mile, or, on 1,000 miles, \$7.50, leaving net to the Chicago, Burlington & Quincy Railroad Company, \$90.50, or \$6.50 more than we get on the Burton car.

If, on the contrary, we haul the car, paying the mileage and charging the freight which the complainant requests, we should receive \$70, and should pay out for mileage \$7.50, leaving net on the haul \$62.50, against about \$90 on the common car.

But it is submitted that the tariff rate is not extortionate nor in any sense a discrimination, but is made with the intent of being and is fair and reasonable, and not more than is charged to other persons for using a like service or transportation, under substantially similar circumstances and conditions; and it is further submitted as a recommendation, that:

1. a railroad company is not, in law, bound to use upon its line the cars of another person or company, and yet pay for the same, and that the fact that it does so here from one or more persons or companies in no way obligates it to hire from others; 2. that under the Interstate Commerce Act, your honorable Commission is in no way authorized to consider or determine upon the quality or fitness of the equipment of railroads; 3. that by and under said Act, your honorable Commission is specifically restricted from ordering that a railroad company give to any common carrier or to this complainant the use of its tracks; 4. that even if full power existed, it would be very unwise and very injurious to the people, as well as to the railroads, to make the order asked for; 5. that on the evidence given, the rate charged to the Burton Stock Car Company and shippers, by its cars, is reasonable and not extortionate, and is in no sense a discrimination under the Interstate Act.

In regard to the Chicago, Burlington & Northern Railroad Company, it may be pointed out that no particular case was made, that no evidence was offered that the Burton Company had ever applied to that company to haul any of its cars, loaded or empty; but this point we do not press, as this Company is a party to the classification; and the real question is the general one, as to whether any such order as is asked can or should be made.

Messrs. Samuel Shellabarger, John S. Blair, and John P. Dillon, for the Union Pacific and Missouri Pacific Railway Companies, respondents:

The exact point and substance of the petition of complainant in this case is that the complainant is the owner of certain cars suited to the transportation of cattle and live stock over railroads; that such cars are better adapted for such transportation than the ordinary cars, and their use is sought for and desired by the public; that they are lighter and of easier haul than the ordinary cattle cars; and 100 or more railroad companies allow them to be put upon their lines for said transportation purposes on the usual terms, under which railroads receive and allow three fourths of a cent per mile to the owner of the car, but that the defendant, The Union Pacific, and other companies, have refused to accept the cars of complainant, except upon payment of extortionate terms, unjust to complainant and detrimental to the public.

And the petition expressly relies upon sections 1, 2, and 8 of the Interstate Commerce Act as the ones containing the provisions which defendant is alleged to have violated.

The substance of the provisions bearing on this alleged unjust demand and refusal found in these sections are as follows:

1. Section 1 requires charges, by common carriers subject to the Act, to be "reasonable and just," and declares unlawful all which are "unjust and unreasonable."

INTER S.

2. Section 2 prohibits carriers from charging or receiving "greater or less" compensation for any service than one person that is charged for a like transportation service to any other person.

3. Section 3 declares it unlawful for the carrier to give "undue or unreasonable preference or advantage to any particular person, or locality, or any particular description of traffic," or to subject any particular person, company, firm, corporation or locality, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever.

Section 4 further requires all such carriers, "according to their respective powers," to "afford all reasonable, proper and equal facilities for the interchange of traffic between their respective lines, and for the receiving, forwarding, and delivering of passengers and property to and from their several lines and those connecting therewith, and shall not discriminate, in their rates and charges, between such connecting lines; but this shall not be construed as requiring any such common carrier to give the use of its tracks or terminal facilities to another carrier engaged in like business."

The exact legal question presented by the present issue and considered in the light of the facts, either conceded or which may be admitted for the sake of the legal point, may be condensed thus:

Do the provisions of the Interstate Commerce Act in sections 1, 2, and 3, or the principles of the common law, oblige these companies to accept from the complainant corporation, a private car manufacturing company and not a common carrier, its manufactures in the shape of cars, and to transport the same over their lines as rolling stock (as distinguished from freight) upon any terms whatever?

Points in reply to this question:

We insist that the answer to this question must be in the negative for the following reasons:

1. The strongest possible view in favor of complainant's contention is that which presents the claim in this light, to wit: that its cars are received on other railroads as part of their trains, and which cars, in process of transportation from State to State, reach connections with the Union Pacific, or some other defendant company, and there demand that complainant's cars shall be received by such company on its line as part of its trains, the same as other cars of like kind are received.

Under this state of facts and conditions of making the demand it is claimed that the position of the complainant is different from that of a manufacturer making cars and taking them to a railroad company and demanding their adoption as part of the lines of the defendant, in this: that in the latter case complainant's car has become, and is, at the time of the demand, a part of the actual interstate commerce of the country, owing to its coming to the defendant's line in the shape of being part of a train of interstate commerce; and, being thus embodied in such interstate commerce, it cannot be discriminated against.

As already remarked, there is no possible view in favor of the contention of complainant

stronger than the one just stated; and this contention of complainant is squarely met and overthrown by the express words of section 3 of the Interstate Commerce Act.

This is so because the concluding paragraph of section 3, which is the strongest provision in favor of complainant, is devoted to the requirement, as against carriers subject to the Act, that they shall "afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines, and for the receiving, forwarding, and delivering of passengers and property to and from their several lines, and those connecting therewith, and shall not discriminate in their rates and charges between such connecting lines."

It must be carefully observed that this clause is one dealing with "connecting lines," as such, and it is a mandatory prescription of the rule regulating reciprocal facilities and interchanges between such "connecting lines."

After having made this provision commanding reasonable facilities for interchange of traffic between connecting lines, and after prohibiting discriminations in rates and charges between such connecting lines, an express limitation is put upon the character and extent of the rule defining these facilities and interchanges by the controlling words which conclude the section and which are:

"But this shall not be construed as requiring any such common carrier to give the use of its track or terminal facilities to another carrier engaged in like business."

Thus the Statute itself makes it plain and literal, to a demonstration, that no carrier is required "to give the use of its track or terminal facilities to another carrier engaged in like business."

In other words, this clause protects all connecting lines in their right to use their own cars for the purpose of transportation. Of course this right to use its own cars is subject to all the provisions and conditions of the common law and of the statutes requiring the carrier to furnish reasonable facilities for all descriptions of transportation of persons and property. Subject to that general obligation every carrier is, by the last clause of section 3, left in the absolute possession of the right to furnish its own cars for its own lines.

The effect of this provision is to leave all carriers subject to this Law at liberty to make contracts regarding what cars from other lines shall be transported over their lines. Because of the unmistakable character of this last clause of section 3 it would be useless to analyze other provisions of this statute bearing on this point, because, since this closing provision of section 3 cannot be misunderstood, it limits, according to its plain words, and qualifies every other provision in the Law, were there any, favoring the contention of complainant;

II. Owing to the vital importance of this matter, it is proper, however, to present other considerations leading to the same result.

One of these considerations may be stated thus:

These companies, although owing certain duties to the public, are, strictly and to all intents and purposes, private corporations, and as such possess the same dominion over their own property as other like private corporations.

Although this proposition seems quite self evident, yet the supreme court has had repeated occasion to announce this law as applicable to the Union Pacific.

In the case of the *United States v. Union Pac. R. R. Co.* 98 U. S. 619, 619, (Bk. 25, L. ed. 186) this is explicitly and repeatedly laid down by that court. It says, speaking of the Union Pacific:

"It is still a private corporation, the same as other railroad companies, and, like them, subject to the laws of taxation and other laws of the State in which the road lies."

In *Union Pac. R. R. Co. v. Preston*, 18 Wall. 39 (85 U. S. bk. 21, L. ed. 792), the court is still more emphatic on this point. After stating that the Union Pacific has certain agencies to perform under the laws of its creation, on behalf of the government, the court adds these words regarding the nature of the property rights of the Union Pacific.

"Notwithstanding this the railroad and telegraph lines are neither in whole nor in part, the property of the government. The ownership is in the complainants, a private corporation, though existing for the performance of public duties. The government owns none of its stocks," etc.

III. This brings us, then to the question: What obligations are imposed by the general principles of law upon connecting common carriers touching the matter of receiving the cars of other people upon their lines?

The question here is not whether the railroad lines of this country, generally, including the Union Pacific and Missouri Pacific, are regarded by the Law as public highways in the sense that they should be open to the trains of other connecting railroads, and there was no right in the respective roads to exclude such other trains from their lines.

This is so because the demand here of the complainant is not to be permitted, by its own locomotives, to run its cars over our lines. This demand is, in law, radically different from that. Its demand is that we shall take upon our lines and transport with our own locomotives the cars of other lines, leaving our own cars idle.

We are, therefore, here not troubled with this question (were there any question) as to the right of other companies to occupy our lines with their trains and locomotives.

On the contrary, the exact question is whether, on general principles, there is an obligation, as against the "connecting line" of railroad, to become the common carriers of other common carriers, they taking up and transporting, in the shapes in which they are tendered to us, the lines of cars brought to us.

IV. The answer to this last question; stated in paragraph III, is explicitly and unmistakably found in the *Express Company Cases*, 117 U. S. 1 (see Bk. 26, L. ed. 792).

The syllabus of those cases is an excellent synopsis of what is decided, and is in these words:

"Railroad companies are not required by usage or by the common law to transport the traffic of independent express companies over their lines in the manner in which such traffic is usually carried and handled.

"Railroad companies are not obliged, either

by the common law or by usage, to do more as express carriers than to provide the public at large with reasonable express accommodations; and they need not, in the absence of a statute, furnish to all independent express companies equal facilities for doing an express business upon their passenger trains."

It will be observed in this case, foot of page 6 (795), that the demand made against the railroad companies was that, in the absence of contracts, the defendant railroads should be decreed by the courts to "transport at all times the express matter, safes, and messengers of the said Southern Express Company by the same trains and with the same accommodations thereon and its depots and stations as it may transport its own express matter or as it may accord to itself."

This was the pith of the contention and the one repudiated by the court.

In that case the court, on page 20 (800), says:

"The controversy in each case is not with the public, but with a single express company. And the real question is not whether the railroad companies are authorized by law to do an express business themselves, nor whether they must carry express matter for the public on their passenger trains in the immediate charge of some person specially appointed for that purpose, nor whether they shall carry express freights for express companies as they carry like freights for the general public, but whether it is their duty to furnish the Adams Company or the Southern Company, facilities for doing an express business upon their roads, the same in all respects as those they provide for themselves or afford to any other express company."

On page 21 (800), the court, in repudiating the contention of the express companies, says:

"It is neither averred in the bill nor shown by the testimony that any railroad company in the United States has ever held itself out as a common carrier of express companies—that is to say, as a common carrier of common carriers."

Again the court says, page 24 (801):

"So long as the public are served to their reasonable satisfaction it is a matter of no importance who serves them. The railroad company performs its whole duty to the public at large and to each individual, when it affords the public all reasonable express accommodations. If this is done, the railroad company owes no duty to the public as to the particular agencies it shall select for that purpose. The public require the carriage, but the company may choose its own appropriate means of carriage, always provided they are such as to insure reasonable promptness and security."

On page 26 (802):

"The exact question, then, is whether these express companies can now demand as a right what they have heretofore had only as by permission. That depends, as is conceded, on whether all railroad companies are now by law charged with the duty of carrying all express companies in the way that express carriers, when taken, are usually carried, just as they are with the duty of carrying all passengers and freights when offered in the way that passengers and freights are carried. The contracts which these companies once had are now out of the way, and the companies at this time possess no other right than such as belong to

any other company or person wishing to do an express business upon those roads. If they are entitled to the relief they ask, it is because it is the duty of the railroad companies to furnish express facilities to all alike who demand them."

Such is the body and effect of this decision, and it is, we submit in legal principle, conclusive against the demand of the complainant in this case, that we shall be obliged to receive in the shapes in which complainant may choose to bring the same to us its lines of cars upon our lines.

To the same point is the case in 115 U. S. 587 (490), where the Pullman Palace Car Company asserted an obligation on the part of the Missouri Pacific Railway Company to haul the cars of the Pullman Company because of the nature of the business in which the latter company was engaged, which consisted "of hiring or otherwise arranging with railway companies to use its cars" under written contracts for a term of years.

The court says, page 597 (503):

"It may be, as is also alleged, that it has become indispensable in the conduct of the business of a railroad company to run on passenger trains sleeping and drawing room cars, with the conveniences usually afforded by such cars for night travel; but it by no means follows that the railway is in law obliged to arrange with the Pullman Company for such accommodations. According to the bill itself, two such car companies cannot successfully carry on a competing business on the same road; and the custom has been for the Pullman Company, if possible, to contract for the exclusive right. The business is always done under special written contracts. These contracts must necessarily vary, according to the special circumstances of each particular case. Certainly, it cannot be claimed that a court of chancery is competent to require these companies to enter into such a contract for the furnishing and hauling of Pullman cars, as the court may deem reasonable. A mere statement of the proposition is sufficient to show that it is untenable."

In the *Atchison etc. R. R. Co. v. Denver etc. R. R. Co.* 110 U. S. 667 (Bk. 28, L. ed. 291), the sections (4 and 6 of article 15) of the Constitution of Colorado, under consideration, were as follows:

"Sec. 4. All railroads shall be public highways and all railroad companies shall be common carriers. Any association or corporation organized for the purpose shall have the right to construct and operate a railroad between any designated points within this State, and connect at the state line with railroads of other States or Territories. Every railroad company shall have the right with its road to intersect, connect with, or cross any other railroad.

"Sec. 6. All individuals, associations, and corporations shall have equal rights to have persons and property transported over any railroad in this State, and no undue or unreasonable discrimination shall be made in charges or facilities for transportation of freight or passengers within this State, and no railroad company, nor any lessee, manager, or employee thereof, shall give any preference to individu-

Cleveland, Columbus, Cincinnati and Indianapolis Railroad Company are members, in which the following rule appears:

"Live Stock in car loads, carriers risk, class 2. Note.—Live stock transported in special or palace live stock cars, not the property of railway companies, will be charged as follows: in cars not exceeding 30 ft. in length internal measurement, 120 per cent of tariff rate. For each additional foot or fraction thereof in excess of 30 feet in length, internal measurement, an additional charge of 3 per cent per foot, or fraction thereof, will be made. For example: live stock in a palace car, 36 ft. in length, internal measurement, will be charged 183 per cent of tariff rate. Live stock in a palace car 40 feet in length, internal measurement, will be charged 150 per cent of tariff rate, it being optional with any railway company to receive cars exceeding 34 feet in length."

This rule is still in force. The Chicago and Alton Railroad Company did not accept the western classification in this respect, but provided by a circular dated May 30, 1887, for a charge of five cents per mile on empty cars, and for ordinary tariff rates on cattle in special cars of 30 feet in length; over 30 and not exceeding 33 feet, 10 per cent additional; and a further charge of 3 per cent for each foot or fraction thereof above 33 feet.

The extra charge to shippers in the western classification above quoted was intended to be in lieu of the former charge of five cents per mile for hauling back empty cars, and was adopted after a suggestion of one of the officials of complainant, to the effect that the public objected to paying tariff rates and five cents additional for the empty cars, and that it would be better to put it in the form of a percentage on the tariff. The Commission does not understand however that complainant thereby acceded to the justice of either charge, but merely that it preferred the one method to the other in case an additional charge was to be enforced.

The traffic in live stock upon the roads leading from the West to Kansas City, Chicago and St. Louis is almost wholly east bound, the west bound shipments being chiefly of fine stock for breeding purposes. It is a matter of material importance to the railroads to be able to get return loads upon cattle cars going back from those cities to the West. The chief opportunities for back loading are found in lumber, steel rails and ties. Lumber cannot conveniently be loaded in the Burton cars. Steel rails also cannot be taken upon those cars, but are at times loaded in ordinary cattle cars through doors placed at the ends for that purpose. Practically the special stock cars are not available for back loading to any considerable extent, upon the roads of the defendant companies.

Upon the foregoing facts one question largely discussed by counsel was as to whether a railroad company is by law required to accept for transportation the cars of complainant, and whether the Commission has authority to direct such cars to be so accepted when tendered in good order, properly constructed, mechanically correct and loaded with live stock.

It was argued by defendants that a railroad company is not bound to accept all cars and other instrumentalities of traffic offered to it,

but on the other hand, is required by the law to provide for itself all equipment necessary for the transaction of its business, and having done this, has performed its duty to the public; and also that the Act to Regulate Commerce contains no suggestion of a power in the Commission to decide upon the quality or fitness of the equipment of railroad companies. It is apparently conceded that the general subject of the safe and proper operation of railroads is within the power of State Legislatures, and of Congress, to regulate within their respective spheres of jurisdiction; a large part of the duties conferred upon some of the existing state railroad commissions is in the supervision of such matters, extending to the safety of bridges and railway, as well as of rolling stock and other instrumentalities and conveniences used in transporting persons and property. But it is claimed that the supervision of interstate commerce in these respects was not contemplated by Congress in the Act under which the Commission is organized, and that no powers have been conferred upon the Commission in that behalf; that the Act regulates the transportation of property, which is called commerce; but that the subject of procuring the adequate means for the transaction of the business of transportation is not commerce, and is not within the jurisdiction of the Commission.

On the other hand the complainant insists that the only way to regulate commerce is by regulating the instrumentalities of commerce; which necessarily includes power to regulate the cars, bridges, heating apparatus, and all other means and appliances by the use of which the interstate commerce is carried on.

The complaint however does not allege a refusal by the defendants or any of them to accept and haul complainant's cars, and the evidence does not disclose any such refusal. On the contrary the evidence clearly shows that most of the defendants publicly announce the terms on which live stock offered for transportation in special cars will be received and transported. For these reasons it is apparent that the question whether defendants are bound to receive complainant's cars is not presented; nor the question whether the Act confers jurisdiction upon the Commission over the instrumentalities of commerce; and no opinion is expressed upon those questions.

In view of the general demand among intelligent shippers for more satisfactory, although more expensive, conveniences for the safe and rapid transportation of live stock, it is scarcely conceivable that any railroad company will deliberately exclude from its lines the improved stock cars which modern invention has introduced, and which are recognized in the official tariffs and classifications of the carriers.

The question presented by the complaint, and the only question properly to be decided here is whether the terms upon which the defendants take the special stock cars are just and reasonable. This question divides itself into two branches:

First, Should the defendants be required to pay three fourths of a cent per mile run to complainant by way of car service?

Second, Is the tariff rate charged shippers for transportation of live stock in special cars a just and reasonable rate?

Upon the first question it is admitted that the defendant carriers refuse to pay to the complainant mileage upon the distance run by complainant's cars over their roads. This refusal is claimed to be an unjust discrimination against the complainant.

As is well known, freight cars belonging to the different railroad companies throughout the land are to a large extent used interchangeably. A record of their mileage when away from home is made the basis of the payment of "car service" at the rate of three fourths of a cent per mile. Of course if the cars of a carrier are used as much away from home as it uses the cars of other roads on its line, the monthly payment for car service will be offset by the amounts received. This is theoretically the nature of the transaction, a matter of mutual convenience which costs neither party anything. The payments and receipts in any one month could not be expected to exactly balance, but if each road has cars sufficient for its use, the result in the long will be very nearly equalized. In view of this fact it is obvious that no great importance attends the making this payment an exact compensation for the use of the cars, and it would not be fair to make it the measure of payment required to be made for the use of cars hired from other persons.

The Burton Stock Car Company does not receive and use the cars belonging to other carriers and there is no possible mutuality in this respect such as exist between carriers exchanging cars in the ordinary way. The Burton Stock Car Company is in no sense a "connecting line," entitled to equal facilities for interchange of traffic under the provisions of the second paragraph of section 8 of the Act to Regulate Commerce. Its counsel insists that it is not a common carrier. When freight is tendered to defendants in loaded cars by other carriers, they have the option to take the car or to reload the freight into their own cars; and the latter course is often pursued when the cost of unloading is less than the car service for the proposed trip. The fact that carriers interchange cars with one another in the manner and on the terms above stated does not entitle the complainant to claim that it is unjustly discriminated against by a refusal to pay it the same rate which carriers adopt as a basis in adjusting their car service accounts with each other. The claim of the Burton Car Company for payment by the railroad companies for the use of its cars is matter of contract and agreement between the parties so far as the proofs before us show, which does not present the feature of unjust discrimination. It seems that some carriers find the use of Burton cars, or of other improved stock cars, to be a service desired and demanded by the public, and are willing to concede to the complainant a reasonable payment for such use. So long as the carriers have no like cars in their own equipment, upon which live stock can be watered and fed without unloading, there is apparent justice in making such compensation. But complainant, which charges and receives from the public two and a half cents per mile for the use of its cars, is not in a position which entitles it to demand an additional three fourths of a cent per mile from the

carrier, upon the ground that the carriers pay that sum to each other upon exchanging cars under the circumstances above stated, and that their refusal to pay the same sum to complainant is an unjust discrimination. Nor is any ground apparent upon which such a payment can be ordered by this Commission.

The other ground of complaint is that the charge made to shippers of live stock is too high.

The extra charge provided for in the western classification is justified by the carriers, upon the ground that the cars have to be taken empty to the point where they ought to be loaded, or returned empty from the point where they are unloaded, while ordinary cars are more susceptible of being loaded in both directions and are often so loaded in fact. This was explained in detail in respect to the Chicago, Burlington & Quincy Railroad, upon which a large proportion of the Company's cattle cars are used in both directions.

It appears to the Commission that the expense of hauling complainant's cars in one direction unloaded, as compared with the greater ability to load back the ordinary cattle cars in use by the defendants, and the fact that a large percentage of the ordinary cattle cars are so back loaded upon the long hauls of the western roads, are considerations which justify a difference in charge against shippers who prefer to hire the improved stock cars for the transportation of their live stock.

The fact that cattle are transported in better condition and with less shrinkage in the special cars, and on that account are worth more at the end of the journey, is not a reason which the carriers can properly make use of as justifying an increased charge; it is in view of this fact that the shippers pay two and a half cents per mile to complainant for the use of its cars; and the legal duties of carriers in respect to all property which they accept for transportation cannot be forgotten.

Nor is the fact that these special stock cars are chiefly used for higher grades of stock a proper ground for additional charge, based upon the kind of car employed in the service. The car is the same whether used for Morgan horses or Texas steers. Any addition to the transportation based upon the value of the article carried is, in part at least, in the nature of an insurance premium paid for the risk, and should be applied to the articles themselves, and not to the vehicles in which they are transported. This is recognized in the amended classification recently filed with the Commission by the joint committee of the trunk lines, in which a maximum value is given upon which the tariff rates are based, and the terms upon which added liability will be assumed for live stock of more than ordinary value are stated in detail. To place an additional burden upon all live stock carried in special stock cars, upon the ground that such cars are often used for fine stock having high value, is obviously unreasonable.

But the question remains whether the additional percentages provided for in the classification constitute a just and reasonable charge to shippers, in consideration of the single fact that the special stock cars usually hauled empty in one direction. The effect of this charge

was explained in detail by the General Manager of the Chicago, Burlington & Quincy Railroad, as follows: "The rate for a car load of cattle from the Missouri River is seventy dollars for a thirty foot car. If sent in a Burton car, a thirty foot car, the charge would be seventy dollars plus twenty per cent, that is fourteen dollars, making eighty-four dollars. Now that fourteen dollars we have on the circular compensates us for hauling the car empty from Chicago to the Missouri River, a distance of five hundred miles, and fourteen dollars divided by five hundred is the rate per mile we charge for hauling the car out. It is a fraction less than three cents per mile."

This is apparently a reasonable explanation, but other facts which appear by the testimony before us should also be noted. As before stated the shippers pay the full car load rate, whatever be the number of cattle in the car; thus, 160 cattle at the Missouri River shipped in Burton cars would make 10 car loads at the 16 head per car, for which the carrier would receive \$700 freight money, at \$70 per car. The same 160 cattle shipped in ordinary cars would make but 8 car loads at 20 head per car, for which the carrier would receive on the same basis \$560 only. The difference of \$140 is the precise amount, according to the witness, which compensates the company for hauling 10 cars empty from Chicago to the Missouri River, at \$14 per car. In other words, the railroad companies apparently receive about 25 per cent more for hauling the same number of cattle in the Burton cars than in the common cars.

It is true that the ten loaded Burton cars weigh somewhat more than the eight loaded common cars. It is also true that the case stated by the witness, quoted above, showing an extra charge of only fourteen dollars per car, was not quite fair, for the reason that the Burton cars are more than thirty feet in length. In the case of a Burton car thirty-four feet in length the extra charge on the haul stated would be \$23.40, thirty-six feet, \$26.60; thirty-eight feet, \$30.80; forty-two feet, \$39.20. If fourteen dollars, or less than three cents per mile be a fair charge for hauling a thirty foot empty car from Chicago to the Missouri River, certainly \$39.20, or nearly eight cents per mile, is too much for a forty-two foot car. Still there is some increased expense connected with the increased length and weight of the longer cars; and on the other side, again, we have the apparent fact that the use of the special cars saves a certain amount of wear and tear that would otherwise occur to the cars of the carrier, not an inconsiderable item in a run out and back of a thousand miles. And still again, the carriers urge that when the special stock cars are in use their own equipment is idle to a corresponding extent, and the investment which they represent is unproductive. The case was not presented to the Commission with satisfactory precision upon this question by either party. The force of the contest was expended on the other points. It is not improbable that other pertinent considerations may exist, mention of which was not made in the evidence, and which have not occurred to the Commission. It was distinctly stated by the complainant's counsel that the object of this proceeding was

not to obtain damages for past overcharges, but to obtain a settled and reasonable rule for future service. We therefore do not now put upon record a finding that the charges last above stated are unreasonable, although we are strongly impressed with the belief that such may be the case.

(July 22, 1887.)

BOSTON CHAMBER OF COMMERCE

v.

LAKE SHORE R. R. CO. *et al.*
